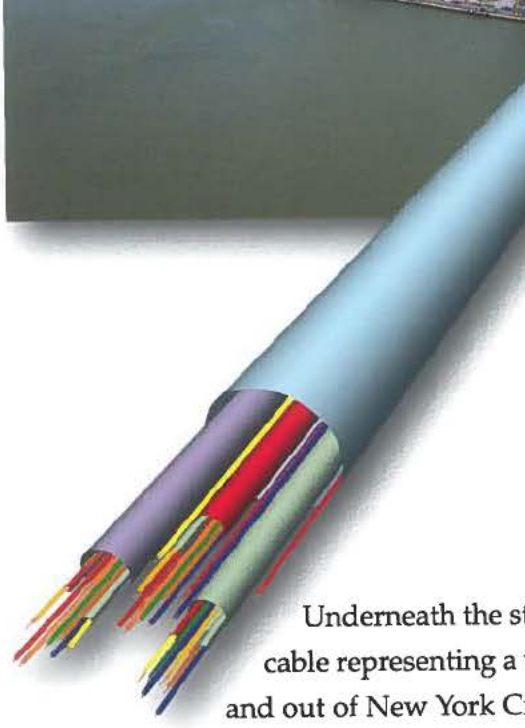
Kiosk Advertising and Electronic Messaging

SERVICE *supplier*

The Network



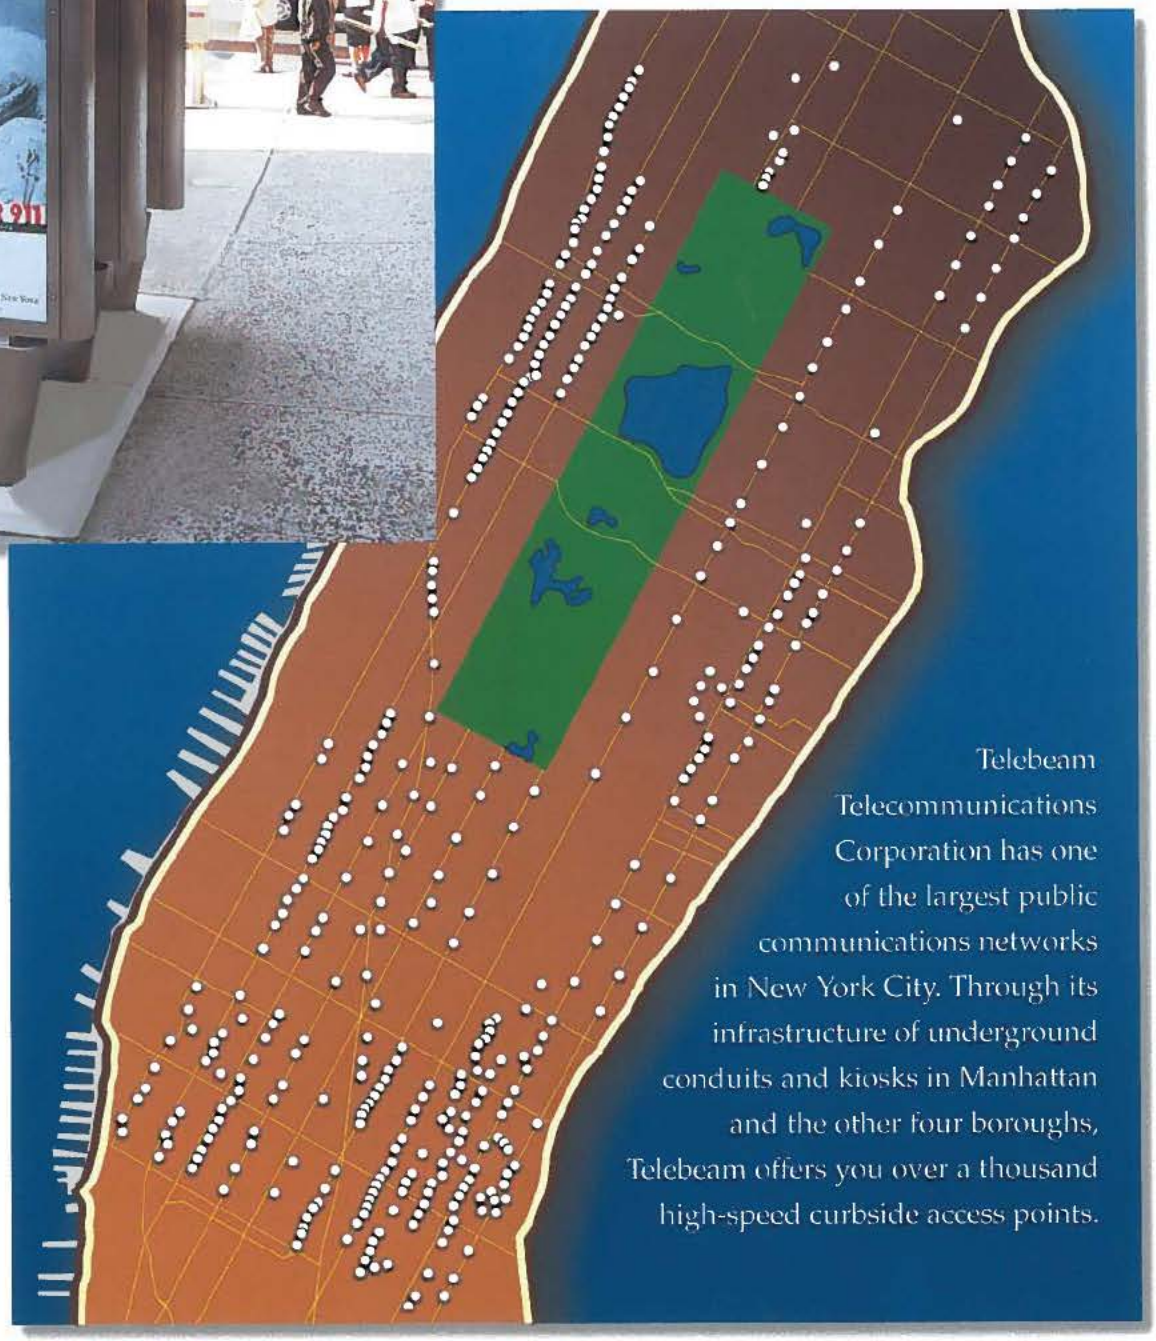
PUBLIC *Infrastructure*

Underneath the streets of New York City are hundreds of miles of fiber and cable representing a vast communications network. All telecommunications in and out of New York City depend on this network.

To provide communications services to customers, a company must have access both to the network and buildings.

Telebeam provides immediate access from multiple locations throughout New York City.

Kiosks



Telebeam Telecommunications Corporation has one of the largest public communications networks in New York City. Through its infrastructure of underground conduits and kiosks in Manhattan and the other four boroughs, Telebeam offers you over a thousand high-speed curbside access points.

The Last Mile Solution

All of Telebeam's kiosks have underneath them a conduit to the underground communications network. This infrastructure allows for efficient connectivity to and from the network.

You can extend your network through our more than 1,000 conduits in Manhattan and the other boroughs and connect to buildings, taking your underground connections "the last mile". With our experience of building over a thousand underground conduits throughout the City, we can obtain all the necessary permits and construct your underground connections efficiently and cost effectively. We'll save you the cost of a major construction project and the time involved in a cumbersome permit process. Although our conduits are well positioned throughout Manhattan and the boroughs, if we don't have a conduit where you want to go, we can build one for you quickly, at a reasonable cost.

INCREASE *Your* ABILITY TO PROVIDE *Services*

Equipment Co-Location

Telebeam also has space available to rent inside the walls of its kiosks for antennas, transmitters, modems, cable connections and transmission equipment, all of which can be connected to the City's underground communications network. Each kiosk is equipped with 120 V.A.C.

Interactive Multimedia Portals

The payphone industry is transforming itself quickly to become a key player in the new electronic interactive media. Payphones are morphing into "interactive multimedia portals". These new e-phones will offer Internet access, e-commerce, video e-mail, printout ability, local tourist information, emergency services, and an electronic message board. Services are accessed through a touch-screen monitor.

As public payphone terminals transform into interactive multimedia portals with Internet access, Telebeam will be providing e-commerce companies and marketers with high-speed access to one of their most important markets: New Yorkers on the go. Millions of New Yorkers will have access to our interactive multimedia portals creating millions of impressions for marketers advertising on our kiosks.

Telebeam Telecommunications Corporation is positioned to deliver one of the world's most active consumer markets.

NEW YORKERS
On the Go

Kiosk Advertising

There is a high demand for premium advertising space in New York City.

Kiosks on the streets of New York City are among the most desirable of advertising locations. These sites produce large numbers of impressions due to street and sidewalk traffic, and high impact on account of the life-size dimensions of the advertisements.

To facilitate advertisers access to our kiosks, Telebeam is partnering with an established New York City-based outdoor advertising agency to assist advertisers achieve saturation in New York City neighborhoods.
