WHAT'S AT&T AFRAID OF?

We don't care. We don't have to.
We're the phone company." – Lili Tomlin

Dear Chairman Genachowski:

If AT&T wanted a private guard band in the Lower 700 MHz. spectrum band then AT&T should have bid for the lower A block spectrum in the auction. But to allow AT&T to create a private guard band using the Lower 700 MHz. A block spectrum that the Commission sold to Designated Entities in auction 73 **is** just not right. It's time to back up all of the rhetoric and take real action. **"*Fostering innovative spectrum use and encouraging new companies to enter the telecommunications market".*** Allowing AT&T to make it's own private guard band using the A block spectrum on our dime is an unfair taking of property without just compensation.

The facts are clear as a bell, interoperability must be restored. The benefits are overwhelmingly in the public interest. We ask you to restore interoperability in the Lower 700 MHz band before interoperability becomes an public embarrassment .

Very Truly yours,

Vincent D. McBRIDE
Chairman and Chief Executive Officer
