Attachment to FairPoint Communications Service Provider CAF II Challenge Notification
WC Docket No. 14-93

FairPoint has used a process to identify and challenge the eligibility status of Census Blocks which are shown is ineligible due to tl reported presence of a competitive provider to a Census Block that would otherwise be eligible for CAF Phase II funding.

The process FairPoint has used to identify and challenge these Census Blocks is through the use of address and telephone numbe information. In this process, FairPoint has identified one or more census blocks that are shown as being served by your company notification serves to let you know FairPoint has challenged one or more census blocks that show your company as a service prov You can find FairPoint's challenge filing on the FCC web site, filed in WC Docket No. 14-93. This challenge process uses FCC Form which was developed for the CAF Phase II Challenge process. That form describes the process used by FairPoint to identify these blocks, and the method is described in the attachment to this letter. The results of FairPoint's analysis are shown in support docu filed by FairPoint along with the Form 505.

Outline of CAF Phase II Challenge Analysis work performed by GeoResults at the request of FairPoint Communciations:

Follows is a summary of the Database Sources and Work Plan that GeoResults used to generate the Census Block Summary Re the Individual Residential and Business Record Report for the Census Blocks of interest that were submitted. It is a complex n process that depends heavily upon the GeoResults National Residential and Business Database files, the GeoResults National Boundary files, and a select set of GeoResults national telecom reference database files.

Sources Used:

- GeoResults National Residential Database
- GeoResults National Business Database
- GeoResults National Wire Center Boundary Database
- GeoResults National Central Office Building Location Database
- GeoResults National Cable MSO Boundary Database
- GeoResults National Cable MSO Overbuilder Database
- GeoResults Master GeoLNP Database
- GeoResults National NPA-NXX-X Table
- GeoResults National Telecom Carrier Primary Business Name Database

Work Plan:

1 Use the GeoResults National Residential database to identify and extract all Residential records that are associated with each Block of interest.

2 Identify the Address, City, State, Zip, Zip4, Unit and unique record identification code associated with each residential record.

3 Run the residential address information through our geocoding spatial process to generate the spatial coordinates (latit longitude) and spatial accuracy for each record address.

4 Overlay the location point for these spatial coordinates onto the polygonal shapes of our proprietary GeoResults Wire Center B products to identify the CLLI Code of the Boundary Wire Center that is associated with each location point.

5 Using the GeoResults National Central Office Building Location database, look up the Serving LEC associated with the CLLI Cod Boundary Wire Center

6 Overlay the location point for these spatial coordinates onto the polygonal shapes of our proprietary GeoResults Cable MSO B and Cable MSO Overbuilder Boundary products to identify the Cable MSO Service Providers that are associated with each locatio

7 Use the GeoResults National Business database to identify and extract all Business records that are associated with each Census interest.

8 Identify the Address, City, State, Zip, Zip4, Unit and unique record identification code associated with each business record.

9 Run the business address information through our geocoding spatial process to generate the spatial coordinates (latitude and lo and spatial accuracy for each record address.

10 Overlay the location point for these spatial coordinates onto the polygonal shapes of our proprietary GeoResults Wire Center B products to identify the CLLI Code of the Boundary Wire Center that is associated with each location point.

11 Using the GeoResults National Central Office Building Location database, look up the Serving LEC associated with the CLLI Cod Boundary Wire Center

12 Overlay the location point for these spatial coordinates onto the polygonal shapes of our proprietary GeoResults Cable MSO B and Cable MSO Overbuilder Boundary products to identify the Cable MSO Service Providers that are associated with each locatio

13 Run each 10 digit telephone number through our GeoResults Master GeoLNP Database to determine the Portability Status telephone number and the Local Routing Number for each ported telephone number.

14 Use the NPA-NXX-X of the 10 digit telephone number for each non-ported telephone number and the NPA-NXX-X of the Local Number for each ported telephone number, and look up the associated Operating Company Number (OCN Code) and O Company Name (OCN Name) in the GeoResults National NPA-NXX-X Table.

15 Use the OCN Code and OCN Name, and look up the associated Primary Business Name (LNP_GeoLSPname) of the Telecom Provider that is provisioning the voice dial tone service to each 10 digit telephone number in the GeoResults National Telecom Primary Business Name Database

16 Use the Primary Business Name of the Telecom Service Provider, and look up the associated Telephone Industry Class (LNP_GeoLSPclass) as either Wireline or Wireless in the GeoResults National Telecom Carrier Primary Business Name Database

17 Flag each residential and business record with the appropriate "TN Served By" Category. The four categories are: ILEC, Cellula MSO or Other.

a. If LNP_GeoLSPname = Serving LEC, flag the record as ILEC served
b. If LNP_GeoLSPname = MSO1 or MSO2, flag the record as Cable served
c. If LNP_GeoLSPclass = Wireless, flag the record as Cellular served
d. All else = Other

18 Record all of this individual record information into the appropriate data fields contained in the Individual Residential and Record Report

19 Using only those records that have spatial coordinates with street level accuracy or better and have a 10 digit telephone develop the Census Block Summary Profile Report which summarizes this data by census block. This information was used to challenges to the appropriate census blocks shown as non-eligible due to the presence of a competitive provider.
