E911 Requirements for IP-Enabled Service Providers	)	

Compliance Letter
Of the Citizens and Frontier Telecommunications Carriers

Pursuant to the Enforcement Bureau's November 7, 2005 Public Notice in this proceeding, the Citizens and Frontier telecommunications carriers[1] (**"Frontier"**) hereby file this Compliance Letter.

1. <u>911 Solution</u>: This description should include a quantification, on a percentage basis, of the number of subscribers to whom the provider is able to provide 911 service in compliance with the rules established in the *VoIP 911 Order*. Further, the detailed description should include the following components.

<u>Response</u>: Frontier provides full E-911 service in compliance with the rules established in the *VoIP 911 Order* to 100% of its subscribers while at their primary locations. Frontier is not currently able to provide fully compliant E-911 service to any of its subscribers while nomadic, but is working diligently with Intrado Inc. toward a solution as set forth in item 1c below. Frontier therefore strongly advises its subscribers not to move their CPE from its primary locations until this solution is implemented. Frontier's VoIP service is currently in trial mode with fewer than 10 customers.

1a. <u>911 Routing Information/Connectivity to Wireline E911 Network</u>: A detailed statement as to whether the provider is transmitting, as specified in Paragraph 42 of the *VoIP 911 Order*, "all 911 calls to the appropriate PSAP, designated statewide default answering point, or appropriate local emergency authority utilizing the Selective Router, the trunk line(s) between the Selective Router and the PSAP, and such other elements of the Wireline E911 Network as are necessary in those areas where Selective Routers are utilized." If the provider is not transmitting all 911 calls to the correct answering point in areas where Selective Routers are utilized, this statement should include a detailed explanation why not. In addition, the provider should quantify the number of Selective Routers to which it has interconnected, directly or indirectly, as of November 28, 2005.

[1] The Citizens and Frontier telecommunications carriers are incumbent local exchange, competitive local exchange and interexchange carriers under the common ownership of Citizens Communications Company.

Response: Frontier is fully compliant with the *VoIP 911 Order* with respect to all 911 calls from all of its subscribers' primary locations. Seven selective routers serve these locations, and Frontier has directly or indirectly interconnected to all of these routers. If, however, a subscriber becomes nomadic by moving the relevant CPE to a broadband Internet connection at another location, 911 calls will still be routed to the PSAP serving the subscriber's primary location, and the subscriber's primary address will display. Frontier has obtained written acknowledgement of this situation from 100% of its customers. Frontier is working diligently with Intrado Inc. toward a nomadic solution as set forth in item 1c below, and therefore strongly advises its subscribers not to move their CPE from its primary locations until this solution is implemented.

1b. Transmission of ANI and Registered Location Information: A detailed statement as to whether the provider is transmitting via the Wireline E911 Network the 911 caller's ANI and Registered Location to all answering points that are capable of receiving and procession this information. This information should include: (i) a quantification, on a percentage basis, of how many answering points within the provider's service area are capable of receiving and processing ANI and Registered Location information that the provider transmits; (ii) a quantification of the number of subscribers, on a percentage basis, whose ANI and Registered Location are being transmitted to answering points that are capable of receiving and processing this information; and (iii) if the provider is not transmitting the 911 caller's ANI and Registered Location to all answering points that are capable of receiving and processing this information, a detailed explanation why not.

Response:

(i) and (ii): When its customers make 911 calls from their primary locations, Frontier in all cases transmits its customers' ANI and primary location ALI with the 911 calls to the appropriate PSAP using traditional E-911 technology over the Wireline E911 Network. All applicable PSAPs are capable of receiving and processing this information. Frontier strongly discourages its customers from becoming nomadic at this time. If they do so, however, their 911 calls will still be transmitted to the PSAPs serving their primary locations and their primary addresses will display. Frontier has obtained written acknowledgement of this situation from 100% of its customers. None of the applicable PSAPs are currently capable of receiving and processing variable Registered Locations through a database administered by a VoIP provider or contractor.

(iii): Frontier transmits the 911 caller's ANI on all 911 calls. Frontier has not yet implemented means for subscribers to change their Registered Location, but is working diligently to do so. See item 1c below. Until it can transmit updated Registered Locations, Frontier will transmit its subscribers' primary locations.

1c. <u>911 Coverage</u>: To the extent a provider has not achieved full 911 compliance with the requirements of the *VoIP 911 Order* in all areas of the country by November 28, 2005, the provider should: 1) describe in detail, either in narrative form or by map, the areas of the country, on a MSA basis, where it is in full compliance and those in which it is not; and 2) describe in detail its plans for coming into full compliance with the requirements of the order, including its anticipated timeframe for such compliance.

<u>Response</u>:

1) Frontier currently provides VoIP service in the following MSAs: Rochester, New York; Poughkeepsie/Newburgh/Middletown, NY; and rural areas in Georgia, Nebraska and Tennessee. As set forth above, Frontier is in full compliance for 911 calls made from all of its subscribers' primary locations, but has not yet implemented a system for Registered Location updates and remote delivery of 911 calls if its customers become nomadic. None of the PSAPs in these areas are currently capable of receiving and processing variable Registered Locations through a database administered by a VoIP provider or contractor.

2) Frontier is actively negotiating with Intrado Inc. for the provision of the systems needed to provide compliance with the *VoIP 911 Order* if and when Frontier's customers become nomadic by moving their CPE to broadband Internet connections away from their primary locations. Frontier expects to complete contract negotiations, execute a contract, and implement the new systems and processes within the next few months. In the interim Frontier is strongly advising its VoIP customers, who currently number fewer than 10, not to move their CPE. Once Frontier's VoIP service is tied into Intrado's platforms, Frontier will have the same degree of coverage and compliance with respect to nomadic 911 calls as Intrado's other VoIP customers. A description of Intrado's services and coverage plans is attached hereto as ***Exhibit 1***.

2. <u>Obtaining Initial Registered Location Information</u>: A detailed description of all actions the provider has taken to obtain each subscriber's current Registered Location and each new subscriber's Registered Location. This information should include, but is not limited to, relevant dates and methods of contact with subscribers and a quantification, on a percentage basis, of the number of subscribers from whom the provider has obtained the Registered Location.

<u>Response</u>: Frontier obtained 100% of its subscribers' primary locations when it physically installed each subscriber's service. It will obtain the primary location of each new subscriber in the same way. As set forth above, Frontier currently uses the primary location as the Registered Location and uses traditional E-911 technology to pass the subscriber's ANI and primary location to the PSAP serving the primary location.

3. <u>Obtaining Updated Registered Location Information</u>: A detailed description of the method(s) the provider has offered its subscribers to update their Registered Locations. This information should include a statement as to whether the provider is

offering its subscribers at least one option for updating their Registered Location that permits them to use the same equipment that they use to access their interconnected VoIP service.

Response: Frontier does not yet have the capability of allowing subscribers to update their Registered Locations but is working with Intrado Inc to provide this capability. When this capability is implemented, Frontier will offer its subscribers a 24-hour, 7 day per week Frontier call center and a web-based interface to make the updates.

4. **Technical Solution for Nomadic Subscribers: A detailed description of any technical solutions the provider is implementing or has implemented to ensure that subscribers have access to 911 service whenever they use their service nomadically.**

Response: Frontier strongly urges its subscribers not to use their service nomadically but does not currently have a technical means of preventing them from doing so. Frontier currently will route a 911 call from a nomadic subscriber to the PSAP serving the subscriber's primary location using traditional E-911 technology, and the PSAP will receive the subscriber's ANI and the address of the subscriber's primary location. When Frontier implements the Intrado solution described in ***Exhibit 1***, nomadic 911 calls will be delivered to the appropriate PSAP over the Wireline E911 Network where either Frontier or Intrado has direct or indirect connectivity to the selective router. Where both Frontier and Intrado lack connectivity the nomadic call will be routed whenever possible to the appropriate PSAP through the use of a 10-digit PSTN PSAP number. In the event of a system failure the nomadic call will be delivered to an Intrado call center, where Intrado personnel will make every effort to route the call to the appropriate PSAP through the use of a 10-digit PSTN PSAP number.

Respectfully submitted,

Gregg C. Sayre
Associate General Counsel – Eastern Region
Citizens and Frontier Telecommunications

Exhibit 1

Intrado Information

911 Solution:

Public Notice Requires: This description should include quantification, on a percentage basis, of the number of subscribers to whom the provider is able to provide 911 service in compliance with the rules established in the *VoIP 911 Order*. Further, the detailed description of the technical solution should include the following components:

The V9-1-1™ solution enabled by Intrado provides a true E9-1-1 solution for VoIP Service Providers. Intrado enables a comprehensive approach to delivering E9-1-1 for VoIP by handling all aspects of the VoIP 9-1-1 call delivery and VoIP Positioning Center (VPC) functionality such as Master Street Address Guide (MSAG) Address Validation, ESQK management, Geocoding, real-time provisioning and routing determination. Included in the Service for the VSP is also the call delivery component to ensure the 9-1-1 call reaches the appropriate selective router and Public Safety Answering Point (PSAP). Intrado manages the VPC functionality and the Call delivery component on behalf of the VSP thereby enabling a full end to end solution from one service provider.

The only VSP customer requirements for delivery of the V9-1-1 service are the ongoing delivery of address and telephone number information to Intrado via a real-time interface and the connectivity to the Intrado network to enable live 9-1-1 call delivery.

- **911 Routing Information/Connectivity to Wireline E911 Network**:

  Public Notice Requires: A detailed statement as to whether the provider is transmitting, as specified in Paragraph 42 of the *VoIP 911 Order*, "all 911 calls to the appropriate PSAP, designated statewide default answering point, or appropriate local emergency authority utilizing the Selective Router, the trunk line(s) between the Selective Router and the PSAP, and such other elements of the Wireline E911 Network as are necessary in those areas where Selective Routers are utilized."[2] If the provider is not transmitting all 911 calls to the correct answering point in areas where Selective Routers are utilized, this statement should include a detailed explanation why not. In addition, the provider should quantify the number of Selective Routers to which it has interconnected, directly or indirectly, as of November 28, 2005.

  Currently through the assistance of our Network providers, our VSP customers will have access to 154 E9-1-1 Selective Routers by November 28th, 2005 and the attached **Major Market Deployment Map** and the **VoIP Deployment Plan** reflects the major market deployment schedules. Note: the market deployment map represent major markets where Intrado has connectivity to at least 1 selective router, ALI steering and the ability to populate ALI.

- **Transmission of ANI and Registered Location Information:**

  Public Notice Requires: A detailed statement as to whether the provider is transmitting via the Wireline E911 Network the 911 caller's ANI and Registered Location to all answering points that are capable of receiving and processing this information. This information should include: (i) a quantification, on a percentage basis, of how many answering points within the

[2] *VoIP 911 Order*, 20 FCC Rcd at 10269-70, ¶ 42 (footnote omitted).

provider's service area are capable of receiving and processing ANI and Registered Location information that the provider transmits; (ii) a quantification of the number of subscribers, on a percentage basis, whose ANI and Registered Location are being transmitted to answering points that are capable of receiving and processing this information; and (iii) if the provider is not transmitting the 911 caller's ANI and Registered Location to all answering points that are capable of receiving and processing this information, a detailed explanation why not.

- **Basic PSAP:** Currently 93% of the US population is served by PSAPs operating off an E9-1-1 Selective Router. To illustrate PSAPs within the US, which are not served by a Selective Router, the attached "**Basic PSAP" map** could be used as reference information. **While these areas are not included within the FCC Order and are not required for compliance,** Intrado is actively contacting these areas to determine technical options for VoIP E9-1-1 native call delivery. **Reporting this information is not required by the FCC.**
- **ANI Only:** There are unique deployment circumstances in areas of the US and Puerto Rico that operate off E9-1-1 Selective Routers, but will not meet the full FCC mandate. This information should be considered as part of the compliance report to the Commission. Intrado is currently aware of four (4) States and a Territory within your serving area that will have native Selective Routing functionality but will only provide Automatic Number Identification (ANI) only service to the PSAP. The following information explains the circumstances within these areas:

  New Jersey - In the State of New Jersey Intrado has gained permission from the State to deploy a voice only service which includes the call taker receiving ANI on the VoIP 911 caller. The State ALI system is not capable of full dynamic ALI updates and will require an upgrade. New Jersey represents 3% of the total US population.

  Ohio - To date, Ohio has not granted permission to Intrado to deploy a voice only solution. The State ALI system is not capable of full dynamic ALI update. Ohio represents 4% of the total US population.

  Hawaii - To date, Hawaii has not granted permission to Intrado to deploy a voice only solution. The ALI systems are not capable of full dynamic ALI update. Hawaii represents 5% of the total US population

  Puerto Rico - To date, Puerto Rico has not granted permission to Intrado to deploy a voice only solution. The ALI systems are not capable of full dynamic ALI update. Puerto Rico represents 3% of the total US population

- **VSP Specific Metrics:** Please see attached **VSP coverage Spreadsheet**.

o **911 Coverage**:

Public Notice Requires: To the extent a provider has not achieved full 911 compliance with the requirements of the *VoIP 911 Order* in all areas of the country by November 28, 2005, the provider should: 1) describe in detail, either in narrative form or by map, the areas of the country, on a MSA basis, where it is in full compliance and those in which it is not; and 2) describe in detail its plans for coming into full compliance with the requirements of the order, including its anticipated timeframe for such compliance.

- **Deployment Overview** – Intrado, as your VPC is working on nationwide native VoIP E9-1-1 delivery in accordance with the Commission Order. The initial PSAP deployments are targeted in major metropolitan areas throughout the US based on the VSP customer subscriber base priorities. The attached "Major Market Deployment Map", which corresponds with MSAs, identifies regions within your territory that have connectivity to at least one Selective Router, ALI steering capabilities; ANI and the ability to populate ALI. These areas are planned for deployments by November 28, 2005; March 31, 2006 and June 30, 2006. This map could be used to demonstrate FCC compliance for the November 28th requirements and the future deployment strategy.

Obtaining Initial Registered Location Information:

Public Notice Requires: A detailed description of all actions the provider has taken to obtain each existing subscriber's current Registered Location and each new subscriber's initial Registered Location. This information should include, but is not limited to, relevant dates and methods of contact with subscribers and a quantification, on a percentage basis, of the number of subscribers from whom the provider has obtained the Registered Location.

This information should be completed by the VoIP Service Providers. As a component of the V9-1-1 Service the VSP has access to the Intrado Validation and Update Interface (VUI) which enables near real-time delivery of the VSP acquired or VSP User submitted address update information. VSPs may integrate VUI into their existing provisioning systems to ensure seamless delivery of acquired registered location information to the Intrado systems.

Obtaining Updated Registered Location Information:

Public Notice Requirements: A detailed description of the method(s) the provider has offered its subscribers to update their Registered Locations. This information should include a statement as to whether the provider is offering its subscribers at least one option for updating their Registered Location that permits them to use the same equipment that they use to access their interconnected VoIP service.

The V9-1-1™ Mobility Services provides Intrado Customers with a real-time provisioning interface to provision/register subscriber (location) data to Intrado to ensure the proper address and call back number is delivered to the appropriate PSAP at the time of a VoIP 9-1-1 call. This interface is named the Validation and Update Interface (VUI). Intrado's real-time provisioning process enabled by VUI includes a geocoding process as well as management of Master Street Address Guide (MSAG) validation at the time of provisioning. Customers can utilize a VSP provided web portal or a VSP provided service center by phone to enable the near real-time update to Intrado.

At the time of the VoIP 9-1-1 call Intrado uses the VSP customer's provisioned information to associate the latitude and longitude assigned during provisioning with the wireline PSAP boundaries maintained by Intrado to determine appropriate PSAP for delivery of the MSAG Valid address and Call Back Number of the user.

Intrado also enables a VSP to utilize the Intrado Level of Service (LoS) query integrated into the VUI application. This functionality enables a real-time query to Intrado with an address of a customer/end user for the purpose of determining the level of E9-1-1 service available to that customer based on their location. Intrado will return a set of responses (Enhanced, Basic, etc.) that will enable the user to determine E9-1-1 service level and take appropriate action.

Technical Solution for Nomadic Subscribers:

Public Notice Requirements: A detailed description of any technical solutions the provider is implementing or has implemented to ensure that subscribers have access to 911 service whenever they use their service nomadically.

VSPs utilizing Intrado's V9-1-1™ Mobility Services are able to route VoIP emergency calls from their VoIP network to the Intrado Network or alternative 3rd party network for delivery to the appropriate Selective Router and then on to the geographically appropriate Public Safety Answering Point (PSAP) via the native 9-1-1 infrastructure. The Services utilized provide a "native" 9-1-1 solution for routing VoIP 9-1-1 calls from both in-region and out-of-region telephone numbers (TNs) to the most geographically appropriate PSAP. The V9-1-1 solution enables full support of nomadic usage of VoIP provided the user updates their address information upon arrival into a new location. Through the Validation and Update Interface (VUI) the V9-1-1 solution will enable the near real-time provisioning (Geocoding and MSAG Validation) of the newly provisioned address and make available (assuming no errors) that user's information for delivery to the PSAP within 15 minutes of receipt.

Intrado recognizes the need for removing the user interaction and self provisioning component of the solution. To that end, Intrado is actively working and trialing a number of location determination technologies, which will be supported by Intrado and the Intrado provisioning interface.
