Re: CC Docket No.88-2 Phase I - Filing and Review of Open Network Architecture Plans

Dear Ms. Dortch:

BellSouth Telecommunications, Inc., (BellSouth) hereby submits its Annual ONA Report, in accordance with the Commission's Memorandum Opinion and Order, released December 19, 1991, in CC Docket No. 88-2. An index of these reports is attached.

BellSouth is submitting this report to the Commission electronically. BCPI has also been served a copy.

If you have any questions concerning this submission, please contact me at 202-463-4107.

Sincerely,

Attachments

INDEX OF BELLSOUTH ANNUAL ONA REPORT

April 14, 2006

Report No.	Description
1	ONA DEPLOYMENT REPORT
2	DISPOSITION OF NEW ONA SERVICE REQUESTS
3	ONA SERVICE REQUESTS PREVIOUSLY DEEMED TECHNICALLY INFEASIBLE
4.	SS7, ISDN, AND IN PROJECTED DEPLOYMENT
5	NEW ONA SERVICES AVAILABLE THROUGH SS7, ISDN, AND IN
6	EFFORTS IN THE NIIF
7	PROGRESS IN PROVIDING BILLING INFORMATION
8	PROGRESS IN DEVELOPING AND IMPLEMENTING OSS SERVICES
9	PROGRESS ON UNIFORM PROVISION OF OSS SERVICES
10	BSEs USED IN BELLSOUTH'S ENHANCED SERVICES
11	ACCESS TO ADVANCED TECHNOLOGIES

BellSouth
04-14-06

Report 2 – Disposition of New ONA Service Requests

BellSouth received the following requests for new ONA capabilities from Enhanced/Information Service Providers (ESP/ISPs) in 2005.

Request #1: Fractional DS3 access to the Broadband Gateway.

Request #2: Higher speed DSL product (6Mbps download).

Request #3: Consumer DSL product that does not require an underlying voice facility.

BellSouth
04-14-06

Report 3 – ONA Service Requests Previously Deemed Technically Infeasible

Single Number Access for Multiple Locations

BellSouth had developed and tariffed several services addressing the above capability, including ZipConnect^{sm}, DataReach^{sm}, ISDN Single Number Routing Option^{sm}, and UNISERV^{sm}. Each of these services use non-rate center specific NPA codes (203, 440, 530, & 930) to allow call completion from different originating locations to different customer specified destinations, based on a single originating number. With number conservation being the main driver, continued use of these NPA codes and limited market demand prompted BST to file an amendment to its ONA Plan in October 2002, asking permission from the FCC to allow discontinuance these services. A Memorandum Opinion and Order (DA 03-849) was released on March 21, 2003, allowing BST to discontinue DataReach^{sm}, ISDN Single Number Routing Option^{sm}, and UNISERV^{sm}. The request to allow discontinuance of ZipConnect^{sm} in Florida was granted in a Memorandum Opinion and Order (DA 03-2552) released on July 30, 2003

Call Forwarding With Call Waiting

Several options for call forwarding have been developed and tariffed by BellSouth. See ONA Deployment (Report 1) for details.

Call Forwarding Busy Line/Don't Answer

Call Forwarding Busy Line/Don’t Answer is available almost ubiquitously across BellSouth service areas. See ONA Deployment (Report 1) for details.

SS7, ISDN, AND IN PROJECTED DEPLOYMENT

In its December 19, 1991, Order reviewing Open Network Architecture plans (CC Docket No. 88-2), the Commission directed each BOC to provide annual reports on the deployment of Signaling System 7 (SS7), Integrated Services Digital Network (ISDN), and Intelligent Network (IN) by percentage of access lines served system-wide and on a market area basis. This report contains six tables which provide these projections for BellSouth.

Table 1 provides a summary of projected CCS7 (Bellcore TR-TSY-000317) deployment, based on access lines served by CCS7 switches. These projections are based on current plans, but are subject to change due to financial, regulatory, market, or other considerations.

Table 2 represents projected deployment plans for CCS7 Network Interconnect (Bellcore TR-TSY-000394) (CCSAC) capabilities based on central offices being equipped for interconnection. These projections are based on current plans, but are subject to change due to financial, regulatory, market, or other considerations.

Table 3 provides a summary of Basic Rate ISDN deployment. The access lines counted in these percentages are lines served by central offices that are or will be equipped for ISDN capability. Equipment provisioning beyond the initial capacity will be based on market demand and forecast. These projections are based on current plans, but are subject to change due to financial, regulatory, market, or other considerations.

Table 4 estimates the deployment of Primary Rate ISDN. The access lines counted in these percentages are lines served by central offices that are or will be equipped for Primary Rate ISDN capability. Equipment provisioning beyond the initial capacity will be based on market demand and forecast. These projections are based on current plans, but are subject to change due to financial, regulatory, market, or other considerations.

Table 5 provides projections for the deployment of IN capabilities. These projections are based on current plans, but are subject to change due to financial, regulatory, market, or other considerations.

Table 6 provides projections for the deployment of AIN 0.1 capabilities. These projections are based on current plans, but are subject to change due to financial, regulatory, market, or other considerations.

Report 5 – New ONA Services Available Through SS7, ISDN, and IN

No new ONA services using SS7, ISDN, or IN were introduced in 2005.

BellSouth
04-14-06

Report 6 – Efforts in the NIIF

The NIIF provides and open forum to encourage the discussion and resolution, on a voluntary basis, of industry-wide issues associated with telecommunications network interconnection and interoperability which involve network architecture, management, testing and operations and facilitates the exchange of information concerning these topics.

The NIIF has two standing committees, one of which is the Network Inter-Operability Committee (NIOC). The NIOC addresses issues related to installation, maintenance, management, and testing guidelines for interconnected telecommunications and signaling networks. The NIOC also facilitates the exchange of information regarding telecommunications network architecture and interconnection, including ONA and/or other technical interaction.
Functional areas to be addressed by the NIOC include the following:

Emergency Communications
Facility Guidelines
Installation Maintenance Testing Guidelines
Installation Guidelines
Maintenance Guidelines
Maintenance Windows
Mass Calling
Notification (Maintenance and Trouble)
Notifications (Traffic Affecting: Network Outages and Changes)
Open Network Architecture (ONA)
Security
Signaling Operational Issues (e.g., SS7)
Test Line Coordination
Traffic Management
Trouble Management

BellSouth is a member of.the NIIF. NIIF background information is available via the Internet at http://www.atis.org/niif/index.asp.

BellSouth
04-14-06

Report 7 – Progress in Providing Billing Information

Bellsouth provides a wide range of services to facilitate ESP billing, as shown in previous reports. BellSouth is not aware of any outstanding billing information issues by ESPs served by BST. At the national level, there are no active NIIF issues concerning the provision of billing information to ESPs.

BellSouth
04-14-06

Report 8 – Progress in Developing and Implementing OSS Services

BellSouth has deployed a multitude of OSS access capabilities for ESPs offering a wide variety of functions and capabilities covering provisioning, repair, maintenance, billing, and account inquiry. BellSouth will continue to enhance existing OSS access systems and develop new access systems to meet identified ESP requirements. As noted in Report 9, following, BellSouth is also an active participant in industry forums addressing OSS access issues.

BellSouth
04-14-06

Report 9 – Progress on Uniform Provision of OSS Services

BellSouth is an active participant in Alliance For Telecommunications Industry Solutions (atis) national forums and other Industry committees that promote uniformity in the ordering and provisioning of OSS services to carriers (local and long distance), including Telecom Management, and Operations Committee (TMOC)/Architech Interface and Protocol (AIP) and the Ordering and Billing Forum (OBF), as well as on development and implementation of new standards and resolutions (i.e. IP-based services) from the industry. The TMOC/AIP defines technical OAM&P standards for OSS services, while the OBF deals with the ordering and billing business rules process for development of implementable standards. Both conform to the business processes for OSS services as defined by the TMOC and OBF forums. BellSouth is also a participant of cross-forum industry working groups that span over atis, which include, Industry Numbering Committee (INC), Network Interconnection Interoperability Forum (NIIF). and the IPTV Interoperability Forum (IIF) standands. Examples of this multi-forum coordination would be the development of Accounting and Settlements Standards for the billing processes of IP-based usage and participation with direct inputs to an Industry-wide Next Generation Network Focus Group (NGN-FG).
.
BellSouth is currently serving in 6 Leadership and management positions at the OBF and actively leads those working groups through facilitation and subject matter expertise, through standard reviews, and through OSS transformation projects to conform to uniform industry standards across OSS services.

BellSouth continues to be involved in the ever-evolving Local Service Ordering Guidelines (LSOG) as well as the Local Service Migration Guideline (LSMG) subcommittee currently working on Volume III defining Data Scenarios (i.e. line splitting/line sharing/loop sharing) which is likely to require TMOC standards updates. Various system releases have been implemented or are being planned to conform to a LSOG 10/ELMS10 release, while continuing to support LSOG6/ELMS6.

BellSouth continues its contribution to new technologies studies for enhancing OSS implementations. An example would be BellSouth's contribution to the industry in the development of VoIP and IPTV implementable standards by chairing the Internet Protocol-Network to Network Interface (IP_NNI) subcommittee at OBF, and providing direct developmental inputs towards the evolution of current OSS systems to support new technologies, such as Wide Area Ethernet.

BellSouth has continued to designate voting coverage and to manage the draft standards review and comments in order to contribute to the process of successful implementation of uniform Access and Local Ordering OSS services.

BellSouth
04-14-06

Report 9 – Progress on Uniform Provision of OSS Services

In summary, BellSouth has been actively and proactively meeting the industry requirements and standards in providing uniform OSS Services in all cross-forum OSS Industry Standards bodies.

BellSouth
04-14-06

Report 10 – BSE's Used in BellSouth Enahnced Services

Below are those ONA capabilities, including BSAs as noted, that are used, or that are planned for use. These capabilities are available to all customers on the same terms and conditions and at the same rates in accordance with filed tariffs.

Note: Generic Names are included in parentheses.

MegaLink®/HiCap - BSA
(Category 3, Type G - Dedicated High Capacity Digital/1.544Mbps)

Exchange Access Frame Relay Service BSA
(Frame Relay)

Exchange Access Connectionless Data Service BSA
(Connectionless Data Service)

Exchange Access Asynchronous Transfer Mode Service - BSA
(Asynchronous Transfer Mode Service)

Called/Calling Number Information - SMDI (NC #13)
(Message Desk (SMDI and ISMDI))

User Transfer (NC #15)
(Three Way Call Transfer)

Call Distribution Functions Including Queue (NC #19)
(Multiline Hunt Group - UCD With Queuing)

Multi-Line Hunt Groups (NC #25)
(Multiline Hunt Group)

Unlimited Size Hunt Group (NC #26)
(Multiline Hunt Group)

Individual Access to each Port in a Hunt Group (NC #27)
(Multiline Hunt Group - Individual Access to each Port in Hunt Group)

X.25 Interface to Packet Switch (NC #47) BSA
PulseLink® (Category 2, Type A - X.25 Packet Switched BSA)

X.75 Interface to Packet Switch (NC #48) BSA
PulseLink® (Category 2, Type B - X.75 Packet Switched BSA)

BellSouth
04-14-06

Report 10 – BSE's Used in BellSouth Enahnced Services

Derived Channels that Comply with UL and NFPA (NC #68) BSA

WatchAlert® (Category 3, Type I - Dedicated Alert Transport BSA)

Digital Private Lines (NC #71) BSA
SynchroNet®, Dedicated Digital (< 64 kbps), (Category 3, Type F - Dedicated Digital (< 64 kbps) BSA)

Error Detection/Error Correction (NC #73) BSA
PulseLink® (see above generic descriptions)

Clear Access to Derived Channel (NC #81)
Derived Data Channel Service (Category 3, Type J - Dedicated Derived Channel BSA)

Virtual Dial Tone (NC #96) BSA

PulseLink® (see above generic descriptions)

Packet Switched Options - Closed User Group (NC #112)
(Closed User Groups - Packet)

Packet Switched - Fast Select Packet (NC #113)
(Fast Select Acceptance - Packet)

Packet Switched Options - Hunt Group (NC #114)
(Hunt Groups - Packet)

Packet Switched Options - Call Redirection (NC #115)
(Call Redirection - Packet)

Packet Switched Options - Direct Call (NC #116)
(Direct Call - Packet)

Surrogate Client Numbers
(Surrogate Client Number)

Uniform Access Numbers (UAN) (MO96.0)
(Uniform Access Numbers for Business Lines)

BellSouth

Automatic Number Identification (ANI) (NC #107)
UAN (Called/Calling Number Information - ANI)

Trunk Side Access Facility (NC #30) BSA
(Trunk Side Access)

Custom Service Area (CSA) (NC #45)
UAN (Custom Service Areas)

Monthly Detail Recording (NC #89)
CDI (Call Detail Recording Reports)

Multipath
(Call Forwarding Variable/Multiple Simultaneous Calls) (NC #4)
(Call Forwarding Busy Line/Don't Answer Multiple Simultaneous Calls) (NC #4)

FlexServ® Service (NC #76)
(Ability to Reconfigure Networks)

BellSouth Remote Access Service (BSA)

BellSouth ADSL Service

BellSouth's enhanced service operations also utilize or plan to utilize other tariffed services that are available to, and, in fact, are used by, other ESPs, such as TouchTone service, PBX trunks, Primary Rate ISDN, ISDN Business Service, Direct Inward Dialing (DID) service, Call Transfer on DID, Native Mode LAN Interconnection (NMLI), AdWatch®, SMARTRing® Service, SMARTPath® Service, CrisisLink℠, and 1FBs (standard flat-rated business lines). These services also are provided on the same terms and conditions and at the same rates reflected in BellSouth's tariffs.

BellSouth
04-14-06

Report 11 – Access to Advanced Technologies

BellSouth is committed to providing unbundled access to advanced technologies. Following are brief discussions of SS7, Common Channel Signaling, Integrated Services Digital Network, Fast Packet Access, and Digital Subscriber Line technologies.

ADVANCED INTELLIGENT NETWORK

In order to meet enhanced service provider (ESP) and end user demands for advanced network capabilities, BellSouth is deploying its version of an Advanced Intelligent Network (AIN). The key architectural attribute of AIN is the separation of service logic programs and/or databases from traditional end office switches. The placement of service logic programs on separate network computer platforms is made possible by SS7 technology that facilitates communications between the switch and the service hardware/software.

By moving service logic to a separate computer platform, AIN reduces LEC dependence on service specific software deployment (i.e. feature capability) within network end offices. In this manner, AIN allows for the development of a single service application, which can operate in conjunction with different switch types, rather than the traditional development of a specialized service application for each switch type. Aside from the benefits to be gained by introducing such operational and development efficiencies, AIN will benefit end users by allowing for more rapid and efficient deployment of new end user applications.

BellSouth's AIN is composed of AIN-equipped switches, service switching points (SSPs), signal transfer points (STPs), service control points (SCPs) and service nodes (SNs).[1] The STPs and SCPs are deployed in BellSouth's network as mated pairs for increased reliability. The STPs are deployed in a two-tier hierarchy, with local STPs distributed across the region. Network elements served by different local STPs can communicate with each other through linkages with a regional STP.

A fundamental principle in the deployment of the AIN is the ability of the end office switch to suspend real time call processing to allow for interaction with other AIN network elements. Suspension of call processing to request AIN instructions can occur at several points within the AIN call model.[2] Once a call is suspended, queries (triggers) can be launched to AIN SCPs and SNs[3] and

---

[1] BellSouth's AIN network does not include switch adjuncts described in Bellcore technical requirements for AIN Release 1 (TA-NWT-001127, "AIN Adjunct General Requirements", Issue 1, April 1992).

[2] The AIN call model and the various points of interaction are more thoroughly described in Bellcore TR 1298, AIN 0.2 Switching Systems Generic Requirements, Issue 2, April 1993.

[3] AIN messaging to and from SNs requires AIN 0.2.

responses (commands) that provide call-processing instructions, which can then be directed from these same platforms to the switch.

BellSouth's SCP is a programmable platform which receives AIN queries from the SSP and sends AIN call control commands to the SSP. The SCP is interconnected to the SSP via SS7 signaling links and does not have a physical connection to the call itself.

The AIN SN is a programmable platform, which may be used to provide services that require physical connectivity to a call. A service node could be used, for example, to provide customized announcements, voice recognition, voice synthesis, or digit collection in support of voice services. These nodes will be connected to an SSP via an ISDN interface. Today, third party SNs can be connected to the network via a tariffed voice grade ISDN circuit.

BellSouth uses a separate platform known as a service management system (SMS) to administer the SCP memory, to manage SCP and SN data, to access network traffic data, to enter/update service provider and end user records, and to manage the subscription to AIN services. In this manner the SMS acts as a key Operations Support System (OSS) for AIN.

COMMON CHANNEL SIGNALING

Common Channel Signaling/Signaling System 7 (CCS/SS7) is the backbone of the intelligent network infrastructure. This network infrastructure performs traditional functions more efficiently, broadens the capabilities that BellSouth may offer its customers, and supports the FCC's goal of bringing to the public the benefits of the information age.

The Common Channel Signaling network capability is based on the American National Standards Institute (ANSI) T1 Committee's Signaling System 7 protocol. CCS/SS7 is a signaling system, which performs network control functions for a variety of services, including interoffice trunk signaling, database queries, data transmission and access call setup. Since these links can provide signaling and control functions for multiple telecommunications paths without utilizing these paths, greater efficiencies are gained.

BellSouth's use of the CCS/SS7 technology is part of the ongoing modernization of its network. Deployment of CCS/SS7 technology in BellSouth is based on a total view of existing and future services, network evolution and market needs. Use of the CCS/SS7 technology facilitates BellSouth's ability to provide logical interconnection to other technologies such as BellSouth's Advanced Intelligent Network (AIN).

BellSouth
04-14-06

Report 11 – Access to Advanced Technologies

BellSouth has long been committed to use of the CCS/SS7 technology, beginning with its initial interstate offering of Common Channel Signaling Access Capability (CCSAC). CCSAC is an optional signaling arrangement associated with switched access, which is available with Feature Group D. The CCSAC option was filed and became effective in 1990. When a customer orders Feature Group D trunks with CCSAC, the necessary signaling connections are provided as part of Feature Group D service.

Other optional features available with Feature Group D when CCSAC is specified are Calling Party Number (CPN), Charge Number or Automatic Number Identification (ANI), and Carrier Selection Parameter (CSP). The CPN option provides the capability in end offices to pass to an access service customer the calling party's ten-digit telephone number. ANI provides the capability in end offices to pass to an access service customer the calling party's billing number. CSP (1) identifies the dialing pattern employed by the end user, if known, and (2) provides an indicator in the initial address message, which signifies whether or not the call originated from a presubscribed end user of that access customer.

Another option available with the CCS/SS7 technology is the 64 Clear Channel Capability. The 64 Clear Channel Capability provides the transmission rate capability of CCSAC equipped trunks at 64 Kbps. Other interstate offerings available via the CCS/SS7 technology include BellSouth's Line Information Database (LIDB) and 800 Database services.

IntraLATA offerings made available through CCS/SS7 include BellSouth's TouchStar® family of products. This family of products includes Call Return, Repeat Dialing, Call Tracing, Call Block, Call Selector, Preferred Call Forwarding, Caller ID, Call Tracking and BellSouth's new service offering Caller ID Deluxe. These features are available on an optional and individual basis.

INTEGRATED SERVICES DIGITAL NETWORK

Integrated Services Digital Network (ISDN) is a digital network with signaling, switching and transport capabilities supporting a wide range of customer options over a single digital interface.

ISDN is a digital loop technology, which, in conjunction with CCS/SS7, enables end-to-end digital information, signaling, switching and transport. ISDN technology also provides a common interface to voice and data services, quality data transmission, network management and control capabilities.

BellSouth has used ISDN technology to make a number of tariffed options

available to customers throughout its nine state region. These offerings include Basic Rate ISDN (ISDN Business Service and ISDN Residence Service) and Primary Rate ISDN. Several optional features may be added to these basic ISDN capabilities.

One option available is BellSouth's Primary Rate ISDN Extended Reach Service (ERS). The ERS option is designed to extend the reach of the inward data option customer from a centrally located metropolitan local calling area into the areas of the LATA, which are non-local to the metropolitan area. The ERS customer purchases telephone numbers within each desired non-local calling area to allow their clients to call them without incurring intraLATA toll charges.

FAST PACKET SERVICES

BellSouth continues to develop and improve fast packet access services (Frame Relay service, Native Mode LAN Interconnection (NMLI), Broadband Exchange Line service, and Asynchronous Transfer Mode (ATM) service) throughout the BellSouth Region. BellSouth will continue to work with Enhanced Service Providers to develop and improve services and features for BST's fast packet network.

DIGITAL SUBSCRIBER LIINE (DSL) SERVICE

DSL is a wholesale service offering in the interstate jurisdiction which includes Enterprise DSL, ADSL, and Session Based DSL. An End User Aggregation (EUA) transport service is available to allow aggration of ISP traffic. BST is continually developing market based DSL services.
