RE: PR Docket No. 93-61

DOCKET FILE COPY ORIGINAL

Dear Chairman Hundt:

It has just come to my attention that the Commission is considering proposed rules for broadband Automatic Vehicle Monitoring AVM in the 902-928 Mhz frequency band that will significantly limit the development and use of Part 15 wireless products and services operating in that same band.

Part 15 products and services include such things local and wide area wireless computer communications networks, digital cordless telephones, remote meter reading, security and alarm devices, wireless PBX systems, and wireless headphones, speakers and video. These products and services have a number of important public interest applications for education, health care, internet-related services, energy conservation, public safety and personal communications.

I am writing to ask you to postpone making a final decision in this matter and open up the proceeding for further comments from those who might be most affected. This includes users of the internet, teachers and librarians, consumers, public interest advocates and others.

Please do not act to limit the development and use of Part 15 products and services without first giving full consideration and weight to these and other public interest issues.

Sincerely,
Allan Poindexter
