Dear Mr. Kennard, MM DKT #87-268 Nov. 1, 1998

- I have written to others about this: There
another way to create clear T.V. without HDTV or
digital T.V. Channel 1 can be restorred. This time,
The picture and sound can both be F.M. Both can
come across on the same channel. Sound co
be switched from picture by pulses in the
blacker than black region. Channel 1 should
run from 30MHz-41MHz. Channels 70-83 can be
decommissioned. They are not even used. Station
that now use 30-41MHz can be reassigned
to the vaconcy created if channels 70-83 are
decommissioned. At the same time, picture
can also be broadcasted on A.M. that would
only take 30-36MHz. Eventually, manufacturer
would make sets to receive channel 1, alon
with other VHF stations. Both picture and
sound can come actoss on the same
channel if both are F.M.

EX PARTE OR LATE FILED

Very truly,
Stefan Pasqua
