EX PARTE OR LATE FILED

Dear Sir or Mam:

I hope I'm not too late to comment on the Notice of Proposed Rulemaking.

DOCKET FILE COPY ORIGINAL

I am concerned about the approx. 50,000 birds dying from collisions with the approx. 90,000 lighted towers across the U.S. This occurs during fall and spring migration, mainly.

ORIGINAL

The birds killed include species of concern, threatened species and endangered species.

RECEIVED & INSPECTED

FCC - MAILROOM

The U.S. Dept of Fish and Wildlife have researched a solution to this problem. This includes building towers less than 200 foot tall or using strobe lights on existing 200 foot or taller towers. Also use monopole construction rather than guy wires.

I hope this NPRM signifies the start of a real change in the way towers are licensed, built and operated to protect millions of neotropical migrants and other species of birds.

No. of Copies rec'd 1
