Here is how I feel about allowing cell phones to be used on airplanes. I equate having someone near me talking on a cellphone to be as irritating as a crying child or having someone kick the back of my seat.

There will be no way to get away from the sound or to not listen. Vera Masters

To Whom It Concerns,

Please, continue to prohibit the use of cell phones inside of airplanes while the plane is taking off, in the air, and landing.

Respectfully,

Martha Maverick. Frank Maverick

Please do not allow cell phones in flight! I have no problem with internet access but cell phones in the air will take the last refuge away from us. I love my cell phone on the ground but, please, not in the air!

I think cell phone use on Airplanes should be very limited so it doesn't disturb passengers wishing to sleep or Read.

Maybe 10 minutes after Take off and 10 minutes before preparation to Land

Sincerely
Janet Lemieux

Dear FCC members!

I am firmly against allowing the use of cell phones on airlines. The planes are so noisy as is, and I can just imagine how loud people will have to speak to make themselves heard above all the competing sounds! What a nightmare that would be.

Recently, we shared a van with 6 other people from the airport to the parking lot. One man proceeded to use his phone — this was 11:00 p.m.! — to tell someone what a great meeting he had! He spoke at length,

and at full volume for an uninvolved meeting of a meeting – and he didn't care that there was a captive audience of tired, uninterested people! I cringe to think how horrible it would be to be seated near anyone as self-centered as that for hours!! – and I'm sure there are many more like him!!

No! No! No! – No cell phones on airplanes please!

Sincerely,

Denise Valencia

My husband agrees with these sentiments!

Dear FCC:

This is to register my strong objection to the lifting of the ban on the use of cellphones on airlines.

Trains have "quiet cars" that prohibit the use of cellphones, but that is not possible on airlines. Since most people speak much more loudly on cellphones than they do in normal conversation, such use will be especially intrusive on airlines where seats are "tighter".

Sincerely,
Darwin L. Neal
