**Re: WT Docket No. 17-200
Ex Parte Letter**

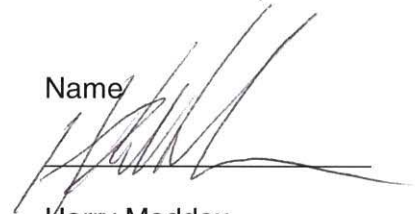

Dear Ms. Dortch:

First Choice Wireless Communications LLC. has been providing two-way radio and wireless communications services in Texas since 2012. We have built our reputation on providing dependable products and services at reasonable prices. Our employees have over 50 years of expertise and knowledge working with two-way radios and transmissions. Needless to say, we know the business very well and a good partner when we see one. pdvWireless has proven to be an essential provider of 2-way radio services to our customers and with the proposed realignment of their spectrum, their ability to offer broadband LTE services will make them even more invaluable to our business.

Being a small business operator, we take great pride in the customized service that we can offer. Most recently, our customer, the North Texas Tollway Authority ("NTTA"), issued an RFP for a new push-to-talk radio network. I immediately reached out to pdvWireless, knowing that they would be an excellent choice for the NTTA. After going through the formal process, pdvWireless via First Choice won the bid, and the trust of the NTTA. The NTTA is an organization sanctioned by the State of Texas to develop and maintain high-quality roadways in North Texas, with their primary goals being the relieving of traffic congestion and getting North Texans around the region quickly, easily and safely. pdvWireless has proven, in a short time, how serious they take this partnership. The NTTA's two-way radio network operation is crucial in order to provide safe toll road systems and meet the region's growing need for transportation infrastructure. Through their partnership with pdvWireless, dispatch and toll-way operators communicate quickly, clearly, and safely 100% of the time with pdvWireless's DispatchPlus easy-to-use system.

With the realignment of their spectrum, pdvWireless will be able to offer better coverage, richer features and a dedicated network serving dispatch-centric enterprises. I urge the Federal Communications Commission to move forward with this proceeding, thereby allowing pdvWireless to better serve the needs of their current and future customers who depend on their network.
