RE: Docket # 07-16

Dear Secretary Dortch:

With every passing day, the internet becomes an increasingly important medium for communications between citizens of our country. For this reason, it is critical that all Americans have at least basic access to the internet, and many municipalities have already funded initiatives to offer free wireless internet to their citizens.

It has come to my attention that M2Z Networks has proposed building a nationwide network that will offer basic internet connectivity at no cost to consumers and federal and local governments. I support this proposal for many reasons. First, free internet connectivity will ensure that all Americans have equal access to the many and varied educational and employment resources available on the internet. Second, it will allow people like myself who travel frequently to remain seamlessly in touch with the office, thereby increasing the efficiency of our business operations. Third, this network will provide public safety officials with a ubiquitous and interoperable network to assist in emergency response.

With the many and varied positive effects of this proposal in public access, business efficiency, and public safety, I urge you to consider M2Z Networks' application.

Sincerely,

DC Palter
President, Apposite Technologies
