Internet access is a telecommunications service. In an age where telephone companies (AT&T) provide television services (Uverse) and television cable companies provide telephone service (Comcast Xfinity includes Internet telephone) it seems obvious that there is no longer much distinction between the two. All ISPs are common carriers, and it is long past time for FCC regulations to reflect this fact. At a time when legislators (Senator Blumenthal, in July 2013) are introducing bills to abolish tiered cable television services and require cable television providers to sell television programming a la carte, allowing tiered services for Internet access seems ridiculous. Unlike the early days of cable television, there is no technological reason to justify tiered Internet service (nor tiered cable television service). This is all about corporate greed. As a programming contractor, I rely on the Internet for advertising, and to provide services to my clients -- mostly small businesses and non-profits that could not otherwise afford the types of service I provide. Loss of Net Neutrality is very likely to put me, and other small businesses OUT of business. True Net Neutrality is good for commerce, and good for democracy. Tiered Internet access will increase the gap between rich and poor, and further erode the status of the middle class.
—Matthew Harris, Oakland, CA

It's important to me that the FCC stay OUT OF OUR LIVES!! YET ANOTHER USELESS, CORRUPT ARM OF THE US GOV'T INTRUSION INTO THE LIVES OF WE THE PEOPLE!! SUCH OBVIOUS CORRUPTION WITH THE LOW COST AND MUCH HIGHER SPEEDS OF INTERNET ABROAD.
—David G, Kailua Kona, HI

Stop Scuttling the internet! Without true, I mean TRUE, Net Neutrality, it will be worthless, and we will no longer enjoy it as the powerful economic tool that it currently is!
—Scott Barnett, N/A, CO

I do not believe any Visual Entertainment Providing Company (including cable and satellite companies) should be allowed to create different prices by which company created the visual entertainment or the type of visual entertainment it is or what country the visual entertainment comes from or Etc..
—Mr. 'Great White' (Shark: Beings Rights Earth & Person), Community of Homestead, NW of Homestead, FL

As a retired person I rely on the internet for so much connectivity with friends, organizations, entertainment, shopping and the news. I'd be very unhappy if my ability and speed of connecting was changed - just because I'm a "little guy."
—Jerry Cecere, Folsom, CA

please don't let AT@T Comast create this so called tiered internet we are being stuck with sorry internet now and high prices , this what they wont to rip us off more please put a stop to this. i cant afford the internet now. when this happen forget me even have it. all the providers like ATT and Comcast Verizon are cready co you dont know what we the coutomers go through you dont never hear our end. only the stupid providers end. put a stop to all this. throw out rules and instead reclassify ISPs as common carriers.
—Matt Arnold, Smiths Station, AL

As a small business owner, I cannot afford higher fees to have the internet speed I now enjoy. Please keep small business alive. Maintain net neutrality!
—Sue Taylor, Colorado Springs, CO

I live on a very limited budget and much of my work, and leisure time, requires the internet. If you make a two tiered internet, you are basically throwing people like me, and millions more, to the mercy of the ISPs, who can dictate costs and make our lives miserable unless we pay up. If you support these rules, you are supporting a "Rich get richer and poor get poorer" stance for the United States. And if that's your stance, you can get the hell out of office.
—Stephen Walker Rosebaugh-Nordan, Hillsborough, NC

I run a small business which provides a service that larger and richer companies also provide. My clients come to me because of the quality and reliability of our work. They find us convenient as well. If you act on this proposal, these richer companies will be able to have their sites load faster, show their work better (as it is streaming media,) and take our business. The free and open internet, where no one gets special treatment is the cornerstone to the modern economy for small American businesses. Do not take this away from us? You must classify the Internet as a public utility! It has become essential to American life, hobby, convenience and business. The Internet is even more important than phone service today. Please do not give big corporations yet another advantage over everyone else in a world where they already enjoy enormous privilege. Do the right thing! Make sure the Internet remains free and open, and a land of true opportunity for all, and the place where a person with a great idea and a website to promote it can become the next American success story.
—Chris Snyder, Northridge, CA

The internet should be a level playing field where everyone has equal access to efficient communication and search capabilities.
—Donald Harland, Candler, NC

First off, let me say that I appreciate your willingness to listen to the people who actually use the internet. It shows that you do in fact care. That being said, the idea of creating a regular and a premium internet service, which is what you apparently intend to do, would destroy the internet as we know it. For the last twenty years, the internet has been allowed to grow unimpeded by corporate and governmental bureaucracy, and look what has happened. It has flourished. New avenues of sale, communication, collaboration, all springing up within a few years because the FCC stepped up to the plate and said "leave the internet be". Now you stand at a crossroads. You can be the man who saved the internet by restoring net neutrality, or you can be the man who single-handedly brought the greatest information and communication tool the world has ever known to it's knees and then cut it's head off. I understand that you used to work for the same people that have proposed this legislation, and i realize that you may have a hard time believing that they would kill the goose that lays the golden eggs, but don't you see? They have the goose held down over a stump, and they just handed you an ax! Mr. Wheeler, I strongly urge you to restore net neutrality, unaltered, to its former glory, and show the world that you actually care about the internet. Thank you for your time. Best Regards. Bradley Reedy
—Bradley Reedy, Jefferson, TX

I have cable TV already. I don't want or need cable TV on my computer (which is what your proposals amount to). Reclassify ISPs as common carriers. The rich have enough money. They don't need more. This corruption by the billionaires is criminal.
—David Chapman, Kalaheo, HI

Reclassify ISPs as common carriers-otherwise the PUBLIC will bear a higher cost internet
—Leonard Fagen, Quogue, NY

I do not trust large corporations to treat the common subscriber fairly. They already have some of the lowest satisfaction ratings of ANY company. And that is in a country that is dealing with a rocky economy caused by the same type of greed from the banks. We need the FCC to reclassify ISPs as common carriers so they do not abuse the rules and pillage the subscribers more than they already do. Imagine if there were only 2-3 gas stations within 100 miles of you. Now imagine that they could charge whatever they wanted to whomever they wanted. Or sell an extremely diluted product so they can give the illusion of fairness, but charge 3x the price for the actual product. That is price gouging. Fair and simple. That is what they will do if you allow the power to do so. Corruption and greed are our biggest problems in this country. Allowing ISPs to have a free reign will just make our internet access as restricted as communist countries.
—Jeremiah Baumann, Melbourne, FL

Please don't let the internet we all love so dearly and rely on to be destroyed by corporate greed! Take a stand for what's right and for the little guy!
—Tymon, Columbus, NE

I am an old lady so the future of the net doesn't matter to me personally. However, for future generations, it's important that the internet not be controlled by ISPs like AT&T, Comcast and Verizon to create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow service for those who cannot afford the fees.The result would be discrimination against online content and applications. No one would be able to do anything about it because it would be "legal". Where is the word "ethical" here? It's missing! Please show some far sighted vision by preserving an open, neutral internet for future generations. I'm not one to jump on bandwagons but this has such far reaching implications that I am compelled to join the many voices out there who are pleading for someone to do the right thing for a change. Once this system is set in motion, there will be no going back. Think about that. I have. It scares me.
—Carolyn Allan, Brattleboro, VT

Don't discriminate! No two-tiered Internet!
—Cynthia Baldwin, Chicago, IL

net neutrality is crucial to an open internet. don't allow the internet to be one more tool of the rich.
—Margaret Wilbur, East Harwich, MA

Net Neutrality is important to me because if the big corporations get their way the internet will cease to have any real usage for most people. The price will be too high and you won't get enough out of it to do anything worthwhile such as streaming video and music. Nope. In the long run if net neutrality goes the way of the dinosaur then it's a loss for us all INCLUDING the big whigs such as Verizon and Comcast/Time Warner.
—Kelly Vaughn, Longview, TX

progress should not be put in the hands of a few big corporations so they can stifle competition and new advances.
—William Gawne jr, Riverside, IL

I have a PhD. I can't stand the drivel in mainstream media. The internet is my lifeline to quality content. By allowing companies to deprecate my less profitable traffic, you are punishing me. You are punishing everyone who hates the mainstream media. This is the wrong way to foster the marketplace of ideas.
—Payam N Minoofar, Ventura, CA

The internet is the most important human invention in generations. If you sell it out to monied interests you sell out every American.
—Emerson Gates, New York, NY

As a student I think it's very important to have access to everything on the same basis. I don't have money to be paying loads of extra fees and I don't want to have to.
—Lexi, Windsor, CT

The Internet is a valuable asset and resource that is at threat of being corralled into a restricted market by companies that are abusing their power and privilege. Please don't let that happen!
—Austin Borgstedte, Ventura, CA

We own a couple of small businesses, Chestnut Hill Pottery, and The Artisans Next Door. The Internet is vital to our businesses for advertising, publishing our websites, communicating with customers, ordering raw materials, communicating with fellow artists, etc. We really can't afford to be burdened with yet another fee to be able to use what we already are using. Please, keep the Internet nuetral!
—Kevin Ross, Wever, IA

Buried your verbiage is clouded and guaranteed uncertainties that only stand to benefit the oligopoly companies for which costumers have NO choices for alternative carriers. Before you champion their cause and falsely claim that a free market exists, take the time to actually listen to the American consumer, public, people! There are not two sides to this. Everyone wants an open, equal internet except for the excessive, obscene and ultimately destructive greed of companies like AT&T, Verizon and Comcast. Ironically, AT&T has already done this before and that is why it was split up into baby bells back in 1982. Did they pay you enough this time around to look the other way or are you actually going to do the job you have been trusted with and realistically consider those whom you truly work for?
—Randy Grafton, Vancouver, WA

Having use of steady and fast internet is key to everyday life at this point. Without fast internet I would be unable to continue to learn and grow as a person. Those without the funds would be blocked off from this under this two tier system. This would be moving backwards instead of forwards.
—Nicholas Jenkot, Birmingham, AL

NO to the plan to let internet providers create a two-tiered Internet. The internet needs to be kept open for ALL.
—Diana Saxon, Salem, OR

I have come to rely upon the internet for information and communication. I'm not wealthy. I have no power over anything or anyone. Does that mean that I shouldn't have the opportunity to use the internet as I wish? I sure hope not. I don't understand the "net neutrality" issues very well. It's hard to believe that anyone in the US government would condone creation of a two-tiered internet: a fast lane for those who can afford to pay for it, and something very basic and not very useful for the rest of us? All because big internet service providers want to increase their profits? Just don't do it. God, I'm so tired of feeling like a second class citizen. I'm so sick of the government, that I expect to stand up for my rights, doing just the opposite.
—Florence D Campbell, St Louis, MO

Its time for a revolution in this country, where good men and women stand up against temptation from lobbyists and special interest groups. Where personal wealth takes a back seat to the general well being of this Nation. Pass these new laws if you want. But you will not be able to stifle the public and corporate outrage you are sure to provoke. You are pandering to too small a group on this one. Keep the internet free.
—Andrew, Whittier, CA

WORK TO BE DONE; SOCIAL JUSTICE IN GREAT DANGER! PROMOTE FAIRNESS, FREEDOM, JUSTICE, PEACE, HUMANITY, PRODUCTIVITY, WELL-BEING OF GENERAL PUBLIC. RESOLVE SOCIO- POLITICAL ISSUES, BALANCING BUDGET. OPPOSE SO CALLED "FAIR ELECTION ACT" PUBLIC FINANCE MATCHING SMALL DONORS FUND- DO MORE HARM THAN GOOD, RESOUCES BENEFIT "BAD GUYS" AS USUAL. TASKS: TOP PRIORITIES: Society in vicious cycles as in need of revolution, we MUST act: (1). Prosecute, eliminate “MURDER- fraud- crime- injustice networks”= cruel tyranny= robbery machine = ROBBER- ISM; destroying essences of democracy, capitalism; continuing, on-going; relaying, penetrating every segment of our lives (inc. civic non- profit organizations); expanding here domestically to overseas- foreign countries; with threat, coercion, victimization, deprivation, discrimination; unjust practices, manipulation, influence; bad legislative bills; unjust hidden agenda with false/ misleading excuses (inc. private- public partnership, economic development, housing, school construction, transportation, abandonment of properties, maintenance of “paper roads”, nonsense grants, programs; …, whatever) to benefit/ facilitate “MURDER-fraud- crime- injustice networks” (inc. officials, judges, developers, lawyers, employees, etc.); expand further unjust operation; endless unlawful- immoral acts; rob/destruct resources (rights, land, properties, home, buildings, assets, accounts, income, pension, documents, evidences; public, private; business, civic, political); frivolous litigation, levies, foreclosures, garnishment, guardianship, power of attorney; improper processing of complaints, procedures, proceedings, docketing, bookkeeping, accounting; cause vicious cycles: socio- political- election-media- budget- legislative- system problems; civil-human rights backwards; people-slave. Examples of problems are provided below: ** (2). Restore: principle, fairness, cost-effectiveness, accountability, reliability, capability; fair election, justice, peace (including civic, non-profit organizations), “check and balance”; Restore: TRUE essence of democracy, fair election process; easy access to government, files, records, transcripts; not unjustly manipulated, influenced, misled by wrong person, information, or “official misconduct- government gang- fraud- crime- injustice networks” = serious causes of socio-political – election –media- budget- legislative problems, which destroy people, families, society, peace, justice, democracy. Based on merits, justification; NO double standards, improper processing of complaints, procedures, proceedings; falsification, false records, tampering of evidence, data; harassment, intimidation (complainant, witnesses); false charges, citation, bond, imprisonment; disparities and improper treatments, etc.; abuse of laws, power, authorities. (3). Promote democracy, fair election, quality, competition, people input (policies, issues, officials, judges); televise public hearings, citizen/candidate forum/debate; maintain, disseminate meaningful accurate information, records, capability, reasoning, good sense of justice, public interest, endurance. Objective screening by meaningful rigorous examinations, evaluations for quality, capability, endurance and public interest. * To capture extended serious problems of “MURDER-fraud- crime- injustice networks” with official misconduct- government gang, please incorporate the following: (A). complaints/ cases: administrative and judicial levels; (B) frequent testimonies before government bodies, official, legislators, law enforcement, committees, public hearings; local – federal; (C) spin-off complaints, improper processing of complaints, procedures, proceedings, accounting, bookkeeping, docketing, etc.; (D) Candidate statements, see Webs and archives. Urge to re-open and investigate Congress.org, DNet (by League of Women Voters), links, etc.; (E) complaints and reports to police, law enforcement, consumer affairs, other authorities/agencies against “fraud- crime- injustice networks”; (F). Numerous TV programs on social issues (Dr. Lih Young: producer, host, speaker). (G). Frequent recommendations/petitions to officials, agencies, law enforcement, local - federal; as individuals or with civic organizations. ** EXAMPLES OF PROBLEMS - “MURDER- FRAUD- CRIME- INJUSTICE NETWORKS”- with official misconduct, government gang- endless unlawful immoral acts: (A): OPM, IRS, DHHS, SSA, DOJ, FBI, DOD, USDA, DOC, USCIS (US citizens/ neutralization services), custom services, various agencies, law enforcement; 3 branches, local – federal- global; National Park Service (Prettyman?), Library of Congress (Neil Gladd); many financial/brokerage/ accounting/ bill-payment processing/ collection institutions/agencies; insurance, car related businesses, utilities…, more; dealers Lakeforest Oldsmobile; phone/utilities/cable, judges, legal/court personnel, detective/ process server/ impersonators, with phony names, or would not provide names even in the court cases (Complainant could not get access to court files; could not even make copies); Leslie Gradet, Tamera Jones, William D Roessler; Offices of Treasury, Comptroller, Attorney Gneral: Joel Jacob/Jacobson, Gail Malle-Davis, Sylvia J. —Dr Lih Young, Rockville, MD

Dear Mr. Wheeler, et al., I am writing in disagreement with the proposed Net Neutrality rulings. I will be clear - I am not a multimillionaire, nor do I own a substantial, or even small, corporation. I am building a small business online and receive most of my news through the internet, from a variety of sources. Many of these are recognizably mainstream - "The Wall Street Journal" and "The New York Times" among smaller independent sources. My point is that the new NN rules will stifle both of these for me personally. While it seems like the new rules will only help small businesses and providers, it will harm them in the end. Only large companies will be able to afford the new "fast track" broadband regulations, leaving small providers, urls, and businesses behind in a slow morass of leftovers and crumbs. I am not selfish in this totally. Many Americans are small business owners who use the internet for advertising, directions, help, as well as sales. They need to in order to compete. Many Americans also use the internet for communications, news, and entertainment due to its affordability. Because the new NN laws favor only a few small organizations and corporations, the poor and the middle class will be less able to afford the wide provisions and innovations the open internet has provided. In effect, the proposed rules only hurt the people who are supposedly protected. Thank you for your time and consideration, C. Mercier
—Christopher Mercier, Vermillion, SD

It is simply un-American to restrict use of OUR airwaves in preference to a few who will exploit their advantage at our expense!
—John Wilson, Tucson, AZ

I live in a very isolated area and rely on the internet for information, entertainment and shopping.
—Glenn W Hay, Westcliffe, CO

The FCC is not a tool for the cable and isp providers . The FCC is supposed to keep the internet open to all not just the people with the most money . You are there to serve ALL Americans . Do not abandon us to the whims of the Big Cable and ISPs . Promote a competitive internet not a monopoly .
—Keith L. Root, Flushing, MI

The internet is the last free forum.
—James Westwood, ,

How can a public library, for example, provide the sort of internet access that its patrons need if you privatize the internet? How can a student accomplish homework in a timely manner if his or her parents can't afford to pay for the digital "fast lane"? Are you even thinking about the ordinary person in this issue? Or should we assume that all of you have been bought and paid for by AT&T and others?
—Toni Rorapaugh, Vestal, NY

The internet was meant to connect people and information, regardless of the location. Keep the INTER-net inclusive; please don't turn it into an outernet. Please reclassify ISPs as common carriers.
—Jordan Louie, Kent, WA

First the internet was developed with taxpayers' dollars. that's every taxpayer in this country. second the internet and all its permutations should be declared a common carrier just as AT&T, PG&E and all the rest of them have been from the getgo. The internet has become too important in this world to let it be manipulated by private corporations to the detriment of the rest of us. Throw out the old rules and reclassify ISPs as common carriers NOW! Stop playing around with the world's future commerce, we have enuf problems to deal with already.
—Sheila Goldmacher, Berkeley, CA

Dear Chairman Wheeler, Net Neutrality is important to me as an American because I believe a strong, balanced infrastructure (internet connections not withstanding) create a competitive global marketplace in the US and allow even our small businesses to remain competitive I also disagree with bandwidth caps as we are now limiting future children's educational opportunities when we do so. We are seeing a large increase of learning moving from traditional styles to a more internet-integrated curriculum, and we as Americans must strive to keep our educational system effective and efficient on a global scale We are facing growths in the technology sector like never before, and to prepare we need to have equal opportunity to access and upload content to the internet!
—Joshua Brown, Charlotte, NC

Monopolies are dictatorship. This country is not founded on that.
—Linda M, Apex, NC

because it's discrimination and wrong and a monopoly/anti-trust issue. The Internet is for everyone to use equally; the only thing that should be banned or forced into the "slow lane" is porn/obscenity sites.
—Jen H, email only, FL

We should be looking to break these giant companies up (remember the Sherman anti-trust act) to benefit the consumer and protect the Internet not creating massive in increases to their bottom line. We need Net Neutrality not Net Dictatorship.
—James Jordan, Englewood, CO

The internet was built on neutrality, without neutrality it's just a massive corporate intranet. Ever tried using one of those? They suck! Case in point: North Korea. Do you really want the whole internet to end up like that?
—Daniel Davies, Bournemouth,

Discriminating smaller companies and the private consumer over larger companies is NOT the cornerstone of ANY fair democracy. Not in my socialistic country, or your supposed land of freedom.
—Klas Linde, ,

I'm a salary-earner now, but some day I want to start a business, and in the interest of my dream, the American dream, and freedom of communication, true net neutrality must be embraced and protected.
—Bryant M Tran, Austin, TX

The Internet has always been an accepted form of "free speech". Don't change that!
—Thomas Peterson, Windham, ME

Net Neutrality is important to allow more competition, which is always good, and to save the public from a eventual monopoly which will probably charge more that the public is paying now.
—George Held, Huntington Beach, CA

I need net neutrality. I depend on my internet to gain information on the world I live in. To broaden my horizons and learn all I can.
—Katherine Stuart, Winter Garden, FL

FREE FOR ALL-NET NEUTRALITY
—Margaret Weeks, Sanford, ME

Leave the internet as it is, I run a small business from home where I am connected to the interest 8-12 hrs a day. I am a stay at home mom, making enough to afford our everyday expense. I do not make enough to pay more fees on top of what I already pay IRS.
—Alicia Grainger, conway, SC

Dear FCC Chairman Wheeler, it's vitally important to our democracy that we keep Net Neutrality, please reclassify ISP as common carriers. A corporate and monied tier system would heavily dampen small business opportunities; the engine of our economy. Please do the right thing for a free press and democracy with Net Neutrality. Thank you, Carlos Pagán
—Carlos Pagan, North Miami Beach, FL

Net Neutrality is very important to me because it gives me freedom to use the internet anyway I feel like and it allows for me to express my opinion to an audience. Please save Net Neutrality and equal access for everyone to use the internet.
—Jonathan Gottlieb, Natick, MA

This plan is just a way for Tom Wheeler to pad his pockets. These giant companies are going to make a ton of money if this passes and Wheeler is going to get a piece of it. Discrimination about internet speed is absurd.
—Joe Maruggi, North Attleboro, MA

FCC, you are destroying the internet. The internet is a basic human right. This has been acknowledged and accepted. To make it selective is a violation of our basic human rights. Your bowing to the providers is insulting and pathetic. Stop it. Right now.
—Jordan Ford, Hinesville, GA

A free and open internet is essential for the propagation of many new businesses, arts, information, and so much more. Forgoing net neutrality will cripple the internet, and our society will suffer for it. The proposed actions will only line the pockets of those who already have enough, will disrupt societal progress, and will harm many in the process . Please see reason and reclassify ISPs as common carriers.
—Seth Hoch, Saint Louis, MO

Our tax dollars developed the Internet. It should be classified AS A UTILITY. Big business has no right to control it!
—Ronda Wilde, Cincinnati, OH

We need net neutrality because we are already becoming a nation of haves and have nots. The present plan being put forth for internet use will only further divide us as a people. It will further diminish our sense of democracy and make us a country owned and operated by the highest bidder. People won't count only profits.
—Ann Marie Cunningham, Chicago, IL

I live in Maine where internet speeds are already slower than national averages despite the expenditure of millions of federal dollars on the so-called 3-ring binder plan which has done absolutely nothing to make high-speed access available to the majority of this state. These new rules will be the nail in the coffin for high-speed access for the majority of the public. Once again, a colossal money-grab for big business -- I guess I need a lobbyist of my own -- THANKS FOR NOTHING, MR. WHEELER -- HAVE FUN SPENDING THE MONEY THEY PUT IN YOUR OFF-SHORE ACCOUNT-- SAY 'HI!' TO MITT FOR ME.
—Ken Tidd, Bangor, ME

The internet is, at the least, the equivalent of the phone service of previous generations. Any double talk claiming that ISPs are not providing a utility is disingenuous as they have, in essence the functional counterparts equivalent to the infrastructure of the telephone system before it. The internet is the modern and more powerful utility and should be held to the same standard of neutrality as any other utility.
—Glenn M. Mooney, North Smithfield, RI

The citizens of this country, the individuals who can vote, deserve a free and open internet. Reclassifying ISP's as common carriers will give the FCC the power it needs to regulate a bloated monopolistic greedy industry and take away the threat of an unequal internet.
—Brett Stewart, Novato, CA

All my friendships are long distance, maintained by the technology that powers an open internet. Please reconsider this decision. I should not have to abandon these connections because Comcast is more famous.
—Peter Buller, Portland, OR

My little site should have the same level of access to those who are interested as do the telecomms who wish to have control of the network.
—Gary O'Brien, Tucson, AZ

I am the customer, who is the king. Deliverers of info are just the vendors, that can't live without kings (customers). So, we are the most important and we don't want to loose capacity and speed.
—Jo Seegers, ,

I strongly urge you to reject Tom Wheeler's new internet plans. I believe they will ruin net neutrality for all of us
—William Stewart, Forestville, CA

A free and open internet protects freedom of speech. A closed internet stifles creativity. Corporations whose only motivation is money should not have this power. No one should.
—Justin Breen, Bensalem, PA

It would be nice to assume that giving more access control to the ISPs would benefit anyone other than the ISPs and large well funded companies. Unfortunately, it is far more likely that the proposed rules will make it increasingly unlikely that small groups will be able to afford to bring the inovation to the network that has paced its progress over the years. Over time, the proposed rules would be a serious hinderence to the useful enhancement of the internet that results from the efforts of these groups. I strongly oppose the new rules and prefer that ISPs be reclassified as common carriers to more accurately classify their position as a commodity service similiar to other utilities which are available to all on an equal basis.
—A L. Mullikin, Peachtree City, GA

A two tiered internet is not in the interest of the general public, neither financial or when gathering information on any subject.
—Patricia A. Haumann, Oberlin, OH

No two tier system, one for the wealthy corporations and one for the rest of us. Get rid of rules that make some of us second class citizens and reclassify internet service providers as common carriers, so we can continue to have net neutrality.
—ret honmgret@charter.net Martha Goldin, Los Osos, CA

Unless you protect net neutrality by making it a public utility, the poor (and even low-middle-income) will be left out of the technological revolution, as will non-profits, libraries, etc., because they will no longer be able to afford access. And nowadays you NEED access for jobs and school!
—Christine Klunder, Bellingham, WA

The net is too big a place to be controlled by a select few. Besides, people ought to be treated as equals on the net.
—Jordan M, Wood, SD

The Internet is as important to America as any other public utility. The ISP's should not be able to favor one content provider over another. The website for a tiny independent blogger should load just as fast as the site for a major media outlets. Please reclassifying ISPs as common carriers.
—Jeremy L Huber, Vancouver, WA

I can choose who carries my internet.
—Eamon Kummert, Fairfax, CA

The internet needs to be accessible and affordable for everyone and not just to the folks with deep pockets.
—Julius Salinas, Esko, MN

The american people have a voice thru the internet. Your proposal will kill that voice
—Carolyn S Coder, Marathon, FL

As a retiree on a small fixed income who uses the Internet for learning, researchig, news and communication with relatives, I would be unable to afford these activities if websites and services are forced to impose charges for access, as your proposed changes would inevitably do. Please keep the Internet as it is!
—Thomas Mora, Leander, TX

I am an educator. Students today rely on the availability of affordable information from their homes, as well as in public and private institutions. The Internet is their lifeline. Net Neutrality is as democratic a notion as the first public library, founded by Ben Franklin. We depend on Net Neutrality to educate the next generation of Americans. I request that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Erik Deerly, Kokomo, IN

I use the internet for my business and I can't afford extra fees.
—Esther Fredholm Conway, Port Townsend, WA

The internet depends on speed. Allowing corporations, which depend on revenue/profit, to charge for faster speeds results in the creation of an artificial market. One where internet "providers" are provided incentive: they can increase revenue by charging to improve network speeds for the customers that pay. This artificially creates a market where the winners are those that can afford to pay for faster content delivery, and the losers are the general public domain content, startup companies, etc. It would not be altogether different from maintaining roads in the United States via similar methodology. Major businesses could "pay" for improved access via better roads, those that cannot afford it get whatever funds are left over. There are never leftover funds. The ruling by the FCC, if left unamended, will fundamentally change the internet in ways that are ideologically opposed to what makes the internet one of the greatest inventions in the history of humankind: equal and unrestricted access to information and content to as many users that have the privilege of living in a country committed to that lofty ideal. Corporations *DO NOT* have the best interests of customers in mind. Corporations, out of necessity, have the best interests of corporations in mind. This is going to be a pivotal point in internet history, and the FCC is creating a disaster for Americans. PLEASE reconsider!
—Wesley Williamson, West Linn, OR

These companies already have too much power. We as a country should be looking to split these monopoly-esque giants, not give them more power.
—Thom Hudelson, Discovery Bay, CA

Don't let a few people decide what a majority of Americans want. The internet is a true modern marvel. Don't let them ruin that.
—Joe Moralez, Olympia, WA

Net neutrality, specifically the reclassification of ISP's as common carriers, is important to me because I want internet speeds comparable to those of other OECD countries without being bled dry by the internet service providers. The US is 'supposed' to be one of the most technologically advanced countries in the world. It's time we started acted like it.
—Sophie Binney, Clarkston, GA

The net doesn't and shouldn't belong to the corporations with the most money. The internet is for everyone and everyone should have equal access. Do the right thing. Stop protecting corporate America and keep Net Neutrality.
—Melody Brinklley, Lyons, CO

In an era where corporations perpetuate data mining practices that infringe on privacy rights, it's more critical than ever to have an even telecommunications playing field so that new companies that respect the right to privacy can thrive and provide viable alternatives.
—Jim Hay, Lakewood, WA

Work for the people, not special interests.
—Carolyn Lilly, San Diego, CA

It is disgusting that yet again another Federal Commission is in the pockets of the amoral greedy economic treasonists! Cut the crap!
—Susaan Aram, Laguna Beach, CA

Money already influences politics. Must it also influence the Internet? That's just wrong! We need more equality across the board in this country!
—Barbara Falkenberg, Columbus, OH

The internet is one of the few places left with truly free speech, equal access and an unregulated or government/corporate controll of ideas.
—Brian McCollum, Staunton, IL

Every phenomenon has a tipping point where the natural flow of events takes on an unmistakable transformation. This is it! We have been heading in this direction for a long time now, but the death of net neutrality marks the clearly identifiable instant where we have officially become The Corporate States Of America. The Federal Communications Commission has sold the citizenry of our country down the river to the highest bidder and we will never again be able to claim that we are the land of the free again. You should be tried for treason.
—John Cannatella, New York, NY

Not sure what you think "Freedom" means, but this ain't it.
—Dustin T. Hahn, Van Nuys, CA

Net Neutrality is very important to me because I'm starting an online business within the next month. I don't want it to fail because I'm being forced into a slow lane for not being able to afford to pay AT&T, Comcast or Verizon extra fees for the faster lane! I want the Internet to remain free to everyone!
—Ms. Rose Riker, Sioux City, IA

It is not OK to force slower internet on people just so rich people can have ridiculously fast internet. This would be another step in creating and maintaining a ruling class.
—Jesse Varner, Sheffield Lake, OH

We believe that the internet belongs to us all, and many taxpayer dollars went into the infrastructure. If we truly are to behave as a democracy, then we need to put measures upon those select corporations that aim to monopolize something that should be public. Isn't the FCC here to protect our consumer interests? At this point it seems as if it's acting on behalf of the corporate world.
—Libet Chang, Sarasota, FL

Stop the corporate thieves and welfare billlionaires. Enought IS enough. Time to butcher the big fat piggies.
—James Norgrove, Winter Park, FL

The internet has expanded over the years. It is now a place where people can start businesses, entertain themselves, and get their news. Net neutrality has ensured that people can do just that. I rely on the internet a lot. To take net neutrality away would be killing new businesses that are just starting to flourish. It would slow and limit entertainment and our news. This situation also arose in telephone lines, with companies charging outrageous rates for simple calls. The internet has decreased the use of telephones and replaced calls with messages and emails. To destroy net neutrality would be much like the situation mentioned above.
—Xiaoling Li, Great Neck, NY

Net Neutrality is important because information is free, and knowledge is power. If you want a better country then you have to open up resources, and the internet is just as important as anything else.
—Ashley, Boerne, TX

Dear Mr. Wheeler, Please don't cave in to these internet service providers. I am an immigrant who just brought ideas and knowledge to enrich USA and flourish myself here. If there were many obstacles (like collecting tolls at every stop on my way to USA), I would not have made it to here. Similarly, there are many small companies with lots of innovative ideas and services springing up on the internet. If they have to pay to every big ISP to get access to their internet users, they will never make it. Please make Net Neutral. Thank you, Bhaskara Reddy
—Bhaskara Reddy, Herndon, VA

The internet is supposed to be a free highway to exchange information through many outlets. Killing Net Neutrality is just giving the finger to everyone that has made the Net what it is today and giving everything over to the big money-sucking corporations that don't give a care about what is good or bad for the future of the internet. STOP GIVING THE BIG BOYS THE TOYS! The Net is an equal playground.
—Elak Swindell, Waynesboro, GA

The internet is the modern "Free & Open Press." Our democracy depends on it staying that way.
—Tim Phares, YOUNGTOWN, AZ

Net Neutrality is important for our economy and free expression. If internet providers are allowed to control the speed of IPs then the video game industry will take a tremendous hit, which is a major part of our current economy. Jobs will be lost and the GDP will drop. Not to mention that if a provider doesn't like your content they can make it slow to the point that no one will look at it, effectively preventing the constitutional right to freedom of expression.
—Dalton Medd, Annapolis, MD

do what is right..and not just right for your org.Keep the net Neutral!
—Don Smith, Napa, CA

I am a disabled person on a fixed income and because of my disabilities, the Internet is my main form of communication. Raising the prices on my Internet access would be a financial catastrophe for me and others like me.
—Renee C Mulhare, Tewksbury, MA

Net neutrality maximizes the current potentials for open and free inquiry for all. It is now an indispensable part of an open, free and democratic society. Ending net neutrality, in effect, means censorship, disenfranchisement and corporatist plutocracy - it is plainly anti-democratic. Kill off net neutrality and you are fully complicit in the destruction of American democracy.
—Philip Minehan, Milwaukee, WI

list isp as common carriers and get rid of your proposal. it doesn't benefit for anyone.
—Dre Cardinal, ,

The proposed end of Net Neutrality will seriously damage the greatest good that the internet can offer. Allowing SP's to determine how to provision content would be a historic blunder, bordering on tragedy.
—Michael Alexander, Selden, NY

The stratification of America is apparent in most, if not all, economic and social institutions. One realm where this gap between rich and poor is slightly less abrasive is access to information and communication. Take that away, and you will create not just economic disparity, but technological poverty as well.
—Mutasim, San Jose, CA

Classifying ISPs as common carriers would allow Net Neutrality to continue as it has. Considering how little Tom Wheeler has listened to the responses and still pushed towards the two-tiered system can anyone believe that there would be any form of enforcement to prevent ISPs from abusing the internet fast lanes. We've been ignore before when we said not to go ahead with this plan and were told we were listened to. One lie is enough to know that the FCC will not prevent ISPs from abusing the two-tier system and creating corporate control over the internet. Only reclassifying ISPs as common carriers will keep Net Neutrality. Do not lie to the American people again and do not push through with this two-tiered system.
—Vincent Molina, Rialto, CA

The proposed Internet rules would be disastrous - condemning us to a world where those who are rich and powerful today will maintain a stranglehold on our future. A democracy requires diversity of opinions, ideas, and approaches, and Net Neutrality is absolutely essential for us to avoid becoming an oligarchy.
—Paul Drummond, Lake Havasu City, AZ

It is outrageous that a possible two tier system of Internet usse could be a reality; imagine being given a choice of paying more for faster Internet service. It is imperative that the Federal Communication Commission assert itself and keep our Internet free. Thank you.
—Philip G Rich, Albany, NY

My small business depends on a fast internet connection and it shouldn't be slowed down since I am not a large business owner.
—Don Crozier, o'fallon, MO

Enough with the government bowing down to corporate america. Stand up for the rest of us!
—Barbara Hauck, Largo, FL

Because innovation is best at an even playing field. Make it so. Net Neutrality is necessary and important for the US's future and for our children and on...
—Chris Mendel, Columbus, OH

Just because a family may not be able to afford to pay extra fees doesn't mean they should not be given the same service as someone who can. It doesn't cost extra for the company to provide everyone with the same service. My children deserve the same internet as the neighbors and should not suffer because I am a single mom and internet is a luxury in our world.
—Sherri Jasperson, Provo, UT

I ask myself: Why do the big, greedy, ISP want fast-lane internet when the people of this nation and a majority of other businesses don't? The answer: Comcast, AT&T and others want to own and control our future--the internet. They can't stop how the internet is changing their old business model; but if they can own the pipes, pick winners and losers (i.e. paid prioritization) then they can maintain control and ownership, they can keep prices for cable and high-speed internet within their grasp all while keeping competition in check (in their favor of course). Chairman Wheeler, please, please fight the greedy ISP. Remind them that the internet is a utility. Yes they will fight any Title II you may (nay, should) enact, but the fight is for the people. Remember what the constitution says: We the PEOPLE, not we the corporations. No fast-lane internet, no paid prioritization, Mr. Chairman.
—Patri McGinness, Urbana, IL

I am a college student who uses the internet for online courses and without net neutrality I would not have been able to have gone back to school. I believe that equal access to the Internet is a right and without net neutrality internet service providers would be able to discriminate against me and other people as well.
—Sarah, Wellington, NV

Communication is vital to everyday life. In a world were almost all communication happens online treating as something other than a utility that is open and equal for everyone is just wrong. Keep companies like AT&T, Comcast, and Verizon from monopolizing the markets across out nation and forcing consumers and Internet users to pay more for less.
—Collin Jackson, Rockport, TX

If approved, these rules would mean the end of Net Neutrality! Wheeler’s plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. These companies would have the power to pick winners and losers online and discriminate against online content and applications. And no one would be able to do anything about it.
—Mike Wayne Clark, McHenry, IL

First of all why does the FCC even think this is a good idea? to allow a new corrupt business system online? To allow true internet freedom to die? Why does the FCC have any legal authority at all? FCC you do not deserve to have any authority over the internet. You have had countless times where you could of improved the internet , but instead you have made it even worse. Give us all a break and stop messing with the internet. You dont even know what the internet is. INTERNET FREEDOM IS FREEDOM WITHOUT THE FCC
—Lance Wright, Yorktown, VA

If you want optimum profits then write this in stone..'ISP's as common carriers will deliver in GOOD time a universal communication system wheras creating favoured space and speed options to the powerful will split and destroy a great invention.'
—John Lawlor, Annamoe,

Equal for all... money should not determine who has priority on the net!
—Ron cabucio, Fall River, MA

Money shouldn't be allowed to buy everything.
—Arthur Sutherland, Sandy, UT

I think that the rules that would get rid of Net Neutrality are a tool of discrimination. As a middle-class woman, I'm already discriminated against enough with pay inequality and lack of representation from people who truly understand my true issues. I run a small website and will not be able to pay any type of fee to be "fast-laned". How will people not only find my website but be able to access it with any type of speed before they give up and move on to another site. It feels like taxation without representation for lack of a better analogy. Please, please, please do not go through with this. We smaller people deserve a break.
—Sarah Foisy, Chandler, AZ

Please protect net neutrality. The consequence of a two-tiered internet would be devastating to smaller companies.
—Sandra Fujita, Kaneohe, HI

Net neutrality is essential to all. We don't want : ISPs to have the right to shape internet traffic, fundamental, horrible change to the nature of internet, inhibition of innovation increase in costs of using the internet - horrible step back. Internet should ultimately become free resource to all. Near monopoly of ISPs needs to be fought in favor of more free market options for all users.
—J Kossowski, Sacramento, CA

The internet is an important resource for everyone. The rich shouldn't be able to have better access to it just because they can afford to pay more for it. That is socioeconomic discrimination and we the people won't stand for it.
—Jeremy Wethall, Orem, UT

YOUR JOB IS TO PROTECT THE INTERESTS OF "WE THE PEOPLE". SO WHY ARE YOU PLANNING TO INCREASE CORPORATE PROFITS AT THE EXPENSE OF PEOPLE?? I WANT AN OPEN INTERNET THAT TREATS ALL USERS THE SAME. THAT IS YOUR JOB. (AND, YES, THE CAPS MEAN THAT I'M YELLING!)
—Crystal M. Clearwater, San Diego, CA

The 99% are tired of having deals approved for big businesses, which ultimately negatively impact the small businesses, and the start up entrepreneurs in numerous ways. Please leave the Internet free, and do not grant special privileges for any individual organization.
—Sage Mason, Barre, MA

Please stop the Net Neutrality non-sense.
—Bradley Clayton, Metairie, LA

Why are we changing freedom? Who is profiting? The people? Why Why Why? Do you care about us, the little people?
—Patricia Wolter, Boulder, CO

First of all I'd like to bring up that I don't live in the US, but as someone who strongly believes in a free internet for all I have to speak up. So many people of all ages use the internet as a second home, whether it be to escape work, school, and their troubles. It's always been there with it's doors wide open, and accepting everyone in. You have no right to tear down our home and think that we won't stand to protect it.
—Grant Chivers, ,

Net neutrality is important to me because it should be equal access to all, not to those who can afford it. By creating fast lanes for additional $$, you've created another class of internet for those with limited funds. Please treat this as a common carrier, not something for comcast, time warner and others for additional revenue stream, the make enough now!
—Susan Bjerke, Scottsdale, AZ

Information should go out to everyone at the same speed. It is my choice what I want to pay for it to get to me.
—Nancy Davlantes, Kaneohe, HI

It will create a society of the haves and have nots. The internet should be for the free flow of ideas not a marketplace for the highest bidder.
—James D. Partin, Ludlow, KY

Dear Commissioner---Net Neutrality, is very important to the people and citizens of the United States, please preserve and protect it. Thank you --Andrew Yuen, Mount Pocono, PA 18344
—Andrew Yuen, MOUNT POCONO, PA

It is the last vestige of freedom of communication. If you have a highway, with equal laws and taxes paid by all to sustain its viability and all of a sudden you say if some pay more money, they can travel faster and ignore the laws that pertain to all. Money transcends ethics these days. Many are bought and paid for to make sure the interest of the rich are served and the rights of the less fortunate ignored. Slavery is making a comeback and the plantation mentality revived. Shame on greed and divisiveness!
—Robin Brewer, Pittsburgh, PA

Adding restrictions to an existing service is neither a "new" nor "value-added" service - it is hardly essential. Therefore, the control points and the resulting fees are not essential or value-added. It is not going to reflect user-access such as user-fees on a bridge. Potentially the hardest hit group will be small business - our only growing business segment - which will have to pay for additional fees to use something they already have without fees. A meritocracy is welcome, plutocracy and oligarchy are not.
—Randall MacLeod, Phoenix, AZ

It's the base of all the awsome things that developed over the years on the internet. Killing net neutrality is like severing the roots from the rest of the tree.
—Gergő Pentz, ,

This infrstructure should be open to all. Instead of "fast lanes" the ISPs need to speed things up for everyone; bigger fiber lines. Instead of pure profit, invest. It's a utility and should be treated as such.
—Christine Burnham, Jamaica Plain, MA

These companies would have the power to pick winners and losers online and discriminate against online content and applications. And no one would be able to do anything about it.
—Frank and Janet Loudin, Eastsound, WA

The FCC's plan is essentially a form of economic segregation, and is simply un-American.
—Sara West, San Diego, CA

Many people depend on their local public libraries for internet access. Slowing down the internet will severely impact them.
—Mary Detrick, Clearwater, FL

The internet is an educational tool, created by society for its betterment. Commit to EDUCATION and the success of future generations by allowing this tool to be accessible equally, by all.
—Emily Schooley, Toronto,

I don't even see how this is being considered! I use the internet to homeschool my special needs sons. I cannot afford to pay more, and my kids cannot function in public school. Think about the people -- all the people -- not just the wealthy corporations!
—Caroline Stanton, Boulder City, NV

Chairman Wheeler's plan would let ISPs like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees — and a slow dirt road for the rest of us. These companies would have the power to pick winners and losers online and discriminate against online content and applications. And no one would be able to do anything about it.
—Jordan Leary, ,

Do not approve the current proposed rules for a tiered Internet. Instead, reclassify ISPs as common carriers. ISPs need to be regulated/controlled in favor of the USERS (citizens of the U.S). Otherwise citizens become captive to MONOPOLISTIC control of their broadband airwaves. Most communities realistically only have 2 choices between service providers which are available to them --- and these companies are already illegally throttling communications. D-B Hudson
—Mr. D-B Hudson, Sparks, NV

Internet-based innovation requires start-ups to have the same playing field as the giants in the field. Without net neutrality barriers to entry for small firms have the potential to become enormous. This has stymied innovation in so many industries, but the web has changed so quickly because the playing field at least at the delivery level, was more or less equal. Neutrality must remain!
—Cameron THibos, Bloomington, IN

I don't want to have to pay to use the Internet! I couldn't use it if I had to pay! They don't want poor people to use the Internet, that's the method behind this madness!
—Janet Borelli, Lakewood, OH

Don't take peoples money from them. It's just a dick move.
—Rachel Stean, ,

It is our internet. The corporations work for us or they are out of business. Welcome to 21st Century Accountability. www.WeAreOne.cc
—Joseph Kohn MD, Wailuku, HI

Taking away freedom on the internet is selfish and terrible! Personally, I'd prefer NOT to pay to look at pictures of cats, and keep awesome fan work online.
—Carmen Mann, Denver, CO

I am active on the small-business site Etsy, which is a gathering of many small-business owners and artists selling their creations online. Most of these small businesses sell on Etsy to make a living. If Etsy members are forced to pay more just to stay online and in business, many will not succeed or prosper. This is only one example of the harm a "pay to play" Internet will have on people trying to make a living in these tough times. Please do not create an Internet system which favors the wealthy over the rest of us. Please keep the Internet open to the voices and business efforts of all people.
—T M. Kraemaer, Milwaukee, WI

I live far away from some of my friends, without free internet I can not contact them. This connection is vital because one of them is suicidal and I am trying to help her recover from cutting and make sure she doesn't do it again. Please, for her, don't do this.
—Maggie McDonald, Virginia Beach, VA

I can't afford the "high" speed Comcast now offers. I can't imagine what it would be like for schools and other institutions if these rules are implemented.
—Lydia Foisy, Swanton, VT

As a medical student, I have learned how useful the spread of information and knowledge is in promoting the health people and communities. Information is the key to growth, progress, and well-being. Keeping the internet open allows for easy access to information by all which in turn benefits everyone. Ask yourself, in the big picture, what will come of undermining the greatest asset of the internet- the sharing of information? What could you personally miss out on? keep the net open and let our country stay informed.
—Leslie Yedor, Santa Cruz, CA

Please do not allow Internet Service Providers to monetize the internet. Thank you.
—Eric Kempter, Pleasant Hill, CA

The internet was created as a resource to be shared by all, don't let a few corporations impose their own rules for their own benefit. It hurts the consumers and the rest of the world. Keep the internet open!
—Gregory Dunbar, Portland, OR

The internet is not something companies should have free control over, so ISPs need to be classified as common carriers
—Noah Greene, Portsmouth, NH

I use a wide range of Internet sites and services, for entertainment and work alike, ranging from big corporate retailers and content providers to small, independent websites. Any proposal which separates the Internet into "tiers" of ANY kind will severely damage my Internet experience. Please reclassify Internet service providers as common carriers, and ensure that Net neutrality survives for everybody's sake.
—Timothy Miller, Baltimore, MD

how does this help ANYONE?
—Noah Bender, Bethel, CT

Rural areas like mine have so few choices in broadband
—Linda Schermer, Sedona, AZ

Simply because equality is important in every aspect of any matter.
—Mats Johansen, ,

I use the internet every day for a variety of reasons. Big corporations have ruined just about everything else on this planet; do they really have to ruin the internet as well? KEEP NET NEUTRALITY!!
—Duncan Brown, Tucson, AZ

Since I have limited mobility, the internet is my lifeline. It is my telephone, newspaper, shopping mall, postal service, electricity and water. Please don't cut me off.
—Joanne Dixon, Colorado Springs, CO

The internet is a level playing field for the time being where any startup/business can have a website with the same level of prioritization as any other website. Removing this level field and allowing one company to get a leg up by prioritizing their traffic above others completely destroys this level playing field and will ruin the internet as we know it today.
—Mr. David Orner, Stafford, TX

Dear Federal Communications Commission: FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Elaine # 1846 Faison-Menzel, Denver, NY

Net neutrality means a lot to me. We all get the same speed internet access and you want to come along and change all of that? Discriminating against those who can't pay the extra fee? Well I've got news for you buddy. Your plan isn't going to work. Bitch.
—Jonathan Espinoza, Reno, NV

The internet must be treated as a public utility preserving net neutrality for the 21st century progress we need.
—Gustav Sallas, West Palm Beach, FL

I am appalled at Mr. Wheeler's proposal. Will we turn everything in our country into things which favor the rich? I do not choose to subsidize AT&T or Verizon any longer. This is wrong, plainly and simply. The Internet must be open to all, without segregating users into rich vs poor. Should the FCC adopt this terribly-flawed plan, I am sure that citizen outrage will force Congress to overrule the FCC.
—Geoffrey Simon, Raleigh, NC

I run a small online publishing business that will suffer greatly from new rules. The new proposal is NOT friendly to small business owners!
—Andrew Rench, Glen Ellyn, IL

There have been repeated votes on Net Neutrality in recent years. In every case private citizens have expressed the desire to keep the current rules in place as this allows the internet to operate in a manner which is best for the public interest. It has become clear that the only disagreement on this point comes from private interests seeking to profit at the expense of what is a superior communications setup for the people at large. Moreover it is clear that the only sponsorship for changing the rules within government is coming from those being aggressively lobbied and, I suspect, paid for their efforts by these same interests. The American people have indicated repeatedly that we prefer you not mess with a system that isn't broken. Who are you beholden to, and why is the overwhelming majority sentiment just not sinking in?!
—John P Lawler, Wilwood, MO

I make my living online as a marketing consultant for local small businesses.
—David Cline, Littleton, CO

The internet is meant to be for everyone. It exists for everyone to use, to gain information, to socialise, to discuss ideas. The internet is meant to be used by everyone and internet service providers should not limit this by making people pay more!
—Hannah Crouch, ,

I work with a non-profit internet radio station and to have speed varying would kill our fan-base. Along with that, as we have only donations to depend on, our ability to do our job would suffer greatly as we will never be able to compete with an extra price to have to pay to keep things up too speed. I have alot more that we could discuss if you like, but I don't really think either of us would leave satisfied. Feel free to contact me at dantalionsm@gmail.com. Until then, I will do everything in my power to rally support to demand Net Neutrality. The radio is quite a powerful tool that I'm not afraid to use, so please make Net Neutrality not just a wish, make it a fact.
—Claud Truax III, Bartonsville, PA

An unbiased internet is essential for the success of our democracy.
—Steve Lyons, rockford, IL

Money and power should not speak! Equal access for all!
—Charles V. V. Brochetti, Slippery Rock, PA

The Internet has been a source of free and open communication between all connected citizens on the planet. Please don't allow it to come under the control of the wealthiest Internet Service Providers for the sake of their profits. Please reclassify ISPs as common carriers.
—William G Schoonover Jr, Kitty Hawk, NC

You realize that you're not helping yourselves here right? You're just giving people more reason to get mad at both the FCC and ISP providers. Denying Net Neutrality is just going to make everyone angry and they're not going to put up with being treated like crap forever. If this bill goes through, there'll be backlash. It's in your best interest to listen to the people calling for a revision to the rules.
—Sam Peeples, Spring City, PA

This is the first step in government determining who gets favors on the internet -- compromising the First Amendment. No, no, no, no, no. Everyone gets equal treatment.
—Steve Courts, adsfljkdf, WV

it matters because without net neutrality, we are one step closer to total fascism... this is one more attempt at corporate takeover to suppress information and news.... and to hinder people from sharing said information
—Marina Vrouvlianis, Newton, MA

These large telecom and internet companies need to be regulated. If left to their own devices, of course they will do whatever they can to boost their profits. If you don't reclassify them as common carriers, they will act in ways which will increase their profits but not be best for consumers/citizens. Your job is to reflect the interests of every day people so that these huge companies cannot discriminate against competitors. I hope you will not approve the too corporate friendly rules that Mr. Wheeler has proposed and instead regulate them in a meaningful way by reclassifying ISPs as common carriers. Thanks, Joe Wainio
—Joseph Wainio, San Diego, CA

please reclassify ISPs as common carriers.
—Charles Courant, Belfast, ME

In a democracy nothing is more important than the free flow of information. In a perfect world everyone would be equal and would be able to better themselves with out starting wealthy. If major multibillion dollar corporations can control how quickly you get information and whether you are privy to do it, we might as well trust our lives to a dictator and officially declare democracy dead, as well as the chance to better your position in life. The world has changed a lot since I was little and we still had landlines and computers were as large as a building. Now they can be as small as your thumbnail with even more information than the dinosaur hard drives. I see another type of dinosaur (corporate t-rexs') taking over the United States and it doesn't have my best interests or the best interests of any human being at heart. Please revise the rules which could mean a new dark age.
—Valkyr Johnson, pueblo, CO

'fast lanes' are the end of start-ups, entrepreneurs, and individuals having free access to the net. we wouldn't allow this sort of thing with any other public utility, why is this one any different?
—Mark Thomas, Brighton, CO

I use the internet in a variety of ways, I shouldn't be limited on what I can and can't do
—Samantha Yigdal, Pittsboro, NC

Internet providers will do what is in their own best interest if they're allowed the discretion on the treatment of internet traffic. Their best interest is increasing their margins. They will squeeze every dollar out of their customers as they can since they have monopolies in many markets. People need internet. They don't have an alternative but to pay extortionist rates. Any decision short of reclassifying the providers as common carriers is a failure.
—Mike Wells, raleigh, NC

The internet is crucial to business innovation. It has to be a level playing field.
—Rudy Peprich, Hopkins, MN

Net Neutrality protects the peoples voices and keeps the internet the one true place where we can all be equally seen, heard and have equal access to important resources which otherwise may be denied to us due to economic or social situation.
—Olivia Barry, ,

The marriage between comcast and Time Warner should never happen
—Oren Sachs, Rockville Centre, NY

It's a slippery slope in my opinion, and with rampid deregulation of industries throughout the US it's no doubt the ISPs will be able to abuse your rules and suck our economy dry. Also this could and will be used to restrict the free flow of information and ideas hurting future development in our country. We are the greatest country on earth and we are slowing down. Doing this will ensure other countries will get ahead!
—Brandon Scott Spicer, Murrieta, CA

Don't change the internet to be a biased one - Protect the Net Neutrality and keep it open as it has always been. It is the one great thing that has been evolutionary in our time, allowing for new technologies, sharing of ideas and innovating the way business is done and created. We need to support and keep it as it has been on a even foundation for all to have the opportunities for advancement in our country. We the people should be able to maintain our freedom of choice as to what sites we want to go to and be able to do so in an expedient way. Many of us already pay our ISP providers for high speed internet. If Net Neutrality becomes a thing of the past as many do not want to happen then I personally will have to make a decision as to whether or not I continue to depend on the web as much as I do now. With so many people out of employment, paying more taxes than ever before, losing homes, high student loans etc....you actually will just add to the hardship of those in the majority of this country already struggling to make ends meet. Changing the game at this point in time regarding the web, is just more of the greed of corporations, and control of the American people that needs to stop. What we have had needs to be protected and expanded to become better and better in development for advancement, not stalemated with tiered options. Keep it open don't slam doors of the web on those who are not corporations with loads of money. If this goes through I can see where many bloggers who make a living blogging will be put out of business due to how the tiered system would work, and that is not level ground for anyone doing business. Please do not let this bill go through.
—Ms. Deborah Lycans, Tucson, AZ

We've become an oligarchy. The internet is our only hope for returning to democracy.
—William Tiwald, Albuquerque, NM

Please reclassify ISPs as common carriers. I'm concerned that a two tiered internet would not be good for anyone other than the largest ISPs and their lobbyists. How can a slower internet benefit anyone? You're making gatekeepers out of ISPs and that's too much power - that power will corrupt - hell, Comcast is morally bankrupt already, I can testify as a former customer of theirs.
—Anthony Zimmerman, Ferndale, WA

Please keep the Internet open to all people, and not grant a few rights over others. This truly gives an unfair advantage to already established companies and squelches any potential startups. Annihilating any competition in any thing always leads to weakening whatever that thing touches. If the Internet itself is weakened, then all things that are ever influenced by the Internet, too, will be affected!
—Tom Steinmetz, Brecksville, OH

World Wide Web must stay free, open and for everyone. This network is the evolution of mankind.
—Lazanas Spyridon, athens,

I use the Internet on a daily basis, and I do not want to find my access slower than it already is. Big companies should not control what we can search for, or slow down any site that we may want to use!
—Gerald H McKelvey, Manteca, CA

Let the people decide, not politicians. I don't want to pay extra for the best thing ever...the internet. I pay for fast internet so I can do what I want with it. I play Xbox live and watch a lot of Netflix and who do you think you are to making me pay more for certain streaming activities. Shouldn't you be looking out for the greater good not taking dirty money from polititions? #Bullshit
—Brandon Alder, Arlington, TX

think for the people. your plan is selfish and does not help us in any way. I am not the only one who thinks this way.
—Aisha Heidt, Ewa Beach, HI

Don't allow a corporate takeover of the internet service. Enforce anti trust laws
—Sheila Wyse, sherman oaks, CA

The internet should be equal for all.
—Ian Brown, ,

With the internet filling a big role in the lives of hundreds of millions of people, up until now it has been an equal place for everyone. And I among millions of others would wish that it could stay that way. A place with so many users from across the world should offer equal rights to its users and not just sold of to the highest bidders. You should re concider and instead re classify ISPs as common carriers.
—Benny Soerensen, ,

Net Neutrality is about the only form of comunication that does not judge race, sex, religion, sexual orientation, and more. It works the same for everyone!! Please protect true Democracy. We the people are asking to save net neutrality. Who does the FCC serve? The people or The corporate?
—Elvis Medina, philadelphia, PA

I am appalled and disgusted that Net Neutrality is being threatened by the new internet rules. ISPs ARE common carriers and have NO right to tier their services. As an American, and a consumer, I am sick and tired of our government giving everything away to big business. STOP IT!!!
—Colleen Kelly, salem, OR

Stand up for freedom of speech!!!!!!!!!!
—brian Abbott, Goldsboro, NC

This will lead to censorship, reduce innovation for everyone but especially small start ups, lead to higher bills, and with continued mergers monopoly. This looks like regulatory capture and leads me to suspect corruption exists in those who voted for the current proposal. Are members being paid off with industry jobs for themselves or their friends?
—Louis Kali, Whigham, GA

The open Internet is the pillar of the technologically advanced future, any significant change other than speed can and will ruin it, chill man sit back and let nature take it course
—Chaim Kohn, Brooklyn, NY

The internet has become a utility, like electricity or water. Should the government allow companies to charge more for clean water? Please end your plans to kill net neutrality.
—Shawn Beelman, Lees Summit, MO

Because I want the Internet to be open and free.
—Russell Novkov, Madison, WI

Internet access MUST by done by common carriers. It must be open to all, regardless of income or geographical location.
—Jon Johnsen, Richmond, CA

The internet was developed with public funds through the military and the universities. It belongs to the people. DO NOT create fast lanes. Re-classify the internet as a public utility, as common carriers.
—Mary Shesgreen, Elgin, IL

Net Neutrality is important! The internet is the last level ground for the common person. Opening the door for corporations to get favored treatment is like taking away the last bits of freedom that ordinary citizens can hope to obtain. If this goes the way of our economy with the wealthy owning everything there is bound to be retribution. Don't do this! Let the people have equal access. Do not favor the wealthy.
—Ben Benjamin Powell, Leadville, CO

When Cable TV first appeared, the public was assured that this was going to usher in a new ere; minority audiences would have access to theater, opera and classical music. Best of all, there would be no advertisement. Right! And here we have, pay TV WITH Commercials. And then there are all those additional tiers of payment. Now you're going to take away the open, free Internet? Fool me once, the more fool you. This time we mean it!
—Irwin Schechter, New York, NY

Keep the communication waves open to everyone!
—Priscilla Bell, Laurel, MT

please reclassify internet service providers as common carriers, the simplest way to preserve net neutrality. - - James Amory
—James Amory, LeRaysville, PA

The Internet should be a tool for democracy, not elitism.
—Elaine Ricci, Houston, TX

The internet is the newest utility and is critical for modern education, business, and entertainment. It's foolish to allow providers to create stratified services that exist even when consumers are paying for a particular speed. We need an open internet! (more fiber optic cabling for "last mile" service would also be appreciated)
—Nicholas Butcher, Grand Rapids, MI

Giant internet service providers should have no say in how fast a website can transmit its signal to internet users. They shouldn't be allowed to favor their affiliates and discriminate against small or nonprofit websites. The internet was developed with tax dollars and has to date been the most free and open form of communication ever. Please make sure it stays that way by classifying ISPs as common carriers.
—Jay Goldberg, los angeles, CA

Repeat after me, Mr. Wheeler: COMMON CARRIERS. Now, if you would do it, we would so much happier. Please!
—Wendy Futrick, Shillington, PA

A two-tiered system is the Class War writ large--the haves and the nave nots--not the American into which I was honorably born.
—Anne F Holder, El Paso, TX

Protect people not profit, equal access for all
—Lyman Michael, COLVILLE, WA

Dear Chairman Wheeler and FCC Commissioners: Please read Steve Wozniak's letter! Please listen to the people and preserve Net Neutrality by reclassifying ISPs as Common Carriers. Thank You!
—Scott Letterman, Newport Beach, CA

Net neutrality is essential to keep the internet-the most powerful and connecting tool ever-in the hands of everyone equally. If the internet was allowed to be unequal in such a way, an upper and lower class internet would be created and nobody wants that at all
—Alekzander Sayers, Brewer, ME

The freedom of the internet is why there has been so much innovation. If only big companies can afford to get proper speeds to their customers, we'll, as a nation fall behind since start ups will just look to other countries to start their businesses
—Connor O'Quinn, Austin, TX

C 'mon man....REALLY???
—John Dieffenbach, Boynton Beach, FL

The internet creator could've become a billionaire, but he knew the importance of making it available to all!!! Poor people, or non-billionaires, deserve the same rights as evil Verizon does. Other countries aren't greedy jerks with their internet, and actually get decent speeds for decent prices.
—Cindy Massey, Littleton, CO

I cannot compete with the like of AT&T, Comcast and Verizon. I am a small business that depends on open access. Currently, I use Comcast as my provider and pay $120.00 per month for the access that I require. I'm very concerned that to maintain my current service, that cost will increase to the point where It becomes a burden. Net Neutrality is a must to keep the internet open to all.
—Ed Simpson, Salinas, CA

The new proposal will stifle both innovation and free speech, cripple small online businesses and will only benefit the rich.
—Catriona Davies, ,

Net neutrality seems to work; why change it? Gilding the lily?
—Alfred R. Greve, Holmes, NY

It seems to me that a government agency's job is to insure fair and open treatment for that which they regulate. Giving favor to one company or another should not be the purpose of your regulations. Allowing any of those companies to restrict the access of the public flow of the Internet appears criminal to me.
—Michael Ungerman, Oviedo, FL

This involves freedom of speech and freedom to learn issues. All should have that access equally.
—Kathleen Howell, San Diego, CA

Letting corporations like Comcast run the internet is insane.
—Matthew Baucco, Bloomington, IN

There are already too many problems caused by ignorant politicians who are trying to squeeze more money out of those of us who work and pay our bills. I am a single parent and I could not afford this proposed legislation. No one is going to give me an Obama phone. Sick and tired of the government giving my hard earned money to those who are too sorry to work in a pie factory. I am already paying too much on taxes and can't afford another tax.
—Danny Kenneth Boyt, Thomaston, GA

I am a working artist. I sell my art exclusively online. I am living below the poverty level but I am a taxpayer and good citizen. The internet provides me with my livelihood. If I am forced to pay a premium just to keep my business going, I will be struggling even more than I am currently. It is not fair to shut out people like me in favor of wealthy users who just want to watch movies. The current proposal is WRONG. It is unfair and based on pure greed. Anyone who votes for it is a greedy asshole and doesn't deserve their GOVERNMENT JOB. Thank you.
—Randi Gordon, Alplaus, NY

We can't throttle speeds based on what the person is using the internet for - that's just not right. For instance, if Time Warner gets to choose which websites get priority - we're essentially letting them knock out the competition based on their monopoly over the pipeline. This is unacceptable! We already pay more for faster speeds - please don't let this factor in too, or those with the most money will control the internet.
—Kristi Benedict, greensboro, NC

Free and open communication is the only way to uphold democracy. This country is becoming more divided politically and otherwise, and to have a two-tiered Internet will further hobble our ability to have dialog that is all inclusive.
—Connie L. Kohler, Birmingham, AL

The internet is the last and final way that we as people can ralley together. We do not support your NWO tactics and are not going to back down on this. The internet is a utility, not a corporate domain. We want you to stop stripping the American people of our rights!
—Alexfikany@gmailcom, Eugene, OR

I'm a supporter of net neutrality and suggest reclassifying ISPs as common carriers.
—Mitchell Steinberg, ALBUQUERQUE, NM

We do not need government to take away our privacy over the Internet.
—Phyllis M Riggins, Englewood, CO

All businesses should get the same priority to the internet and all people should be able to use it how they want without having to buy twenty different package options. To limit this would be to limit small company growth free thinking and creativity which can only have a negative impact on the US economy
—Chris Raulin, Madison, WI

It is important for the stability of the businesses I support as an IT professional. Some are small, and cannot afford a 'bandwidth ransom' fee proposed by these greedy ISPs, who seem to soak up all of their competitors, leaving us with no choice in the matter! The internet is NOT a 'service' any longer, as many places offer their resumes online to potential job-hunters as the ONLY way to apply for a job. I shouldn't need to go further. It's so obvious, that I HAVE to say Mr. Wheeler is being willfully blind as to the destruction a poorly-worded set of rules will cause to the very infrastructure of our country. And given his background, I must also state what is most obvious to anyone from the layman, up to the elite. Tom Wheeler is the FOX guarding the HENHOUSE. I push for his resignation. It's the equivalent of voting in a foreign terrorist as president of our country. It's downright sick.
—Keith Schneider, Coos Bay, OR

Why favor telecoms over every other business that uses the internet. Not a good way to encourage ecommerce.
—Brennen Power, city, MO

I am a senior and TIRED of the corporations taking over this country! This is just one more nail in the coffin! STOP IT HERE NOW!!!!
—Joyce Venables, Carrollton, OH

I really believe that the FCC should do all it can to keep the Internet neutral and equally accessible to all its users. I am disgusted by the thought that there might be a "fast" lane to accommodate users who can pay more for it. The FCC needs to classify ISPs as common carriers so that it can protect the public's right to a free and neutral Internet that does not favor big corporations over everybody else.
—Sue Collins, Hancock, MI

I want to be able to view all my searches & web sites at the same speed. I don't want big companies to essentially censor my internet use!
—Christine Dingeman, Rochester, MI

Net neutrality is what keeps the overall internet open and non structurally biased. But with a tiered service structure, money and business can impact what was once a level playing field. Views that the ISPs find undesirable could easily be shuffled aside, and all the extra profit they would be making would have to come from somewhere. Please don't destroy the internet.
—Daniel Guerriero, Nanuet, NY

Proposed rules would create an oligarchy on the Internet. I believe in democracy. Dump the new rules and start over in a democratic manner!
—Mr. James Morgan, Olympia, WA

The Internet is important to me as an 80-yr old on Social Security - and Facebook! The FCC planned rules would mean I couldn't afford the extra fees to be on the Internet fast lane. This is discriminatory. It is important to keep our Internet neutral and open for everyone. Neutrality makes the most sense for everyone.
—Lois Dow, Lakewood, CO

The Internet would be lost as a communications and learning tool for many poor and middle class families if they were pushed into a "slow lane" and had to pay more for faster access. People (including me) will not have the time, patience, or extra funds to deal with slower access. We must protect the little guy in this equation. Big business did not create the Internet and does not own it for their own selfish profit.
—Carol Claus, Marietta, GA

The only way to protect real Net Neutrality is for the FCC to throw out its rules and instead reclassify ISPs as common carriers.
—Cynthia Adkins, Charlotte, NC

Keep net neutrality or we might as well go back to pre internet era where information was hard to come by.
—Judy Lamb, Longview, TX

Amazing and wonderful ideas & talents are easily shared with open access. Much of this comes from the 'little guy' who doesn't have the big bucks to pay off the cable companies. We will all lose out if money undermines access.
—Carol Charest, West Hurley, NY

I am a tech enthusiast and a maker. I innovate and so do others. The internet is where I show my work to others.
—Shane Dillingham, Seattle, WA

Net neutrality really is (was?) the last bastion of free speech. Sad that FCC chairman screwed the pooch because he didn't want to make an "unpopular" decision. Of course, like too many politicians & their ilk, the only "people" that Wheeler bother to listen to are corporations. The Net is the last place that a free exchange of ideas can actually take place. Corporations have already dumbed down every channel on TV...stay the hell out of the net.
—Evan Parker, potomac, MD

Why does the FCC insist one changing an internet that is working just fine?
—David Cencula, Sparks, NV

We need net neutrality as small businesses and cottage industries to remain competitive. Many people depend on Internet income to make ends meet and still be at home taking care of their families and seaking out our diminishing American Dream. Don't put our future in the hands of irresponsible corporations just out for the buck.
—John C Fish, Las Cruces, NM

Killing internet would kill the vibrancy of the intenet as it is today, making it harder for many to communicate and learn. Please think about what you are doing before you create another win for the haves and leave the have nots in the cold.
—Helena Almaguer, San Diego, CA

It is not a free and open democratic society when the internet is controlled by a few super wealthy corporations, or controlled by any group of a few with an agenda. When it is in their power to discriminate online content and applications, this can have far reaching consequences of stifling free speech and information. I fear this is the the point, they will want the power to censor the collective thinking the internet has created. Call me paranoid, but it is clear this is already happening in other countries, like out neighbor Mexico! they want the power to blackout when ever they feel the need. I suppose the Arab spring and other political uprising has scared the big powers, and this is the path to taking control again. As was said for the "happy video" in Iran, the power there commented how they don't like the internet because it can whip up support for causes they don't support. Let America continue being a free nation, not one owned and controlled by big money. Didn't our tax dollars pay for all the infrastructure of the internet, and all that cable and high speed cable that is all across our nation and oceans? Why should a few big companies get to control and profit off that, off our backs. Terrible terrible idea. So not American. Our nation must be by the people for the people, remember!? Not by the mega corporations, for the mega corporations. Please do your job right. Stop being owned by big money. Stop selling out America. I want to be able to use the internet just like anybody else. I don't want to be sidelined.
—Lisa Thomson, Tucson, AZ

This is a communication service that helps keep families and communities together. It has helped people call for help, for all kinds of reasons. The different people around our planet made this happen. Now big business wants to 'own' it. I say no. We need more companies providing communications, not less. The big 3 companies are a monopoly and needs to be taken down.
—Vivianne Mosca-Clark, Williams, OR

NEUTRALITY is important to the average citizen. PLEASE DON'T CAVE IN TO SPECIAL INTERESTS!!
—John Napierala, Costa Mesa, CA

Because this is a fee country and I shouldn't have to worry about being blocked from a website because of some ruling that the government thought would benefit just their pocketbooks.
—Michaela Karshner, Tarlton, OH

The USA is already in the third world as far as internet delivery, Why make things worse?
—Ken DAVID, Tucson, AZ

We do not need monopolies, American Taxpayers paid for the creation of the Internet and I was one of the men who worked on it during the DARPA days. No "fast lanes" stop pandering to criminal corporations.
—Daniel Wiberg, ZipCode, SC

I will not continue on the internet if we don't have net neutrality. This could be very damaging to the internet.
—Jean Friday, Belle Vernon, PA

It is important that small businesses and artists have the ability to openly and inexpensively promote themselves via the internet. Without this, these people and places would likely struggle or go out of business. Keep the internet free and for the people!
—John F. Finger, Cincinnati, OH

I hope that my kids one day will have access to the information of the world, to build connections with others around the globe, and to be able to utilize one of the greatest inventions of our history regardless of whether I end up a rich or poor man. Please throw out these new rules and instead reclassify ISPs as common carriers. Give equal access to all. Think about how much this could impact our country's future. A kid might not be able to afford to read information on the internet that could inspire her to create something new, something that could change the world. And she will have to pay to be inspired. Give us net neutrality!
—Israel Santander, Pomona, CA

Your decisions today will shape the future of the human race. It is your duty as our representatives to NOT take this task lightly!
—Mike Morrison, Pataskala, OH

Simply: knowledge is power. Whoever controls the knowledge has the power. We must remain a democracy, so the knowledge has to be accessible to all people. Creation of a two-tiered internet puts us on the path of "knowledge" going to the highest bidder...
—D Scott, Ithaca, NY

Take care of the people/masses and not your big company buddies!
—Major Charles Middleton,Sr., USAF,Retired, Chicago, IL

Currently Netflix is being blackmailed and its legal. At that point, you have to know that your laws are seriously broken! This will only get worse, as ISPs are able to support content that they make over their competitors. Not only that, ISPs should be opened up for proper competition. Please work to protect the people, and not the interests of these ISP companies.
—Glenton Jelbert, Foothill Ranch, CA

The internet is the greatest public exchange of free ideas ever created. It allows people worldwide to connect with one another. Destroying Net Neutrality for crass comercialism would destroy that. ISPs should be reclassified as common carriers, as they offer goods to the general public, and should not have the power to decide who wins and loses on the net by virtue of a two tiered internet.
—Gregory Dean, Grover, MO

Do not end Net Neutrality. The ongoing trend of media consolidation combined with the threat of destroying the openness of the one form of media not utterly dominated by gigantic megacorporations may render us a plutocracy. I take this issue extremely seriously for a number of reasons and I will remember the names of the people involved and do what I can to make sure their ruinous actions are remembered. Do not take this step.
—Bob Westal, North Hollywood, CA

work for the people not big corporations!
—Randy McPherson, marysville, CA

The Internet belongs to the people, NOT the corporations!!
—Gloria Burd, Sunnyvale, CA

FCC: Please throw out your rules and instead reclassify ISPs as common carriers, to protect real Net Neutrality. Thank you.
—Bounchanh Senthavong, Springfield, VA

The internet is our creative, fun place. Don't create fast lanes for ISPs that can afford it and slow lanes for those that can't. It affects ME. When an ISP has to spend more to get the speeds that another service provides, they raise their prices. When an ISP can't afford to spend more, you risk creating a monopoly! We need REAL Net Neutrality and your proposed rules are not the rules we need! You must classify ISPs as common carriers; this is the ONLY way to protect REAL Net Neutrality.
—Kara Bancroft, Tucson, AZ

Most ISP's have a monopoly in given areas, so customers would be at their mercy of these situations. I'm one of those customers. Further, competition is what drives the market place, without it we'd still be using cans with a string on them. I always thought the FCC was for the people, clearly if they decide to allow this then it will be all to clear who's side they are on.
—Larry Cooke, Tucson, AZ

Chairman Wheeler, you should be serving "We, the People," not your former employers. We want an open internet!!!
—Marjorie Johnson, Espanola, NM

Net Neutrality is important to me because I believe in equality and free and unimpeded speech. Too many parts of our country now do not have adequate internet access; privileging big providers will make them even more disadvantaged.
—Mary Ann Fleming, Manhattan, KS

I have an e-commerce business and rely on internet marketing for advertising and sales.
—Frances Woodley, Llandysul,

I use the internet to search for information about the crops I grow, the seeds I use, and to communicate with my customers. Without a level playing field, I will likely not be able to find the valuable research amongst all the commercial clutter, in the search engines. It has already gotten to where the same paid placements show up first on every page of results.
—Tom Denison, Corvallis, OR

Net Neutrality is the only way to ensure a truly free and open Internet. A fast and slow lane for the Internet simply would not work, and what's worse, it would utterly demolish the Internet as we know it. DON'T DO IT.
—Lawrence L'Vor, Snellville, GA

The FCC must reclassify the internet as a utility and protect the architecture of the internet. Corporations can do nothing but act in a way that benefits themselves. When that is applied to how the internet works, the corrosive effect of improving the bottom line will destroy the open dialogue that is becoming nothing less than our last chance at saving our race.
—Christopher Southall, Little Rock, AR

As a freelance writer who depends on the internet for income, ending net neutrality would significantly affect my income. I ask you to reclassify Internet Service Providers as common carriers. You can swell the profits of large telecom corporations, or protect the incomes of hard-working Americans. But you cannot do both. Which is it going to be? With whom do you stand?
—Dianna MacLeod, Langley, WA

I want Net Neutrality back, becasue this way these Phone Companies won't charge us and now you letting them charge us so bring it back
—Charles Roberts, Detroit, MI

One can easily classify humanities rise as the species we've become as an increased ease of access to information. From the formulation of mathematics and a written alphabet, to universities and the printing press, and on to the internet; our species has grown in proportion to the ease of that access. Why would we want to go backwards?
—Carl Devon Athans, Austin, TX

As a teacher who uses the web to communicate teaching tools am I going to be pushed into paying more fees to get my content delivered to my students?
—Alan Liechty, Los Altos, CA

Net neutrality must be preserved to allow for free commerce and wealth prosperity for all US citizens. We cannot bend to the whims of the telecommunication industry any longer. The internet is a basic human right and must be protected against any company that seeks to curtail that right for their own financial gain.
—Jacob Quickel, Los Angeles, CA

Internet service isn't a luxury for small businesses and creators anymore; it is a necessity.
—Bethany Brengan, Port Hadlock, WA

Net Neutrality is important to everyone because in today's modern world everything gets done faster and better through the internet including Schools, Companies, Restaurants, Libraries and etc. Almost every time something like this pops up is mainly about people with power trying to have more power and they have greed in their eyes. Huge rich companies now-a-days are greedy and they want more and they believe because they are rich and have power, they are titled to everything they please. Greed has poisoned men's souls and I ask you Mr. Wheeler as FCC Chairman don't try to please other people especially companies that can care less about you and only look for you when they want something. Please Mr. Wheeler, Net Neutrality is important to us. You are the FCC Chairman and you have the power to say no. Why do you think other companies are asking you for permission? because they want power! and at the end of the day these companies are going to turn on you when the public ask why? They're going to say is your fault, not theirs. I hope you make the right decision and don't try to please these greedy companies proposal. They will try to convince you in any way to show you that it's a "good thing" and everyone will get richer from it. That is greed in plain sight. Kill the proposal. God bless you.
—Emanuel Pagan, Worcester, MA

The internet was and is still just fine the way it is, these new rules will bring VERY EXPENSIVE trouble among your companies. Not only that top tier personalities will show up to protest against your unwise decision, it will also bring the attention of the whole US and possibly the whole world. I'm struggling as it is to afford internet access...
—Adan Salas, Grand Prairie, TX

net neutrality is information democracy
—Ashley Briscoe, Saint Paul, MN

Elitism with the internet? That is going too damn far. Same internet for everyone, no 2 tiers, no extra fees. Get real.
—Barbra Morman, Mount Pleasant, TX

Free internet is a right for all people in this country. Not classifying ISPs as common carriers is not only foolish but ignorant. The internet is no longer a privliaged thing for a select few. It has now become a necessity for all people in this country to strive and succeed in all their endevours. Thank you, Gabriel Younan
—Gabriel Younan, Round Lake, IL

Do the right thing -- the Internet is clearly a basic public utility today, and should therefore be protected as a common carrier.
—Dr. Andrew Flanagin, santa barbara, CA

Taking away Net Neutrality is like taking away everyone's basic rights of speech and free will. Not only that, but every american is being overcharged for internet now. This is not right! We shouldn't have to pay ridiculous prices just to get online!
—James, Newton Falls, OH

It takes us one step closer to equality. We need everyone, not just the rich, to have access to all the bast information the internet has to offer.
—Chelsea Harrington, Bellingham, WA

The internet should stay a free and open place for all.
—Keira, ,

I believe that the Internet is public property. If those who are able to pay get preference for speed and content the inequality that is rampant in our country will be spread to the internet. There will be no more Net Neutrality.
—Paula F., Tucson, AZ

Fairness..for everyone. So simple!
—Geri Rochon, Woodlyn, PA

I belong to an arts organization that's only 5 months old. They have a website but don't have the big bucks to be put on the fast lane. I run a small business and have a website but don't have the big bucks to be put on the fast lane. My ISP provider isn't one of the big providers. Thanks to your rules these sites will be come invisible to the public. A site that takes a long time to load or interact with becomes, basically, invisible. I do research on the web and could have reasonable confidence of finding a diverse set of information on any subject. But, with your rules allowing a fast lane, that confidence is gone. What information will I not be able to see or get to because it's in the slow lane? When was the last time you waited, waited, and waited for a web page to load, or login, or watch a video? If net neutrality is really your goal declare ISP as common carriers or telecommunications as a utility. Otherwise kiss the internet goodbye.
—Linda Rutenberg, Buckley, WA

Not only is the existence of net neutrality a basic right, it is also an important aspect of business. If businesses, both small and large, cannot be treated fair and equal, there is a large chance that a lot of traffic and servers will move out of the United States and into countries where Net Neutrality is preserved. Both from a big business and individual perspective, Net Neutrality is the only sane answer. We cannot allow ourselves to be bullied by the short-sighted greed of a few corporations. History will remember this decision. Make the right one.
—Christopher Moran, Soldotna, AK

I am sick of seeing the best parts of America privatized and ruined.
—Deirdre Benavides, Fort Worth, TX

When, I mean WHEN, will these scumbags we call OUR leaders, stop selling us out??? WHEN??? Dear God, what do we have to do besides police them every minute of every day to do THEIR job that WE PAY them to do??? We PAY them and they still do not do it. The people I work with in the streets that these same scumbags attempt to remove their meager welfare and food stamp checks from are capable of performing in a fashion that is stellar to these greedy political hacks! They don't hold a candle of strength to the young women and men without spouses who support households of children and other relatives on the minimum wages and meager living conditions that these souls do in my work. And these archetypes don't want to raise their minimum wages to allow them to ever be able to rise above the lives they struggle with every day as they teach their children to be beautiful human beings and get an education so they won't repeat the steps of these hard-working parents who get up in the middle of the night to get to their crews and risk their lives to save others? What kind of a nation of mules are we to allow this to go on??? It would be easier to work with infants than these insidious greedy bastards we call our leaders! You're damn right Mr. President and Mr. Vice-President, and Mr. and Ms. Legislators, and your appointees, I am talking about YOU! Please join me to stop these horrible misfits that should be in the streets with the condemnations thrown at them. We have it ALL wrong. It is THESE welfare recipients at the TOP of the food chain, and their greedy corporations that need to have THEIR welfare checks and food tickets removed and THEM put in prison for the crimes they commit against great Americans and other citizens around the world who struggle every day under the debt peonage these pathetic scumbags create to let the cream at the top take and pad their bank accounts with.
—Peter Listino, Media, PA

The Internet belongs to ALL of us! It's NOT just for those who have the money to pay more!
—Donald Norton, West Des Moines, IA

i do not want a 2 teri system where the rich have an advntage!
—Ian, Seattle, WA

More and more basic services are now only available online. Net neutrality is the best way to prevent internet "ghettos". ISPs should be classified as common carriers to help protect everyone, no just the rich. -Gerald C Walker
—Gerald C Walker, Dallas, TX

the internet is very important means of comcation that I use every day please throw out Tom Wheeler's proposal and reclassify ISPs as common carriers. This will protect real net Neutrality.
—Howard L. Wood, Raleigh, MS

I deserve net neutrality
—Ryan Lessl, Tampa, FL

There is no cost-driven reason for the rules you've proposed, and the ISPs will not suffer economically if they are reclassified as common carriers - which is what they truly are, given the amount of voice and other 'common carrier' traffic that they carry.
—Patrick Bosold, Fairfield, IA

The public funded the creation of the internet. The internet is a common good that should remain open to all. Reclassify ISPs as common carriers.
—Wilson Chin, Seattle, WA

The internet is the last truly democratic venue for individuals to voice opinions, sell goods, and provide services. Splitting in internet into a pay to play fast lane and a slow lane would undermine this democratic spirit and make the internet no better than cable/satellite television.
—David George, Springfield Gardens, NY

I have been doing volunteer work for my community online for several years, with a few blogs of my own, and Twitter handles as well as contributing to other's projects. I am donating my time to the public by serving my community, spreading the word about local causes, events, local businesses and so is my most of my family. Its become kind of a family hobby to support our community online. If you take away our ability or slow down our ability to serve our community through online groups and non-profits, where is our free speech and ability to be vital community members in this day and age? We are not rich. We are government workers and school teachers and artists. Internet is a service for the people and should be regulated by the government for the people, not corporations.
—Lisa Miller, Salem, OR

The internet was made to be free! We don't need people taking advantage of it and trying to control it.
—Kaleb J VanSant, Santa Clara, CA

The progress of humanity must not be hindered - or more likely stymied - by the ugly reach of capitalism. Net neutrality is a parallel for human progress; keep human accomplishment on track by not giving in to the profit whores!!!
—Edward Jasiewicz, Pittsburgh, PA

People in the US already pay too much for internet service. It's unconscionable that my fiber connection is now too slow...
—David Amundson, Lebanon, PA

FCC throw out its rules and instead reclassify ISP as common carriers. NET Neutrality
—Edna Publicover, San Diego, CA

taking away disabled peoples view of the world is wrong
—Eric Iverson, Stevens Point, WI

As an entrepreneur who writes software the depends on the internet, the issue of net neutrality is very important to me. I've reflected upon both sides of the issue: removing net neutrality allows for some interesting business models that cannot be pursued otherwise. However, on balance, the damage removing net neutrality in our current consumer internet ecosystem would do is catastrophic. If there were real competition for the last mile, opening up new business opportunities and removing regulation would be a far superior model. Unfortunately, that is not the world we live in. Instead, consumers are stuck with a choice between one (or, if they are really lucky, two) internet provider. If that provider decides to screw with upstream providers bits, the customer has no recourse. And, given the cost of infrastructure, that situation is not likely to change any time soon. So, instead of opening up new business opportunities, ending net neutrality would, instead, entrench existing businesses and reduce (or eliminate) the chance for new companies with disruptive business models to enter the marketplace. Removing net neutrality is nothing but a vote for more regulatory capture for some of the largest, most hated consumer companies in the United States.
—Travis Jensen, Lehi, UT

Net Neutrality allowed this country to enter the 21st century on top of the game and these proposed rules will be a huge step backward for America's leadership in the digital world.
—James Mostowski, Wood Dale, IL

I cannot afford to pay any more money for internet access. I am disabled and on a small fixed income.
—Renetta Hirrel, Ramona, CA

To the FCC: Throw out your rules and reclassify Internet service providers as common carriers. This is the ONLY way to protect real Net Neutrality. Thank you.
—Beatrice Villar, Chicago, IL

Reclassify ISPs as common carriers and protect the internet!
—Ed, Brooklyn, NY

"NO!" TO NET NEUTRALITY.
—John Mantey, Chula Vista, CA

preserve net neutrality!!
—Angelene Flowers, Jamestown, CA

An equal playing field is an important aspect of innovation on the internet. You have not previously needed to broker deals with every operator between web services and customers, allowing new services to launch, grow, iterate and survive based on their own merits rather than the strength of their negotiating position and available funds. Please support a truly equal and fair internet for all by classifying ISPs as common carriers.
—Bryan Adams, Livonia, MI

Please do not stifle innovation.
—Ian Griffin, Altamonte Springs, FL

The Internet is important to me because, as a senior who has limited transportation and means, it allows me to interact with others, conduct personal business, and troubleshoot; it's my lifeline. The internet is also my medium for researching a number of issues, publishing commentaries, and political activism, especially dissent. I need to know that there will not be barriers to entry for the new ideas and services that I or others (aspiring college grads) may want to bring to the marketplace or for the betterment of our world. If ISP subscribers have an easier time loading websites of existing companies than my new innovative product or ideas I may want to present, there's no way that I will be able to compete or succeed in those issues and things important to me and others I network with. However, despite all of the above I am deeply concerned that Mr. Wheeler, having once been a huge powerbroker/ lobbyist for the very industry he is supposedly a watchdog for now, seriously bothers me. It has been said the Koch Brothers refer to ordinary poor folks as "useful idiots." I'm beginning to realize the folks with power in this nation take a lot of ordinary people to be fools, these days. It is truly sad to witness the insanity committed in our name, with our tax dollars, and always without our consent. I also believe President Obama appointed Mr. Wheeler to the FCC as a matter of repayment for the cooperation that was extended by telecom giants in assisting the NSA with the retrieval of everyone's meta data in this country and well beyond, Or worse, consider the recent case of Bermuda residents and the capture of everyone's cell phone communications and content in that Island Nation, by the NSA. These are my thoughts. But, I doubt Mr. Wheeler (and those he is still lobbing for) really give a damn about what us "useful idiots" truly feel and think. Given the FCC's revolving door tradition so pronounced in government and industry these days, and especially evident in the career paths of FCC's most recent chairmen, these mega monstrosities want the internet to look like today's cable T.V... You are forced into packages full of junk content, with overpriced tolls for every little item, even for old cinema, which has catapulted fees out into the stratosphere and service in the toilet. We The People have made the internet what it is today through market forces. What also evolved was a communications system that brings us the ability to stand up for democracy, especially in one of America's darkest eras. As one internet user or "useful idiot" put it a few years ago, "…The internet brings us the ability to send each other pictures, socialize and not to mention that it's the greatest tool for activism this planet has ever seen." It is this latter point that concerns Mr. Wheeler and those of his mindset the most. That's what makes us "useful idiots" a force to be reckoned with, especially when we are all finally on the same page. It is real simple Mr. Wheeler; just make the net a common carrier, which is what it is.
—Lara DeLuz, Orangevale, CA

Have you seen the state of the world? The only antidote we have is the internet. It's the only thing where people have a ghost of a chance of finding out the truth about anything. Don't allow corporations to break it.
—Nick Taylor, ,

Throw out your proposed rules and tailor some new rules to protect real Net Neutality. Do not create rules that for the Monopolies you allow to exist, for the sake of profits.
—Jaime Olson, San Jose, CA

No one entity should have control over the net !!!!!
—Kelly Tracey-wood, woodridge, IL

The internet is a very important part of my life. The use and enjoyment of the internet should be the same for everyone--individuals, companies, organizations, etc. I request/demand that the FCC retain and protect net neutrality.
—Judith Magness, Little Rock, AR

Throw out your rules and instead reclassify ISPs as common carriers. This is the ONLY way to protect real Net Neutrality.
—Matt, San Clemente, CA

Chairman Wheeler, Please don't let AT&T and others buy the internet. Kenneth Kearney
—Kenneth Kearney, Weyanoke, LA

They want this law to pass because it is one more step to power to those who can afford it
—Susan Bensont, Calexico, CA

I shouldn't have to pay more to get decent internet becasue someone else can pay more.
—Shane O. Conger, princeville, IL

A neutral, non-corporate-controlled internet is the essence of free speech and innovation just as much as newspapers were in the 17 and 1800's. Please allow no money-grubbing and content-censoring corporate interests to control and thus ruin what a valuable tool on which the common folk (such as myself and my family) presently depend to voice their uncensored opinions of the aforementioned corporations!
—USMC P SSgt John P. Farrar Ret., Erie, CO

Please don't pass this law. If this law is passed we will be a step closer to being a communist country right behind North Korea.
—Steve, Tempe, AZ

The internet had become a key part of our national and global infrastructure, and should be treated as such. Allowing higher payers to get faster service will allow the rest of us to be stuck with slow service that will not improve over time, and will rapidly fall behind the "standard" speeds like dial-up, which will force everyone to become higher payers just to maintain basic functionality. It's an organized extortion by ISPs who are looking to squeeze everyone who has become dependent on the investments and physical infrastructure that were made long ago, and will reduce their incentive to invest in any infrastructure that won't be profitable by comparison.
—Matt Arns, Evans, CO

Net neutrality is a lot like Freedom of Speech. A level communication field, in which a single individual, Mrs.L. V. Jones, let's say, has equal access to the internet, Mrs. Jabba's net-speech is equal to that of XYZ Inc. a multinational corporation! This is the profound principle that is at stake here, and we are at the crossroads. Will money elevate elite net-users into "gated communities"? Or will the Net-stream stay open and equal for all?
—Maia Maia, Isla Vista, CA

To me, the internet ought to be an open place where everyone can have access to what it is they need. I don't think it's right that providers should be able to have total control over a system that's meant to be open and free for all people to access, no matter what they use to access the internet.
—Sabrina Espinoza, Garden Grove, CA

Nry Neutrality is essential to our future as a country!
—Bruce Dage, Florence, AZ

Technology is changing every day, and the Internet is just one part of it. But not just any part, mind you—it's become a way of life for us as the future progresses.
—Ian Sherman, Columbus, OH

Since I am below the poverty line, I would not be able to access necessary services if preference is shown to cyber giants.
—Arlene Merryman, Berkeley, CA

Please kill this proposal! !
—Indochine, Miami, FL

Hi there. I'd prefer the internet stay JUST the way it is... the telecoms have enough power. It REALLY is OK for the government to hold on to some things. Please..."throw out rules that don't reclassify ISPs as common carriers..." so we can keep the net neutral. Thanks a lot.
—TH Simpson, Belleville, IL

Stop handing our freedoms away to corporations. This only points to corruption in our government. Think of those that cannot afford the services that will be offered. The Net should be accessible to all equally. This is bad for the people and for small businesses and puts all the money and power into the hands of large corporations. This creates monopolies that only add to corruption and high prices for those that cannot afford services that are not equally doled out. KEEP the Net neutral.
—Charles Coffelt, Tigard, OR

NO fast lanes for the rich and wealthy - classify all ISP's as common carriers now! Thank you.
—C s, san diego, CA

Net Neutrality is important to me due to the fact that without it the U.S. could be stuck with extremely high prices for moderate internet speeds and censored websites., something you (FCC) seem to enjoy.
—Grachya Dilanyan, La Crescenta, CA

I'm interested in all disparate opinion and don't approv of giving preference to the opinions of those who can afford to pay for the privilege. The great advantage of the internet is that you can find a great variety of opinions on it.
—Marjorie Fenner, Kew Gardens, NY

Net neutrality is essential to democracy.
—Peggy Alt, Philmont, NY

Reclassification of ISPs would be disastrous. As an institution based on freedom and protection I can only tell you that these new rules would be a black scar on the FCC's reputation and show the world that not even the FCC is above corruption. Do the right thing and throw out these rules.
—Cameron Heller, Westerville, OH

I am a professor whose students have benefited enormously from the open Internet as well as a small content provider who would be greatly harmed by its absence.
—Mildred Lewis, Inglewood, CA

Reclassifying ISPs as common carriers is the only way to maintain net neutrality - anything else will completely compromise this.
—Luke Desmond, Trowbridge,

The internet should be a common carrier without preferential treatment. It has become one of the drivers of the economy by allowing unrestricted non-discriminatory access to everyone. The worst possible outcome of an abandonment of an open internet would be something similar to the cable television industry. Stephen Souder
—Stephen Souder, Danville, KY

Start up companies won't stand a chance if they're not on a level playing field.
—Richard Longley, Fort White, FL

There are millions of people protesting the rule that would benefit just a few corporations. One person gets to decide this? What psychotic gets to make up this rule? ?
—John, Calexico, CA

Deaf FCC there is no reason why you should go forth to congress and take away our internet. It is our right and I refuse to let you corporate monsters try and take away what is ours. I will make sure that everyone I know, knows what is going on. You will not take over our right to a free internet.
—Manuel Hernandez, Los Angeles, CA

Net neutrality would ensure equal access by all citizens. It is important to maintain equal access to common carriers to ensure the preservation of our democracy. FCC:; reclassify internet service providers as common carriers!!!
—Lynn Miller, Portland, OR

I am very concerned about the potential for the restriction of free speech and the expression of dissenting opinions if a few corporations are in control of the internet without appropriate government regulation. We live in a time when corporations and wealthy individuals are actively seeking to control the government of the United States for their own economic gain. If this oligarchy gains control it will mean the end of our "noble experiment" in democracy. The internet should be treated as a regulated public utility. This would allow a fair rate of return to investors while protecting our form or government and constitutional rights.
—Steve Radcliffe, Grants Pass, OR

The free and open internet was a wonderful innovation and experiment in true DEMOCRACY. OF COURSE the minions of those who fear freedom, openness and true Democracy would like to control, stifle and enrich themselves at the expense of the PEOPLE. The question is WHOM does our government work for? The PEOPLE or the CORPORATIONS? Looks like the answer is pretty clear and it AIN'T the PEOPLE! For SHAME!
—John Cooper, Lewisburg, PA

Net Neutrality is important to me and others within my age group (18-24), because we are far more reliant on the Internet than previous generations, not just for our happiness, but for our sanity as well. If it requires payment, very few of us would be able to use the internet, given that there are no jobs available for us anyway!
—Madeleine McIlheran, Stafford, VA

You know perfectly well the Internet is a common carrier and should be reclassified as such.
—Liston Tatum, Orleans, VT

The internet is the last bastion of truly free communication in the world. Its global impact cannot be overstated. In many ways it is the conduit through which we secure and protect freedom by giving fair and equal voice to everyone. Please protect net neutrality. Do not let corporations put their profit margins ahead of the public good.
—Andrew Riggio, Walpole, NH

There is already enough privilege accorded to large corporations in American society. The internet was once touted as a true egalitarian venue, where access to services and opportunities differs not around the globe. Please make choices that maintain that ideal.
—Colleen M Szabo, crystal falls, MI

Net Neutrality is one of the most important aspects of the Internet as it provides an equal opportunity of sorts for communication. These rules will harm competition and freedom on the Internet, and needlessly protect entrenched players over potentially ground breaking new businesses. These new rules will change the Internet for the worse, and change its nature for good.
—Martin Hills, ,

Gaining preferential treatment to corporate (large) interests wholly negates the value of open Internet access. It devalues the great possibilities that would potentially be gained by OPEN access. You MUST certify that the Internet will always provide equal access for all parties. ALWAYS!!!
—Mrs. and Steven Rosenbaum M.D., Livingston, NJ

Please remember that we are already so far behind so many other countries in internet usage for the common citizen. Do not do this thing that will make us even further behind, leaving the ordinary person at a disadvantage.
—Barbara Raymond, Forest Grove, OR

Internet must be for people, not limited to companies, and no company has the right to own people or their information
—Pierre Longpre, ,

Net Neutrality is the foundation of the Internet.
—John Viacrucis, Moorhead, MN

This is an outcry!!! the internet should belong to no one!! keep my internet equal!!
—Jaquez Barden, Warner Robins, GA

Do the right thing for the common man and reclassify ISPs as common carriers! Keep freedom an equality alive on the internet!
—Ron Iacopucci, Redondo Beach, CA

I reject the large carriers for their deceptive pricing and horrific customer support - classifying internet as a common carrier means I can rely on my internet from small local providers to be as good as what corporations can get.
—Jessica VanHook, Council Bluffs, IA

The internet should be free to all. Commercialization will negatively affect consumers.
—Dylan Hadfield, Jefferson, MD

The FCC has already allowed mostly monopolies in cable TV, unlimited commercials on all TV channels, and total abandonment of Truth in Advertising enforcement. Net Neutrality is the last bastion of freedom in communications. The FCC should rule for the public, not for the corporations!
—David Ross, San Francisco, CA

Mr Wheeler, you plans to push for legislation of a two-tiered Internet platform is outrageous, discriminatory, and a disgrace bordering on social criminality. It would appear you may be in receipt of an enormous kick back from the privateers who you support to the total detriment of ordinary everyday internet users. But then in your world view, the rich must be allowed to farm the poor regardless of the cost, is that not so?
—Brian Snowdem, ,

How much more power and control over our lives do we give Coporations.How many ways more ways will they continue to profit over every aspect of our lives? Did you forget you are a government agency set up to serve the public . You"re failing misersbly and it' too obvious who you"ve given your allegiance to.
—Patrick Kelly, Roselle, IL

I want more competition, better program choices for consumers, lower prices and access to programing of my choice at high speed.
—Adele Richman, Walnut Creek, CA

I need Net Neutrality for my business to survive its important. You said you believe in Net Neutrality--put your money where your moth is. No tiers for the big guys.
—Ms. Kim Kensler, Toledo, OH

Please do something that benefits ALL Americans and keep the Net Neutral. Mr. Wheeler's plan is discriminatory, prejudicial, unAmerican, politically and morally indefensible. The FCC has an obligation to the people of this country, not to Big Business. Reclassify ISPs as common carriers and fulfill your mandate.
—Nancy Oliver, Los Angeles, CA

the internet is our greatest source of productivity, commerce, and research. If you turn it into a toll way, you risk squandering a modern renaissance, for the profit of a few companies. Those companies are allowed by the public to manage and maintain an incredibly important public resource, and charge a reasonable fee, not use their license to gouge consumers.
—Chad M Miller, Chicago, IL

The spirit of competition should be encouraged, not destroyed.
—J Benevento, gilroy, CA

Installing internet tollways is ruinous to the information economy. It's an artificial restriction that puts America at a disadvantage and will cause a divestment from new tech startups. Don't hurt the economy. We need net neutrality. There is technical abundance that is possible through proper network engineering. America has the technology; America has the market demand; America's big internet service providers aren't keeping up. We need our high speed internet networks updated quickly for our changing times. Technology industries thrive in a net-neutral internet ecosystem where bandwidth is abundant. Americans currently pay the most money for the worst performing internet access. I demand 100 gigabit internet access to my home for less than $50 a month without tracking or throttling. Other countries have done it. We need to catch up. The future of America's information economy depends on it.
—Paul Heussner, New Braunfels, TX

Without net neutrality it will be harder for ideas and technology to advance by stifling innovation and creativity therefore keeping companies amd businesses from growing and keeping up with competition.
—Brian Imel, lawrence, KS

Pay to play is NOT net neutrality. Our "regulators" in my life time have become foxes guarding the hen house or virtually non existent. This is OUR utility. Stand up for us!
—Patrice Beck, Seattle, WA

Verizon pays no taxes. Probably also the other two AT?T and Comcast. Furthermore, they all offer lousy service. Also, why is the FCC headed by a man who was a telecommunications lobbyist. All of these items are anti=American. The people who voted for this control agenda are treasonous, greedy scum.
—Janet Gaudiello, Plantation, FL

I support net neutrality because it is only right that an advanced culture have total access to information.
—Jacqueline m Dias, Las Vegas, NV

It's important to my freedom to use the internet as I see fit without the interference of corporations or the government. We have too much corporate "sponsorship" in this county already.
—Chela Grey, Silverdale, WA

It's all a matter of free speech. Take away our net neutrality and you take away our freedom. Please don't do this.
—Megan H, Georgetown, KY

The internet is a defacto public space. People may have migrated off theie landline telephones into cell phone and broadband service. But the conduct is the same to conduct communication. The internet is like a libray with a telephone attached. Everything at your fingertips. These new FCC rules are akin to having a bunch of advertisers move all the books about the things they want to sell to the front of the library and put everything else the public may want to access behind those people blocking the gates to what we really want to look up. Currently there are no advertisers hogging up the lobby and blocking easements to the rest of the library. But if these rules pass, it is like having to wade through a ton of crap just to get to what I want in the library. The library and the internet are public spaces. Advertisers have their place, but that place is not in the lobby blocking access to the rest of the library. I demand a continued free and open internet and I demand an investigation into why government offices holding fiduciary responsibilities to the public are allowing private corporations to come in and rewrite the rules of our democracy. I feel like we are living in the world of that "Continuum" show.
—Stefanie Sellars, Simi Valley, CA

At least make a small move to make the US more like the rest of the world. The US lags almost every developed country in internet speed and access!
—Kenneth C Morris, Southport, NC

I'm an independent consultant in a highly professional field, and the Internet is the only realistic way of promoting my services and attracting custom. A two-tiered Internet would mean the end of my livellihood, and that of many thousands like me.
—Derek Rogers, GLASGOW,

We need a free and open internet in order for everyone to thrive!
—Todd Dmitruk, Selkirk,

The Internet is a UTILITY!!! I say NO! to corporates, and NO! to corporate-fascism!!!
—M Solomon II, Harrisburg, PA

These proposed rules will impair the ability of Internet users to use the service for which they are paying to the full extent which exists presently.
—Barry Guith, Mesa, AZ

Changing the internet to including "fast lanes" will RUIN the internet!!!. And, (once again) allow the ISP monopolies to take advantage of their customers. Please DO NOT change what we have!!!
—Ryan Gens, Sheboygan Falls, WI

Please, this is so important to thousands of middle class and poor people. The internet is a tool that we use to express ourselves and create content for the entire world to see. The fact is that lots of people cant pay for the fast lane that you guys are proposing. In this modern , fast and tech savvy world speed is everything so therefore if you limit people to speeds less than 2MB a lot of that content becomes frustratingly hard to create and deliver to the audiences. A lot of the little guys understand this issue and will not stop fighting until we get what is right. The internet needs to be fast, secure, robust and open in order to achieve maximum usefulness to america and its territories . Please i beg the FCC to reconsider even though giant corporations are paying boatloads of money to influence the FCC to kill net neutrality and gain even more control over people and small businesses. Please just see it through our eyes, you people also don't nee the money don't be greedy :)
—Kenat, San Sebastian,

This is important to me based on the fact that this completely destroys any chance that smaller size businesses can do business in this space just as fast as the bigger businesses. We have to let the free market have control over this. I am sick of being a consumer paying for all these mergers that big companies do. Add that onto inflation then how do you expect that the average American Family suppose to live. The same company that is buying all these other companies people work for them have to come home and deal with regulations in their free time. This is not what this country was founded on.
—Darrell Johnson, Baltimore, MD

Net neutrality is essential to my work as a free-lance researcher. Common carrier internet would protect my job from extinction and let me depend on my own talents rather than corporate permission.
—Paul Cardwell, Bonham, TX

You are supposed to be protecting me not the big corporations!! No two-tiered system!!!
—Linda Lambert, Ojai, CA

I know that things that exist now such as Google, Twitter, Facebook, Netflix and Amazon all started as small companies who would not have been able to compete with Yahoo, MySpace, Blockbuster, and other big companies were it not for Net Neutrality. These rule changes would not only mean higher prices for these services but also the end of innovative technologies that shape the Internet as we know it. These changes are unacceptable and we already live in a country that regulates the Internet more than any other first world nation, this would allow not only government but CORPORATIONS to run the Internet. Me and many others will do whatever it takes to protect/reinstate Net Neutrality if need be. You have the backing of corporations, but we have the numbers!
—Eric Hebert, Mundelein, IL

Make the internet a Common Carrier please. Thank you.
—David Wolf, Kula, HI

Please protect my right as a consumer. Net neutrality is so very important! Creating a tiered internet will greatly impact our educational system. Public schools already struggle to provide equal education opportunities. Creating a system that only allows those with higher income to access faster internet speeds will create even more financial hardship for low income families and low income schools. It will increase the costs of college fees and widen the gap between those that have and those that have not. Why should for profit companies be allowed to monopolize and profit from the internet? Support Net Neutrality!
—Randi A. Thomas, Little Rock, AR

I don't think these big company's should have the right to decide what I can or can't see. This is all about money and not all of us have alot of it. I live check to check I use the net for many things. Don't take and throw Net Neutrality out the window. Because I truly don't think those company's should have the power to decide what we do online..
—Robert Colburn jr, Stillwater, OK

Net Neutrality is important to me because I deserve to have fast internet service at a reasonable price.
—Jacqueline Newman, Greenville, KY

Net Neutrality is crucial to maintain fairness across the internet and ensure that the internet is accessible to everyone.
—Katelyn Poon, ,

Today we have a free market for information. In news alone we can access any issue we are interested in. This is not the case with corporate TV news; These news outlets routinely hide and bury stories that their corporate owners find inconvenient. Internet news outlets typically have no such limitation, and they allow anyone to get the news they want to know about. This alone makes the a free internet the best news system in history, but the current access to social media makes the system accountable to it's readers, rather than a corporation. As a result internet news outlets are more likely to deliver accurate information. The new rules the FCC has proposed will destroy this accountability, by placing ISPs in control of the news. This will give them the power to control the national conversation that controls the political system of The United States. These new rules will effectively hand over the country to a handful of corporations, and will end representative democracy. This alone makes these rules a threat to the country, and combined with the other aspects of internet communication, makes these rules one of the greatest threats our country has ever known.
—Steven Conwell, Amarillo, TX

The internet is a communications network and should be regulated as such.
—Lisle Lewis, Naples, FL

The internet should be regulated as a public utility, as it has now become nearly impossible to do anything without the internet being involved in some way. Do NOT turn it into a pay for play luxury where corporations can discriminate against online content.
—Amanda Butler, Salt Lake City, UT

The bottom line is, the new roles will lead to even more expensive service for us, consumers. Right now I pay $185 for triple service from Comcast. And it is not even the most expensive their service! You, sir, do not think that is way too much? Did you see what is going on with Internet In Europe? Somehow the companies there manage to get a profit AND provide much faster access then here, in America. And what Americans have to deal with? Less and less competition, higher prices and now, the restrictions on service. Yes, restrictions! And, of cause, the higher prices will follow. Please, not let this happen.
—Andrei Chernetski, Perth Amboy, NJ

The Internet was created to be free for everyone, this means that no one person, company, government or organization is intended to control the internet by any means. By doing what you, the FCC, is doing you are violating what the original creator of the internet intended. The internet should be free, not restricted by rules that will restrict, discriminate and ultimately violate rights we have as internet users to do what we wish to without being restricted by an outside organization. This is unjust, unfair and a violation of our rights as users and people.
—Tatianna Gilbertson, Henderson, NV

I believe the answer to the whole quandary is to throw out these new rules and reclassify ISPs as common carriers! Thanks!
—Katherine Schock, Rock Springs, WY

I am disabled andlive on a fixed income of $1192.00 a month on SSI. If I had to pay for anything extra on the Internet I would lose contact with my friends, getting the news, and having entertainment. I can barely afford the monthly ISP cost as it is now. So please keep the Net Neutrality, other people just like me depend on the Internet to be free, not pay as you go and only for the rich.
—Gary C. Smith, Sacramento, CA

ALL vehicles of public communication should be treated the same. The FCC's actions are about control and favor big business at the detriment of consumers, as usual.
—Marlene, Philadelphia, PA

An open internet is important to free speech and to small business.
—Andrew Knowlan, Vancouver,

THIS IS AMERICA AND I BELIEVE THAT NOT HAVING NET NEUTRALITY IS A VIOLATION OF MY RIGHTS! Simple as that
—Rene Garcia, Compton, CA

Will Corpporate America control this too?
—Gloria Davis, Sacramento, CA

What about democracy? If you think you have a sense for democracy, how come you want to impose rules that the absolute majority of internet users are opposed to? A truly democratically minded decision maker would heed the wishes of the majority and reclassify the "open internet" to utility rules and regulations. Be true to yourselves and the rest of the digital world and think about what you really want to represent; a Plutocracy or a democracy. Don't say one thing and then do another! Think about the self -defeating long term consequences for a short term monitory advantage of a few.
—Axel Meier, Oakland, CA

Everyone should have equal access to the internet period!
—Harry A. Mitchell III, Souderton, PA

It is like the telephone system - Would a call to Dominos go through faster than a call to Pizza Hut because Dominos pays off the telco? NO! Don't give into short-sighted companies. Preserve net neutrality.
—Glenn Miller, Columbia, MD

It's hard to imagine a more blatant conflict of interest than a cable/telco lobbyist as chair of the FCC. If Mr. Wheeler, had an ounce of integrity, he would recuse yourself from his job and let someone take over who will look out for the American people rather than the corporate elites you serve. The arguments for Net Neutrality are undeniable. Allowing data to travel at different speeds will provide insurmountable barriers to startups and give undue and grossly disproportionate power to big corporations. It is no exaggeration to say that ending Net Neutrality will do serious damage to the internet. But there is no point in arguing the actual reasons why Net Neutrality is so critical because lack of understanding is not the issue here. The real issue is a hopelessly corrupt FCC that despises democracy and is willing to cause vast harm to a vital public utility to suit its corporate overlords. Shame on you, FCC. If you think we're going to let you get away with killing net neutrality, you're wrong. One way or another, we the people will stop you.
—Mark Lloyd Baker, Globe, AZ

If you honestly believe that giving this much power to isps will not corrupt, you need to snap back to reality! Plain and simple!
—Samora M Mogaka, Kansas City, MO

This proposed control and restriction is unnecessary and prohibitive. I pay for my internet and to make these changes will drive up the costs I pay for the higher internet and could restrict what I access. As a customer I feel Net Neutrality is important and should remain as it is.
—Davlyn Evans, Loving, TX

Net Neutrality is one of the few things left that haven't been taken over by corporate money. We MUST protect this and reclassify ISPs as common carriers.
—Daviann McClurg, Salina, KS

Unless we have true Net Neutrality there will be more and more inequality in this country.
—David Knutson, Rochester, MN

Net neutrality is the only way to preserve the free market.
—Bonnie Arcari, Middlefield, CT

Net neutrality is important me because everyone gets the same speed. And the small guy gets to have his say. He speech is not slowed down by businees greed.
—David Paz, Portland, OR

Net Neutrality allows access to information and education for all levels of society. The rich have enough advantage in today's society as it is, those supposedly serving the people need to stop giving them more and more!
—Perry McCarney, Auckland,

Since, like most Americans, I now conduct a substantial amount of activity (that used to fall under the purview of the United States Postal Service) online, it only makes sense to reclassify this medium as what it really is - a public utility - and reclassify providers (ISPs) as what they are - a common carrier.
—Sherilyn Wells, Bellingham, WA

Paying for better service online is ludicrous and unfair.
—Orion Burk-Poole, Mountlake Terrace, WA

A common carrier is just common sense, just no profit markup potential for the service providers. But they are doing just fine so far. I don't mind them making more money but not if it means higher costs to the users of the internet. Real net neutrality is an open and affordable one for the individual and small businessperson.
—Patrick Vingo, Norwalk, CT

A two-tiered system, like so much else, will help the biggest and richest companies and hurt smaller ones as well as ordinary Americans.
—Wallace Elton, Saratoga Springs, NY

We need you to take a stand for all US consumers and recognize the fact that Internet is and will continue to be integral to our success. With that in mind we need it to be accessible and unfettered.
—Michael J Blanchard, Manhattan Beach, CA

THROW OUT ITS RULES AND INSTEAD RECLASIFY ISPS AS COMMON CARRIERS WE THE PEOPLE WANT NET NEUTRALITY
—Pat, Spencerport, NY

Net neutrality is a must since we have no real competition in the USA. Reclassification is the only way to go at this point
—Rui Fernandes, Silver Spring, MD

The Internet is already expensive and fluctuates too much in speed. This is in no way a good idea.
—Michael Patrick, Augusta, ME

Net Neutrality if critical to preventing dominance of speech on the internet by rich and powerful corporations who would further "tilt the political playing field".
—Kenneth Scott, Camp Sherman, OR

I am a retired person, who does a lot things on the Internet. With the loss of net neutrality, I would possibly be priced out of the market. PLEASE DO NOT ALLOW THE BIG COMPANIES TO DICTATE, BY PRICE, WHO GETS THE BEST/FASTEST SERVICE. Thank you.
—Arthur W Green, North Fort Myers, FL

I would be unable to create awesome web apps freely available to the world.
—Justin Porter, Woodstock, CT

Because they aren't just internet carriers anymore - they are multimedia carriers and should be regulated as such. The internet is the least of what they provide.
—Gavi Stevens, Largo, FL

Tri-opolies controlling a two-tiered Internet would create higher fees that would seriously cripple students, research, seniors, and the vast majority of small businesses. In turn, it would further damage the economy. Such a change in communications would be against the FREE-enterprise system America claims to stand for! It would further provoke anti-American sentimentality and outrage on a global scale. Mr. Wheeler, is this what you want as your legacy?
—Dr. Carla Davis, Oak Park, CA

letting those with money control the internet would ruin the idea of free speech.
—Ronald R. Villarreal, Wake Village, TX

Internet access is a basic human right.
—Michael Dowling, Winnipeg,Mb,

The proposal that the FFC has out out would devastate people who are already having to deal with slow internet speed. Net Neutrality means no one having to suffer through who gets what speed.
—David Robertson, Bateau Bay,

Damm you FCC Commissioners for pushing the agenda for ending net neutrality. DO NOT approve the telecoms' agenda!
—Dave Weaver, Rio Rancho, NM

Mr Wheeler, Net neutrality should be the engine that drives forward innovation for all players. To accomplish true net neutrality, ISP's should be classified in such a manner, that the creation of haves, and have not, is not possible. Please consider the concept of ISP's as common carriers with true net neutrality.
—Matt C., Rangely, CO

Don't sell out the people to the corporations yet again. Try doing something just because it is the right thing to do. No one deserves better access to the internet than anyone else.
—John Smith, Aiken, SC

As a common carrier of what is essentially a 21st Century utility, just as critical as home heating and indoor plumbing to our civility, you must discard Wheeler's derelict internet plan!
—John S. Sonin, Juneau, AK

My husband and I depend on the internet for most of our communications with family and friends. We can barely afford the relatively slow connection we have now. Furthermore, the sharing of information in general would be severely limited by this measure, putting low income students at an extreme disadvantage.
—Kerin Woods-Relf, Waltham, MA

I pay a lot of money for my internet connection every month. My internet provider in return should give me unobstructed access to all of the internet. I don't want them to slow down any particular service so that they can extort an extra fee from them on top of what I'm paying like what they did to Netflix. FCC should safeguard the open internet and consumers like me and not cater to lobbyists so that they can make extra money on top of what we are already paying them. Net neutrality was not broken so it doesn't need your fixing. Internet providers will make enormous sums of money without your help and attempt to stifle the competition and making it harder for the newcomers to the market. I want to be able to access all the new internet services and websites at full speed without waiting until my internet provider extorts an extra fee from them. Thank you, Mike Zych
—Michael Zych, Flushing, NY

The classification of ISPs as common carriers is the entire point of the Internet. Classifying them otherwise will have chilling effects on our economy - even before they impose tolls, the threat that tolls are possible will make many potentially enormous and productive new businesses infeasible just to begin. It will also harm the credibility of the FCC, and that loss of credibility may undermine its mission forever.
—Ben Donley, San Francisco, CA

If the internet is regulated by companies, there is no point to having it. The idea of the internet is to be able to get other information near-instantly. When some of the internet is slowed down purely so that companies can make more money, the internet will have lost its entire purpose. Normal search engines already only search a tiny fraction of the internet; this proposal would make that fraction essentially nothing. As a citizen of the United States, I do expect to be able to look at more information so that I can think freely. This proposal would allow large companies to censor websites they don't agree with or that don't belong to them, thus removing freedom and taking the American internet down to the level of China's (or North Korea's) level of censorship. No one should have to pay money to be able to access additional information to be able to truly think freely. Freedom of Thought is an inherent right, NOT a corporate product. That is why net neutrality is so important.
—Arthur Woodworth, Kalamazoo, MI

Net neutrality is critical for unimpeded flow of information as well as encouraging new developments. Considering the very fertile grounds for abuse of a public resource by large telecoms as well as content providers. There are also significant concerns about the suppression of free speech and political discussion by corporate interests. There are numerous examples of abuse with the system as it is now, so it is critical to have net neutrality. As a scientist (Chemistry) I have grave concerns about the creation of limits to internet activities that will compromise my abilities to carry out my consulting activities in an unbiased manner. Edgar F. Paski, Ph.D.
—Ed Paski, Blaine, WA

As a user of the Internet and a little bit of a shut in, I count on the internet to conduct business and keep in touch with my family and friends and sometimes it matters on how fast. These proposed 'rules' would limit my access to my family and cut down on the responsiveness I sometimes need to help facilitate keeping things smoothly operating. I also am a small time online game enthusiast. And a forced' slow-lane' on the internet would be the possible 'death' of that and many other industrys as well where sometimes 'speed' is very much a factor to the outcome of the game. This is true in the business world as well, where time is money, and a slow reaction to something could cost billions. So please, don't do this to the internet and keep it free and neutral.
—David M. Drummond, Rialto, CA

The internet has provided a balance to corporate consolidation of media. Without free internet, there is no free press, just Chamber of Commerce propaganda.
—James Peloquen MD, NY, NY

Aloha! Its me again! 15066? I've already said what I felt saying in previous comment, but today I'm in a far less cross mood.
—David, New Brighton, PA

Only reclassifying ISPs as common carriers will protect the open Internet. The action is a must!
—Arlene Zimmer, Rancho Palos Verdes, CA

Internet is important to me and please leave it alone so every one can enjoy it
—Alan Llewellyn, South Lake Tahoe, CA

Net neutrality is important to me because of the same reasons we don't charge people for sunlight or oxygen. It's not like we don't pay for the internet, everyone still pays the monthly fees to have internet. However, it's designed in a way that even poor people can have access to the greatest source of information on the internet. Without Net Neutrality, small businesses everywhere will be crippled and only the grotesquely wealthy people will remain unaffected. Please, throw out your proposed internet rules and instead classify the ISPs as common carriers. This is the ONLY way to protect real Net Neutrality.
—Carl Palmgren, Spring, TX

I do considerable research on the internet for my job. The internet has become a critical resource for professional scholars and research agencies. Net Neutrality is essential to my ability to do my work. Slowing downloads, streaming, and access will significantly hamper my productivity and the quality of the research I am able to produce. Please do not go forward with the FCC plan. Instead, reclassify ISPs as common carriers.
—Patricia Sotirin, Chassell, MI

I believe that the internet is the last form of open mass communication among people. All the other mass media are owned, biased, censored, and very expensive.
—Melanie Cordell, San Antonio, TX

America needs net neutrality to help keep the country great. The FCC's new rules would cut out healthy competition and stunt the growth of new websites and businesses trying to be relevant in this "pay to succeed" model of the internet. It disappoints me that such an idea could make it this far in a country I once thought knew better for its citizens; however, you have the power to put a stop to these new, un-American rules, and we have the ability to maintain our sense of American freedoms. On behalf of the majority of Americans, I beg you to rework these rules and bring true net neutrality back.
—Rosie S., Cincinnati, OH

Net neutrality helps preserve what's left of the American Dream!
—Mary Thompson, Centerville, UT

Net Neutrality is what prevents every company from ramping up enormous prices for going to very specific sites based on web traffic in pursuit of the almighty dollar.
—Michael McIntosh, Sutton, WV

Net neutrality matters to me because it creates a fair Internet where everyone has equal access getting rid of it will just lead to higher Internet prices for those who can afford them and slower Internet for those who can't getting rid of net neutrality benifits the few and hurts the many and that's wrong
—Marshall Wegh, North Bellmore, NY

The internet as it is helps to keep the world informed and supports freedom. Removing net neutrality means corporate interests (money) will rule supreme and that is wrong for the future of mankind.
—Martin Carroll, ,

Net Neutrality is the ultimate in freedom.
—Maris Murphy, Norman, OK

Without an equal and open internet, there's not reason for me to pay for any internet. It'll be like the cable TV service that I've cancelled and done quite fine without. I'm not going to pay for access service plans to what's always been equally accessible to me an anyone. Internet service should be as a common carrier for all people, and not another way for profit mongering.
—Jason Anderson, Richardson, TX

The internet is a public space, and therefore all should be allowed access to its content - and that includes broadband and internet speed. Allowing companies such as Verizon and AT&T to discriminate against its users and the public space of the internet is a violation of what makes this great country's foundation: freedom. It also furthers class warfare and allows the affluent to step on the less fortunate... again. Finally, the FCC exists to monitor and check companies who provide things such as internet and television services, particularly in the case of discriminatory action, and now they seem to be doing the exact opposite. This begs the question, who are you really protecting?
—Mr. Jeremy Gee, Denver, CO

Net neutrality is important to me because the internet is one of the last true free areas in so many peoples lives. Please keep the net neutral for me and the rest.
—Jared H, Roswell, GA

The FCC has a political agenda which certainly is not to the best interests of the public. Appalling but not surprising that these political hacks get away with this.
—Alice Easton, Holden, ME

the internet is the only leveled playing field for education and information. we cannot have a democracy based on who has the most money and power.
—Jenny England, san carlos, CA

What happened to consumer protection?
—David A Shewmake, Edinburgh, IN

Are we losing our democracy? My job depends on the internet to receive assignments and report results and I cannot afford extra fee or delay
—Teresita Vanderdys, Irvine, CA

We need to preserve Net Neutrality for the free and fair and open flow of information. Net Neutrality is a crucial personal freedom and right that must be protect. Internet Service Providers are common carriers and should be classified as such. We cannot, and should not allow a two-tiered Internet that would give priority to the traffic of those who have paid for premium service. Access to information should be equal for everyone and not controlled. Corporate disfavor or disagreement of contrasting viewpoints will be bias and will control what we see on the Internet. Don't let the wealthy and large corporations usurp the Internet for profits. NO Internet monopolies! This country is being taken over by this elitist plutocracy. Our freedom and rights are not for sale to the current plutocracy. Don't forget the first three words of our Constitution, "We the People".
—CPA Richard B Maselow CGMA, Encino, CA

These people only want money and power. They are not here to help people connect. Paying $30 a month for something which costs less than 10% of that is usury. They didn't create the internet and are greed-based to control people with their connection. They should have no say as to how we use our connection nor withhold faster service.
—Lyle A. Chandler, Lorain, OH

I manage the internet side of a business. Today we lost internet. Didn't kill us, but it was just as bad as having our lights off, or phone not working (utilities). We couldn't process credit cards, and I was very much unable to do anything. Internet access and a website are linked pretty closely. Oh, did I mention we lost our phones? We get our phone through the internet, a utility.
—Andrew Mauk, Oakland, MD

I depend on the Internet to get a lot of information.
—Vivian Schatz, Philadelphia, PA

Don't give an avenue for established profitable or well-funded corporations to buy a fast lane that gives them an advantage over start-ups and other small companies. We need a level playing field for everyone.
—Warren Tighe, Walnut Creek, CA

Throwing out net neutrality is SELLING OUT TO BIY CORPORATIONS. DON'T DO,IT. NET NEUTRALITY FOREVER!!!!!!!!!!!!!!!!!!!!!!! !!!!!!!!!
—Mark Koppel, Greenacres, FL

The death of net neutrality means the death of innovation and new start up companies. Net neutrality means new jobs and a better economy.
—David Motz, Evansville, IN

I have already sent Mr Wheeler a email which I doubt VERY highly he ever saw it. We Americans are getting really UPSET with what has been going on in this country. Corporations dictate to our so-called representatives. I hope Mr Wheeler does what he wrote to me about keeping the internet open for all not Corporations to make us pay to have fast internet.
—David Boerst, Globe, AZ

The rich, powerful, and greedy are ruining this economy, and ruining this world. And internet providers are some of the worst. They will do anything to make more money and they don't care about taking away anything from their customers. The internet should be free and open, and we need REAL NET NEUTRALITY!!
—John J. Meise Jr., Roanoke, VA

Keep this country great!!! Dont restrict net access like in other places! Allow the public to share info and stay informed!
—Sarah Wyckoff, Houston, TX

The internet is the largest data base of information and global communication system in the history of mankind. That being said, any type of sovereign control over the system would immediately and irrevocably negate the reasons in which the system continues to exists. For this reason Not one faction, or group of factions, in our world has the fortitude, or intelligence, to execute a truly "fair" internet for all. NET NEUTRALITY NOW!
—Schaun R Cox, Springfield, OR

Anything short of breaking-up these monopolies, and worse enabling this enormously risky business practice, is a betrayal of the public trust. If you disagree, then your appointments were deralict. Thank you.
—Andrew Culver, Williston, VT

Net neutrality is essential for innovation and the growth of our economy. Furthermore, it is necessary to promote real competition. Allowing companies to push out competition for fees not only threatens consumer choice, but also provides a foundation for infringement on free speech.
—Jeff Brown, Madison Heights, VA

Our rights are quickly being taken away from us by big money
—Karen Stoutmeter, Sun City West, AZ

Reclassify ISPs as common carriers.
—Frank Heller, Duluth, MN

Stop this insanity, restore and maintain a free and undiscriminating information highway by classifying ISPs as common carriers. I can't believe that the corporate giants like AT&T, Verizon and Comcast are so greedy that they need to profit further at the cost of a neutral internet. Tom Wheeler please show us that you are no more than a lap dog for these greedy bastards.
—Zach Whitson, Mooresville, NC

As a teacher and researcher, the Internet is a vital resource for my work. However, the information sites I seek on the web are of little value to advertisers. If it becomes significantly slower to access these sites it will have a negative effect on students and teachers alike.
—Michael Warren, Thousand Oaks, CA

I'm a senior citizen and receive meager benefits from Social Security. I use the internet every day for finding coupons to save money when I go shopping. I also use it to keep up on the latest news that is not available through newspapers and TV news. I use it to stay in touch with my elected officials. I use it for banking and it has saved me bank overdraft charges because my up to date bank balance is instantly available. I am a Veteran, Active Voter and TaxPayer. As a Veteran I put my life on the line for Democracy. I'm sure that many more individuals use the Internet than corporations. Please help stop the plutocratic take over and save American Democracy and the middle class. It is a proven fact that a strong Middle Class creates a strong economy. It is a proven fact that people spend more when they make more and that creates a stronger economy.
—James K Hadcroft, N. Falmouth, MA

The internet is not primarily for entertainment but an essential platform for this nations communications system. To create a two tier system based on paying to fast track is unacceptable as it is based on an entertainment rather than communication and news gathering premise. It is reprehensible and inconsistent with previous FCC actions (referring of course to radio payola) the FCC levied heavy fines against record companies and are now, in essence, blessing the same actions by time warner
—Lisa Reissig, Syracuse, NY

we need the FCC to stand with the people who use the system, not just for the corporations that want to make more money off of us. We pay too much now for inferior service. I just received an email from AT&T today increasing my monthly services charges for inferior service (I have not other provider where I live).
—Rex Sanders, Phenix City, AL

A two-tiered internet is only in the interest of the service providers; the cost of the “fast lane” that other companies pay to them for preferential service will simply be passed on to the consumers. Internet service should be regulated just as landline phone service is (and as mobile phone service should also be); these are utilities and should be reclassified as common carriers. This is the only way to protect real net neutrality, which is important to level the playing field for future innovators as they contend with established companies with far deeper pockets. Please reconsider your ill-considered plan. Thank you.
—Victor Maurice Faubert, Jackson, NJ

Internet is a necessity in this day and age. If you allow Chairman Wheeler to give prioritized access away to the highest bidders we will have a system that favors the biggest powerhouse monopolies while slowing everyone else down to second rate status.
—Jim Patterson, INDEPENDENCE, MO

I don't want to pay more just to use the internet. There should not be different rates for "faster" service. One rate should apply for all internet users. I'm tired of corporations making millions and billions of dollars off the backs of the American people.
—Elizabeth Riddle, Whitsett, NC

The Internet is the only medium that allows everyone to reach everyone equally, as this nation's founders envisioned. The proposed rules are not just a slap in the face--they are an abomination against the very principles of freedom and equality upon which this nation is founded.
—Sharon Lai, San Diego, CA

The internet is the one place I can freely express myself.
—Hannah Quigley, ,

Net Neutrality is just like public broadcasting in the United States. Without Net Neutrality, Uncle Sam will have to pay a higher fee to get faster internet. A corporate takeover of the internet lead by the wealthiest 1%, will be a disaster to the first admendment of the U.S. Constitution. Please classify the internet as public utility because without it, Americans like you and me will have to pay the ultimate price.
—Charlie Heckman, Chicago, IL

People require the internet to get work, do job searches, get news, pay bills and other basic functions. This rule would unfairly target the poor and middle class while creating a boon for the wealthy.
—Emory Edwards, Jersey City, NJ

The internet was created and designed expressly to encourage the free flow of information. This proposal is a betrayal of that intention, and would cause vast and irreparable harm to all of us who depend on the net every day.
—Laura Horowitz, Pittsburgh, PA

Seriously, do what the public wants, this is government by the people for the people, not for the corporations. It's really sad that that is what it has become . . .
—Brian Daniel Ganster, Zephyrhills, FL

The Internet is a Public Good and should not belong to any single individual (even if an 'individual' is a company - according to the 5 evil Supremes).
—Warren Buckles, Madison, WI

I am disabled and rely on the Internet for many things, from communication with my doctors to refilling my prescriptions to day-to-day matters. More fees would affect me dramatically for the worse.
—Jay Wolfe, Pepperell, MA

Democracy requires an informed public that has heard multiple sides of an issue and can learn about issues that are not being addressed. The free flow of ideas needs an open internet!
—Carol Ballou, Belmont, VT

Net neutrality is important to keep the internet available to people of all classes. Not just the upper crust. It's classism at its finest. It will keep the poor poorer and the rich richer, dividing us all even further. Please don't allow companies to monopolize the internet. We ALL need it EQUALLY.
—Nicole Finger, Cincinnati, OH

The FCC's proposal on net Neutrality would put an end to small businesses on the internet. It is pro big business and the FCC needs to leave things as they are. Keep your hands off my internet.
—Robert Basye, Dry Ridge, KY

The internet is a repository of knowledge that can help anyone get entertained, meet new people and become a better person. From that Netflix series to that how-to video on Youtube to contributing to open source software on Github or Sourceforge. Everyone should deserve equal access to these services. If net neutrality didn't exist, my internet provider could restrict or limit access to these services and I might not have been able to view that article that learned me how to be a programmer. I would have never met the awesome people working on the same open source projects. If my provider had restricted access or throttled my bandwidth, I would never have been able to download that piece of software that allowed me to compile my code. I might not have been able to download Linux because my provider made a deal with Microsoft to promote their product instead. And I would not have the IT job I have today. I love what the internet and net neutrality have done for me, and I want the same for every generation to come. Don't sell the internet to the highest bidder.
—Hidde Jansen, ,

Corporations have no right to profit from control of the internet which was created by public funds.
—Patty Parks-Wasserman, Corrales, NM

Please do NOT create tiers for the internet as this sets a dangerous precedent with limitations on many who cannot afford the extra fees! Thank you.
—Brianna Rene Chase, Swansea, IL

The "Haves" need to stop discriminating against the "Have Nots"!
—Darlene Barger, Greensboro, NC

Wheeler: stop being a corporate toady. The electromagnetic spectrum the Internet uses to operate is a commons, not a fenced private preserve. Stop pretending that corporations own it. They do not. You, sir, are supposed to protect it from the excesses of business treating it like the frontier, taking what they want and depriving common folk of its existence.
—Ernest Rosado, Berwyn, IL

You can already see the effect of abolishing net neutrality with Netflix signing on with Comcast and paying to ensure they can keep the speed of their connections to their customers. Within a month, Netflix notified their customers that the monthly fee would be increased by $1. This is the model that would be established. Many would then be forced to pay. This would leave people who can't afford to pay for faster connections with second rate service. It then is no longer free and equitable access by all. In the end, it simply creates more revenue for a few corporations/individuals. With the establishment of net neutrality, what other accounts will I have to pay more for? First Netflix, then Skype, then my conference site, then my email accounts...it will never end and for what benefit?
—Dora Taylor, Seattle, WA

do not ruin the internet by adding this new and ridiculous sanction. This will certainly monopolize the industry in addition to crippling users who can not afford the fast lane. The internet is meant as a means for expression by all one of the last and few spaces where ideas can flourish. ISP companies need to stay common carriers because they will dictate like a drug czar and how does that benefit anyone in any way.
—Frank Timoney, Phoenix, AZ

No one company has the right to control the internet. The internet is the best chance that man has of being a better race but you would know that, that is why you want to control it. Make ISPs "common carriers" so that the whole world has a fair go.
—Stuart roberts, ,

As a poor citizen who depends on the internet, I am asking to not be discriminated against.
—Dorinda Kelley, portland, OR

The fast pace of innovation in the US has been predicated by fair access to the Internet. Giving big corporations privileged access to faster speeds will put the US at a major disadvantage on the world stage.
—David Smith, Richmond, CA

The Internet was intended to be something special for everyone. It was designed by the people and for the people of our world when the government handed it over to us after the cold war. You see, the internet needs to remain open and free and the only way to do that is make it fair for everyone. Not give special permissions to those who pay more money to get a special faster connection. If we allow this to happen, if we allow the internet to be bought out by corporations. We will loose and alienate the very people who innovated the internet and made it what it is today. Please do not sell out the internet or its citizens.
—Jesse Chenoweth, Medford, OR

We must remain neutral so all can be heard.
—Marian Rowland, Barto, PA

The internet has always been a place of sharing ideas rapidly, leading to the development of many great ideas. Even universities rely on the internet for the rapid sharing of their scientific works that act as inspiration for new work from others. Without net neutrality, the very possibility of freely sharing information for the benefit and education of others is impossible.
—Thomas Hopkins, Ann Arbor, MI

Because furthering self-education relies on a neutral web, whereby 2 sides of each story can be researched, analysed and people can continue to better themselves.
—P W, Beverly Hills, CA

Net Neutrality is what allows small, unheard-of companies with great ideas to spread and become successful companies with innovative practices. Forcing people that don't have the financial backing to stand up to greedy ISPs to suffer second-rate internet speeds means directly standing against innovation itself. Please open your eyes to the 21st century and don't give in to the lobbyists of the Internet Service Providers.
—Alex Lambert, Cincinnati, OH

This is illegal. These people are changing rules and doing harm to the American people. This is not right!
—adriana Hall, Pacifica, CA

The ISP's already have too much control over how information is transferred. Being held hostage by bandwidth throttling until you are forced to pay more is wrong. Their subscribers (like me) are already paying them for access to content and the availability of that content should not be determined by who has deeper pockets. Please do the right thing and preserve Net Neutrality. It is obvious that our current system and the current plan for the future is broken and dangerous for the future of the open internet. Thank you.
—Scott Bennett, Bremerton, WA

Net Neutrality gives start-up companies, many of them relying on the internet to reach out and expand their customer base, a fighting chance. By ending Net Neutrality, small businesses will not have to worry about paying a second fee just to allow customers to access their website (remember, companies already pay for the bandwidth hosting their service, so they're already paying the fee to reach customers). I don't believe that 'fast lanes' by ISPs do anything for the internet, especially as we have the technology for a faster internet already available to us to create a faster internet. We are the 32nd nation in terms of internet speed and the fact that ISPs are choosing to charge people more for faster lanes instead of investing in better technologies and providing a better service to their customers (who often have no other options in their area due to monopolization of ISPs) is telling. Net Neutrality and free markets is not something that service providers respect despite their words, so I strongly urge the FCC to stand up for the free market now.
—Elizabeth Wehner, Carthage, NC

improve the life of human race!
—Dave Cadway, san diego, CA

Money shouldn't rule how content is sent
—Kelly Raymer, Houston, TX

Net neutrality is our only guarantee that monopolistic practices will not erode a level playing field.
—Jonathan Young, Carmichael, CA

I use the Internet daily for my news, to work from home, stay in touch with family and friends. I insist the FCC protect the open Internet by reclassifying ISPs as common carriers. I depend on the Internet the same as I do other utilities.
—Therese Bovee McKelvey, Monroe, WA

Level the playing field on access to information for all without imposing tiered systems that hurt the majority of citizens.
—Judith Harris, Fort Wayne, IN

it's a utility, not a privilege
—Eve Bogdanove, Greenfield, MA

As someone who counts every penny, I cannot afford to pay for a top tier internet. The Internet is worldwide - I don't understand why AT&T, Comcast, Verizon would be allowed to do something that can affect users not just in our country, but in others as well. Please reclassify ISPs as common carriers, like radio stations.
—Sharon J Smith, Evansville, IN

Electronic communication is a public utility and should be regulated like one. ISPs are trying to shift their focus from providing useful services to the general public to acting as chief arbiters of the internet, deeming certain content worthy of "privileged" tier status at the expense of the rest of the network. The success of the internet comes from the impartiality of its data transmission protocol. If the ISP no longer wishes to become simply the facilitator in this transmission, but an active participant actively trying to disrupt the neutral flow of information to pursue their profits to the fullest legally allowable extent, the utility itself is jeopardized. ISPs should be treated as common carriers, as the internet deals in information and ideas, it is the truest example of a common good. We wouldn't start allowing electric companies to charge different prices for electricity based on how an individual uses it, as we would see that as an unfair grab for power from consumers by the electric companies. Why have some bought into the idea, then, that the internet is different? The economic activity generated by a completely neural internet is multitudes greater than any additional profits the ISPs could squeeze out of their users by redefining the internet.
—James V Dugan, Boca Raton, FL

Big companies should not own the Internet. The net was made for all users not just the ones that have lots of money and want to make lots of money!!!
—S Smith, Sound Beach, NY

Multinational corporations should not be given special favors simply because they can afford to pay, or charge extra. The Internet is neutral because it belongs to everyone. It is a public utility that belongs to everyone, worldwide. We have an obligation as Americans to be a good example of Net Neutrality for the world and future generations. Giving special expensive privileges to those who can afford it, and who will burden people by passing those costs onto them, reeks of elitism and plutocracy. Net Neutrality is for the people. Please keep it that way.
—J.M. Moss, Canyon Country, CA

The internet rules favor one group of the population unfairly and disadvantage others. Reclassify ISPs as common carriers. Protect Net Neutrality.
—Susan Michetti, Mt Horeb, WI

Mr. Wheeler, As chairman of the FCC, it's your responsibility to make decisions that are fair for consumers. In this case, that means reclassifying ISPs as common carriers. Please make the right choice. Thank you, Paul Statezny
—Paul Statezny, Phoenix, AZ

I depend on net neutrality to go about my everyday life and without it I would have to stop using the internet all together.
—Hannah, Kirkville, NY

The internet is the only thing even close to a level playing field that we have right now. For the love of all that is good, don't hand the last refuge of humanity over to your corporate overlords.
—Joseph Cutler, Longmont, CO

Please reclassify these ISPs as common carriers. It is unjust for them to be making profit off of unjust fees they impose on other businesses.
—Bill Nguyen, Westminster, CA

This decision should be a real no-brainer for anyone who claims to serve the public interest. What do you serve?
—William Todd, Strafford, NH

Net neutrality is freedom.
—Edward Hanson, Commerce City, CO

The best content is found on independent sites, not on those of the media behemoths. We really need to retain the Internet as an unlimited source of information and conversation.
—Wayne Daniel, Phoenix, AZ

The Internet is the largest source of free information in the world, but an Internet controlled by corporations is not a free Internet. I use the Internet primarily to read the current news stories in the world and to do research. With the FCC's proposed plan the web sites for news outlets may not be available due to censorship, or they may load so slowly that they may as well not be available at all. I believe the Internet should remain free and available to everyone. It should not become the property of special interests who operate it for their own benefit.
—Donna McDonald, Louisville, CO

the what, why and how: COMMON CARRIERS
—Meg Kidd, Keene, NH

Without net neutrality, big business has yet another way to put their own squeeze on the competition. This can be greatly damaging to independent websites and companies who tend more to tell the entire, unbiased truth. It has been historically proven that businesses and the state ought not be in control of any media outlets. The end result is inevitably strangulation of the entire truth, or even outright lies.
—Christopher Mooney, Houston, TX

I work online in the medical transcription industry. Playing around with the internet and allowing companies to set different rules for different types of users would severely limit my ability to make an income. I am not a big company that can afford fast-tracked business rates. I'm just an ordinary user who happens to be online working all day long. Please help me out by protecting the open internet and net neutrality Large internet service providers should NOT be given control of the internet via controlling bandwidth speeds. The potential antitrust ramifications of this kind of action are mind boggling. Please throw out your rules and reclassify ISPs as common carriers.
—Donna Skeen, Saint Charles, MO

This has become a way of communicating with everyone for everyone. It's a place to exchange ideas. This is changing the world. The internet can change the world if everyone can participate at a fair price rate. To close it would be like going to the dark ages. Please, for everybody's sake, keep net neutrality
—Wendy Schroeder, Denver, CO

Startup businesses and the middle class need parity to survive.
—Misty Day, Fullerton, CA

If it ain't broke don't try to fix it. Why let the big corporation control the internet. Keep it innocent.
—George Nauful, Paso Robles, CA

freedom
—W F. Noble, BOSTON, MA

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Charlene Joye, Abingdon, VA

The country and world now depend on the free passing of information. Allowing the telecoms to censor information would ruin the internet. ISP'S should be common carriers
—Cory McCluskey, Encinitas, CA

I use the internet every day, and it is especially useful when I need to look up something I don't know much about. Plus, through Facebook, I am able to keep up with my friends from college and find out about some interesting things I didn't know about previously.
—Brandon Kozak, Edwardsville, IL

Hello...monopoly vs free speech (in the tech age)...it seems pretty simple to me. We talk about (ie.) China blocking Google and/or content...or any other myriad of variations...do we, Land of the FREE want to allow capitalistic gain block the poorer voices to go unheard? or so slowly heard they become ineffective? Stand UP and do the right thing. These mega giants are quite wealthy enough without resorting to this for their survival. This is mega at it's worst.
—Lois Wilson, NOVATO, CA

Net neutrality will seriously damage the internet we all use today. Stop giving breaks to the big companies and stand up for the public!
—Allen Winiski, Roswell, GA

I deeply value the Internet as a democratic, equalizing resource, and feel certain that this would disappear if ISPs, which have purely a profit motive in mind and no sense of the public good, are allowed to determine how content is delivered to us. Please classify ISPs as common carriers and protect Internet neutrality in a meaningful way.
—Emma Miniscalco, Washington, DC

Internet access in today's age is a UTILITY. Please re-classify it as such - Internet Service Providers are COMMON CARRIERS. The BEST action to establish and maintain open and competitive internet access for all Americans, today and into the future, is to re-classify Internet access as a utility service, just like water and electricity. America has some of the poorest service/speeds, and some of the highest costs among the worlds most developed nations - and these Internet Service Providers are getting unfairly rich in the process. I'm all for competition, and investing to make our internet access the greatest - and the NEST way to do this is to maintain Net Neutrality, not allow any 'fast/slow lanes' segregation/discrimination, and re-classify Internet access as a Common Carrier Utility service. Thanks for listening. Tom Leahey
—Tom Leahey, Denver, CO

reclassify ISPs as common carriers. The internet should be equal to all.
—Trent Sokol, San Diego, CA

Well it now appears that the United States is truly selling out. This is no longer the America our fore fathers fought to create. This is now the United States of corporations. And I am no longer proud to be an American. Not only has the FCC sold out to the internet providers but it has also spit in our faces. What if we can't afford faster service? Screw us right? I will no longer appreciate this country.
—Daniel Despres, North Grosvenordale, CT

It's how my grandchildren and I get to see eachother
—Mary Gilbert, Pleasant Plains, AR

It's another way to divide the people. The haves and the have nots. I always thought that the enternet belongs to the people. I'd rather you just leave it as is than to make greed the issue.
—Ernest Jones, Losantville, IN

I know this won't make any difference because you're all bought and paid for by lobbyists. How else can you possibly explain doing something so horrible for the people and so good for the big businesses? We are no longer a representative government. It's a plutocracy, and this kind of action simply proves it.
—Eric Montellese, HOCKESSIN, DE

The Internet as we know it (an open and fair resource,) is crucial. It facilitates simple things like communication between friends and relatives, but also plays a major part in promoting positive, world-shaping movements like Civil Rights and Environmentalism. I understand why people like people in power, like Tom Wheeler, want to squelch this out: It's bad for business. But no matter how much or how little they have, People are not Money, and People need an open internet-- not only to craft a better world for tomorrow, but to solve the many problems of today. Mr. Wheeler, and the hyper-rich, for which he stands, are not immune to these problems, nor are they immune to the People, and the Republic for which they stand. An open internet is what the People need. Reclassify ISPs as common carriers. For Tomorrow. For Today. And For People.
—Trevor Black, Los Angeles, CA

Monopolies have enough power as it is - these "rules" will only further an already-rampant problem.
—Rachael Allert, Saint John, WA

Democratic rights should not be determined by what individuals can afford. Costs for varying degrees of Internet service will be passed down to the consumers, who are, more importantly, CITIZENS. This is a critical decision that will influence free speech and access to information. ISPs must be classified as common carriers so that all people in this country are given fair use of the Internet.
—Skye Christensen, San Francisco, CA

Let's not have Internet providers provide fast lanes for those who can afford the extra fees and a slow down for the rest of the people.
—Ann Searing, Milton, MA

Don't allow money to buy access to and control of open flow of information.
—Joshua Nagine, Lewiston, ME

The internet should not segregated by economic status. Functionally, ISPs provide the same service as Telecommunications, which are classified as common carriers. The internet is replacing telecommunications in many ways and should therefore be treated exactly as telecommunications are. The best interests of the people are served if the FCC protects open internet. As a governmental agency your job is to protect the interests of your citizens, not pander to corporations who have no one's interests but their own in mind.
—Nicole Boyeson, Madison, WI

Corporations have far too much influence on the lives of Americans already without adding to it in this important way.
—Betty Phillips, Topeka, KS

If you do not reclassify ISPs as common carriers then you will hand over too much power to big corporations, ending any real competition and curtailing free speech. Small companies and non-profit media companies will be relegated into the slow lane and their voices drowned out. This is not acceptable. I need a free and neutral internet so I can exercise my 1st amendment rights to speech freely. This is one of the most important issues of our time, right up there with climate change.
—Lois Brooks, Ferndale, MI

We all deserve a level playing field! If you can't side with the PEOPLE over Corporations, then RESIGN!!
—Polly O'Malley, Los Angeles, CA

we need net neutrality now. Reclassify ISPs as common carriers.
—Mono Veissid, Los Angeles, CA

The American media is ALREADY OVER-POWERED by BIG CORPORATE INTERESTS..... INTERNET NEUTRALITY IS ABSOLUTELY THE VITAL 'LAST STRAW' in order to keep ALL of OUR ACCESS to news-media-infomation our from under the SELF-SERVING THUMB of BIG CORPORATIONS !!!
—Christine Hicks, Cuyahoga Falls, OH

This is an issue that cuts across the entire political spectrum. All citizens WILL care once they find out what the FCC is up to. All citizens should have equal access to the internet.
—Susan Gamble, Lawrenceville, GA

Everyone should have equal internet access.
—Trisha Lalancette, Wolcottville, IN

I don't want Comcast or any other infrastructure provider to decide--based on their own corporate preferences and the personal and religious preferences of their executives--what content I should see, or at what speed or quality.
—Jed Holtzman, San Francisco, CA

FREE SPEECH IS MY RIGHT!!! NOT MONEY IS FREE SPEECH
—Alan Parker, Independence, MO

Isp are already screwing us dont make it worse
—Anthony m fargo, Ashley, OH

Net Neutrality is absolutely necessary for both our Economy & for our National Security!
—Steve Sears, Hatboro, PA

TGom Wheler must be fired from his position as FChairman. He has betrayed the public trust and sold the internet to the highest bidder. As far as I am concerned he is a traitor.
—Marc Page, Norwich, CT

Net neutrality is pivotal and a necessity for life.
—Carlos Campos, Fontana, CA

Real Net Neutrality is crucial for creativity to be fostered and for corporate monopolies to be prevented. Without it, technology start-ups without a lot of money will not be able to compete with larger companies, such as Facebook and Google, that can afford to buy "speed lanes". This ultimately creates more costs for the consumers. Moreover, Internet Service Providers will be able to slow down websites that they do not like (by speeding up others) and the internet will no longer be as free as it is right now. Even free speech will be affected. Internet Service Providers must be neutral and should not be allowed to treat data for different websites differently.
—T Tan, Deerfield, MA

Equality is the greatest gift human beings can give each other. Validate your humanity and reclassify ISPs as common carriers for true net neutrality and the free, equal benefit of us all. Thank you.
—Chris Smeaton, Flower Mound, TX

The internet is the closest thing citizens have to direct democracy. By making the internet more easily accessible to people who can afford it and less accessible to those who don't means the people's voice will be stifled. Please keep the internet free from corporate control.
—Tyler Clemens, Olympia, WA

I use it for research and important information that I share with emotional and mental ill consumers so I need a fast inexpensive internet
—Rose King, Lockport, NY

We all need a level playing field for access to information online, which is the basis of nearly all opportunity now. If certain organizations can pay to have access to their information preferenced, it's the same as any other form of censorship. The internet needs to be a democratic forum with regard to information access. Don't ruin it like you have mass media, cable companies, and all the other information industries that no longer serve the public interest as they ought to.
—Janique O'Shea, waltham, MA

I cherish my freedom of speech!
—Mark Meyer, Westland, MI

Stop thinking the only thing on the internet that matters to me is Netflix. I depend on any site I want to access being equally accessible.
—Kent M. Willocks, Eugene, OR

Independent science research, data sets, analysis -- no access to www2 -- educational programs will suffer even more -- no net neutrality will make things even worse. Why is S. Korea, Singapore, and Japan so much more advanced than here for high-speed broadband, at less cost? Sincerely, lon freeman
—Lon (Master of Science in Teaching) Freeman, Olympia, WA

I pay for access to the internet. ISP's should not be allowed to double dip on service charges. Net neutrality is fair and even. Please don't destroy it and the small businesses that rely on an even and fair internet.
—Brian Alvarez, nashville, TN

Please stop allowing internet service providers to control and manipulate the market through monopoly / duopoly power.
—Bogdan Vlad Tira, Chicago, IL

Dear Tom Wheeler and FCC Corporation, Your new rules to replace Net Neutrality upsets me. What ever happened to "home of the free"? It is companies like the FCC that is making our way of living worse because you refuse to listen to the real voices of the world. Why give us chances to speak out about our opinions of your choices if you are just going to do whatever you feel is best? While Net Neutrality has its flaws, it provides us a way to access everyday information in a failing economy. In a world filled with despair and sorrow, the Internet shines a light in the darkness as it provides us a way to connect, talk, and share with people who live either close or far away from one another. The Internet gives me a way to relax and forget about the real world for some time, and to think this may be taken away from me just to find another way to make a quick buck appalls me. Why should we all be punished for something we all as a whole did not cause? Are we 5-years old to you? The government can push these new rules all they like, but I will fight for my right to browse the Internet for free despite how many insufferable rules you decide to shove down our throats. But who cares, right? It's not as if you'll actually read this message. Sincerely, JWK
—Jwk, ,

Hello Tom, how about keeping your word on protecting net neutrality and not killing it just to benefit the internet providers, you need to reclassify ISP's as common carriers.
—Edward Pineda, Garland, TX

These rules won't just apply to the now, but also to the future. My children's future and their children's future. This shortsighted "net neutrality" cannot be allowed to pass. We need to start thinking in future terms and not just for businesses but the public who will be the ones to bear all the good and bad that can come from any decisions made without thought to future consequences.
—Andrew Darcy, Wanaque, NJ

Net Neutrality is important for an equal opportunity business environment, and is important for personal/individual equality in society. Net Neutrality has allowed for great progress with global communications, business communications and social communications. Maintaining Net Neutrality is a must and we must continue to protect it so that it can not be abused or used to abuse. Internet Service Providers should be reclassified as COMMON CARRIERS like utilities such as electricity. We should have an equal opportunity environment in all areas of business if we want to have an open and equal opportunity environment to work in.
—Justin Presto, Everett, WA

The internet is no longer a luxury, but an absolute necessity in this day and age. Classifying ISPs as common carriers will preserve Net Neutrality and foster innovation.
—Alison Wilczek, Marblehead, MA

Genuine Net Neutrality is essential for the citizens of this country - otherwise we get total discrimination by the rich and powerful - it is absolutely required for a democratic nation.
—Nancy L Singham, Chicago, IL

I would rather have no internet at all than have crappy, biased, dial-up slow internet. If the FCC passes this appalling plan, I will cancel my Comcast subscription. They will not get another penny of my money. Shame on you, Tom Wheeler, for even considering such a biased and unbalanced plan!
—Susan Yeske, COLLINSVILLE, MS

In Michael Parenti's phrase we don't need Democracy for the few. Keep the Internet open!
—Michael Eichenholtz, Richmond, CA

A two-tiered internet gives less power to the people and stifles the flow of new ideas and businesses.
—Grant Forbes, Louisville, KY

Please reclassify the internet as a common carrier. We want real Net Neutrality
—Grace W Tiessen, Pasadena, CA

It's the only place left where equality still matters something. Not much, mind you, just that little something that's probably holding this whole place where we live cozy enough so we still don't want to risk our life in a riot. Take it away so we can know how few we really matter to our rulers. I'm just curious about how this will be remembered in history books, 80 years from now... That's it, if you will not be the ones who'll write them, of course... But, given the current times, I wouldn't be so optimistic about it if I were in your shoes...
—Veronica Vergallo, ,

I try to keep up to date on numerous issues...in my community, my province, my country and worldwide, through the web. It is important that people have equal access to information. Rich and poor need to be informed to be active members of their communities. Please don't allow the Internet to become a two-tiered system where only the rich and powerful can afford true high speed internet access!!
—Bonnie McCool, Port Hope,

In my mind, the internet is the great equalizer. As it stands now it allows all information to be readily accessible and judged by it's own merit. I don't want to be stuck in a pay to play type system. Please adopt real Net Neutrailty.
—William J Berroth, Ramona, CA

Net neutrality is an important, indeed essential component of democracy. Individual freedom must not be compromised by the interests of corporations.
—Anara Carroll, Mullumbimby,

Internet neutrality is NOT up for negotiation and neither is the constitution. I will fight you the whole way!!!!!!!
—Victoria Parks, Worthington, OH

Everything for the Elite and Corporate -Nothing for the people -sickening .
—Deborah Cogar, Harshaw, WI

ALL freedom is important to EVERYONE
—Vincent Salinas, San Ramon, CA

Reclassify ISPs as common carriers is the only fair thing. These companies shouldn't get to dictate how the internet is run, especially in their favor.
—Scott Smith, Oklahoma City, OK

Internet neutrality is extremely important! Reclassify ISPs as common carriers!
—Sam Carpenter, Seattle, WA

Let's not become high-tech Victorians.
—Aradia Farmer, Corvallis, OR

American tax dolars paid for Darpanet, which gradually evolved into the internet we know today, with a lot of help from taxpayers. So now you are going to turn around and sell bandwidth to the highest bidders, and throw us under the bus? That's what happens when you let a fox run the henhouse.
—Mike Larkin, Schnecksville, PA

Equality for all?
—David Curdie, Sparks, NV

It isn't right that a company that has a vested interest in content creation should have control over the content dissemination as well, double-dipping by charging both users and content creators for tiers of internet speed. This takes the fundamental choice of which content a consumer chooses to consume and altering it by forcing one to be of lower quality. It is also unnecessary as the data travels at the same speed over Layer 2 of the OSI Model.
—Sean Willemstein, Long Island City, NY

It gives start ups, small companies and real innovation a fighting chance. Without Net Neutrality, all of these will be crushed.
—Mike Bell, Somerdale, NJ

I am out in the boonies and can not get fast internet now. With these proposed rules I would be one of the ones who get pushed to the back of the line. Preserve net neutrality! Classify ISPs as common carriers!!!
—Carol Lynne Frey, Emerson, NE

Wheeler’s plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. These companies would have the power to pick winners and losers online and discriminate against online content and applications. And no one would be able to do anything about it.
—Lisa Whalen, Kettering, OH

The FCC works for the People...not corporate CEOs.
—David Childs, San Diego, CA

The modern economy would collapse without the internet and American life would be extraordinarily disrupted. It's a simple fact that the internet is a public utility, not a private service. It's time we regulated it as such. Today, in America, we are paying hundreds of dollars to internet service providers like Comcast and Verizon, for so-called "high-speed" internet access that's slower than much of the developed world. In fact, the United States isn't even in the top 25 when it comes to internet speeds. We come in at 31, behind countries like Bulgaria, Estonia, and Romania. Several cities across the country have freed themselves from the monopoly of the main service providers and the results are outstanding. Chattanooga's publicly-owned utility company EPB, "The Gig" allows Chattanooga's residents to surf the web at lightning-fast speeds. For less than $70 per month, residents browse the World Wide Web on a high-speed fiber-optic connection that shoots data back and forth at one gigabit per second – that's 1000 megabytes per second. In Washington, D.C., you have to pay a lot just to get a 20 megabit-per-second connection. As The New York Times points out, one gigabit-per-second is 50 times faster than the average internet speed for homes in the rest of the US, and is just as fast as internet service in Hong Kong, which has the fastest internet on the planet. But "The Gig" isn't just good for downloading movies and shopping online. It's good for business too. Chattanooga officials say that "The Gig" has helped to create at least 1,000 jobs over the past three years. And, internet-based businesses are moving to Chattanooga from high-profile cities like New York and San Francisco because of the lightning-fast internet speeds. In the years since "The Gig" went live, other cities across the country have jumped on the publicly-owned internet bandwagon. Lafayette, Louisiana and Bristol, Virginia also have rolled out publicly-owned high-speed networks. These cities have realized that natural monopolies like the internet function best when they're run by We the People for the benefit of the people, rather than by a big corporation for the benefit of profits and stock-holders. Lightning-fast internet speeds shouldn't just be in Chattanooga, Tennessee; they should be everywhere in this country, urban and rural. The internet was developed by universities and the military and brought into being by an act of Congress. It was never meant to be controlled by giant corporations. It should be a public utility, run by and for We the People, not just another profit line on a giant corporate balance sheet.
—Jenna DiFeo, Incline Village, NV

Neutrality on the internet is as important as free speech in the press. What's next? Censorship? What kind of society are we becoming where commerce and information becomes a tool for the super rich only..
—Jerome Rasheed, Apopka, FL

Not everyone, myself included, can afford to pay more for their internet which is exactly what will happen with the current plan the FCC has.
—Quinton Schwartz, Lafayette, IN

It's important that all the information out there be accessed in an equally fair manner!!
—Amanda Yoder, Chesapeake, VA

The net is as much a public highway as telephone and electric service. It should not be two tiered.
—Marilyn Caplin, Coral Gables, FL

I don't want my internet censored by my service provider, Time Warner and Cox Cable. And I don't want content censored or web sites deselected.
—Howard Hyatt, Las Vegas, NV

Keep the internet neutral. It's the last frontier.
—Brianna Aragon, Oklahoma City, OK

This decision is about more than the Internet. This is about maintaining our democracy and not selling out to mega-corporation agendas.
—Patty Barga, Indianapolis, IN

I only have two viable choices for internet access--Verizon FIOS and Comcast Infinity--and I live in a densely populated city in New Jersey. The internet is a utility, no different from the water works or the electric utility. I have no meaningful choice with respect to either service or cost. I strongly urge you to recognize the internet as a utility and regulate it to ensure net neutrality. American innovation and our economy depends on it.
—William D Henderson, Trenton, NJ

The internet is a "free" tool for all Americans, and should not be subverted by companies looking to turn it into their profit machine.
—Chance Rearden, West Hollywood, CA

The free internet, reclassified as a common carrier, is the only way to guarantee internet equality. Big $ will win, otherwise.
—David Poteet, Canandaigua, NY

Education, education, education! Due to budget cuts, many public schools (such as the one my son attends) don't even have hard copy textbooks. The textbooks are ONLY online, and many other essential school resources are ONLY online, including the only avenues for parents to stay in touch with their kids' teachers, keep up with their grades before report cards come out, etc. It would be an absolute crime to limit a child's access to BASIC PUBLIC education due to their socioeconomic status limiting their access to the internet and the tools they need. And, I do mean NEED. Access to information is not a privilege - it is a right, and this goes for people of all ages. How can adults make informed decisions on who to vote for, where to go for healthcare, where to go for decent childcare, etc., if they are not able to freely access that information? How will small business survive and offer the jobs that Americans so desperately need if they aren't able to advertise their business on the internet? All comes back to education and the absolute NEED for it to remain readily available for EVERYONE. Net Neutrality MUST remain or we will see the worst this country has ever faced, and that is really saying quite a lot.
—Kate Weeks, Jacksonville, FL

The "fast lane" idea is not fair to everybody involved, and will set a precedent for an even less free internet/market, driving small businesses out of business.
—Yanina Wood, Seattle, WA

I'm getting older and don't go out much, this is my only way of communicating with others. I don't have a big fat billfold either!
—Judy, Oshkosh, WI

I'm a professional software developer and I know firsthand how difficult the industry is to compete in for startups due to a number of factors (IP amongst them). Allowing ISPs to give faster service to those with deep pockets will further cripple small businesses and startups in the software space. Saying that the FCC will make sure these are "reasonable" is no comfort at all. Anyone who knows anything about lobbying in D.C. knows that longterm regulatory capture is far cheaper than having to fairly compete. The internet's role in the future of not only technology and innovation but also social change is unsurpassed. Once the principle of net neutrality is compromised to the advantage of those with wealth, it will be night impossible to unbreak the internet. The internet is no longer a luxury. It is a necessary public utility, and if it, and equal access through it, is not protected, the damage will be beyond measure and irreparable. Represent the interests of the public and future generations. Don't break the internet. Classify ISPs as common carriers.
—Mahmood Quaderi, Madison, WI

We do not need to privatize the internet. It was always assumed it to be as it is now and I believe it should remain open and not privatized. The internet is a way for people to communicate with others, pay bills, exchange opinions, share on social media, and even order a pizza. Why is it necessary to privatize this wonderfully open means of communication? I need my internet for daily information, to locate items for purchase in various stores, even to send my doctor an e-mail. This "internet" belongs to the people. We already pay to have it. I think the very best idea was to reclassify the Internet Service Providers as common carriers. I need my internet to continue to be open and not controlled in any way by corporations wanting to make more money off it, or to change it in any way. We want the internet to be net neutral and open to all and no changes.
—Linda O'Connor, Levittown, PA

its always big money trying to stop the will of the people.
—Sterling Leavitt, Yuma, AZ

I cannot believe that our government is choosing to allow companies to pay for more bandwidth. This is atrocious, and needs to be put to an end because in the long run all smaller websites without the same number of views per day as these big ones like facebook and netflix are going to not have as good bandwidth and this will really cause monopolization. That's what our government is supposed to stop... Thank you for reading this, Nathan Moshos
—Nathan Andrew Moshos, Terre Haute, IN

The internet is the first truly democratic tool in the history of our planet, a place where everyone's voices might be heard - no matter how lofty or low the individual. This concept is what the Founders of our Republic fought to create and it is up to us to protect - the fundamental right to free speech, uncensored and important. Defend true net neutrality.
—Kevin Lavin, Massapequa, NY

Free and equal, the same for all, this the way all content should be transferred and accessible via internet. If we not give out the basics of democracy, we have to stand for net neutrality. People should chose what they will read, watch and listen, not big money companies and ISP's.
—Petr Vodicka, ,

I educate my children at home, and the proposed rules discriminate against small websites and consumers on tight budgets. Don't take my babies' futures by handicapping their learning experiences!
—Heather Bowles, Tulsa, OK

This is the ONLY way to protect real Net Neutrality.
—Richard Glinski, Alden, NY

The internet is one of the last truly democratic spaces that exist in the United States. Keep it democratic. You like democracy, don't you?
—Zachary Smith, Amherst, MA

Net neutrality allows voices to be heard that would otherwise be lost. Individuals with an effective message can reach millions - and they don't have to have millions of dollars to do it. The recent decisions are anti-competitive: they will prevent small, cash-poor startups from being able to reach the same audiences as established corporations. These decisions do nothing to benefit consumers - they just allow ISPs to take more of our money and offer less service. Isn't the point of regulation to prevent this sort of thing? Why does the FCC even exist?
—Mary Jean Crom, Washington, DC

To me, this is and has been a hallmark of anything resembling a communication democracy...let's not lose it
—Thomas Rippolon, putnam valley, NY

Net Neutrality keeps the "internet playing ground" level. This is the way the internet should be. Your responsibility lies with the people not with huge corporations. Big corporations have way too much power and influence already. This is not healthy for the democracy in the US. I am a taxpayer, and I demand Net Neutrality be restored. Thank you.
—Robert Winglass, Ellsworth, ME

CC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Michael S Benson, Oklahoma City, OK

I don't want to have my internet speed be termined by my income, its unfair to the average internet user to have to try to auction a fair deal on useable internet speeds.
—Andrei Paduraru, Roseville, CA

I oppose a two-tiered system for the Internet and ask that the FCC protect the open INternet by reclassifying ISPs as common carriers. I can't imagine a two-tiered public library system or postal system, and I don't want a discriminatory Internet. This is a policy decision -- a choice -- to either make us a more perfect or less perfect union. Please support open democratic society by keeping the Internet neutral.
—Krissi Jimroglou, Washington, DC

because it is the last place on earth where we are all equal!!!!
—Mariana Delbue, washington, DC

I use the internet for everything from entertainment, online purchases, to banking and job search. Please keep the internet free and equal for everybody and all uses, not just for corporate greed. thank you.
—Alison Gilmore, Spokane, WA

Do your job instead of shilling for corporate interests.
—Charles B. Mullen, Canton, OH

FCC throw out the rules and instead reclassify ISPs as common carriers. This is the only way to protect Net Neutrality.
—Mary Alice Jennings, Grosse Pointe Woods, MI

How can the "little guy" have a chance to fair pricing and net speed against the oligopolists who are merging constantly? Please reclassify ISPs as common carriers and keep the public internet public.
—Gary Reynolds, santa fe, NM

If you allow this B.S. To pass, you better get a great attorney, as I already have 7521 signatures to file a law suit against you, and the fcc. We will not stop till the scammers who bought your whore butt are down in the depth of the sewage you all deserve to be in with the rest of us.
—Robert, Ware, MA

The old normal forms of communication are not reasonable in todays lifestyles. We now use internet for every aspect of living-including setting up appointments, paying bills, submitting assignments and reports, purchasing every conceivable item necessary for daily living and accessing information event to the extent of seeking employment..
—Clara M Zschaler, Las Vegas, NM

It will ENSURE EQUALITY online!
—Andrew F Colletto, Somerset, NJ

This is a brave new world where information services build an empire on the backs of the people whom it serves. This is a utility, a resource we are required to use to participate in our government and society. It needs to be treated as such.
—Gin Ferrara, South Burlington, VT

Democrcy, not oligarchy. Remember Washington? Adams? Jefferson?
—Barbara Riverwoman, santa Cruz, CA

Freedom of information. Limits on corporate overreach.
—Bill Pitts, Palm Springs, CA

I've been a web developer since 1996. If the companies I work for can't compete on equal footing because they can't afford to pay for top-tier access, I'm out of a job.
—Josh, Alameda, CA

We the people have paid for the internet with our tax dollars, it is your responsibility to keep the internet neutral for everyone.
—Jerry Gale, Kerrville, TX

Why are you doing everything you can to do destroy democracy. STOP THESE RULES AND LET THE PEOPLE HAVE ONE PLACE THEY CAN SPEAK ALONG WITH THE BILLIONAIRES. I will never vote democratic again. You have sold this country. We are tired of being owned and want our country back. Democrats will lose and we the voices of social justice will stop this oligarchic nightmare.
—If Pebbles, Sherman Oaks, CA

FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—David S. Wilson, Myrtle Point, OR

How dare you consider the the opening of fast lane internet. No matter how you disguise it, it means that the internet will no longer be on a level field and money and politics will win out. The internet should be declared a public utility.
—Barry De Jasu, Montague, MA

If we do not have true net neutrality, then some ISP will put their political interests above those of our democracy.
—James McIntosh, Ann Arbor, MI

Net Neutrality is important to me as I am soon wanting to start my own business. If you go thought with this, it could hurt me and my future plans to be successful in my goals.
—Tiffeny Whittington, Hickory, NC

Protect the internet for all and not for you're donors
—Tim E., Raynham, MA

Mr Tom Wheeler How would you like to pull onto the interstate highway and be told that for an extra $15 you can enter a special partitioned section of the public roadway and travel as fast as you desire with few or no access lanes to slow you down? How would you prefer to see a letter from your local water utility advising that to get a good stable water flow you will need to subscribe to extra pressure water line? Please see that our internet, created by the government, is open to all at the same speeds. Treat it as a common carrier or public utility. Keep it open to all at the same speed. Preserve net neutrality.
—Larry Woodall, Springdale, AR

Give corporations a say in the Internet, and you will kill the most creative system ever devised to encourage entrepreneurs.
—Eric West, Port Orange, FL

So you support the 1% over everyone else or is it just that you believe corporations should always be allowed to tell the American people what they can and cannot access on the Internet? Just because I can't afford to pay higher prices to get faster service doesn't mean I am not as good as those who can. Net Neutrality first. Money shouldn't be more important.
—Charlotte Sines, Colorado Springs, CO

because otherwise only people with the most money will be heard. Everyone deserves a voice!
—Carlos Tapia, ,

The Internet, is quite possibly one of the greatest inventions of our time. It means knowledge for everyone. So putting any form of restriction on it, would absolutely be a step in the wrong direction. It seems America has to fight for Net Neutrality every two years, and I'm sick of it. There's a reason the people have come together time and time again to oppose idiotic restrictions such as those described in Wheeler's plan. I say not only should the plan be scrapped, but ISPs should be reclassified as common carriers, to ensure that the people's wishes are kept safe.
—Joel Neumier, ,

keep net neutrality!!
—Robert Cline, richmond, VA

If the Internet does not fit the description of a utility, then the term has no meaning...everyone in the country, with the exception of ISP monopolies (and the lobbyists they hire), know this intuitively. And I believe that you members of the FCC know it as well. The only question is, will you stand up for the people of the United States, or will you stand by monopolistic companies so infamous for their poor service and bad prices, that they are consistently deemed "the worst companies in America." Please, history will reward you...they will teach about the courage of the decision...if you do what everyone knows is the truth: declare ISPs the common carriers they are.
—Russ Carrick, Telford, PA

I need what little freedom I have in this country.
—Victoria Lange, Los Angeles, CA

Net Neutrality basically prevents censorship on the Internet, and censorship horrible.
—Jared Hockenberry, San Jose, CA

The growth of businesses that are a large part of our modern world, names like Google, Amazon, Facebook, would not have been possible if it were not for the free and open access to opportunity that an open internet provides. Without net neutrality, the balance of power will be shifted away from upstart companies looking to present new an interesting ideas, and will be placed firmly in the hands of companies that are already well established and can better afford additional rates that ISPs might impose. This would also harm consumers in a couple of ways. First, it is currently possible for an entirely new service to spring into place on the internet that better meets the needs of consumers, and they are freely able to discover and use that service with no concern about paying for access. The service that any new company can provide is solely determined by the quality of their product, and not by any deals that their competitors may have with the networks that deliver their service. Without network neutrality, a new company may be very limited in reach because it is either unable to pay any fees to upgrade its reach or remove the limits placed on it by consumer ISPs, or because competitors (including the ISPs themselves for things like providing TV content services) may be unwilling to provide them access in order to prevent competition. Regardless of the exact cause, not enforcing network neutrality means fewer new internet business, which in turn means less consumer choice, and that is most certainly undesirable. Second, consumers could easily end up in a position where they are paying twice for the same content. The ISP on the one hand demanding that the consumer pay for access to the internet, and the web service on the other raising their prices to compensate for the costs imposed by the ISP to deliver their content. Please reconsider your stance on the issue of network neutrality, and consider enforcing strong, clear rules that will protect the abilility of new companies to make themselves available to consumers, and for consumers to freely exercise their ability to choose the services that best suit them.
—Daniel Rogers, San Leandro, CA

This proposal would fundamentally damage the internet and how it operates.
—Zach Overmann, Dysart, IA

Net neutrality creates a level playing field for everyone including corporations. Your current proposal favors corporations and everyone else is second class, this is not right.
—Gordon Lange, Kihei, HI

It is not called the Elitenet, but the Internet. It belongs to the Commons.
—Eloise Bates, Portland, OR

Consumers already pay for delivery of content at the speeds and data amounts specified in their service contracts. Last mile cable companies shouldn't be able to abuse their virtual monopolies to double dip for payout.
—Christian Gray, Anchorage, AK

Net Neutrality is important because we all need FREE & UNLIMITED internet. We depend on the Internet for research & entertainment purposes. So if you're smart enough and have enough common sense, you'd get rid of these retarded rules and not end Net Neturality!!
—Earl Miller, Bear, DE

Yet another way this stupid government can try to control all of us. The U.S government doesn't even care about us, they only care about getting money and being greedy. You guys always have to find a way to ruin something. You suck. This government is really pushing its power. "When the people fear the government there is tyranny, when the government fears the people there is liberty."
—Zachary Henry, Omaha, NE

Consumers have very little to no choice of service providers for high speed internet access (in my area, only Comcast delivers high speed internet). If the service providers are allowed to vary the speed of content delivery to their own benefit, such as for profit, it will be extremely unfair to the consumer. As a result, ISP's should be regulated like phone companies and other utilities. As but one example, what if phone companies were allowed to make some voice conversations more clear than others, with the clearly transmitted ones being those which pay an extra fee? It would significantly affect who could speak to whom. Please regulate ISP's as public utilities rather than allowing them limitless influence upon the actual content available to citizens! Thank you, Peter S. Auerbach, MD Portland, OR
—Peter Auerbach, Portland, OR

I am a small business owner, and we use the internet to deliver video proofs to our clients. This two-tiered internet proposal would put me out of business by hindering my ability to deliver content to my customers in a timely fashion. This rule does more than institute the corporatization of internet access--it relegates independent sites to an inferior internet on the 'slow lane' and creates a HUGE barrier to entry and continued operation for entrepreneurs, small businesses and new start-ups that may compete with--or directly challenge--incumbent technologies and corporations. This rule will KILL start-up innovation, degrade American business competitiveness in the global marketplace, and enshrine the power of Big Telecom corporations, who will make the internet as awful as they have already done with cable television. Let's review the facts of the matter: the United States Court of Appeals for the District of Columbia Circuit struck down the old Open Internet rules on a technicality, that being the internet was not classified as a common carrier by the Commission. All the FCC needs to do is correct this classification oversight -- which is entirely within your own administrative power -- and reclassify the Internet as a Common Carrier, which all common sense says that it is. The Internet should be reclassified immediately as a Common Carrier, which the Commission can easily do, and indeed should have done immediately after the Court's ruling. Please protect free speech, innovation, and Net neutrality to preserve an open internet. First, assert reclassification authority of broadband, and the internet overall, under Title II. Then, do the right thing and re-classify the entire internet as a Common Carrier. The competitiveness and economic future of this country depends on the internet being a Common Carrier, and deserves nothing less and nothing else.
—David Langley, Alexandria, VA

The internet does NOT belong to anyone - it belongs to EVERYONE! It is the only fair and equal marketplace left!
—Pm M., Cheyenne, WY

Keeping the Internet open is critical to sustaining a nation of informed citizens. Please do not buckle to corporate lobbying!
—Linda Billings, Arlington, VA

I've worked for the largest Telecom here in the USA and I know they play Hardball against all their customer... especially the uneducated and uninformed. Verizon & AT&T will ruin our Internet.
—Jesse Galvan, San Antonio, TX

Dear FCC; Please throw out your rules and reclassify ISPs as common carriers. Thank you. Joyce Marshall
—Joyce Marshall, Greensburg, IN

Without an open internet we'll stifle creative innovation and lose our position as the leader in numerous different fields.
—Dustin Simeone, Lehighton, PA

If the FCC doesn't protect net neutrality, I will not be able to afford to use the web in any meaningful way. Do you really want to deny access to low-income people? This is what will happen if the large providers get their way and start charging for reasonable net speed.
—Cheryl Biale, olympia, WA

Real Net Neutrality is the modern internet day equivalent of free speech. Anything less is unamerican! Wheeler is just one of those things that is wrong with this country. How can an ex-lobbyist like himself end up chairman of the FCC? It's like scarface leading the FDA
—Sam Coward, New York, NY

The Internet has become the life's blood of democracy. Kill it, and you kill both.
—Ray Ray Lovelace, El Prado, NM

It's bad enough that "we the people" have to depend on the greedy, control-hungry behemoth service providers for connection to the internet in the first place to even get to any internet content. They don't even face real competition as do cell phone companies, which is a disgrace in itself. They lobby (aka bribe?) lawmakers for protectionism and get it. And now you want to give them even more control over the internet and we the people by handing them the reigns to control content now? What in the hell is wrong with you? Keep the robber barons out of content control. Grow a pair, Wheeler, and leave ISP's as common carriers. Leave the Internet in the peoples' hands where it belongs. Do something for THE PEOPLE for a change instead of BIG BUSINESS.
—Vivian Capritto, decautr, GA

Affordable internet access is vital to everyone. Please do the right thing and leave it neutral and mutually accessible to everyone
—Ms Margaret Marlowe, Leander, TX

The internet is not the plaything for massive corporations looking to protect their outmoded and antiquated business practices. It is where freedom of speech and freedom of information are paramount, and seeking to limit either with your backward, cowardly and small-minded rules are completely out of touch with the real world.
—Jayrde Kurt, ,

Though I am from Europe, (where we fight the battle for net neutrality as well) I urge you to keep up net neutrality on the other side of the pond as well.
—Mara Heinzl, Muenchen,

There is no justification for corporations to have priority over individuals.
—Tom Samuel, Lethbridge,

I'm a senior on a very tight budget, and the Internet is vital to me now and will be even more so as I get more frail.
—Jeanne Munoz, San Francisco, CA

Help prevent corporate takeover of our Democracy and stand up to greed!
—Mike Raymond, Shelby Township, MI

It is surely a no-brainer to do the obvious and recognize that ISPs are in fact common carriers. They should be classified as such.
—Sylvia Haven, Seattle, WA

Unless your Commission re-classifies AT&T, Comcast & Verizon as 'carriers' they will eventually take control of the Internet, they will create more than two lanes and they will block any sites they please. 87% of all Americans use the Internet and you will be taking away the rights we now enjoy. DON'T DO IT! PLEASE!
—Sara Deatherage, West Plains, MO

I use the internet for many more, essential daily activities and depend on it far more than I ever did the telephone. Yet the service I can get in my area is much less reliable than the "common carrier" utility that is my phone service. Please, you must not make things even worse.
—Mike Smith, Seattle, WA

The fact that a former cable tv lobbiest is trying to make extra money for his cronies is insane and should not stand in our society. Fast paid lanes and slow "free" lanes is an insane idea. I already pay ATT for my internet access each month and I should get everything I want to get equally fast for my money instead of depending on ransom money paid by companies that I do business with to determine the speed I receive the information I paid money for to begin with! I hope you're out of a job soon for your sheer stupidity and greed. I plan on making sure of it come election season, you lousy low life slime of a chairman!
—Matthew Adam Kreth, Birmingham, AL

My job is working in medical records remotely from home, saving my employer the necessity of providing office facility for me and THOUSANDS of other employees. We MUST have Net Neutrality to perform our jobs, this is the way it is done these days!
—Jo Barcelona, Hazelwood, MO

It does not make sense to classify the internet as anything other than a public utility. It belongs to everyone. Keep it that way.
—Susan Blain, Gardner, MA

We really don't need any further assaults on our abilities to engage in our ailing democratics system - so, don't act insanely - Tell the FCC to throw out its rules and reclassify Internet service providers as common carriers. This is the ONLY way to protect real Net Neutrality.
—Sharon McGraham, Watsonville, CA

Hello and thank you for taking my comment about this issue. It comes as no surprise that the FCC is swindling the American people when one considers the conflicted interests of some of its members--are its decision-making members are in cahoots with industry lobby? This shameless power-grab and retreat by the FCC is truly another milestone of the raiding of the commonwealth of the people by the few in a position to abuse the power they have worked to obtain not in service to the American people, but of the bottom line. Listening to Wheeler's speech that the rules would be in place "with all dispatch" was to witness a gut-wrenching display of unmitigated arrogance and disdain. Let me be clear to the braindead FCC: The provision of the backbone and all of the appurtenances of what comprises the physical and backend of the internet IS A UTILITY and only a bunch of ignobly corrupt, or perfectly supine prigs would rule otherwise. Get your act together and start representing the interests of the American people and not the voraciously greedy, self-serving, solipsistic monopolies!!
—Lawrence Curtin, Airmont, NY

Damn corporate whores. You sell your souls to big business and to hell with the rest of us. Net neutrality is important and should be classified as a common carrier.
—Wendy Mueller, Haltom City, TX

Failing to enforce Net Neutrality is a failure to recognize the technological progress made in the most recent decade. Taking apart a system that has fostered an entirely new era of availability of information is tantamount to deciding not to maintain a road because it gets too much traffic. The internet is already backbone infrastructure for both small and large businesses, and there is no equal alternative. Net neutrality needs to be enforced because just like every other utility, everyone has a right to receive the service they have paid for. Water is water, just because someone lives in one-particular side of town, or owns a business does not depreciate their right to receive the service they have paid for. Replace "water" with data, natural gas, sewage, or any other utility that is of importance to the modern way a service customer operates and the validity of the statement doesn't change.
—Travis Palmer, Hudsonville, MI

It's the infinite library
—Nathaniel Bechtel, Chicago, IL

The FCC should have the public's best interests in mind when trying to pass any internet regulations. Instead it seems it will only have corporate interests at heart so they can make even greater profit off of the poor. Seems that's the new American way...how sad.
—Rebecca Spindler, UNION CITY, CA

The internet is supposed to be a place for free flowing information and content and in NO WAY should be put in the hands of ISP's who will pick winners and losers in addition to limiting quality access to those who can afford to pay more. PLEASE STOP THIS!!!!
—Mark Vincent, Castle Hayne, NC

the internet must remain accessible to all, not based on ability to pay for better access. Reclassify service providers as common carriers, like phone service used to be.
—Ms. Megan Rollins, Richmond, VA

Tell the FCC to throw out its rules and instead reclassify ISPs as common carriers. This is the ONLY way to protect real Net Neutrality.
—Alysha Schlundt-Bodien, Ann Arbor, MI

It's important to me that everyone has equal access to the internet. Even those with whom I disagree or who don't share my tastes or interests should have the same right to post, upload, download and share at the same speed and at the same price.
—Abby K Alcott, SILVER SPRING, MD

I have a friend who runs a small online business. Your proposed business would be disastrous to him and many, many more! Please, preserve net neutrality!
—Alex Anderson, Greer, SC

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Kevin Coe, Woodbridge, VA

this is FAR outside your mandate ... leave the net alone
—Duncan Bray, ,

Time to start standing up for the People.
—Patrick Smit, Coos Bay, OR

note: for some reason my original comment was not posted in 14-28 and it has been more than a week so I am reposting a comment in disagreement against the new proposed rules.
—Zach Westerbeck, Sandy Valley, NV

Please do not allow the new internet rules to pass, the internet is in fact a form of telecommunication and allowing corporations to dictate band width is unacceptable.
—August Lumpkins, Brownville, ME

I need net neutrality to conduct my personal business affairs from home without slowing down the access. I cannot afford to pay extra fees for my internet access.
—LeAnn Berg, Corona, CA

It is only fair.
—John Hess, Roslindale, MA

There's sufficient "tieredness" in the different connection, broadband vs dial-up for instance.
—Zoe Morgan Z, Albany, NY

If we vote to ensure Net Neutrality, we will be telling the world that we believe in democracy and the equal opportunity for all people, poor as well as rich.
—Claudia Frantz, Fair Oaks, CA

The internet should not be controlled by corporations! People being appointed to head the various government agencies need to what they're supposed to do, look out for the citizens and country not open the door to their cronies and allow them to fleece the public. Anyone doing so needs to be removed from their position pronto.
—Enrico Pelausa, Manassas Park, VA

Besides entertainment, the internet has become my main source for news, I think my generation's equivalent of reading the morning paper. It's the way uncensored information is spread from emerging crises. The core of interaction and the means through which speech is spread, without a free internet, there won't be truly free speech.
—Adem Boeckmann, Anchorage, AK

An internet that is equally accessible to all is a harbinger of freedom. Changing this access will allow active and passive suppression of free speech and signal the demise of free expression. Please do NOT let this happen! It would be a mistake that could never be corrected.
—M Stergos, Florissant, MO

The internet is the best protection for our democracy if treated as a common carrier where every user has equal access.
—Mary Catherine Green, Madison, WI

True net neutrality is necessary for encouraging economic growth and sustainability. The Internet was not built for the profit of a few controlling companies.
—Richard Hyman, Morrison, CO

Is this still the land of the free and the home of the brave? Big corporations are controlling everything from a to z in this country. The job of a citizen is to keep his mouth open and we are! Thank you for opening your ears and listening to the citizens of this free country.
—Vonny Eckman, Carlisle, PA

The internet is by definition free and open.
—Greg Goodwin, Seattle, WA

There is no long-term gain from actions made for the intent of gaining monetary profit. Money is an obsolete article of our current "economic system" and will only become a hindrance for our future generations. Our ability to evolve, adapt and persevere as a species in the light-seconds to come will depend on our willingness to redesign our global economic and social systems. Our greatest strength is intelligence and the internet is the greatest portal of knowledge that humankind has yet created. However, our greatest weakness is that we segregate the inhabitants of our pale blue dot by location, cultural identity and a fictional number which we write every day of the week with our time and labor. However, the concept of global brotherhood is young and malnourished, but there is a chance for it to become strong. Time for the world to put down this monopoly game, make dinner and feed its family. There are bigger fish to fry than a game of monopoly. The internet has already become poisoned enough by the invisible powers of the monetary system. The internet is for the world, not for the wealthy. The future of the internet will be great, but if we let Net Neutrality be compromised, we'd just be buying another pack of capitalism and sucking 20 more little white rods.
—Theodore Reid Vossler, Rockville, MD

We need net neutrality to keep a level playing field for start ups and established businesses alike.
—Meghan Wood, Titusville, FL

Stop the corporate takeover of the internet. It should be a utility and protected as one.
—Mark Spindler, UNION CITY, CA

A Democracy requires equal treatment and access to all. Net Neutrality will deliver that. By the way, it was tax payer dollars, not corporate money, that helped to develop the Net.
—Mitchell Alperin, Haverhill, MA

I depend on the internet for independent news and information. I do not want anyone to filter my feed.
—Mark Homer, Maryville, TN

I pay $41 a month for a cable connection and it is slow enough already. I don't believe we should have to pay extra to keep our already slow connection. Also given our current economy some people would not be able to afford a cost increase. If you are unemployed the internet is one of the only ways to search for employment. Companies do not place ads in newspapers anymore.
—Z Everett, Garden Grove, CA

why do we have to explain that a fair and openinternet is important to us ? there is no issue with an open and fair internet, so why change it ? you want to introeuxe a fast and slow lane ? for what ? for who ? you are an employee of the us government and as such a representative and emplpyee of the american people. this is NOT in our interest ! we pay you and employ you to watch out for us, not corrupt our system to get rich from big corporations
—Sam Slitee, new york, NY

The two tiered internet is extortion pure and simple. They already charge too much.
—Joseph Ferri, Charleston, SC

Net Neutrality is a First Amendment right. The Commission's position is no different than kicking the soapbox from underneath someone and then allowing but a few corporations to sell soapboxes at obscene profits. The Commission is only opening the door for corporate greed. The Commission's responsibility is to serve the public and NOT corporations.
—Jack Jack Jernigan, Magalia, CA

Its terrible because you have to pay more for what your not paying more for now.
—George Noury, Wayne, NJ

I use the internet for many more, essential daily activities and depend on it far more than I ever did the telephone. Yet the service I can get in my area is much less reliable than the "common carrier" utility that is my phone service. Please, you must not make things even worse.
—Amber Heath, Seattle, WA

I believe Tom Wheelers propose is a terrible idea. I am believe in net neutrality, and believe the internet should be classified as a utility.
—David Anderson, Corsicana, TX

This is absolutely unacceptable. Giving more power to wealthy companies will mean most of us will be walked upon as if we're nothing. We're already treated as such by them by unfair billing practices and worst-company-in-america level of customer support.
—Paul Railback, kansas city, MO

The internet is the ultimate tool for democracy.
—Cody, Mableton, GA

Net neutrality is vital. The internet is as useful and necessary as my household utilities.
—Rachel Sousa, Brooklyn, NY

The net is an important source of information for all Americans. It should stay neutral and not allow big corporations to squeeze out free speech and expression. The net must be reclassified as a common carrier.
—Ronald Shaheen, San Diego, CA

The economic future of our country depends upon an open internet. One that is free from predatory service restrictions by last mile monopolists.
—Jesse Shumway, New Bern, NC

I depend on the internet for my income, Please don't hurt the little gut just trying to make a living again in the name of big money.
—Jill K Prettyman, Santa Ana, CA

Everyone in the world deserves to have internet access, everyone deserves to have high speed internet at an affordable price. My internet with AT&T has increased in price $14 in the last year, yet they deliver a lower speed now than I had 3 years ago. These companies still do not deliver internet to everyone, to all locations and they do not deliver the same options to their customer base. Yet they want to discriminate even more and charge even more? Absolutely NOT! My "high speed" internet is the fastest for my location and yet I can barely play a youtube video. My cell phone did a better job.
—Patrice Hocking, Placerville, CA

The majority of people want net neutrality, and the majority of the people pay the majority of the taxes. Give us what we want.
—Lee Lindsey, Cypress, TX

I believe the Internet is a utility that all people should have equal access to.
—Michael Buckhout-White, Silver Spring, MD

Please do all you can to see we have real choices on the internet.
—Scott Link, Eagan, MN

The Internet should be reclassified a a "common carrier" to best represent the interests of all its users. I am a digital artist and will be hampered in my my work with slower services - I'm an independent contractor and a sole proprietor without room in my budget to compete with larger corporations for bandwidth. The Internet is a part of a global commons and not Verizon's source of petty cash.The internet should be maintained as it is, as a commons, with no "pay-to-play" priorities awarded.
—Stewart Hartsfield, Lake Oswego, OR

Leave the damn internet alone!!!, next it will end up like television, taken over by commercials and propaganda and special interest groups instead of free and equal!!!
—Richard Richard Olson, Homer, AK

Maybe I am wrong but I think I have as much of a right to high speed internet as any customer of Comcast, Verizon or AT&T. The airways belong to us all just as does the interstate highway system. Would you see anything wrong if the government allowed me to use the highways only on wednesdays and fridays while WalMart trucks have no restrictions? The same goes for the airways. For this reason alone companies using the airways should be classified as common carriers! Equal access to communication resources, like health care should not be profit-based but an equal right to all. Net neutrality must be maintained if we are to be a democratic nation rather than an oligarchy. Thanks for considering my convictions. [Ralph J. Ellis, Brighton CO]
—Ralph J Ellis, Brighton, CO

The Open Internet opened me to new horizons and new opportunities! Please don't take it away!
—Michael Craig, Clewiston, FL

The internet is important to all of us.
—Carolyn Villanova, Pittsfield, MA

Government wants to shut down the internet so they can impose tyranny more easily upon the common people, NUFF SAID!?!?!
—Andrew Fisher, Huntingdon Valley, PA

Without net neutrality I won't be able to use the internet. Living in a rural area it is essential.
—Glenna Shenas, Whitewright, TX

The internet was created with government support. It should not be used for selective profit. Keep the field level. the internet is one of the most powerful tools for keeping the public engaged in the democratic process.
—Virginia Brien, Charlotte, NC

keep the net neutral, no slow lanes!
—Susan VanMeter, Paw Paw, WV

The statements and discussion you've been having is absurd, needlessly complicated and designed to obfuscate the real issue. Stop this nonesense!!! And protect the internet the way its always been!! Democracy, not oligarchy!! You guys truly are a bunch of idiots!
—John Paul Roy, Minneapolis, MN

I live rurally and rely on the internet for all information, news and personal communication. Many in this region are still waiting on broadband expansion. Building up access along with preserving and increasing the speed of all internet content is in the public interest and best serves my own individual needs. Please reclassify service providers as common carriers to preserve net neutrality and maintain its democratic oversight.
—Scott Hedlin, Compton, AR

Where else do we really enjoy any kind of true freedom ??
—Alan Creighton-Kelly, Vancouver, CA

Begging your pardon, Mr. Wheeler, but I don't see how creating a "separate but equal" Internet resolves the net neutrality crisis.
—I McNertney, Pittsburgh, PA

The Internet should be common carriers.
—John Owen, Essex Junction, VT

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—James Campbell, Placerville, CA

i believe in a free and open internet with equal access for all!!
—Jeremy Dawes, Seaside, CA

Net Neutrality is extremely important to me. I can not imagine an internet that was divided into two tiers, once again allowing those with more money the fast internet and forcing the financially challenged to a slow and frustrating internet like the dial-up. The internet and the knowledge it brings into peoples lives should be equal for everyone.
—Vicki L. Pearson, Lake Worth, TX

Dear the FCC, Let me be clear as mud... I DEMAND REAL NET NEUTRALITY AND I DEMAND RESULTS!! I do not want any of Tom Wheeler's silly shenanigans that he claims is net neutrality. What he wants is net discrimination and preferential treatment, which while he can afford to pay for that, most people in America cant. We don't Tom's proposal and we don't want a Time Warner Cable and Comcast merger either!! Turn your brains on and start listening to us insyead of ignoring us!! We want net neutrality and we want real net neutrality. I have said this time and time again, RECLASSIFY THE INTERNET AS A UTILITY!!!! I am 15 years old and I need the internet to do my homework and get things done and my parents don't have the money to pay for the costs this new plan Tom Wheller proposed will cause. I hope you consider what this will do if you ignore me and the countless others speaking out about this. Do the right think and reclassify!
—Liam Spencer, Louisville, KY

I believe that two things will assure the continued positive progress of civilization: continuing to value and invest in education, and the free exchange of information and ideas through an open internet. The proposed actions of comcast and other ISPs to change the internet from a level playing field to one of tiered access would fundamentally affect the latter of those two principles for the worse. As an American Citizen, I implore you, my elected government to represent my feelings, and not those of large corporations. I hope you all make the right decisions in these pivotal times. Kind regards, Heath Gurganus
—Heath Gurganus, Beaverton, OR

Please don't give the cable companies still MORE power.
—Genevieve Carnell, Tacoma, WA

"Don’t tell me what you believe, Tell me what you do, And then I will tell you what you believe!!"
—Mervin Holland, Vancouver, WA

I depend on a open internet so I can provide free computer support for those that can't afford taking it to a repair shop. I urge that these sanctions/rules are stopped. Providing priority to the highest bidder isn't going to help the commonwealth that makes the internet what it is today. It's keeping it open to the people and ensuring that corporations can't control what sites we can visit.
—Daniel Duke Lazzatti, Maitland, FL

The President has promised this. We rank 30th in the world as to internet access, speed and cost. These companies have failed our society. Please do not favor these large businesses.
—Terry F. Hatch, Mahomet, IL

It's the democracy and commerce, duhhh.
—Paul Szymanowski, Curtice, OH

Without Net Neutrality, online research for school and later work would be subject to obstruction unless I fork over cash I don't have and can't get without Net Neutrality for my degree: it's a utility, like water and electricity, and should be classified as such!
—M A., Hillsboro, OR

Maintaining Net Neutrality (and I do NOT mean the faux neutrality Mr. Wheeler tried to fob off on us) is essential for the United States to stay competitive with the world. DO THE RIGHT THING!
—David & Judith Laws, Bellingham, WA

I’m a senior living on my Social Security, the Net allows me to tour the world and see things and experience things I will never be able to enjoy without the Net. Maintain Net Neutrality!
—Nigel Thornell, Roseburg, OR

As a web owner I already pay for the band with my visitors use. So the lie about video using more bandwidth that needed to be billed for is a lie. The web owners have already paid for that bandwidth, and as far as speed ALL webs should be able to flow at the maxim speed allowed by the Physics of the technology, and not the whim of a private corporation.
—William Peary, Sag Harbor, NY

You should not restrict my accesse to news and informations
—Tom Bianco, Atlanta, GA

It just is, that's all.
—Arden Kirkman, Whitsett, NC

Monopolies can dictate fees by setting them anywhere they want to. No competition equals higher fees! When will this end? Where did consumer protection go? How much were you (FCC) paid to give in to this travesty!
—Susan Sanocki, Azusa, CA

Net neutrality is non negotiable in a modern democracy.
—Madeleine Ras, SF, CA

Net Neutrality is the only way forward for the world and is the only guarantee that the internet will remain equal for all. There is so much inequality in the world today, the internet is an exception that can help millions of more disadvantaged people get a leg up in life. Not everything is about money, some things are more important to our quality of life for all. Clean air, water, food, education and information make the world a better place.
—Jane Stephens, ,

I am an IT consultant. An unfettered internet is a major asset in my business.
—JB B. Van Wely, Baltimore, MD

Protect Net Neutrality. Reclassify ISPs as common carriers!
—Nadia Salomon, Natick, MA

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Gary W Rowland, Oceanside, CA

INTERNET SERVICE PROVIDERS MUST BE RECLASSIFIED AS COMMON CARRIERS.
—CJ Dietrich, Tampa, FL

Since big money has been further sanctioned in politics.....the internet is really the only venue left to the majority of us....to exert our influence in the direction of the country. Gerrymandering has locked up the legislative branch. When you take away every reasonable method by which the common citizens of the country have a voice.....you leave them with the consideration of "unreasonable" means, to make their voices heard. Taking away net neutrality...is one more step down that awful road.
—Michael A. Miller, Chandler, AZ

Net Neutrality protects consumer intrests.
—Patrick Bruce, Terrace,

It is apparent that the world has changed and that cable is now a mainstream utility. It should be treated as a commom carrier, and not be in the hands of a few large companies. Neither should media outlets. That isn't todays subject, ut I bring that up to tell you how let down by the FCC as a private citizen I have been. I grieve for the fairness doctrine and things have gone down thr tubes for access to information fir the average citizen ever since . Please do not continue this slide downward. Restore some faith in our government as being by the People, for the People. Corporations are not people.
—Lisa Canning, San Diego, CA

Major American media is controlled and skewed by corporate interest. NO one in the country deserves to be educated by commercials instead of facts. A free and open interbet fair playing field is NECESSARY. Thank you.
—Mike Myers, shoemakersville, PA

The internet was built and created by us, why should these giant companies get to stroll in and make us pay extra to use it!?
—Evan Obler, Plainsboro, NJ

I have been an IT professional for 26 years and run my own consulting firm for the last 12 years. Knowing that the internet is truly neutral and equally open to all is important to my business, my clients and me.
—Craig Vogel, Irvington, NY

Net Neutrality is important to everyone!
—Teresa Matych, Arroyo Grande, CA

The internet is one of the few resources we have left that is truly equal - i.e., access is not stratified as a function of socioeconomic status. To desire to change this reality is nothing but pigheaded and short-sighted. I would hate to live in an America that is this ruthlessly, nonsensically addicted to misbegotten notions of the capitalist ideal.
—Rhodes Hambrick, Georgetown, KY

Your proposed rules are ridiculous, against the very nature of the internet, and just plain un-American! Reclassify these ISP's as common carriers and protect the fairness of the internet.
—Devin, Saltillo, MS

Reclassify ISPs as common carriers.
—Sarbaga Falk, Carrboro, NC

The internet should be open to all, not just those that can pay for it.
—Sam Selfridge, Santa Barbara, CA

There can be no democracy without Net Neutrality.
—Deborah Forest Hart, oak bluffs, MA

Do your job!
—AG Gilmore, Walnut, CA

This is the free speech issue of our time. If you grant corporations the right to discriminate what content we can access, they can control the information we receive, and that will destroy innovation, free speech, and spiral into political corruption beyond what we've ever imagined. If you think they'll regulate themselves, you haven't been paying attention. If ISPs want to charge us more for more bandwidth, fine; they already do. They don't need to charge us for certain sites to do that.
—Tyler Newton, Cambridge, MA

Free Internet is something most people need they don;t need to be charged extra for fast lanes and the people would be charged. Big corporations would pass on the cost to consumers cause that is what they do.
—Kim and Lynn Allen, Ypsilanti, MI

Chairman Wheeler, I understand that you are currently being bombarded by comments from all sides regarding net neutrality. However, I, like so many other Americans feel that it is necessary that you hear what we have to say on this matter. You say that you're in favor of a free and open internet, yet your proposed plan does nothing concrete to ensure its continued existence. Furthermore, should these rules be enacted, the extent to which they would be carried out would be at the whims of whoever heads the FCC. You may desire to see them followed closely, but what's to say your successor will be so adamant? The American people need firm reassurance that the internet as we know it will remain open and protected. The only way to guarantee that is to reclassify ISPs as common carriers once and for all and put this to rest. Please, understand that this is a desperate plea from just one of millions of Americans who urges you to listen to our voices. Make a decision that puts the well being of the citizens of this country ahead of corporate interests.
—Rob McLemore, Chicago, IL

Please stand up for small business
—Michael Zhang, Urbana, IL

Let's have equal opportunity for everyone on the internet, in the spirit of our Constitution.
—Matthew Harper, Dallas, TX

I feel this is wrong, and that your generation is not the one to manage this. Let it develop organically.
—Grayson Parker, Bakersfield, CA

I would like to get the results I am looking for when I search for things, not what my gov and their cronies want me to have. Who ever votes for this has no morals and their name should be put on a hit list for when the shtf.
—Jon, Cross Plains, IN

I oppose these new rules. I don't think you should have to pay internet service providers for "faster" service. The little guy will end up being left out entirely.
—Cyd Brown, Holly Springs, NC

You would be making it more difficult for those seniors who have access, but are on fixed incomes to remain in contact with families who often live a long distance. The economy has taken enough of a toll on seniors and "middle income" (read now "lower income" to have anything within our reach. Please don't mess with our net neutrality - rates are already way too high.
—Corrine DiMarco, Orlando, FL

It could monopolize political debate and marginalize our political structure even more. Net Neutrality is the only thing that holds promise for a more egalitarian and happier world society
—Connor DiGregorio, Argyle, TX

My favorite sites are not for profit. They barely are able through donations to exist. They could become slow that I would not being willing to wait. Also, you can speed up the internet; it goes at speed of light. The only thing you can do is slow down the internet through taking out packets of data and releasing them later then their natural flow!
—Errole Ross, Chicago, IL

Net neutrality is crucial to we who are 'customers' of the internet. It allows all content to be treated the same. For many, like me, who live in more rural areas, it is expensive and difficult enough to get internet service. An end to net neutrality would make this worse. I have read that the United States is already behind almost all other countries in net speed and pricing. I see this pay for play as another way for internet providers to impose additional costs to consumers. In addition, I want to choose my own content, not have some corporation decide whether I get certain items faster. The corporatization of America is already beyond the pale, and I don't wish it to go further. What the FCC needs to do is to classify net services as a common carrier and regulate it as such.
—David Underwood-Sweet, Danville, KY

Stop constantly thinking about money! The internet as an awesome and useful tool for EVERYBODY. We will not accept you forcing us to pay more simply because you favor the few over the many. DO NOT KILL NET NEUTRALITY! RECLASSIFY ISPs AS COMMON CARRIERS, PLEASE.
—Kim Cyr, Gatineau,

The Internet was developed to help individuals, families, work groups, administration, CEO's all the way up to our President. There was no plan to change the way the internet was designed for net neutrality to give all who used it to have equal access. Now the same people who think they can run our country because of their checkbook balances, is trying to make the internet another way they can try to control our country. This country was built on equal rights for all. Please do not let these people get their way again. Stand for all of us and keep net neutrality.
—Janet Eaddy Dougherty, Schertz, TX

To Expose Self-Justifying Money Pusher Admin Bummonseat Makework Mission Creep Predatory Necrotising Fasciitis Economic Infections!
—James Barrington, London,

just another example of our corrupt goverment
—Jeffrey A Blosser, uniontown, PA

Dear Federal Communications Commission: When I received the news that the FCC is moving toward creating an internet without Net Neutrality, I was very concerned. I enjoy my time on the internet, looking at independent artists' and writers' work, as well as shopping on independent sites. However, if Tom Wheeler's plan to make the internet into a fee-based "fast lane" and "slow lane" comes about, I'm afraid I won't be able to use the internet as easily for my needs. I also fear that the sites I love will be difficult to access because they may not be able to afford the fees that the internet providers will demand for "fast lane" speeds. So many of us have benefited from the equal opportunity on the internet to express ourselves, to start businesses, and even now, express our opinions to our government. Please support Net Neutrality by reclassifying ISPs as common carriers. Everyday Americans need Net Neutrality to thrive; please support them! Thank you, Karin Silver
—Miss Karin Silver, Colorado Springs, CO

If we have to pay for free speech, it isn't free. We've strayed farther and farther off the path the founding fathers set out and the results have been disastrous, with the economy in tatters, the acceptance of the absurd and patently ridiculous proposition that corporations are human beings, and the predictable degradation of our democracy as those with more power are accorded a bigger voice and a far more liberal interpretation of what constitutes a crime. Taking away my ability to freely access the internet would be the nail in the coffin. Stand up for democracy and defend net neutrality.
—Kathryn Vinson, Seattle, WA

To end net neutrality is to quash not only our rights but smother the Renaissance of our generation, who depend on open internet to connect with others in this time of national recession and support one another in every aspect of our lives. The internet is a community, not a social club for only the elite and entitled.
—Petra Winters, Wilmington, NC

Don't screw around with this. The internet is a UTILITY. The PUBLIC should have control. It should not be "sold" to the highest bidder. PLEASE let it as it is.
—David L. Dority, Nashville, TN

I'm already paying too much for poor choice and bad service. You've allowed cable companies to abuse us at will. Equal access to Internet is all most of us have left. Just do the right thing for once and protect the average citizen. Please.
—Mack Price, Raleigh, NC

A multi-tiered internet will inevitably skew towards those who have and against those who have-not. We have all thrived on an open internet system - why go backwards?
—Judy McCollum, Minneapolis, MN

Net neutrality is the only thing protecting the free domain that is the internet from corporate greed and monopolizing. Without net neutrality essential internet speeds and access will be limited. destroying valuable resources small businesses need to survive, and giving elite groups huge advantages over those who cant afford to pay up rediculous internet fees. The internet is more common than a phone service and should certainly be considered a common carrier being that almost every person in the country utilizes internet for information purposes. without net neutrality the company google itself might not exist, despite countless other business and start ups that require net neutrality to be successful. To abandon net neutrality, would be to destroy a piece of freedom that makes America what it is. It would take from the majority to give to the elitists, and leave the rest of us high and dry. These rules that have been laid out by the FCC allowing discrimination of the internet are completely unacceptable. I hope the FCC will see how wrong they are and immediately halt any further rules or programs against net neutrality.
—Robert Gaven, Delran, NJ

The Internet has become what it is because, so far, it has remained open and neutral--and millions of users as well as countless businesses, large and small, have benefitted from that neutrality. If FCC Chairman Wheeler's plan is enacted, the only beneficiaries would be a handful of large telecommunications companies; small businesses would be severely hampered, individual users would be soaked with extra fees, and everyone would suffer. The large telecommunications companies would effectively become gatekeepers, able to block (with high fees) access to the fast lane for those companies by which they feel threatened or which they simply do not like. And do not trust even the most carefully-written laws to prevent them from doing so, for companies with legal departments as large and pockets as deep as theirs will find or create loopholes soon enough. No, the Internet must remain neutral and open in order that users and small businesses may continue to enjoy its benefits. Please reject FCC Chairman Wheeler's plan and instead formally classify Internet service providers as common carriers. Thank you, on behalf of small businesses, individuals, and Internet users everywhere.
—Andrew Cole, Pittsburgh, PA

I have an on-line business and I conduct ALL of my personal business on the internet also.
—Harley Armentrout, Chino Valley, AZ

Because freedoms are scarce enough in these days of corporate oligarchy owning Washington DC. ENOUGH!!!!
—Rich Wills, Grass Valley, CA

Please keep the Internet functioning as it is.
—Craig Coley, Bloomington, IN

Without Net Neutrality, those with more money are given another advantage.
—Henry Berkowitz, Sabinsville, PA

Throw out your rules and instead reclassify ISPs as common carriers.
—Colton Sorensen, Bountiful, UT

Do not create a class system for the Internet. In this world, a lack of shared experience between the "haves" are "have-nots" leads to a lack of understanding and compassion between the two. Creating a tiered Internet where those with financial resources are able to enjoy advantages over those without will only breed further class-segregation.
—Calixto Flores, Davis, CA

This benefits the few at the expense of the many. I pay my taxes -- government is us. For the people, by the people. Stand up and represent the people and what's best. Enough of Amercia for the greedy, by the greedy. Let's all grow up already.
—Jaben Cargman, Raleigh, NC

I support Net Neutrality. Do not allow a two tiered Internet. Reclassify ISPs as common carriers.
—Donna Etheridge, Raleigh, NC

Net neutrality is important to me and my business, Today the internet is a necessity in both our personal and business life. Everyone always talks about small business being the backbone of our country. Any increase in costs on services that are a necessity amount to a undo tax. Actions taken by the FCC should protect the majority of people and businesses, not break their backs with increased costs for services.
—Joe Kutsop, Blakely, PA

I want history teachers and students to be able to use easily and freely the website I have created at UC Davis!
—Sherrill Futrell, Davis, CA

The internet is far to essential to everyday life at this point to be considered anything BUT a public utility. Allowing companies to create these fast lanes for services that pay would cripple our internet based economy by stifling most new competition. Classifying ISPs as common carriers is realistically not only the best choice, but the only choice.
—Joe Crom, Minneapolis, MN

I pay my ISP for bandwidth which MUST not be throttled because of source and type of data. Just because the large users and me forced to pay, on the end this NOTHING to lower costs.
—Larry Hitz, clarendon hills, IL

An open and equal access to the Internet is an indispensable condition for democracy inasmuch enlightened and emancipated action of its citizens is not possible without full information for all and in all matters.
—Alois Stifter, ,

The internet must remain free and untainted for the good of us all.
—Robyc Besly, Honolulu, HI

When radio was invented and commercialized, the common wisdom of our people was to make it a public air waves now called common carrier. To banish net neutrality is to inexorably move toward privatization of communication and diminish the dialog of our citizens.
—John Vieira, Mount Vernon, WA

We already have the situation where corporations can now purchase influence over politicians and finance their campaigns. Now imagine that one of those corporations has the power to slow or stop the transfer of information regarding competitive political organizations, or even competitive companies. We must never give this power to anyone. The internet must remain neutral.
—Nancy Perillo, Westlake Village, CA

Nick neutrality is important to me because it speaks to the core values of American democracy. Without it, ordinary citizens voices won't be heard. Without it , the more optimal the climate for abuse of power.
—Patricia Buskirk, Honolulu, HI

The Internet is one of the largest steps man has taken. Leave it as is.
—George Anderson, Alexandria, VA

The internet is such a powerful and useful tool because it's a level playing field. Furthermore, taxpayers funded its development. I'm sure the ISPs are salivating in the worst way to be able to act like they own the internet and make a pile of money off their proposed two tier internet.
—Lisa Agard, Mount Vernon, WA

Please, save some cake for the chattering classes.
—Robert W Lewis, Conway, AR

I am a massage therapist in private practice. While the internet is crucial to my livelihood, I can't afford to spend a lot of money on my online presence. I can only see one client at a time. My website is self-built. I pay monthly fees for DSL internet and website hosting. If my site loads slowly, or I can't accomplish my online tasks at reasonable speeds, my business will suffer. People like me deserve an even playing field when it comes to internet access. I wouldn't exist as a self-supporting practitioner if I had to pay extra premiums for "normal" phone service--don't let that happen to the internet.
—Carol A. Niemi, Houston, TX

No Discrimination !
—Tom Cuevas, Tucson, AZ

These corporations are NOT people and they have no regard for the PEOPLE!!!!
—Daniel Gould, Falmouth, MA

You know why everyone hates cable companies? They add nothing and take everything. That is the future of the internet as it stands right now.
—Todd Clay, York, PA

At this point in history, the Internet is a right. Do you want to be known for making it anything else?
—Ray James, madison, WI

The cost of cable and internet is insane for people on a fixed income These new rules disenfranchise millions more people and causes disenfranchisement to grow exponentially. This country is becoming a serfdom. So much for government of, by and for the people when unelected bureaucrats can hand over everything to the corporations with no thought of the devastation they do to the vast majority.
—Kevin J. Gosztonyi, Bethlehem, PA

Destroying Net Neutrality hinders equality between providers and carriers. It also creates an unfair advantage for those willing or able to pay more based solely on which provider(s) are can use financial weight to buy their way into the forefront of viewable media.
—Ismael J Rodriguez, Vineland, NJ

Broadband companies MUST BE declared as COMMON Carriers and regulated as such!
—Paula Hitz, Clarendon hills, IL

I am an attorney. I depend on the free flow of information in my work and in my life as a citizen. At a time when access to education and unbiased news is lessening, we need an open internet.
—Kathy Murphy, Livonia, MI

Net Neutrality allows me to push forwards in my education, it allows me to learn without fees, without holes to jump through, and without limitations. It allows me to share my thoughts freely where I like, make friends, connections, and change lives through the technology we have been given. Do not take that away from me.
—Sophia Scott, Gresham, OR

The internet is a utility and needs to be regulated as such. It is not a commodity to sell to the highest bidder. Wheeler just doesn't get that his proposal won't work and needs to be scrapped. He's an industry insider. Unfortunately he thinks he still works for them and not the people. Telecommunications companies have already broken the promise to have the country fiber optic enabled by 2002. Why should they get a single further break from the taxpayers they've screwed?
—Ann Catherine Keirns, Castro Valley, CA

The net is a window to and from the world, and must remain free of favoritism and discrimination toward its users.
—Mary Rexford, Ashland, OR

I make my living online; don't gimp me, bro!
—Andrew Pavlicek, Odenton, MD

We are all citizens and have the right to the same internet.
—Norbert Gernes, Eden Prairie, MN

It's the only thing that's important to me!!!!!
—Jeffrey A. Coleman, Palmetto, FL

You and I both know that all other forms of national communication (newsprint, radio, TV) no longer do more than echo the views of their owners. In the worst case scenario (Fox) they actively distort the truth and are an obvious political arm of the radical Republican party. The Internet, the unconstrained and neutral Internet, is our last source of untainted information. Give Verizon, AT&T and the like control over this access and we lose all pretense that there is any avenue of free speech as guaranteed by our Constitution. It is clearly time to reclassify Internet service providers as common carriers.
—Bob Schilling, South Deerfield, MA

The same Title II authority that required the old telco's to treat all content the same, regardless of source, should be used to ensure that today's ISPs do the same.
—Hank Bromley, Savannah, GA

The internet is a new opportunity for us to create a world that conforms to our best ideals - not greed and profiteering.
—Noleian Reusse, Chicago, IL

The internet is a new opportunity for us to create a world that conforms to our best ideals - not greed and profiteering.
—Noleian Reusse, Chicago, IL

This is why I, like so many others, have no faith in the United States of America! The FCC is supposed to protect the rights of American citizens but like most government agencies it is in collusion with corporate interests. What can you expect when an industry lobbyist like Wheeler is posing as a "public servant?"
—Eric Hultquist, Mesa, AZ

Online line freedom is now as important as a "birth right", please protect all American's from big communication entities Comcast, Verizon, AT&T etal!
—Mr. Jerrold Whaley, Lone Tree, CO

You need to reclass the ISP in order to protect and preserve the internet as an open platform that will foster innovation and the future of the US economy. There is much more at stake than the interests of a few cable companies.
—Aaron Falk, Buffalo, NY

Please do not let the Internet service providers have control of what goes on the internet. We cannot expect them to be unbiased and fair when there's money to be made!
—Diane Patrick, Plano, TX

Dear Decision Maker: I know just by the internet being a electronic provider to many homes and businesses it falls under the FCC jurisdiction however the FCC did not create the internet and should consult with Mr Gates who is the creator of our fast information highway. In my mind as a consumer and as a user of the internet for many uses and not very much for social use mainly for information easier to find because of my AOL provider I do not believe the FCC should throw it's weight around that is not that much different than private companies claiming ownership rights when they have no business dictating how the internet should be run or operated. They buy into internet use just like us consumers and to throw one's weight because of the electronic access is not right than have each provider pay for their share of members and leave the FCC out of it all together after all we pay by provider a lot of us do our volunteer and action activist work by use of the internet so make the rules FCC but inform all consumers of your rate to each provider shopping around for us consumers will be great after all that is what free enterprise is all about . Isn't it? In the meantime I support Net Neutrality and want a reclassifying ISP's as the common carriers. Sincerely, judy wisboro
—Judy Wisboro, worcester, MA

Its bad enough that big money is already practically buying the democratic voting process; lets keep them from buying privileges on the internet!
—joseph I. Donohoe Jr., EAST LANSING,, MI

Having been one of the first online back in 1982, I can tell you that proposals being put forward now will do more to stifle the entrepreneurship and commerce. It was being released from those shackles of speed and data content which created the vibrant web we now have. Don't do this.
—Bob Mutascio, Venice, CA

The internet should be free to ALL, no exceptions. All equal.
—Amy Immel, Albuquerque, NM

If $'s are speech then speech isn't free! Corporations are NOT our government.
—Aaron Tidwell, Burnsville, NC

Fascist, police state amerika controls the MSM! Free, open internet has the the Truth; and the Truth shall set us FREE!
—Pedro Anillo Guevara, ,

I do not want a internet where things travel at different speeds depending on how much money the company has to grease the wheels. I'm sure all of Comcasts services get the highest possible speed at the expense of everything else on the network. Do not let the ISPs stop their only competitors by virtue of them have the only pipe to deliver it. We deserve a world where innovation wins over established players protecting their own interests. I would go a step further and require that ISPs work together on creating a shared fiber network that they all pay to maintain and the company with the best service gets the cutomers.
—Benjamin Webb, Stafford Springs, CT

I work from home entirely on my computer and already feel that I pay a premium for the internet! I don't like the idea of a two-tiered internet at all because I'm quite sure I couldn't afford to pay anymore and doubt if I am the only one in this position!
—Lea Ogozelec, Roswell, GA

we must classify these as common carriers. enough corruption.
—Ray Legault, Kent, WA

Net Neutrality is extremely important to our culture and economy. It is how people keep in touch with their families and friends, whether they live across the street or across the country. It is how many people run their businesses, through facebook pages, blogs, personal websites, or sites like etsy or ebay. It is how people stay informed about important happenings around the world, politically and culturally. It is how many people get their education through online classes for universities, or through free education materials and sites like Lynda or DIY videos that teach people how to build, create, and cook things themselves. It is how people collaborate creatively or intellectually, despite distances that may exist between them. It's how people keep up with the news, how people unwind, how they keep entertained. It is absolutely essential that the internet be classified as a public utility for it to continue to grow and improve all of these wonderful benefits that the internet currently allows us.
—Brita Adamovics, Portland, OR

The People need a free internet where we all participate equally. Please do not create a 2-tiered corporate internet! This is all we have left.
—Susan Peirce, Lyons, CO

Sounds like you're trying to fix something that is broken, leave it alone.
—Darrell monson, Staples, MN

I get and participate in political blogs, whose organizers cannot afford to pay high fees for access to high-speed service. It sure would be a LONG step backwards if my dialogues were sent back to the speeds I had when my Internet access was via dial-up from my telephone... Keep the New neutral. Designate the ISPs as telecommunications entities, subject to FCC regulation.
—Dennis K. Mann, San Jacinto, CA

Dear Federal Communications Commission: FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Gary P Rost, Falcon Heights, MN

Net neutrality is a global issue, you have no right allowing a tiered system for the entire globe.
—Kathleen Beavin, Bothell, WA

In fairness to everyone who depends upon the internet for communication, information and e-commerce, the internet should remain neutral so that everyone can benefit from it's use. Furthermore, anything that you do to interfere with net neutrality, will seriously hamper on-line merchants. Thank you very much.
—Rosemarie Schaefer, Plano, TX

Your leadership as a public servant is intended to be of the public which includes big corporations AND everyone else. If you do not preserve Internet Neutrality and, instead, favor the big corporations in this plan of yours then nobody in the USA can refer to you as a public servant anymore. We need to call you corrupt, prejudicial, biased. That is a shameful legacy leave behind, and you will have ZERO credibility with me.
—Drew Innenkraft, san rafael, CA

Was created by the government... it should be managed by the government, not businesses.
—Benjamin Schlein, Nashville, TN

Because FFC will be supporting discrimination! By letting big companies with lots of money controlling the fast lane and dumping the rest of us to the beyond slow lane! I totally agree the FCC needs to reclassify ISPs as common carriers!!!
—Rolaine Smoot, Riverview, FL

I am an artist who uses the internet to show and market my work, as well as connect with online communities of artists and art enthusiasts. I completely rely on the internet being a level playing field with Net Neutrality to get my work seen, do business and learn from my peers. For communications with friends and family, as well as clients and customers, the internet is far more important to me than a phone. This is true of most people I know. It has become a crucial communication tool. ISPs should be considered common carriers because they already ARE for most individuals and companies who use the internet. I'm also very concerned that doing away with Net Neutrality will hamper innovation and economic development in this country for decades to come. For example, my husband uses the internet to communicate with global collaborators on a start-up company. How will that kind of free flowing communication happen for new businesses without Net Neutrality? It is absolutely imperative to individuals, businesses and to the country as a whole that the FCC reclassify ISPs as common carriers.
—Joann Edmonds-Rodgers, Seattle, WA

ISP's are spending millions of dollars on lobbying instead of innovating. This is such a waste of talent.
—Vismay, Minnetonka, MN

DEMOCRACY MATTERS
—H Gray, Hayward, CA

ISP's already have too much power and monopolies in certain locations. This lack of competition means ISP's have less of an incentive to offer faster speeds and gives them the ability to charge businesses and consumers higher prices.
—Tony Delgreco, New York, NY

Researchers like me need to be able to access all internet sites quickly, and we especially don't want to have to go through commercial sales sites before we can get data that we are seeking.
—Frederick Paper, Ann Arbor, MI

The Internet has become a utility just as much as water or electricity. The only way to guarantee the prevention of anti-competitive, tacitly coordinated tactics on the part of ISPs is to create a legal landscape they would not be able to manipulate their way out of - we have to reclassify them as Title II common carriers in order to appropriately regulate them such that Net Neutrality is protected. No rhetoric, no "open Internet" will substitute for this.
—Ryan Cunningham, Houston, TX

This action is anti-consumer. Part of a pattern in government to protect the corporate "entity" at the expense of consumers. Time to wake up and help the customer.
—Theodore Bahn, Tucson, AZ

A free internet allows the ordinary person to have a voice in world events that they have never had before. It is a true democratic voice for the common good of all humanity
—Patricia Newson, ,

The internet is one of the few places where all voices may be heard. It's so important for our democracy! Please save net neutrality.
—Shelly Ley, Coxsackie, NY

Our democracy is at serious risk as the "Elites", "Oligarchs", "Plutocrats" take over more and more power. This current proposal shows Tom Wheeler's plan to be supportive of the Elites, etc. over the interests of We the People and the common good. Do the right thing and reclassify ISPs as common carriers!!
—Marjorie Worthington, Enumclaw, WA

I'm a freelance translator. Most of my clients are overseas; I communicate with them exclusively by e-mail, and I often use online dictionaries and research terms on the Internet in the course of my work. Both slower Internet speeds or higher fees for decent speeds would have a negative impact on how I earn a living.
—Sarah Neufeld, Beaverton, OR

America's postal service compared to other country's (apart from twice a day delivery in England) was revolutionary in its egalitarianism, affordability, and security, and thus played no small part in forming the nation. Now the internet replaces it as the forum that will succeed it, or fail - to undergird? - or to cripple, those early American aspirations now owned by the world. Your rules will contribute to the reversal of hundreds of years of struggle. Congratulate yourselves on that? or be all that you can be.
—Tim Harrington, Weston, FL

People without a lot of money should not be subjected to slower Internet service. Keep the Internet neutral. Throw out the new discriminatory rules and reclassify all Internet providers as Common Carriers.
—Bruce Farah, Eugene, OR

Internet service providers like AT&T, Comcast, and Verizon are already gouging its customers! Most of us can't afford for them to launch two or more tiers!
—Allan Francke, Walnut Creek, CA

Big Corporations should not get preferential treatment. This will kill innovation. We are already behind Europe in speed and price. Regulation protects everybody.
—Sydney McQuoid, dallas, TX

Open internet = good for democracy!
—Glen Peters, Elgin,

Equality matters damn it.
—Kyle Bennett, Perth,

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Charles Vaughn, Charlotte, NC

I plan on becoming a video game developer. And this could really hurt my buisness, I rely on the open internet to provide my players a fast and simple play.
—Shayne, Los Angeles, CA

The proposed plan is not what is in the best interest of the Internet, and everyday people. It is to the benefit of the corporate powers. It is not even a compromise. Re-think the Internet and how big it has become. Save Net Neutrality!
—Peter Tummino, Wilmington, MA

One of the only places left that hasn't been corrupted by corporate cash. The only level playing field left in the United States.
—Jacob Setchell, Hampton, VA

I don't like corporations making life decisions for me about what I can and cannot reasonably read, discuss, or access. Keep the internet, and our nation, free. Please support Net Neutrality and legislate for the benefit of the people who have elected you. Thank you!
—Stephen Dahl, Kingston, RI

Net neutrality forever. Keep hand off.
—Ronald A. Sturman, Martin, MI

Don't shut out the common person. Their time is real also.
—Ann Wagner, Fort Myers, FL

Innovation is the key to our country's future, an open internet is important in fostering innovation.
—Martin Jordan, Loami, IL

We are very concerned about the direction the FCC is taking in their recent proposals. We do NOT agree and support this current direction and insist that you consider the people and their voice and reclassify ISPs as common carriers. We NEED for you to hear our voices and concerns and not continue with the current proposals which seem to favor the big ISP providers and not the users.
—William Chambers, Bellingham, WA

What's on the internet should not be influenced by what the media controls...no pay for play.
—Nancy A. Becker, Potomac, MD

People of all ages depend on an open internet. Everything on an open internet is important. Please do the right thing and do not take that away.
—Deborah Peterson, Indianapolis, IN

Net neutrality is one of our last vestiges of democracy! Why can't you see that and do the right thing?
—Lorraine Schmidt, Mountain View, CA

We should be championing a free market. Chairman Wheeler wants to essentially permit bribery to give unfair competitive edges to larger businesses. That is not a free market. This level of stupidity proves that the chairman of a regulatory agency shouldn't be an ex-executive that spoke for the companies that he's supposed to regulate and protect society against their stupid selfish desires. Please stand up and protect our free market society since the chairman wouldn't do his *current* job.
—Alan Alex, Parker, CO

The internet should be classified as a public utility so the internet remains neutral, NOT PAY TO PLAY.
—Nancy Gutierrez, PALM DESERT, CA

THERE IS NO RESON TO LET THEM NOT LET US ALL MOVE AROUND ON THE INTERNET OPENLY & FREELY
—John E. Robie Sr., ORLANDO, FL

Access to the internet should be the same as access to electricity. We pay for power and the power company doesn't get to choose what devices the power is used on.
—Gregory Wilbur, Fitchburg, MA

I believe net neutrality is important because the internet has become an essential part of modern day life. It is a tool of communication equivalent to the telephone these days.
—Jonathan L Respaldiza, Macon, GA

I am a poet, a high school librarian, and a concerned citizen - and I expect the federal government to protect the free and open Internet. The FCC must not institute these new rules that favor the huge corporate ISPs, but must reclassify them as common carriers. It's important for democracy, for the Internet and for all citizens of our nation.
—Mr. Matthew Murrey, Urbana, IL

Net neutrality means that everyday people who must live paycheck to paycheck can still have a way to be heard by more than their immediate friends and neighbors when they spot an injustice...like this one! With the new rules, the only people who will be heard will be the ones with the money to pay for 'air time'. It means the plutocracy that big business has been trying to turn this country into since America's beginning will be a fact and government of the people, by the people and for the people will be just wishes on paper somewhere. When your new rules take affect, the most democratic country on the planet will be just another China or Syria or maybe we can be Somalia cuz the pirates will be running the place. If you can find no justice in your own conscience, please listen to ours and leave the internet an open road. You know it's the right thing to do.
—Laurel Kramer, Seattle, WA

You are here to represent all Americans not big companies.
—Colin Ryan, Elgin, IL

I believe in a free and open internet for all. I do not agree that big corporations should be able to charge for a fast lane internet .
—Anthony Sanfilippo, fullerton, CA

So many small businesses depend on the internet as it now stands.
—Sheila Rice, Talbott, TN

We need to reclassify these ISPs as common carriers, esspecially since these companies run like oligopolies. Please think of the average person, this commodity needs to be universally and evenly shared.
—Paul Bruns-Bielkowicz, San Pedro, CA

Your actions smack of corruption. Shame on you.
—Robyn Blakely, Asheville, NC

as a low income person I need an affordable internet,I can't afford more than I pay now!
—Patricia Vanderpool, applegate, CA

Freedom of speech is a right, and changing the name of the game so crooked corporations can make more money is anti-democratic and should not happen. Our Constitution demands it. Corporations, regardless of what the tea partier supreme farce says, they are not people. We are the people meant its citizens, never it was meant to mean corporations.
—Jorge I. Gomez, San Antonio, TX

Please keep the Net Nuetral
—Kelly V Place, Williamsburg, VA

Which lane would you like to be in?
—Paul Muns, Long Beach, CA

I'm old enough (65) to remember when the FCC served the public interest. NOW YOU ARE CORRUPT AND SERVE GIANT CORPORATIONS AND ABUSE THE PUBLIC. Repent! Serve the public interest!
—Glen Anderson, Lacey, WA

I shouldn't be discrimated against, simply because I don't have a certain ISP. That's wrong. If Net Neutrality goes away, my enjoyment of going online will dissapear too.
—Tricia Flodquist, Shoreline, WA

At my age-i can live without the internet especially if there will be two-tier service.I can only speak for myself but if you want to ruin customer service-be prepared for a backlash
—Alan Griffiths, ,

We must maintain net neutrality and public access to the internet. You may believe that these companies will not abuse the power you are proposing to give - please do not let them have the opportunity to prove you wrong. For years, medical insurance providers in the U.S. continued rejecting valid claims of their paying customers - even when it led to the death of said customers - because their actions were technically legal and benefited the company's bottom line. Allowing the communications companies to charge extra for premium access may lead to a significant reduction of access/services for citizens who cannot afford the additional costs; costs which are likely to increase exponentially over time. Corporations do not (should not) have the right to price gouge customers for what is essentially a public service. Yes, they laid the infrastructure but the public has the right to regulate their activity - the ability to communicate in an ever-increasing technological world is a matter of freedom. Please fulfill your duty as a representative of the American people (corporations are NOT people) and protect our freedom. Reclassify ISPs as common carriers. Thank you for your measured and thoughtful consideration in this matter.
—Aaron Thomas, Westminster, CO

It's just not fair that the internet won't be a free place!
—Charlotte, West Hollywood, CA

I am a physician and a scientist, we use the internet to move large amounts of experimental data. We occasionally use a large amount of bandwidth for transferring experimental data; without net neutrality, we would not be able to afford to experiment with open protocols and open data sharing, especially for large data sets.
—Daniel Cleary, Portland, OR

Net neutrality is not only important, it is essential. Eliminating NN would send us back to the stone age. It could potentially put us way behind the rest of the world technologically.
—Shawn Fratis, Green Valley, AZ

Hey make internet companies CCS.
—Grayson Malinowski, Minneapolis, MN

It would be extremely unfair to divide the internet like this, since it would be very easy for discrimination to start happening. Furthermore, the internet has always been a free resource, equal to everyone, and changing it would be unfair to those of us who cannot afford higher-speed internet.
—Hotaru Tomoe, Shartlesville, PA

I believe giving away American resources to entrenched corporate interests, which are global by definition, hamstrings American entrepreneurship.
—Arthur j. St. Clair, Santa Monica, CA

We are suppose to have freedom of speech, and that is why the internet should always be neutral and free from restrictions from any government or company.
—Bernadette Belcastro, Floral Park, NY

Daily we see the invasion of corporate money and control over the government agencies and elected officials that are supposed to rule for the people. The internet needs to be reclassified as a utility or everyday people will be priced out of this service. The current consolidation among IT corps is already creating less choice for the people.
—Marcy Donaldson, Denver, CO

Net Neutrality is important to me because a free Internet is true democracy.
—Lucas H. Stewart, Seattle, WA

I've seen communities develop around the exchange of information. It took a while, but these communities grew; and continue to grow. These communities have also done some amazing things. I'm talking about the Fighting Game and the Speed Running communities. The Fighting Game community, while still extremely rough around the edges, has grown into something amazing; and has allowed for people to travel around the world just on the interest of gaming. Communities from around the world unite on this one interest. They've even pulled something amazing in the tournament/exhibition known as Fight for Relief, where the FGC raised around $30,000 to help with relief efforts in Japan when the Tsunami hit. The Speed Running community is also amazing; and not only do they do exhibitions, but they make it a yearly tradition - week long marathons of people exhibiting gameplay for video games and raising money for non profit organizations such as the Prevent Cancer Foundation, which is an organization focused on the prevention of cancer through awareness and education. These two communities would not have been formed if under the proposed regulations that the FCC is trying to push. They would have been buried and lost; and efforts such as those described above, would not have happened. We cannot allow these types of communities to die before they're even given a chance to form. What's worse is that the internet is not a finite resource. It's not something like fossil fuels where fossil fuel usage would harm the environment; and it would only take additional hardware to upgrade bandwidth problems. So I see no reason as to why these types of regulations are necessary. On top of that, so many activities revolve around the internet now. Schools constantly rely on the internet to assign homework and communicate. Businesses, both big and small, require internet usage. Homes require internet usage to do even the smallest things like keep in touch with family and friends; and pay the bills. As I see it now, the FCC regulations do nothing but impede all of these actions. These regulations are therefore, work against all but the ISP companies that profit from these types of regulations; and thus work against the interests of the majority of the American people. Therefore, the FCC, as a government agency that represents the interests of the American people, should not be putting in regulations that work against the American people.
—John Paul Siruno, Bronx, NY

Please listen to your fellow americans on this.
—Samuel Bogdanove, Talent, OR

Anything short of true, non-discriminatory, net neutrality hamstrings the US economically, muzzles its citizenry and press, and sets us further behind the rest of the world in developing a strong infrastructure, for the internet WE invented. It's embarrassing, appalling, and one of the largest economic and social threats to the US since the War on Terror began. If these things aren't clear to you yet, step down, get out of the way, and let someone who understands the landscape do your job!
—Nathaniel James Jordan, Burlington, VT

As a person on disability i cannot AFFORD to have a higher bill for internet. YOU pass this bill and the lower income people WILL pay a HUGE price INCREASE! The internet was started as a education and NOW a lot of people depend on it as a NEUTRAL entity for free news,medical advice and in my case Diabetic help (type 1 35 years) SO i depend on the FREE to ALL internet! Please DO NOT remove NET Neutrality! Clipper Wallace
—Clipper Wallace, Neodesha, KS

Mr. Wheeler keep saying that he is for an open internet but his actions are completely contradictory. I see a blatant liar. Mr. Wheeler should step down and allow someone to take his place that is not so clearly trying to give the internet to the corporations.
—Ms. Brandie Lynn, Ashland, OR

The internet is, probably, the one place where I feel most comfortable expressing myself. I've never been in a place where I could possibly reach so many people, not just from my city or country, but from different parts of the world.
—Irene, Los Angeles, CA

Net Neutrality is extremely important, and not just to me. Don't screw over an entire generation because you want rules for a multi-media resource that is linked between many of the major countries in the world. I have friends in other countries who I probably wouldn't be able to talk to anymore, because I would be unable to afford extra fees. Internet and phone bills are difficult enough to pay now, don't make them more difficult. Also, don't sacrifice the entertainment and interaction of the rising generation because you think companies should have a say about who has access to what. It's the Internet. It's supposed to be accessibe to everyone, to be used as a resource in life and business, not accessed by the elite who can afford it.
—Katie, Downingtown, PA

I live in a rural area where internet service is poor and slow at best. Without net neutrality it will cost outrageously more to get still insufficient speed. Please classifly internet providers as common carriers. The spirit of the US Post Office had it right and still has it right: provide service equally and fairly to all.
—Jennifer Slack, Calumet, MI

The internet is where I do my research. I need full access and many sources for such research. My husband is a photographer and designer. The internet is where he promotes himself and works with clients. He also uses it to connect with other artists. These things would come to an abrupt end if we lose net neutrality. I wouldn't be able to finish my work. My husband would be out of work. There would be no future for our daughter. We can't pay for high access, and we shouldn't have to. Stop dragging your feet and listen to the public.
—Kayla McKinley, Buffalo, NY

The Internet is about equality- a soap box where anyone can speak and be heard. Don't let the big guys choke out everyone else.
—Mark Saleeb, Bellingham, WA

I produce HD videos that are distributed over the web. Without full and complete net neutrality, I might be forced into an internet slow lane in the future, unless I pay a toll to the largest ISP's.
—Michael Murrey, Palm Springs, CA

An open a free internet is the reason we have companies like Netflix, Google, and Reddit. They are each innovators in their own way, this proposal would squash potential innovations that could revolutionize the way we communicate.
—Reiley Weekes, La Jolla, CA

The internet is the modern form of communication. Just like telegrams and telephones were in the past. Classify the internet as a communications utility under a Title II.
—Anthony Gradert, Lawrence, KS

We want to keep free press and free for internet.
—Gisele Germain, Phoenix, AZ

The internet is so globally relied on, and in all sorts of areanas....from education, health, public safety, commerce, entertainment and social networks....that it needs to be protected from all types of manipulation and monopolisation and remain with neutral, open and transparent equality as to any aspect of "competition".
—Gai Anderson, ,

Dear FCC Chairman. I feel very strongly about the need to classify ISPs as common carriers. The ISPs are already merging and consolidating in order to plan even greater power over the network. All these companies are very large corporations with deep pockets. They would like us believe that they are merging in order to be able to compete but this is a half truth. They all have different ways to compete and ensure survival. Charging based on content is truly a recipe for disaster. Carriers should only charge for access and bandwidth. Like a phone carrier charging for a line and for minutes used. Could you imagine paying a different fee for a call to a family member vs a call to a merchant? This is a dangerous slippery slope we are allowing to happen if no definitive action is taken now: ie classifying ISPs are common carriers!
—Laurent Comes, Butler, NJ

Net Neutrality means an open and free Internet. As a free country, everyone in U.S.A. should have a right to a completely open Internet.
—Andrew Yoon, Lynnwood, WA

True net neutrality is the ONLY SOLUTION WE WILL ACCEPT!!!
—Steve Beverly, El Paso, TX

NET NEUTRALITY is DEMOCRATIC!!
—Ms. Linda Rubiano, pennsauken, NJ

Reclassify ISPs as common carriers if you are going to protect net neutrality and have a fair internet for all.
—Carl rl Hosterman, Wausaukee, WI

Creation of a two-tiered internet for those with the clout to force such legislation, and those of us who do not, is a travesty. The internet should be open and non-discriminatory.
—Bill Martin, Tigard, OR

The only way the Internet will survive is being honest and free.
—Roberto J. Gallegos.D., San José,

The internet is the de facto venue for free speech for the vast majority of our country's citizens. To protect the first amendment as it was first envisioned, it you must reinterpret the rules and classify ISPs as common carriers. Please, do what is best for the country and her people.
—Alex Zywiak, Sudbury, MA

Gentlemen, The Internet is now as useful, as convenient, as vital and as necessary as the U.S. Postal Service or telephone service. I depend on the Internet every single day; in fact I depend on email even more than I depend on the Post Office or telephone service. I believe that, after years of usage by all people having equal access to this service, the Internet is a common carrier as is the Post Office and telephone service, as well as a public utility as is gas, water and electricity. After over a decade of Net Neutrality, with common access for all to internet services, email, data acquisition, research, scholarship, and numerous other services, to now deny equal internet services to all except for those wealthy enough to afford a "fast lane" service would be arbitrary, capricious, cruel and unjust. I urge you all to maintain the concept of Net Neutrality. I believe that to truly protect Net Neutrality, the FCC needs to reclassify broadband providers as common carriers under Title II of the Communications Act. Robert M. Camacho Cambridge, MA 02138
—Robert Camacho, Cambridge, MA

The free open internet is the most important device to our generation and culture.
—Kosta, Ogden, UT

First off lets clarify. ISPs are not information providers. They provide a service just like phone companies do (in fact if you know anything about the technology it's amazing how similar it is) It should be treated as such. Can you imagine calling you local pizza joint and being put on hold for 5 minutes every time but be able to get through instantly to Pizza Hut because they paid a premium to the phone company? Can you imagine how that might destroy the local business? The idea put forth with these FCC rules are just like that. Sure you'll eventually be able to bring up your smaller business websites but why wait when you can bring up the big boys instantly. It stifles growing business and innovation. Not to mention the potential damage it can cause to freedom of speech. Protect Net Neutrality so our children and our children's children have the opportunities Google and Netflix and all the rest had to start up. Protect it so we can still have a voice on the net and aren't censored by big business.
—Frank Boyan, Sebring, FL

Net neutrality is another word for essential infrastructure that enables a high quality of life for all citizens of the United States. The internet is a great enabler for education, entertainment, employment, social justice, voter education, innovation, new business development and on and on. Its potential was developed by a shared investment with great amounts of money flowing from our taxes and the profits from other public utilities. Keep the lines open and improve the speed and security - to match what many other advanced countries have deployed.
—Gregory J Rosasco, HOLIDAY, FL

You infringe on our rights as consumers to have reasonable access to the Internet. Policies giving corporations the ability to restrict access to the Internet violate the very reason it was developed, to share and have free access to information. Any attempt to restrict or reduce access, allowing corporations to benefit by acting as gatekeepers charging fees for differential access, discriminates against the rights of US citizens to have equity in access. Stop your interference with access to information and stop preferential treatment for corporations making profit off of Internet access. Remember the reason behind the development of the Internet, the ability to freely access information and exchange ideas. Any action taken to provide restrictions would be analogous to Internet restrictions placed by China and Iran.
—James Wallis, New Port Richey, FL

I am a teacher, and I want to preserve easy, free access not only for myself, but for students of all socioeconomic backgrounds. Money should not be the determining factor in access to the wealth of the Information Age.
—Dianne Schure, Port Washington, NY

this policy of is another attempt by corporations to stifle opposition to corporate policy, as in daily kos' case
—Chris Jones, Stillwater, OK

I prefer to make my own judgment as to what I want to see on the internet. Thank you Rebecca
—Rebecca Haynes, North Vancouver,

If it isn't broken, why fix it? The internet should stay the same with equal treatment for all whether rich or poor.
—Michael Crabtree, High Point, NC

I NEED TO COMMUNICATE WITH MY FAMILY AND FRIENDS FROM ANY LOCATION POSSIBLE. I LIVE IN A RURAL AREA WHERE IMPROVEMENT IN INTERNET SERVICES AND REACH IS CRITICAL FOR OUR ECONOMY AND SOCIETY. SELLING OUT TO CORPORATIONS THAT "punish" us for living in a rural area IS NOT AT ALL IN THE INTEREST OF LAW-ABIDING, TAX-PAYING CONSUMERS. NOTHING WOULD ANGER ME MORE THAN NOT BEING ABLE TO COMMUNICATE WITH MY FAMILY AND LOVED ONES BECAUSE THE INTERNET SERVICE PROVIDERS ARE DECIDING MY BEHAVIOR ONLINE WITHOUT MY DESIRE OR CONSENT. I WANT TO DO WHAT I WANT TO DO ONLINE. I PAY ENOUGH A MONTH TO USE IT, ANYWAY. DO NOT ALLOW FOR CORPORATION TO CENSOR MY USAGE OR CONTROL MY LIFE. THANK YOU.
—Lorna Immel, Otley, IA

Net Neutrality is vital to ensure a free press. It SHAMEFUL that the FCC is planning to let corporations control our access to the internet.
—Myron Buker, city, IL

We cannot continue to give away our power as citizens of a democracy to the richest corporations. Please protect net neutrality. Thank you.
—Barbara Thorne, Idaho Falls, ID

The internet was created as a research centre, meant to be used internationally and free of charge. Adding costs to websites not only takes away the right to learn, it says that you do not respect education or the scientist who helped create something out of their belief of advancement - scientific and education. Additionally, I work a minimun wage job to support myself and help support my mother. I do not have the extra money to pay for all the extra sites on top of all of the other bills I have to pay for. If this is passed I will have no internet. I won't be able to go to school like I plan to. The people with better jobs than me keep telling me to go to school and get a better job; but how will I be able to do that without access to the internet, where most things are now-a-days?
—Brandi, ,

Some of our biggest businesses today were once small and needed to compete in a fair and open market. Equality matters and changes everyones future
—Jesse lyons, Edmonton,

Net Neutrality preserves the Internet's status as a democratic forum for communication, where everyone has an equal voice on an equal playing field.
—Joel L Steinberg, Washington, DC

The reason why the internet was/is revolutionary is because everyone is equal. It is free to access and post to the world... without the limitations of discrimination embedded in our society. These proposed rules would make the rich have more access than those who need it most. Keep net neutrality and stop economic discrimination.
—Jason Melo Hall, Gilroy, CA

A net neutral internet is the single most important concept to preserve freedom of speech. The average person relies entirely on the internet to receive information from and pass information to each other. No company should be allowed to decide which content is priority.
—James Gass, Dunedin, FL

I can not support a system that stifles creativity and a moral capitalist structure for the customer, so I categorically do not support Chairman Wheeler and the FCC s rules for the internet. As a user and an entrepreneur on the digital medium I say this keep the internet free and open to all, there no appropriate alternative.
—Mason Gregory, Springfield, MA

It’s time for the new FCC leadership to correct the agency’s past mistakes and to reassert the agency’s clear authority over our nation’s communications infrastructure. To preserve the open Internet, the FCC must reclassify broadband Internet access as a telecommunications service.
—Steven Brady, Halethorpe, MD

Because if it's not free, then corporations will get an unfair advantage.
—Ron Frank, Cambridge, MA

Save net neutrality!
—John Belton, Brooklyn, NY

I depend upon the internet for my business and to communicate with Congress. You have done a very poor job in regulating the cable companies and you have made the same mistake with the Internet. Applying extra charges does not support Democracy. Our tax dollars were used to help develop this resource and the FCC wants to create a 2 tiered system. This is not acceptable.
—Donna Williams, Columbus, OH

The rich get richer and the poor get dial-up speed? WTF dudes? A septuagenarian.
—Anthony Barron, Mesquite, NV

Many reasons - for the common good, for business, and for education, the internet needs to remain open and free to everyone on an equal basis. Just like America. Otherwise , you will stifle creativity, risk isolating entire groups of people who can simply be priced out of the system , or go under due to unfair competition.
—Lynne Shamshoian, Cupertino, CA

Throw out the proposed rules and reclassify ISPs as a common carrier. Enact strong Net Neutrality. Creating Fast lanes only makes any other lanes slow, Censorship, cost for consumers to raise, while ISPs triple dip for profit.
—Chris Schlingloff, Rock Island, IL

I am a one-man independent game studio and rely on net neutrality for my business. Internet Service Providers should be reclassified as Title II carriers because that's the best option we have right now.
—Roozbeh Ashtyani, Franklin Lakes, NJ

The net IS a utility...it needs to be available like electricity....the neutrality is key to the free exchange of ideas and services...where would yahoo or google be if they had to operate at half speed?...Please do NOT ALLOW A multi tier system.
—DAV jon cooper, Quarryville, PA

Net Neutrality protects the free flow of ideas and creativity for everyone who wants to participate, whether they are rich or poor, famous or anonymous. It means I can research without having to worry so much about bias in the availability of my sources. It means I can focus on content rather than things that would distract from the intended message. It means everyone gets an equal right to speech. It means I can access and contribute to the next generation of innovations, and even help shape the Internet itself. It means everyone can participate in the worldwide community effort that is our Internet.
—Kathryn Bukovi, Guthrie, OK

You are about to kill my chances of starting an online business.
—Mr. Charles Longoria, Port Orchard, WA

Equal access not favoring the fat cats.
—Daniel Carpenter, Loxahatchee, FL

The internet is our telecommunications business.
—Ronnie Watkins, Merrick, NY

the corporate take over of our democracy, our environment,and so many aspects of our public and personal lives is a terrible thing to have happened. the internet is a last bastion of real freedom. you want to go down in history as the guys who killed the free internet. do the right, just thing. reclassify ISPs as common carriers. thank you
—Miriam Israel, sea., WA

Please reclassify ISPs as common carriers. Virginia L. Latimer
—Virginia L Latimer, BEVELY HILLS, MI

ISPs need to be common carriers because easy access to information should be a right, not a privledge.
—Ben Urciuoli, Wethersfield, CT

Dear Chairman Wheeler, Real net neutrality matters. A two tiered internet is not acceptable to anybody but internet service providers that stand to profit from the newly proposed system. It will ruin American innovation as well as relegate the traditional internet to a back dirt road. All traffic must be treated equally. Please reclassify ISPs as common carries. It's the only way I and many others see to keep this "public" infrastructure open, fair, and a place of American innovation. Ron Thompson
—Ron Thompson, Wexford, PA

I have signed this petition, and numerous others, many times. Over and over again, I have to sign the same thing - keep the web open. I'm sick and tired of this. I'm a believer in a stronger, *smarter*, centralized government but that's not easy nowadays. Please, please - listen to us. This isn't neutrality. If this law goes through...well, it would be a sad, sorry, horrible state of being. So please, please stop it. Stop it.
—CA Drucker, Arlington, VA

As a web developer for a small business our customers depend on us being able to supply hosting solutions that are just as effective as those of major companies. Keep the playing field level for small business's everywhere by reclassifying ISPs as common carriers.
—Daniel Pearson, Corvallis, OR

A restricted internet is going to kill small business and stifle the voices of the common person. I will not vote for anyone who pushes this measure to its end.
—Matthew Turner, Frankfort, IN

As a small business owner, I depend on the ability to communicate quickly and accurately with clients and providers, and I would never be able to afford the extra fees. This matters to me!
—Stephanie D Jackel, Vista, CA

We have fees, taxes, and surcharges on virtually every line if communication in our country. The net is the last place where how much money you have doesn't dictate how much voice you have. Please don't take that away from us.
—Allison Stark, Camp Hill, PA

The whole value of the internet is equal access for EVERYONE.
—Bryan Foster, Saint Regis, MT

I refuse to be treated as a "less than" citizen by faceless corporations! As a self-employed artist, I rely on a freely-accessible internet in my work. Please keep the internet available to ALL who need it.
—Tanya Stewart, Berea, KY

I like most Americans have one and only one choice for an high speed internet provider. If my provider puts an application in the "slow lane" I have no other options.
—Cliff Carson, Woodstock, NY

the web is one of the last places you can get information by letting the big companies decide what a person can look up and what they don't want you to see will make the net as bad as our useless "news" programs
—Don Wendlandt, Crystal Lake, IL

The internet was developed by the government and no private business should have the right to create a two-tiered system for access and speed. It is outrageous that the FCC is even considering such a plan. I am a strong supporter of Net Neutrality and so should the FCC be. After all you represent the broad public not a few well-heeled special interests. Do the right thing and stand up for high speed internet for everyone, not just for the favored few.
—James R. Cook, Laredo, TX

Information and the means by which we get it should be equal, egalitarian, and easily accessible and affordable for all. Companies make enough money.
—Chris Rogers, Los Angeles, CA

We need freedom for all
—Deborah Dissette, Salt Lake City, UT

Internet is already expensive. I have already seen my internet bill go up. I am being charged for over g
—Steve Carroll, Glenpool, OK

ISPs need to be classified as common carriers to prevent future abuses in this market.
—Kevin Connolly, Blacksburg, VA

Please check the history of the distribution of electrical service, the distribution of telephone service, and the original intent of the founders of the Internet with regard to Net Neutrality. Also, what happened to the decision to allow charges for Caller ID, Call Waiting, and so on, which cost little for the phone companies to implement and was supposed to pay for the roll-out of high-speed Internet service all across the USA? What happened to THAT money? I guess it's now safely in the pockets of the Telecom CEOs and in storage in the Cayman Islands. Don't kill the open Internet!
—Robert Boeckmann, Bartelso, IL

Because it DOES
—Terry Silver, ,

Virtually all the most exciting innovations in the world today are made possible by the open internet. Providing two-tier services would bake into the internet the very advantages that megacorporations use to stifle innovation and crush competition in the real world. The internet has been the great equalizer and the push to a two-tier system is little more than an appeal to selfishness by anticompetitive corporations to internet providers. The introduction of such a system would, in effect, reduce the global internet to the level of China, North Korea and Iran, where only a select few are provided the privilege of access to the power of information and innovation. Just as the world is pushing the boundaries of innovation, this cynical attempt to milk people for more money to line the pockets of the few will deal a crippling blow to all efforts to tap this power for the greater good. Nationalization of Internet service providers is preferable to a two tiered system.
—Loo Choo Khong, ,

Please do not stifle my speech while giving a megaphone to others. This feels like a violation of my first amendment rights.
—Jana Rice, st louis, MO

Why should those with the most $ rule the net? Stop this!
—Barbara Sue Scholl, Lancaster, OH

The Internet was never intended to "belong" to anyone. It should never "belong" to anyone. These rules will give the big companies like Comcast and AT&T effective ownership because they get to say whose programming gets through unhindered whose doesn't. That's not a level playing field. That's not fair. That's not ethical. That's not what we, the people, want.
—Camille, Olympia, WA

It's not fair to have a two-tiered Internet with fast lanes for those who can afford extra fees and a slow road for the rest of us. As I believe the rest of us are in the majority.
—Carol McMahon, Placerville, CA

A free and open Internetnis as important to our society as free public libraries. The two of them are the primary sources of information and entertainment available to the American people.
—Carol Gronstal, Carroll, IA

It's important because it can allow innovation. It's important because, everyone should have the same access to the same info. Not the way you are proposing. It's very wrong headed to divide the internet between the have and have nots. Matter of fact, it's sickening. It goes against everything we are supposed to be. What's wrong with you all? Shame on you, Mr. Wheeler. As a result of your plan, you now clearly have no business being chairman of the FCC. The internet is supposed to be for everyone, not just those that can afford the high prices. This is some garbage that China, Iran, or Russia, would pull. Makes me sick. Stand up for the little guy, not big business.
—Andrew R., Cumberland, MD

Please protect the open Internet!
—Lisa Ray, San Antonio,, TX

A two-tiered Internet denies equality of free speech and hampers democracy. Protecting Net Neutrality = protecting freedom of speech!
—Sandra Gagnon, Manchester, NH

I am already being railroaded by Time Warner Cable because the have monopoly on fiber optic cable in my area. They are the only viable internet carrier around. Additionally, they limit their speeds and charge outrageous prices. Eliminating net neutrality would be just another step towards large corporations taking ownership of the internet. All companies should have access to high speed internet, not just those that can afford it.
—Anthony Zimmer, Lincoln, NE

They know why Net Neutrakity is important to us all..They don't need to be told..Tom Wheeler is selling out to the Coprotations, and screwing all the rest of us...
—Michael Carney, Runnemede, NJ

I am opposed to FCC Chairman Tom Wheeler's proposed that would bring an end to Net Neutrality. Internet service providers like AT&T, Comcast, Verizon and COX should not be allowed to create a two-tiered Internet with "fast lanes" for wealthier people who can afford extra fees and slower connections for the rest of us who can't afford ever increasing Internet fees. The worse part of Chairman Wheeler's plan, if approved, is that no one will be able to do anything about this two-tiered Internet once it has been enacted. The public's frustration with companies like AT&T, Comcast, Verizon and COX who presently control television and a growing share of telephone services, is that these companies do not provide the sort of services that customers want and can afford. They will certainly do the same with the Internet without sound Net Neutrality protections in place. Giving these companies the ability to change the fundamental manner in which the Internet has always operated is believed by many, myself included, to mark the end of the Internet as we know it. I do not support the Chairman's new rules and advocate that they be thrown out. I believe that ISP's must be reclassified as common carriers in order to protect real Net Neutrality.
—Most Rev. Russell F. Coates Jr., Rocky Hill, CT

Everyone uses the internet, every day. Keep it open.
—S Arnie, Nashua, NH

So should we do this with the automobile highways as well. Only the rich can afford to use the interstate? Like Bitcoin...people will find another way..perhaps the silk road will become utilized more.
—Eunice, Fremont, CA

Without a level playing field on the Internet, all of the websites and blogs I frequent will be SLOWLY accessible at best, severely curtailing my intellectual life.
—Robert M. Goetz, Wilkinsburg, PA

The populace should not be priced out of the internet, and the access to information provided by it.
—Howard D. Pollard, Philadelphia, PA

Private companies have shown time and time again that they are not trustworthy when it comes to maintaining ethical practices over making money.They will inevitably take a greater cost to the consumer over time and the consumers will once again have services held randsom by the wealthy companies who are policing themselves at being a responsible body.Please stand for the consumer -it is the right thing to maintain net neutrality.
—Peggy Mcknight, Coker, AL

The slippery slope is obvious. The premise for this whole idea is ludicrous, unilateral in favour of the wealthy, and would further fuel the disparity and resentment between the various classes. In short, it's a dumb, un-evolved idea. It should die.
—Chris, Los Angeles, CA

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Jordon P, Littleton, CO

I will never have a lot of money. I help people, that's why. I'm a health care provider, a psychologist in rural USA, to be more precise. Like teachers, home health care workers, doctors, nurses, child care workers, and other people to help those in need of support and care, I get paid little. I am committed to my service to others (I know that may sound insane to you, but I am a psychologist so I insist I am of sound mind anyway), so I know I will never have much money and will have a lot of trouble finding a way to retire without significant work to earn income. And I still have to put my kids through college! Nevertheless, for work and contacting those kids and their schools and to help myself relax occasionally, I need a decent internet service. Don't start the ball rolling toward a multi tiered system. Start it and you set the precedent for many moves to come in the same game! Reclassify all ISPs as common carriers.
—Stephen Benson, Blue Hill, ME

Open access to the Internet helps ensure and promote freedom by allowing all people access to multitudes of ideas and information. By allowing telecom companies to write the rules you pave the way for those very same companies to not only stifle freedom by giving them the power to control Internet access but it gives them the ability to stifle competition by controlling information about themselves and their competitors.
—Sam Taylor, Clearwater, FL

The open internet is vital for the free movement of information, which is invaluable in our modern era. Allowing ISPs to restrict this movement for profit is akin to censorship.
—Oriana Spizzo, Belleville, IL

We need everyone to have the same access to the internet, so that good ideas can flourish, not big money.
—Eric Johnson, Bothell, WA

There's no reason to limit the internet - it accomplishes nothing and restricts our rights.
—Cory, Germantown, MD

Internet is already too expensive and I am being charged for over gig limits. Internet needs to be available to everyone at reasonable cost with no restrictions. I am unwilling to continue with internet should these restrictions be put into effect
—Steve Carroll, Glenpool, OK

I feel your proposal is a horrible mistake which may benefit corporations which already benefit from outrageous rates while ruining Internet freedom for everyone else. Leave the Internet alone.
—M Becksvoort, portland, ME

Taxpayer-funded research created the internet. Citizens have paid for web service that treats all users equally. The internet truly is a globally essential public utility. Serve the citizens and not ever- ravenous corporate greed.
—Ted Kozlowski, Portland, OR

As a web developer my career hinges on internet neutrality. Anyone with a career tied to the internet who is not already extremely wealthy depends on internet neutrality.
—Tyson Runnels, North Ogden, UT

I attend an online college that requires me to use a variety of online search engines and tools in order to complete my classes. If online providers were able to impede the speed of my service unless I paid more, then I, as a college student, would struggle to keep up with my class workload and my academic goals may suffer.
—Nathan George, Racine, WI

I've talked to all my friends at the gym and local newspaper about this because we all use the internet. We all think it's really stupid that a large company can control the entire internet marketplace, and control what we want to see. Internet is like phone that we all use and should be considered a common carrier
—Jeff Carlson, Munster, IN

We need an open internet.
—Zach Goldenberg, Barrington, NH

The FCC was created to protect the public from misuse of the public airwaves. At that time those communication airwaves were free to all. All anyone needed was a receiver for whatever format they wanted to consume. This proposal for a two-tiered Internet, which I'm sure is being sold as designed for the public good in that it will free up faster service for those who need it most, creates a loophole in the very purpose of the FCC and its purpose to protect the public's right to the best and safest communication platforms available.
—Andrew Wells, Marshall, MO

Net Neutrality represents power for the people.
—Mark Barrera, San Antonio, TX

Stop fucking gearing everything towards companies and capatalism. If you stem the internet you're literally killing global collaboration. Stop trying to mess with it, it's annoying as fuck.
—David William Charles Bryant, ,

As a religion communicator, I fear that the churches I serve through websites and social media would be marginalized under the proposed FCC Internet rules. We have a real question as to whether the proposed rules would violate the First Amendment, which not only forbids laws that would restrict religious expression, but also provides for freedom of speech and of the press, which we believe should encompass all communications media.
—Cynthia B. Astle, Dallas, TX

Please preserve our commons and let all people have equal access to the peoples internet. We paid for its development we should have unfettered access.
—Krissly Walter, Tumwater, WA

How can businesses be guaranteed that people can reach their website if there isn't equal access to all sites?
—Peggy Cope, Round Rock, TX

Why should net neutrality be a threat. We need some accountability starting with the President. Obama pissing me off a lot of what he said when he was running for President will not be forgotten. Just let it be.
—Michael James Flanagan, Littleton, CO

Freedom of information is vital to a functioning democracy. Our current news and information sources, other than the internet, are tailored to meet the agenda of those who supply that information. Placing control of information online into the hands of those same private companies relegates it to the same fate, nullifying any real freedom of information. Please reclassify the internet as a public "common carrier" and keep information free.
—Graham D Parent, Keene, NH

To most American families, constant, high-speed internet access is now every bit as important as the a telephone connection -- if not more so. It's time internet access was reclassified to reflect that.
—Tim Keenan, Steamboat Springs, CO

Content providers should compete on the quality of their content, not on who has deep enough pockets to afford fast lane connection speeds to their customers. Reclassify ISPs as common carriers!
—Benjamin McCabe, Lanham, MD

Wheeler's use of the phrase "open net" is open deception. A two-tiered accessible "premium, manipulatory advantaged rate" and a lesser, "peasant rate" is not "neutral" by definition. This hand-picked obama fundraiser and "former" cable industry lobbyist is STILL lobbying for cable. He's the least trustworthy FCC chair in a string of untrustworthy industry shills.
—Gary Robert, San Francisco, CA

Don't let yourselves become as corrupted by corporate and foreign interests as the rest of the government. Please keep the internet neutral, and free for all without tiered corporate domination. Please start over, and reclassify ISP's as common carriers!
—Richard Harris, Houston, TX

As it stands now, the Internet is probably the closest thing we'll ever get to a true meritocracy: Start-up costs are low, so anyone with a cool idea and three bucks a month can set up a website to broadcast their thoughts. From there, the thoughts people - all people - like the most get the most traffic, the most money, etc. This is utterly destroyed when a third party - an ISP, in this case - is allowed to discriminate between sources of data, and to adversely effect the experience of other users (through selectively slow load times). Suddenly, it's not just about how good you are. It's about how much AT&T or Comcast or Verizon /likes/ you, either because your data is easy to process, or - and I see nothing to keep this from happening - because you happen to have cut a deal with that ISP. Why should I care how much AT&T likes my website? Americans have never appreciated market fixing in other fields. Why should we tolerate it in the information industry?
—Avery Szafranski, Fredericksburg, VA

The current rules are inadequate to protect net neutrality. Wheeler and the FCC should make the rules more strict by specifying, as a legal matter, that his rules rely on 706 authority primarily, but are also backed up by the full force of the Commission’s authority, should 706 authority fail. This would be a reasonable change to the current rules that would most likely hold up in court.
—Jeremy Pastore, BROOKLYN, NY

The plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us.
—Steve Dickey, San Bernardino, CA

do not end net neutrality
—Nancy Warthan, Arizona City, AZ

Just keep catering to the rich, I for one can't afford to pay more for a so called teir Packages. 40 bucks a month is what I pay and thats enough I think! and for small businesses that rely on the internet to sell there products are screwed if this happens. So Mr. wheeler, get your hands out of the corporation pockets, cuz that is exactly what's happening. FCC please protect the open Internet please!!
—Paul Redmond, Bellows Falls, VT

The ability to pay more should not determine access to the internet. Income inequality is already causing enough damage to those of us who are not in the 1% - don't make it worse by auctioning off internet access to the high rollers!
—Arline Taylor, River Falls, WI

As an artist who makes a large percentage of my living income online, I depend upon the connections and relationships I maintain with fellow artists, patrons, and clients online! Without that, I cannot provide for myself, for others, and cannot tell my stories. Please listen to our stories, please think about the enormity of the situation. Thank you.
—Kim Miranda, Pearland, TX

The taxpayers paid for the development of the internet, and it must remain open to us all equally.
—chris Powers, Portland, OR

I pay for "high-speed" & get 600kbs vs. 6Mbbs claimed. Fast lane would end my links.
—Maureen Roche, Petrolia, CA

I am fond of saying, "The Internet means I never have to be curious for long." The internet is vital to many people who are not wealthy. Students use it as a part of their schoolwork. For many of us it is our primary method of distance communication. It would cause hardship for the average user of the Internet to allow it to be overrun by big business. In the long run allowing tiered service would turn the internet into another narcissistic garbage pile like the film industry and the cable TV business. The Internet is best run as a public utility so it can continue to serve everyone. Converting the Internet to a playthig for the rich and a venue for big business will ultimately kill the internet. I certainly will not shop in the limited market Mr. Wheeler's plan would create.
—Les Rees, Tempe, AZ

Under the proposed rules many Internet startups would be priced out of the (high-speed) market.
—David Citron, Martinsburg, PA

The Internet is the marketplace of the world. A marketplace is typically in a public space. A public space belongs to everyone. The Internet belongs to everyone. It was our governments greatest innovation. Which we paid for. Now a few companies think they own it and while I already pay for an Internet provider that's not enough for them; they also want to charge the internet sites I enjoy visiting which means I will be paying those sites more. What it comes down to is: I pay twice for the same thing. I would like to see more bandwidth and free internet access across american cities; this will set a course towards more innovation and bring on the "next big thing" and I hope lots of new big things. The Internet is too important to leave in the hands of the "internet providers' for what they think is best for me. I want a public utility that answers to me the public. When I turn on a tap I get water instantaneously when I turn on a light bingo I have light, when I search for a website I want it now! I don't want to have to pay and pay and pay to get it promptly. I also don't want tiny startups to have enormous cost barriers to public access. Thank you for your time and consideration. Your friend, Linda
—Linda Vilhena, Eugene, OR

As a small business owner of a web based product, this is horrifying. We employ 10 people and do not have the budget to pay for our data to be given priority access. These rules would hurt our customers as well as our business.
—Joe Koenig, Highland, IL

I own websites and create websites for many small business and web based clients. If we loose Net Neutrality I would loose my business and many of my customers would loose their business. Small business is what drives our economy and without the ability to compete, small business will die. We need small business, we need Net Neutrality.
—Claude Prettyman, santa ana, CA

Denying Americans access to the vast knowledge and information that the internet holds will keep our society from advancing, and the denial of this acces is easier and more possible than we may think through these policies. Anyone can understand that these FCC policies will only serve to ensure that corporate interests regulate the information available online. That is not where we should be headed, not where we need to be headed, And the American public will hopefully take action and act on our best interests as citizens.
—ben, Boulder, CO

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Raphael Clearfield, Durham, NC

I remain quite concerned regarding the efforts to secure ruthless American corporate takeover of the Internet. Sirs, anyone with a functioning brain can figure out in 4 seconds what is going on here. I would hate for an Obama appointee to be overseeing the parceling out of even greater cutthroat corporate greed at citizens' expense. Do the right thing. History will record your treachery, if you fail to protect the citizens.
—Michael Scott, Nashville, TN

Why did you born losers? You can't even take one decision. Look the whole world is against you. This proves that your decision is wrong. As you are a civil servant of a democratic country i order you to stop using your small brain and take back your stupid decision. Thank you. *Note: To get some respect, do some good work. I apologies if any thing written is else I mean it.
—Gunjan Yadav, ,

I have no confidence that you will act in the interest of actual human beings who benefit from the single tiered internet. Prove me wrong.
—David M. Beyer, Allentown, PA

Throw out Tom Wheeler's plan, and reclassify ISP's as common carriers. I like having my ISP not interfere with what I do on the internet. And actually getting the service that I pay them for.
—Aaron Killpack, Draper, UT

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers
—Evan Howell, Honolulu, HI

Your proposed rules threaten internet neutrality! Reclassify ISPs as common carriers immediately! Protect internet neutrality!
—tom Frouge, Placitas, NM

The open internet is an important tool for all. It should remain NET NEUTRAL. Please reclassify ISPs as common carriers.
—Judi Burns, Henderson, NV

corporations have too much control over media already
—Andres, ,

Neutrality is a misnomer, this is about fairness.
—Gary Elshaw, Wellington,

I object to the two-tiered plan because I believe it would reduce competition and lead to an Internet monopoly.
—Noel Elliott, Silver Spring, MD

Our society is already stratified enough economically. A neutral net is one of the few ways left to give all citizens equal opportunity when using the net. AT& T and Comcast and Verizon should not be responsible for making even more money when there is so much to lose when you consider the concept of equal access. Please let the Net remain neutral.
—Trudi Westwood, Evanston, IL

Giving corrupt corporations control of the Internet over people would be incredibly ignorant and prove that the FCC was in bed with corporations. Keeping the Internet free and neutral means that everyone can co-exist and interact with one another and speak their mind online. Many use it to communicate with loved ones all around the world. Do not allow this to happen. Reclassify the Internet and make ISPs comply with regulations to protect everyone.
—Bill Lindner, Greenbrae, CA

Selling out to the wealthy Internet Service Providers is not good for America.
—Clark Nelson, Wethersfield, CT

Internet should be available to all equally and without restrictions. The internet is already ridiculously expensive. If these restrictions are put in place then it will be yet another thing that is only available to the wealthy/elite. Do not allow this to happen, it is unamerican, pro wealthy and com
—Kandice mallinger, Glenpool, OK

I am a science teacher and I rely on the Internet to stay informed and to deliver information and activities to my students. Please do not allow this tremendous resource to be more easily accessible only to the wealthy. The Internet has become the great leveler where people all over the world can compete and better their situations by having access to information and being able to utilize and share their creativity with the world without having much money. How else can those of little means, who strive for success, break the cycle of poverty if the playing field is stacked against them? America is supposed to be the place where anyone and everyone can attain their goals if they work hard. It looks like hard work will no longer be enough if only those with means have the greatest access to such an amazing resource.
—Dana Barbato, Staten Island, NY

The internet is for everybody, and is increasingly more important all the time. Allowing Corporations to control it for profit is an assault on Freedom of Speech.
—Rex Baumgardner, Kingman, AZ

The internet is, to me, far more important than land line telephones. It should be a utility! At the very least, protect our interests by maintaining net neutrality!
—Angela Sharer, Seattle, WA

It is the little people who make the world go round, including small businesses. If the only the ones that can pay to play passes.... the world will stall...
—J Jordan, RICHLAND, WA

Think about consumer needs, not corporate needs.
—Keith Hanson, Seal Beach, CA

Internet Service Providers are just like any other common carriers of basic utilities. Just like any other basic utility in this Country; like water, electricity, or gas, these industries do not have a two tiered pricing system. Mr. Wheeler; Just the other day you told the People of the United States of America, that you support Net Neutrality, and by the oath that you have sworn to be in your office, you had better not betray the People by not reclassifying ISPs as the common carriers that they most assuredly are !
—Shawn Sargent, West Yarmouth, MA

THIS CANNOT HAPPEN. I am dead serious when I say I will move out of this country. The internet is the backbone of American life, and as a student, I use Google Drive, and we watch all movies on Amazon Prime and Netflix, etc. If this is approved, I will be against all your causes my whole life.
—Hoon Kim, Cherry Hill, NJ

Net neutrality is important because some people can't afford to pay extra fees and that could be unfair and the rest of everybody will have terrible internet which is stupid because why do we need to change the internet. It's already perfect as it is.
—Unknown, San Diego, CA

Net Neutrality is vital to innovation and free speech. A free and open Internet is essential to the survival and growth of democracy in the 21st century. ISPs must be reclassified as common carriers -- it's only common sense!
—Carl Capotorto, New York, NY

Pretty simple. If you can explain to me how companies paying for faster internet lanes is "neutral" and have it actually make sense then go ahead with the bill. For some reason I think you will have a hard time justifying that... So do us all a favor and just stop.
—Brent Rood, Cockeysville, MD

The internet has revolutionized the way we communicate throughout the world. It's been used to bring down tyranny, and bring light to issues that were otherwise invisible. Allowing a few individuals, [as corporations are considered individuals] to control the flow of information is a new form of slavery. The internet is the beginning of a new era of connectivity that can be used to bring all of humankind to a better, higher place of understanding. The FCC proposal will castrate the internet as a tool. I demand, as a taxpayer, voter, and citizen who's served this country in the Armed Forces, that the open internet be preserved as a new resource. Classify ISPs as common carriers, that the Internet remains the open forum of communication which made it useful in the first place. To do less, would be to impose a new kind of slavery upon the populace.
—Eric Anderson, Spokane, WA

This discrimination is absolutely horrible! You should throw this plan out immediately!
—Joseph Hilton, Provo, UT

It's clearly a unnecessary money grab, we have the right to equal grounds on all sites. The only person it benefits are the people from these companies.
—Daniel Sullivan, Dundas,

Thew backbone of the internet belongs to the PEOPLE - the service providers only bring it the last few miles. It should be classed like a utility with the ISPs as common carriers. Fair and just - and neutral.
—Marc Habern, Phoenix, AZ

It's important to me to be able to use "boutique" sites where most of the content I care about is located. If the carriers are allowed to accelerate their favorites and slow everything else, the internet's value to me will be greatly reduced. I believe it also will cripple innovation here and let other countries become the dominant developers and providers. Do we really want any of that? Isn't our country about innovation and change? Why should we let the big corporations lock out new challengers and innovators?
—Donald Weigt, Madison, WI

The internet truly has become our dominant source of information, entertainment, and business. It has also become one of our main coping mechanisms for dealing with the pressures of life. If we let such a precious tool become abused by those who have more than us, then we shall lose not only our money but also our window to new worlds and our right that established us as true independent thinking human beings. That right is none other than our freedom of speech.
—Athena Baker, Germantown, TN

Save the net!
—Pat Avendano, Arlington, TX

As Americans we do not want discrimination! Please protect us by making sure the open Internet is re classifying ISP'S as common carriers. I don't want the slow lane.
—jann Reynolds, Chattanooga, TN

Net Neutrality is important because who the hell NEEDS to have it controlled by faceless greedy corporations?
—Austin Saks, Grayson, GA

An open Internet is the most concrete expression of the freedom that the United States of America stands for. Be a leader and an advocate for freedom. Do the right thing for US citizens -- not for the corporations.
—Jesse Bernstein, Philadelphia, PA

Ending net neutrality will lead to censorship by powerful corporations, which are NOT people despite the Supreme Court's absurd claim otherwise. Ending net neutrality will also make the American people second-class citizens in relation to corporations.
—Dennis Welch, Cary, NC

I am already paying high fees just to have the internet. If I have to pay for each site, it would be prohibitive. I wouldn't be able to access news or important issues. Throw out Tom Wheeler's plans to make his friends more money. Keep NET NEUTRALITY!!!
—Elizabeth Jones, Roanoke, VA

I pay for unlimited access to the internet and for you to allow the provider to control the rate of that access to particular web sites will unfairly influence my web site choices. The provider is nothing more than a common carrier providing me access to the internet and should be classified as such.
—James McKnight, San Marcos, CA

In our society the internet has become as essential as electric power, water and sewer. It is possible to live without any of these, but it shouldn't happen here.
—Willard Seehorn, Cary, NC

The Internet is a utility!
—William Roos, Bloomington, MN

These proposed rules will render the Net nothing more than another cable TV type service or "Big Box" shopping cart. I myself will be dropping all net services if this is allowed to happen. I imagine many others will do the same. What will be the point if the net is nothing more than a shopping cart. Why would I or anyone actually pay for that. This will be a huge blow to those that wish to find out rapidly what is going on around the world and being able to have there voice heard. I seriously doubt this will go without a hitch. You think the Occupy Wall Street was a mess. This promises to be far worst. End result, these new rules will result in higher prices across the board (higher phone service - band width limits that will crush VOIP services, Internet data rate limits re-instated like the old days of MindSpring and AOL, higher retail prices for merchandise - basically there would be no competition for the "big box stores" - band width crawl would dry everybody out, More expense for entertainment content - smaller services like Netflix and the like will be sent to buffering hell leaving only the higher cost cable and communication media mega corps offerings - less choice polluted with annoying pop-up adds and so on. This is just the tip of the iceberg. CNN will load instantly while online alternatives such as Daily Kos or AP will just be a spinning soccer ball and timeouts. Dissenting View points would effectively be silenced. The only truely democratic choice is to declare the internet a utility that requires that everyone has access to it. I did not even mention the education that aids that local school systems strapped for cash have come to rely on for free or near free tutoring and instructional aids. As I previously mentioned, the loss of Net Neutrality goes way beyond a few corperations increasing there already obscene profits so they can stuff there fat faces with more lobster!!! The voices of girls being exploited by extremist and natives who are the victims of genocide a and ethnic cleansing. By allowing this travesty to stand, you could have literal blood on your hands. It is imperative that Net Neutrality be restored.
—james Thackston, Smyrna, GA

Mr. Wheeler, Let me get this straight, you're seriously considering segregating the free internet in the name of money? You're seriously considering putting the clamps down on free enterprise, freedom of speech and the ability for an average American to make a living from anywhere in the world without having to depend on the unstable economy? Not only will you take away many of the basic freedoms of the internet from the majority of the American public, you'll also invite large foreign companies to advertise in our country while inhibiting the ability of your own citizens to do the same. Where will these companies spend that money, Mr. Wheeler? In the U.S.? Maybe enough to pay your "toll" and for advertising costs, but they'll be taking the rest of it home - I guarantee it. What about the individuals that will lose their incomes from your action? Have you ever taken the time to look at the number of individuals and small businesses that rely on a free internet to earn a living? Do you even care? For your information, there are thousands of individuals now earning their living online, some of whom have disabilities. Many of us may who are disabled will have no choice but to apply for Government assistance in order to make ends meet simply because of the greed of individuals like yourself. I'm extremely upset that this is even being considered. If you're successful, you are going to hurt a lot of innocent people. I want to know how you people sleep at night? I have to stop writing now. I'm in disbelief that this is even being discussed. Mr. Wheeler, I urge you to reconsider your position. Try thinking about the lower and middle class instead of how to line your pockets further. Sincerely, "One of Many Disabled U.S. Veterans"
—Joe Stewart, Scottsdale, AZ

Net neutrality is important to everyone. This is the most important decision you have to make. The internet is too important for ANYONE to not have access to. Life is not live-able without access, so we need to make this the same as electricity. Everyone can get it and it will not bankrupt ANYONE!!!
—Joshua Wood, Rotterdam, NY

Make sure ISP's are treated as "common carriers" - do not allow information and access to become a tier service - subject to the providers decisions - not consumers.
—Brandon Belcher, Knoxville, TN

Because it ensure the free flow of the information. A free internet is the most important invention since the Gutenberg printing press
—Robert Wagner, Rosevile, MN

It's nonsense and a money scam! Stop the greed!!! Some people need the Internet to do their job get education and they can't afford more outrageous prices that are allllll ready outrageous !!!!
—Courtney Legleu, Milford, OH

companies should NOT have preference over everyday people! we all should share the internet.....how much money did they put in your bank account to bribe you to support big business you FCC jerks
—David Jernberg, Elgin, IL

Free and open means of mass communication is the backbone of democracy. To allow a handful of major corporations the ability to limit any citizen's access to information - the world of information - and to also limit the ability to desiminate this knowledge, is pure lunacy. It is also dangerous. Our ability to communicate as a society, as a people should never be controlled by anyone or anything than us, we the people.
—Robert Galbreath, Gardnerville, NV

We know, Mr. Wheeler, that you once were a lobbyist for the cable industry-is this why you are so bent and determined to destroy free enterprise and net neutrality? How far will you go to protect the interests of those who bought you? What are the real costs to the American people when you do the bidding for the giant cable industries? You are indeed a despicable human being. Unless you grow a conscience and wake up, we will demand that Obama remove you from your position.
—Emily Johnson, League City, TX

The Internet was not made into the phenomenal source of free information that it is today by people giving certain content preferential treatment. The Internet is arguably the greatest invention of the last 25 years - as such, it's imperative that net neutrality is preserved and that everyone continues to enjoy the free access they do today. Anything less is short-changing the people who did so much work to make the Internet what it is, and will result in a degraded, poor experience, not only for all the people who currently enjoy the wealth of information that the Internet has to offer, but also those who come along in the future.
—Gus Luxton, San Jose, CA

Tell the FCC to throw out its rules and instead reclassify ISPs as common carriers. This is the ONLY way to protect real Net Neutrality. Anything else serves only lobbyists and BigCable.
—Michael Berquam, Spokane Valley, WA

The 2 tiered system is unfair to everyone of us who is not a big carrier. You claim that you're wanting it for us to. Now is the time to prove it. Thanks.
—Carole Katz, cortlandt manor, NY

There should NEVER be a pecking order to speed on the Internet! It's counter productive to innovation, invention, and abusive to the general public. Internet service quickness has become part of life. Once there is no Neutrality, you create financial discrimination across the board!
—Antoinette Rubino, Staten Island, NY

I need a fair and fast internet for all my communications for whatever reason. Please protect the internet by reclassifying ISPs as common carriers.
—Martha Spann, Blowing Rock, NC

The word "Neutral" by definition means: "To not pick sides or favoring one over another. Not helping or supporting either side in a conflict.". Net Neutrality does neither and is only going to make things worse. For years we had to deal with cell phone issues where we were locked down by how many minutes we got. Then minutes and texts. Then text were free but you had to pay for minutes. Now we're at a point were we can pay one flat rate and get unlimited everything. And now Net Neutrality is going to allow corporations to do the same thing that we fought for years to get away from with cell phones, TO THE INTERNET? NO! With Net Neutrality, browsing the internet will be one price and more than likely limited by how many Gigs of data we can use a month. If you want to stream movies from Netflix or Youtube you have to pay an extra fee for streaming. Oh you're a gamer? Well extra fee for that. Skype video chatting? More money. And so on. People are already paying in upwards of $300 a month for Comcast TV, Internet and Phone, which is ridiculous, and I'm sure if you said they could they would do exactly as I said above...They would. AT&T would for sure. They were charging customers extra money for Facetime usage on Iphones when the feature was built into the phone and didn't even work over AT&T's network. People had to purchase Internet with WIFI capabilities form their cable company to use the feature and AT&T was charging them extra for it just because they could see when people were using it. That's flat out corporate greed and corruption at it's best and it needs to stop. Comcast is just as bad. Comcast was throttling internet speeds down for Netflix because they feel Netflix is stealing their TV subscribers. The Netflix customers thought it was Netflix's fault that their videos were constantly buffering and not getting HD quality. So they complain to Netflix, costing Netflix more money, because Comcast wants more money from Netflix. Ultimately Netflix has to pay Comcast so Netflix customers can use Netflix service over Comcast Internet and Netflix has to raise cost to their customers because of Comcast. So basically Comcast customers are paying money to Comcast for Internet. Those customers are also paying money to Netflix for Netflix service. Then Comcast doesn't let their paying customers get another service they're paying for form another service they're paying for.Total BS! I guess if you wanted to use Net Neutrality to STOP the abuse from corporate giants such as Comcast and AT&T who are screwing over other companies such as Netflix who need the internet. That would be fine. But allowing them to charge more money to Throttle up or down speeds FOR the corporations is a big no go.They are the ones who need to be limited.
—Matt Macy, BRANDON, FL

I'm very concerned about the free flow of information. I'd almost like to see the small businesses and personal web sites have BETTER access to the internet than the monied companies.
—Alex Logan, San Jose, CA

Internet rules cannot be written to disadvantage any class of users. All must have equal access and equal treatment.
—Richard L. Godfrey, Madison, WI

The Internet has become a necessity, and already the carriers are charging high fees. Eliminating Net Neutrality would make getting this service significantly higher. Maintain Net Neutrality.
—Cheryl Edwards, Fayette, MO

liberty
—Taylor Phelps, Aurora, CO

Phone companies were designate as "common carriers" because they provided service essential to commerce and safety. That is what the internet does today.
—Richard H Staples, Louisville, CO

The internet should be considered a UTILITY. How does someone like Tom Wheeler even get elected? RECLASSIFY ISPs as COMMON CARRIERS. THROW OUT YOUR BOGUS "PROPOSED" PLAN!
—Stephen Schoenith, Grosse Pointe, MI

Knowledge should be free! And not just for the upper class. Everyone deserves to be connected!
—Catrina Tidey, Port Orford, OR

you bastards have sold all the public airways and all the emf spectrum to the fat cat robber barons that have enslaved the american public for far to long. and now the internet ? what's next our first born ....when will you greedy pigs have enough ? sham on you and may your houses burn down . keep the peoples internet free for all the people!
—Joseph Capshaw, burbank, CA

The internet is part of the people's commons and mega corporations have no inherent right to scam and price gouge us. We need the internet to be open with equal access for all. A level playing field for everyone.
—Donald Cooney, Santa Fe, NM

The internet has become a vital resource to all people and to divide it up between the upper class and lower class is only going to further separate the two and unbalance our economy. All people should have the equal right to information.
—Sophie Flynn, Lewiston, ID

We demand that you protect the people's interests and reclassify ISPs as common carriers. Prevent massive multinational corporations from controlling what sites we do and don't have easy access to!
—Margaret Hornick, Kalamazoo, MI

WE PAY ENOUGH TAXES TODAY & W E NEED TO HAVE INTERNET TO BE LEFT THE WAY IT IS
—Mary Dolores Aitkins, Mc Clure, PA

The real way to trash the internet is to start regulating it in this manner. Keep the internet open, useful, & neutral.
—RW Etheridge, Cantonment, FL

The Internet is like the phone, in fact, it is the phone these days. It should not be monopolized!
—Gale Greeley Kempner, Gainesville, FL

Net Neutrality is crucial to democracy
—Robin Cohen, Boynton Beach, FL

Money shouldn't dictate our internet quality!
—Jaclyn Lenggenhager, Saint Louis, MO

Why are you against poor Americans and American Senior Citizens and Veterans? You should be ashamed of yourselves. I happen to fit in all the above categories. This is not justice for this nation this is a form of economic slavery. Many of us old folks have only the internet as a form of communication and expression to friends and family. But hey, we will be dead soon so what does it matter to you. And to think I once wore the Uniform of the U.S. Army.
—Mr Allen Watters Gildard, Apple Valley, CA

Nobody wants this.
—Everyone, ,

This is disgusting and a complete betrayal of the public you serve. The internet is public commons not a place for corporate profits to rule over the people's right to communicate.
—Steve Fryburg, Bellbrook, OH

I cant afford to pay for every little thing on the internet. I pay comcast for my internet. I dont need to pay to go to certain websites.
—Jannette Pastrana, Miami, FL

You cannot allow giant corparations to continually monopolize every aspect of business globally. You've seen the corruption is beyond obvious your whole board is filled of ex lobbyist to telecom stations and cable stations. If you pass this bill, the quicker anarchy will rise and you'll be on the end of the knife.
—Tye Daley, Grand Rapids, MI

Let's not pick winners & losers on the Internet! This is the only place where everyone has an equal voice!
—Mark Zall, lynn, MA

It is the only way!
—Steven Hibshman, Foster City, CA

You and your Corporate Plutocrats can go to hell. You're too damn stupid to know that your killing the fatted calf. Morons!
—Mr. Ll Ss, Atlanta, GA

Recently,it seems that courts have been ruling in favor of corporations over people. I urge you not to follow their mistaken lead.
—Jim Ahearn, Clearwater, FL

Net Neutrality is essential & equivalent to freedom of speech. Leaving it as it is makes an equal playing field for all; rich and not so rich same net experiences. Stop stomping a class or caste systems on the net.
—James Loh, ,

Corporate America should not be the gatekeeper on Free Speech. Ending Net Neutrality is simply another form of pay-as-you-go politics that will further marginalize the voices of the average citizen in the US for the sake of lining the pockets of the major corporate powers that have only their own greedy interests at heart. We need a voice, too.
—William Christina, Danvers, MA

and Please enforce the Anti-Trust Laws
—Martin Lemke, Elk River, MN

When the US President and the creator of the internet are both telling you not to do it, then maybe it's time to listen. Keep the internet neutral, reclassify ISPs as common carriers.
—Christina Queen, Seneca, MO

Net Neutrality is the cornerstone of the Internet. The proposed rules would replace it with an admission price turnstile. Do the right thing for the people and reclassify ISPs as common carriers under proper FCC control.
—Kenneth Christopher, Plymouth, MI

Read the definition of Common Carrier. It applies to ISPs a priori. This debate should have been over a long time ago.
—Hugh Cushing, New York, NY

We all know what will happen if Net Neutrality isn't maintained.
—Ms. Joyce Carlson, Ft. Collins, CO

This is unfair discrimination of those of us that live on a limited income and use the Internet to try and supplement our retirement income just to make ends meet. How many more times can you tax and add fees to the already overtaxed middle class. This will adversely effect my business and my quality of life. Please reconsider this plan.
—Sandra Vlier, Frisco, TX

The Internet is essential to American business, innovation, and democracy. Allowing monopolistic Internet providers free reign to censor, slow down, or block websites while requiring higher fees for faster service and more content is not only a gross infringement of the rights to access of information, it would effectively cripple our economy and technological progress. For the sake of American progress, please scrap paid prioritization and protect Net Neutrality!
—Zachary Anderson, Gowanda, NY

Net neutrality is the backbone of free speech and knowledge in our era. Without it we will create another gilded age of the haves and the have nots. It is imperative that we preserve net neutrality for the good of society globally.
—Martin I. Montoya, Milford, MA

Just another way TO SCREW THE PUBLIC
—Patricia Swenson, Gravelly, AR

The Internet will not remain the unique human endeavor that it is if ISPs are allowed to create fast lanes. Fast lanes and net neutrality cannot coexist.
—Sebastian Ferrari, Ann Arbor, MI

I depend on a variety of news sources to help me form my political opinions. These in turn, inform my voting patterns and my habits as a decent member of society. If certain news sites are given preference over others, interest groups will be able to blanket the voices of many news outlets while smaller ones are silenced. Please keep the internet open and classify all ISP's as common carriers!
—Mr. Maxwell Kessler, Los Angeles, CA

ISPs are common carriers--the end of net neutrality is the end of the useful internet.
—Steve Hoffman, Peoria, IL

My clients are small start up companies that can not afford the extra cost this will bring to them to have a present on the web. Also, it will create an unfair corprate advantage that will kill of the small business owners. The ISPs need to be reclassify as common carriers.
—Ralph W. Tobin, Fort Worth, TX

Please don't force me to have poor internet access because of my low income.
—Donald Goppert, Sylvan Beach, NY

Net Neutrality matters to me because of its many economic, social, and educational uses. The proposed plan is playing with fire, tinkering with the most important tool that the world has created. Why? Because of special interests that have taken advantage of either the incompetence or low ethics of the decision makers. These special interests already enjoy monopolistic benefits due to government's mismanagement. The line must be drawn somewhere. Classify ISPs as common carriers!
—Shaun Currier, Naperville, IL

Internet is a public good. Innovation will drop dramatically with different levels of internet.
—J Hynd, LOS ANGELES, CA

The internet, in its current awesome, usable form, can only stay that way if it remains an even playing field. Even advertisements couldn't kill its buoyant freedom, so just, please, don't make me spend the little money I have left on the very thing that allows me to forget about all my money woes in the first place.
—Richard Karl Schneider, Bellingham, WA

This is a democracy, FCC, and you work under the auspices of We the People. End your mission-drift immediately! Thank you.
—Franz Kitzberger, New Ulm, MN

Net neutrality is a must! Two-tiered internet is only a profit scam and the people should not be subjected to such greed.
—Laura Farah, Eugene, OR

Dont want to buy internet packages like cable channels. I want to access all of the internet.
—Darlene Quinones, Yauco, PR

We Don't Need More Large business running the government and Cable tv internet
—Max DeRoin, Spring Hill, FL

The only internet provider in our area is already as slow as one can imagine. This proposal by Mr. Wheeler will only make it worse. We might as well learn how to use smoke signals.
—Robert Hasselbrink, Pueblo, CO

Let me get this straight. You're going to limit and change the world's greatest economic engine and put it in the control of profit hungry companies that have used their power to lobby you for there profit. The FCC was formed to regulate for the Publics greatest benefit. in my opinion if you pass this new rule you're considering you will be regulating to the Publics greatest detriment. The Supreme Court recently ruled that all public officials are publicly and personally liable for their actions. Please consider your actions on this critical matter. The public is watching closely.. Thank you.
—Mark A. Gardner, Las Vegas, NV

Equal access for all!!
—Ralph Thomas, Mount Shasta, CA

There are so many of us who use the internet for a variety of reasons in our lives. It is incredibly important that it remain a place where information can be accessed without a company controlling how and what we have access to. It is so valuable that the internet is a fair market for the consumer at this point and so many people would not be able to afford the access to everything and we do not need large companies controlling what we see and how we get to it.
—Kristen Jordan, Hoboken, NJ

Net neutrality is important because freedom of expression is important.
—FJ Logan, APO, AP

Please reclassify ISPs as common carriers.
—Jordon Nagler, Monticello, MN

This is nothing more than a way for big businesses to screw over the rest of us by charging more for services we NEED! Services that were created through PUBLIC funding and as such, it belongs to the public. Period the end. The internet was funded through US. You know? The people that are meant to be protected not screwed over by the law? It is a utility. It is something that is needed to function in our lives now that it is so integrated. Be it cell phones or emails or social media, most of us rely on these services for important things. This is greed fueled and just plain selfish. AT&T, Comcast, Verizon already make billions. Stop taking more! You are not entitled to it! You already earn enough! I work hard, I'm not entitled to decent services? I'll be reduced to slow lanes and my content being selectively displayed because I'm already struggling to pay for my expenses at a full work week (which includes my internet) because you, FCC, allow the companies do what they want?
—Amber Gilbert, Canterbury, CT

These new rules would create a financial incentive to make internet service as slow as possible to compel businesses to sign up with the "fast lane" service. It allows cable and phone providers an easy way to restrain the trade of their competitors and disincentivises innovation
—Matt Williams, Highland Falls, NY

I DEPEND upon an open Internet for my tiny business - and, unlike Verizon, AT & T , and Comcast, I DO PAY FEDERAL TAXES.....
—Patricia Guthrie, Chalfont, PA

Yes, please reclassify ISPs as common carriers.
—Jan L Bergeron, Sacramento, CA

Money is not speech.
—Bill Burns, Buda, TX

Fair and just would be to have ISP's classified as COMMON CARRIERS. The Gov. should not regulate my freedom and fair structure basis. My communication source should be structured on a FREE equal to all basis. Thank You ! , Please record my comments / JC
—Jerry Conradt, Wayne, NE

I no longer subscribe to Cable TV. I get ALL of my TV Viewing streamed over the INTERNET so, for me, the Internet is my only Media Gateway. Your proposed rules would restrict my ability to get news and other critical information by DECREASING competition. All Internet Providers ARE media broadcasters and NEED to be classified as such. Don't Kill Net Neutrality for Me!!!
—Carl Mccall, San Diego, CA

The internet is important to me and I hate to see it taken away.
—Alison Ziemba, Lemont, IL

Think of the folks who are on a fixed income and also vote. We also have need for affordable internet service. We also remember that there used to be laws against monopolies.
—W C., Louisville, KY

It's absolutely insane that you guys are willing to break something that has created more American innovation, business, success and opportunity since the discovery of fossil fuels. Making the web a common carrier simply must be done. It's a more important communication backbone than telephones. Don't sell off Americans' access to knowledge, and opportunities for innovation .
—Brian King, Sherman Oaks, CA

The FCC's decision is unacceptable. Internet traffic must be treated equally. This obvious corruption cannot stand.
—Alex Sparrow, Ashland, VA

At this stage in the game, fair and equal internet access is essentially a civil right. It's necessary for everyone to have a level playing field when it comes to access, and it is NOT for big businesses to decide who gets priority.
—Jessie Hodgins, ,

Net mobility is essential for my work every day!!
—Mary Harte, Berkeley, CA

FCC: YOUR NEW RULES FOR THE INTERNET ARE VIOLATIONS OF FREE SPEECH. THROW OUT YOUR RULES.
—Craig Spring, Los Angeles, CA

Net neutrality is very Important to me and all Americans'.
—David Kallechey, Atlanta, GA

As a writer and editor, I earn my living via the Internet. It's not a lot of money, but I would be out of work without net neutrality. And I also fear the changes to our democratic access to information that the end to net neutrality threatens.
—Amy Henry, Northampton, MA

While I doubt extra fees will be passed onto the consumer, I have no doubt websites that forget to pay their protection fees might find their load times measured in aeons.
—Khalil Sheehan-Miles, South Hadley, MA

The Internet is a communications utility and should not be manipulated by corporate special interests and money!
—Kathy Bradley, Lugoff, SC

The future of our communication is via internet and associated technology. It is not in our best interests to let any one group (or special interest, or based on any other attribute) decide who can see what, when or where.
—Leslie Cummings, Lakewood, WA

An open internet is required of a democracy.
—Katherine J Batsis, Greenfield, MA

I want the Internet to stay open. I don't want preferences given to those with more money
—Nathan Shively, Shreveport, LA

I want to see the internet IPSs classified as common carriers, subject to the same rules as utilities. No cable or phone company should be able collect additional money to assign my downloads or email service to a 'priority' que. All internet users should have equal access to information.
—Paula Kraus, Westland, MI

Companies should never be trusted to police themselves, as history has proved. Please don't allow companies to make these decisions. I don't believe Nickle and diming people is the right decision here.
—Sean Kingsmill, Hinckley, OH

If you go ahead with this you will have demonstrated that, in all likelihood, you never had any intention of listening to us. Do not call our anger 'boffo'. Do not ignore us by saying that we are right and then going ahead with your plan anyway. There's NO NEED for a fast lane. Dozens of other countries have no such lane and their internet is far faster than ours. The USA and Canada are suffering from, not a technological or infrastructure handicap, but from lazy, slow, greedy corporations who depend on long-term contracts and exorbitant service fees (believe me I've had experience with those) to make more money than they have any intention of ever spending on improving their services. Please do not let yourself be influenced by corporate interests; there has never been a single corporate interest—charity, advances in environmental friendliness, or responsible action—that was motivated by concern with anything except the corporation's own benefit. The only time companies have ever been philanthropic is when they were privately owned and the owners were philanthropic themselves. Giving them yet another way of choking money out of people is not going to make the internet faster and you should know this, given the fact that it is your business to know this. Most services for web hosting, etc. are in the USA. I am going to suffer if the United States' FCC does a gaff like this. Don't do it.
—John Robert Rutherford Fraser, Niagara Falls, ON

Please vote no to this merger.
—Ivan Weissmann, Dallas, TX

Because I quite like the net as-is, thank you very much
—Hester Kenneison, ,

Let's keep the internet non-commercial !
—Fred Brown, Palomar, CA

I don't want internet rules. please support net neutrality.
—Andre LeBlanc, Maurice, LA

I have a small business. Let us market too!
—Genevieve de Mahy, Baltimore, MD

I rely on the internet for a range of diverse opinions on news and events. To allow certain carriers special privileges to present their opinions is to stifle opposing points of view.
—Robert Adams, ft collins, CO

to allow ISP's to pick and choose who gets reasonably quick access is like letting alcholics hold the gin.
—Mike Andrewjeski, San Francisco, CA

The Internet is a lifeline for me, it is my only means of communicating and by being neutral in its processing, it facilitates the information exchange to be vibrant and ongoing. DO NOT turn it into another censured tool of the corporations. Maintain pure equality.
—Rudy Sovinee, Escondido, CA

As the internet has progressively displaced traditional phone service to become the de facto common carrier, REGULATE IT AS SUCH.
—Jon Longsworth, aptos, CA

Net Neutrality respects all people, allows free speech to all, allows access to services and education to all, so it must not be structured to favor rich corporations, but open to all equally.
—Timothy Hoyer, Jamestown, NY

It is very simple: WE demand that the FCC protect the open Internet by reclassifying ISPs as common carriers. Period finito
—Randall Dollins, Kansas City, MO

Without Net Neutrality there can be no competition between websites and online companies, and without competition companies have no motivation to change for the better.
—Samantha Bronster, Edgewater, NJ

I'm a blind person who uses the internet as a form of communication, so don't control where I can and can not go. I can see if I worked for you guys, but I don't
—Raymond Lombardi, east dublin, GA

The internet is a truly great resource for everyone. No private interest should be allowed to limit access or charge higher fees for certain privileges on use of internet features. It's just plain WRONG!
—Dan Avery, Butte, MT

We don't need big corporations limiting our choices just so they can rob us blind. Rule for regular people not the elite.
—Robert Poulsen, Santa Cruz, CA

free flow of ideas and information is critical to the health of a democracy
—Rick Myers, ashland, MA

Just like the telephone was to the 20th century, the internet is the communication technology of the 21st century! Like telephones, water, electricity, sewer and roads, the internet is a modern public utility, and must be classified as a COMMON CARRIER. These few powerful corporations want to govern and filter all digital communication. It is worse than thought police. They seek nothing less than to give themselves a total monopoly on what ideas live or die. They are trying to make themselves the gatekeepers to everyone's business and communication-- the ultimate arbiters of innovation and discourse worldwide. This is happening now, in Mexico. It will happen here if you let it. There was a time when the FCC stood for the people of this country. Your forebears regulated against foreign ownership of 20th century media on the basis of national security. Today, the companies and billionaires who stand to benefit from controlling content on the web are more powerful than most governments on Earth and hold no allegiance to anything but themselves. Allowing them to monopolize discourse on the single most important commerce and communications network of all time is dangerously unAmerican.
—Adrienne Arno, Los Angeles, CA

The internet is part of day to day laude. It should be a utility. Don't tell me what information I can have when I am paying for it!
—Tristan Bell, ,

I'm a teacher and the internet is a constant resource for me and my students.
—Joanne Thiele, Norfolk, VA

Everyone deserves fast internet. This plan of the large corporations is about greed, not about service. They are providing service and all customers deserve equally fast Internet service.
—Camille Gilbert, Santa Barbara, CA

Owners of the means of data transmission should not also be in control of content. Thus, I favor treating the internet as a common carrier, preferably owned and developed by the public.
—Dr. Patrick Tchou, Pepper Pike, OH

Internet service providers and other corporations already have too much power. Please stand up for the 'little guys' - WE THE PEOPLE - who supposedly matter in this country.
—C Born, Portland, OR

Because it fosters innovation by small companies, and gives equal voice to smaller internet providers
—Stuart Montgomery, Mountain View, CA

The use of the internet should not be treated like a luxury.
—Mark Harrison Jr., Bedford, IN

Democracy depends on freedom of speech and thriving public discussion. That doesn't happen by letting the market rule; it happens through choices to support it. To put it another way and to mis-paraphrase a former FCC commission, no, internet devices are not just toasters with data.
—Dr. Bruce Lenthall, Rosemont, PA

Net neutrality stands for poetry and science and above all justice.
—Max Frazier, COLUMBUS, OH

PS...ALSO Please be Aware of: AMERICAN “CorpoCRISY” $$$ CORPORATE Media CON-OCRACY $$$ & SOCIAL TREASON ~ Definitely Not the Sound of *We the People* Or We the WORLD* (Washington D.C. or B.C.? , Yes BEFORE Christ OR JUST PLAIN BIZARRELY CUCKOO!) Good Luck on this One for Sure! Greg's Universe Publishing/Th.Trkstar www.GregsUniverse.com On Going UNIVERSE the Thread to Mend...
—Greg Garbulinski, Lapeer, MI

Please allow free speech.
—Jason Nutbrown, Albany, VT

AT&T and Comcast are much more interested in control & their bottom lines than in the American consumers. Don't let them control our Internet.
—Gayle Spencer, Menlo Park, CA

A free and open Internet is vital to democracy and free speech in the 21st century. The protection of free speech is in the 1st Amendment for a reason. Stand on the right side of history, stand with We The People and protect a free and open Internet.
—Amalio J Martinez, Dumont, NJ

Freedom and equality for all to share equally, diversity makes the world stronger and stable, don't discriminate for profit for the few only.
—Sean Livingstone, ,

Every voice should have equal representation, not just those supported by big money. Why don't you do the right thing and keep the internet a democracy? I thought that democratic ideals were what this country was built on. Your actions fly right in that face of that. Is that the message you really want to send?
—Kc, Fairfax, VA

These people need to be re-classified as common carriers; which is all that they are -just like telephone, cable,, etc. There is no reason to allow them to turn the internet from a useful communication device to a major profit center for the corporations; they did not invent it; should not control it. And turning control over to the UN or "international body" is not a good plan for free communications.
—Charles R. Ross, Rio Nido, CA

This should be obvious!
—Skip Vena, Woodland Park, CO

Net Neutrality is probably the most important issue of our times. Everything from voice, commerce & social data is exchanged via the internet. It is crucial that any party has equal access to the same bandwidth and speed to the internet.
—Alan Tsuyuki, Brea, CA

I use the internet for research and discovery. My 10-year-old daughter uses sites designated by her school that are a big part of her education. There are millions of citizens like us. We cannot afford the high fees that will result from the discriminatory pricing that will result from your proposed rules. In the information age, ISPs are now the quintessential common carriers. Any final rule should reflect reality and classify them as such. Please do not take away our access by turning the internet into an elitist tool.
—Mr. Mark Lee, Dallas, TX

As an independent musician that relies on websites such as bandcamp and blogger to spread the word of my music, net neutrality is very important to me. If the services I use to generate revenue are compromised I am, in the vernacular of our time, screwed.
—Matthew Wasik, Cary, IL

As a disabled American, I depend on neutral. affordable internet access to keep contact with everything important to me.
—Ruth Hardy, cincinnati, OH

Are you really interested in destroying innovation? If so, these rules are a great way to do it! If you care at all about SMALL BUSINESSES, NEW IDEAS, and/or ANYTHING NOT MADE BY RICH PEOPLE OR LARGE CORPORATIONS, then these rules NEED TO BE TRASHED.
—Sarah Ammerman, Columbus, OH

Everyone but a few phone companies want net neutrality. Don't fall for te phone companies' line by saying that the FCC will stop transgressions. Spell out in the rules that the phone companies cannot differentiate between customers. Your approach sounds good to you, but fails miserably in the real world.
—Roy Gamse, Arlington, VA

An open Internet is absolutely essential to contemporary research. As a graduate student I depend on it to obtain references and collaborate with my advisor and fellow researchers. If these rules go underway, countless online data archives and outreach sites -- which depend on already very sparse NSF funding -- will fall victim to the restrictions imposed by these rules and the biases of ISPs, and affect scientific progress nationally as a result.
—C Austin, Champaign, IL

Dear Federal Communications Scumbags: This is ridiculous. The internet plays a HUGE role in our daily lives, and you monopolize it? This will have a HUGE negative impact, and pretty much a guaranteed backlash from the public, IT ALREADY IS FACING A GIGANTIC BACKLASH FROM THE PUBLIC. This isn't what our country is about, you are ruining that, and just making us worse. I don't know exactly how this is going to end up if Net Neutrality get's killed, but i'm sure it won't be in your favor for a long time.
—Francisco Gomez, Miami, FL

I am trying to tell folks we are being poisoned by food & pharma as a disabled RN
—Maureen A Absten, lewis center, OH

Creating an OUR interNet that can be controlled in any way by moneyed power brokers that have only profit on their agenda, must not be allowed by any of OUR trusted public agency servants.
—William J. Ashwood, New Brighton, MN

Net Neutrality is what allows users and content creators to share both ideas and content in a fluid and dynamic way. Without it, creating both will slow down, and our American companies and citizens don't need or want to be slowed down by the service provider. Thanks, David Ball
—David Ball, Boise, ID

Ending net neutrality would make us a 2nd or 3rd rate country in the information age. Let's not sabotage our ability to compete.
—Gordon Kaswell, Eugene, OR

The Internet was created to be free. Net neutrality has to be protected from anyone who would control it.
—Manuel Sanchez, Laredo, TX

NO MORE discrimination based on INCOME!!!!!!! STOP BUCKLING TO THE WEALTHY!!!!!
—Sherry Evans-Carmichael, Los Alamos, NM

I've been in this business space my whole career. The internet needs to be free and accessible to all as a fundamental utility. Please classify it as a common carrier.
—Anne Walker, North Reading, MA

These rules are great for our growing telecommunication monopolies. The big fish get to make money hand over fist while smaller businesses are left with a decision to either pay to compete with large multinational corporations for big pipe access or try to make due with capped/limited bandwidth. Infrastructure pays for itself. There is no reason to not treat internet access like a public utility. Please spare us all from the disastrous path these rules will lead us down if they remain as currently written.
—Timothy Forsythe, Greensboro, NC

No matter how you slice it, there is a limited amount of internet going thru the wires. If they keep a part reserved, then the other part runs slower due the extra demand on it.
—Shawn Owen, Tulsa, OK

I'm disabled, and depend on the internet to communicate with my League of Women Voters Unit.
—Ruth Hardy, cincinnati, OH

Protect Net Nuetrality, a free and equal internet is this democracy's and humanity's last and only hope! A corporate dominated internet will be as bad as our corporate dominated democracy!
—Aaron Pearl, Culver City, CA

Without Net neutrality, I lose the freedom to pursue my interests as I wish. I lose the ability to freely browse and expand my knowledge of the world. I'm not talking binge-watching Netflix. I'm talking research for my novels, inspiration-gathering, even posting snippets of my work online for comments. You would be preventing the spread of the arts, stifling free speech, and generally screwing over the generations of people who have grown up with the Internet.
—Laurissa Corbin, Spring Arbor, MI

I am a small business owner. Small businesses make up: 99.7 percent of U.S. employer firms, 64 percent of net new private-sector jobs, 49.2 percent of private-sector employment, 42.9 percent of private-sector payroll, 46 percent of private-sector output, 43 percent of high-tech employment, 98 percent of firms exporting goods, and 33 percent of exporting value. Not supporting Net Neutrality is not supporting small businesses which, in turn, is not supporting AMERICA.
—R Erwin, Kahului, HI

The Internet is possibly the greatest invention of all time, and letting megacorporations like AT&T create fast lanes for the rich would destroy the equal playing grounds that have been the internet for as long as we can remember
—Virginia Hutchinson, Birmingham, AL

please keep the internet equal so all people rich and poor get the same benefits.
—Patrick Scarry, o'fallon, MO

Please do the right thing for the people, not big business, we need YOU to make things right. Please reclassify ISPs as common carriers. Thank-you.
—Vicky Bauer, Mount Airy, MD

Your dictatorship tactics to take away freedom from American citizens and give more power to cooperate near monopolies is fucking discussing. Tom, please Retire and go live in Siberia, this country no longer needs you or people like you. Thank you
—Zach Oeser, Elizabeth, CO

Do any of you actually care about free markets and the heart of capitalism? If you have ever used that line in your political careers, then STOP selling out to the highest bidders and allow everyone access to the marketplace.
—Austin Nelson, Bend, OR

Because I don't want 5 people deciding such a big issue for the American people!
—Cindy Koch, Long Beach, CA

Net Neutrality enables me to talk to my far flung family though Skype and other media.
—Jean Perkins, Phippsburg, ME

You're letting corporations pimp the internet?! Shame on you!!!
—Prescott H. Paine, Wesley, ME

I demand that you toss out your rules, and support the internet as the free and open service it's intended to be. Listen to the citizens contacting you and wanting to be heard. Don't sell us out to big telecom because that would cripple the internet, stifle creativity, and silence voices which need to be heard. I demand REAL NET NEUTRALITY instead of some gift to the Verizons, AT&Ts, Time Warners, and Comcasts. I am begging of you to deny those aforementioned companies the ability to have an almost dictator-like control of the internet, and to instead leave the internet as it is. Thank you for reading, and I STRONGLY urge you to re-consider your current proposal. Thank you.
—Steven Byrd, Ball Ground, GA

It should be an equal playing field for all on the internet.
—E Amba Caldwell, Santa Fe, NM

I want an open internet so everyone has a chance to do something great. Google started small, so did Amazon, and Netflix. It is sad to see that new start ups would not be able to compete with people who have a lot of money. Please protect the internet by reclassifying ISPs as common carriers.
—Megan Wilcox, Middletown, NY

I take college classes at home and if you add fast lanes to net neutrality, It will be impossible to take classes. Please, reclassify ISPs as common carriers.
—Evan Worster, Brownville, ME

Anything that America does, and the world will follow when implemented. A world where money will provide you with a better services is calling for corruption. There'll be even more inequality in the world when this happens. Remember, if the world regards America as the role model, then America must be responsible for its decision as it never affects just the States alone.
—Tan Yan Ling, ,

The Internet is a foundational technology, critical to the leadership, innovation, and future of our country. How in the world can anyone think that placing such a huge responsibility in the hands of the likes of AT&T, Verizon, and Comcast would be a good idea??! These guys want to find ways to make more money without providing any new, improved services. Please don't let them. IMO, America already lags far behind other nations in providing access to the information universe. Destroying Net Neutrality will bang us even farther down the list. The consequences will be awful. I'm embarrassed for my country that we're even having this discussion. Are we a leader or are we bought and owned by Big Corp and Big Money? C'mon, leaders. Listen to the people and then lead, here.
—Holly Croydon, San Andreas, CA

I am an educator, and it is important to me that my students and colleagues have ready access to online information without it being filtered by ISPs.
—Susan Goldstine, California, MD

Internet should and must be free and neutral, even here in south america we understand that, Brasil is taking steps to ensure that what you guys are trying to do, never happens. Please, internet is a incredible source of knowldege, it allows people to communicate overseas, it is VITAL that remains neutral, PLEASE alter your rules, PLEASE protect the internet from the corporations that only want power and money, everyone deservers to have a free internet, our children, or grand children, PLEASE.
—Damian de Arce, ,

The internet is like any public utility and should be regulated accordingly. Everyone deserves to have the fastest internet connection available - not just the wealthiest among us. Internet Service Providers need to be reclassified as common carriers so we will have Net Neutrality.
—Carole Hope Seplin, Hollywood, FL

Two-tiere internet will lead to further discrimination of people on low incomes.
—N Watson, Enniskillen,

Destroying net neutrality flies in the face of the 1st Amendment of the US Constitution.
—J, Woodinville, WA

WORK FOR THE PEOPLE!!!. Not big greedy corporations. Protect Net Neutrality. Chairman Wheelers new rules need to be trashed! Throw out the rules and instead reclassify ISPs as common carriers. Protect the internet.
—Christopher Coleman, Blue Creek, OH

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers. It's a shame what has happened to the broadcast industry in the United States. I believe we have lost forever the notion of “broadcasting in the public interest”. I have been involved with the FCC beginning in 1975 when I took the test in Long Beach to receive my FCC Third Class Broadcasting License. I spent the next 30+ years in radio, mostly with non-commercial station KXLU-FM, working as an FM host, disc jockey (with real vinyl records!), and taught the basic principles to countless college students either pursuing a degree in Communication Arts, or willing to put in the time because of a love of music. I preface my plea to you with this information, so that you may know that I care deeply about communications in general and specifically now about net neutrality. That we are today faced with the behemoth of Comcast and a pending deal between Direct TV and AT&T reflects the loss of a true principle of “local broadcasting” and its importance to every community. That the wholesale media consolidation in the United States has turned 180 degrees, allowing such mergers to occur with little or no opposition is an outright shame. The consumer is faced with ridiculously frequent rate increases by what can only be called a monopoly. Sure, let them charge as much as they want for your access to television, telephone, and internet access. That we are forced to pay such a high premium (Silicon Valley adjacent no less) for a service that still utilizes cable installed, in most cases, going back to the e early 1970’s is at times unbelievable. When one measures the speed and quality of local internet service, in comparison to many other much smaller countries throughout the world, it makes me feel bad about the United States, and that is a feeling with which I have very little experience. That being said, what the FCC has allowed to take place over the past several decades has certainly not advanced the medium, or the intent, of local broadcasting. It seems lately that the news carries only the story of how the American consumer is being rounded up and quashed by unbelievable mergers that line the pockets of these corporations. I’ve not seen any display of goodwill, nor even concern, for the public that they “serve” – at their discretion. The advent of the internet and the changes it has fueled are really something to marvel at. Unorganized, uncategorized, worldwide entertainment, information, communication, learning, and the world at your fingertips (at whatever speed Comcast ‘hosts” in your neighborhood) seems to me like a miracle. One is so meshed with the internet now that it seems almost unbelievable that we got along without it. The innovation, creation, boundary-breaking nature of the internet is something to be celebrated for its uniqueness – not quickly “sold off” to multi-national corporations that seek to take over this last form of “free communication & free speech”. Why the FCC even entertains the notion of totally changing the way the internet works to allow for a “movie company” to stream their content over Comcast or the like, somehow thinking that this is more important then any of the other mass communication or private communication uses of the internet is so totally “out of touch” with how the internet works today as to make one just stop and stare at such a power move. Perhaps the FCC is overly challenged with duties at hand. Surely, what you have control over has grown just as exponentially as the diversity of communication mediums within your oversight. I thought it a challenge back in the day when you had to control radio and television. Anymore, those are looking like tired business models that such corporations like Comcast seek to have any interest in only if they own them. The internet should be allowed to grow as it has. Marvel at the changes it embraces, and how it continues to grow, unimpeded by wholly private money-making corporations, with profits ruling their intentions. Hey, save one for the “little guy” for a change and speak out against and further do not allow such as has been proposed and voted on. It’s not too late to change my opinion of The United States, and that of people throughout the world. We could use the positive PR for a change here in the USA. The little guy and the Big Country could be proud of taking a stance and NOT allowing further encroachment of private concerns on our communications. Stand up, throw out the whims of internet service providers, and bring some shine to the FCC again. You could really make an important stand at this juncture of the growth of the internet with a vote against your proposed rules. Don’t seek to allow further encroachment of companies like Netflix and Comcast, allowing them to make the internet their little party of profits. Who knows, I could even enjoy what used to be warm and fond memories of my old Third Class License, sealed in its aging dime-store frame. Old and yellowed from sitting on top of a tube-based transmitter for most of its life, subject to the heat of analog technology, the embodiment of Marshall McLuhan’s concept of a “Hot Medium”, but it stands for so much of what is important in general with regard to communications. Dismayed by the way people approached and used new media such as television, McLuhan famously argued that in the modern world "we live mythically and integrally ... but continue to think in the old, fragmented space and time patterns of the pre-electric age.” Stand up to these powerful, money-fueled lobbying concerns and make the right choice on this one. I’d put money down (if I had any left after paying my ISP bill) that in 10 or 20 years from now, there won’t even be something called “Netflix”. Times will have inevitably changed and new forms of communication, unimagined today, will evolve and help bridge the gap between people of different nations. The World – it’s a big place, yet so very small at the same time. Do it a favor guys and turn the tide against further private interests in the internet. Sincerely, James Dunfrund
—James Dunfrund, Pleasanton, CA

Is this another attempt of corporate America to rule the US?!
—Connie Stone, santa barbara, CA

Innovation. Big companies don't like innovation, anything that's new is risky. large much prefer to take safer, well known ideas, and run them into the ground until they wring the last penny out of them. theses days new ideas and concepts don't come from major companies, they come from individuals who come up with an amazing idea and just decide to run with it. the modern gaming industry is one place that shows this quite well. A few years ago, when the market was still being flooded with hundreds of identical, boring, badly-made first person shooter titles, Minecraft came along, and showed everybody what it was like to have an imagination again, it was made by just a few guys with a few computers and an idea, now it's one of the biggest, most popular games out there. it showed people that if we wanted good games again, we'd have to make them ourselves. The internet, and net neutrality, were key to all of this. if net neutrality ends so does the chance of anyone else ever being able to create something wonderful like that. if you think for one second that big businesses won't take advantage of this proposal, then you're blind. Corporations literally exist to make as much money as possible, and they attempt to block anyone who tries to move into their market. this proposal is essentially a big steel wall they can slam down in front of any independent developers to stop them from getting any sort of start. We need net neutrality in order to keep new ideas flowing. Please, don't do this. ~Joshua L. Castro
—Joshua Castro, Brooklyn, NY

Really? This does not require an explanation.
—Brian Steinberg, Crystal Lake, IL

I depend on Net neutrality! Please keep the internet open!!
—Charles T Lakin Jr, Ocala, FL

My husband is a business owner and a content creator. We should have a fair shot at Internet traffic- there's no way we can compete with companies like Verizon when they can afford a faster experience for consumers.
—Cameron Edwards, Pasadena, CA

I depend on net neutrality to help with school,and project proposals. DO NOT GET RID OF NET NEUTRALITY. If that happens then educational system will lack an placing the united states lower on the educational system list.
—Kyle, Idaho Falls, ID

Net Neutrality is no different than freedom of speech and press as it gives every individual an equal opportunity to be seen and herd.
—Logan Afton, Curwensville, PA

Net Neutrality is vital to the growth of new American businesses (like mine) online. Without Net Neutrality, small websites will not be able to compete with larger websites, creating a situation where competition can literally be rubbed out by more powerful businesses, and startups would have little recourse. Help us build a better America today, let the seeds that have been sown grow without broadband discrimination. Reclassify Internet Service Providers as common carriers. We independent web entrepreneurs are counting on you to help us make a better and brighter future possible for all. Thank you.
—Alex, Wisconsin Rapids, WI

The internet is an invaluable tool for information and knowledge. Slowing it down means that only people with the ability to pay will have greater access and control, which is completely unacceptable.
—Nezka Pfeifer, Scranton, PA

Please please please don't bring the strife of class division into the Internet. Do not be bought. Por favor, protect the people and not the corporation. The average person and not the top percentage. Thank you if you would.
—Maria, Bronx, NY

The Internet is essential to my daily life for work and keeping in touch with family that live several states away. The tiered Internet proposal would likely force me into the lower tier where my ability to stay in touch via Skype or download short home movies would be greatly hampered. My family is important to me. If it were not for my job, I would still be living just down the street from them. Please do not let corporate greed take that away from me. They are not hurting for profits. These telecommunication companies earn higher profits every year. They don't need your help to bolster it further.
—Brett Ussher, Tempe, AZ

Without Net Neutrality, the internet is subject to abuse by the service providers and would negatively impact most people (excluding of course those who want to suck even more money out of the American people).
—Ek, Irvington, NY

Everyone should have equal access to all sites. Corporations should not have the right to censor & limit access to anything.
—Karen Sewick, Downers Grove, IL

This country does not belong to just big corporations, the internet is all of ours and needs net neutrality
—Louis Drinkwater, Chelsea, MA

Net neutrality lets me have a job! Don't kill the information business I work for so a certain number of monopolies can further line their pockets!
—Samantha Bartley, Spencer, IN

We want net neutrality, not another corporate takeover. Try serving the needs of the general public for a change.
—Mark Bordine, Gold Canyon, AZ

Now days when we see the Country that we love and care for the only way we can fight back to stop the Corporations and the multi Billionaires to slave all of us and the rest of the world Is to keep alive NET NEUTRALITY so don't do this.
—Marcial R. Ramirez, San Francisco, CA

The Internet is not broken--so why are you trying to "fix" it. Please stop meddling with Internet. Instead, work to undo all the media consolidation that has narrowed the range of public discussion, limited information dissemination, and damaged our democracy.
—Patricia Walsh, Boston, MA

I truly dislike what I have read about this two tiered system. Since I live in a rural area, my service is already slow.
—Paula Denissen, Wolcott, CO

The Internet is one of the greatest inventions of the 20th century and is poised to change the world. It should be treated as the valuable resource it is. The attempts of the telecommunications companies to establish fast lanes or charge data providers for any services beyond connection is reprehensible. They have already proven themselves untrustworthy guardians of the Internet, and I find it amazing that the government gives them as much free reign as they do. Since Verizon successfully lobbied to have the Internet unregulated under current rules, the only thing to do is to declare Internet Service Providers a Type 2 carrier and enforce Net Neutrality with an iron fist.
—Chris Gottschalk, Cresco, IA

Please do not play favorites with the internet; it will create classes of haves and have-nots and will be detrimental to our democracy
—Laura Strom, Los Angeles, CA

I already pay heavily for the internet and do not want tiers.
—Richard Cassidy, Winston Salem, NC

I live in a rural area where the internet is my main means of communication thru e-mail. Please keep Net Neutrality cause my wait time is long enough as it is.
—Veroune Chittim, Selma, OR

Please reclassify ISPs as common carriers.
—Gary Schaible, Warren, MI

hope you folks @ the FCC don't ruin a good thing and keep the airways open for us the PEOPLE
—Raymundo Martinez, los angeles, CA

I don't think it is fair that big telecom. companies will be able to regulate the internet speeds. We should be working on improving the internet, not creating fast lanes for those who can afford it and slow lanes for those who cannot. We already pay very high fees to the telecom companies and have slower speed compare to Europe. President Obama promised he would protect a free and open internet when he first campaigned and he should be kept to his word.
—Cheryl Dzubak, Yardville, NJ

Please classify ISP's as common carriers; I run a small business and need net neutrality.
—Michael Hocevar, Georgetown, CO

Carriers should only charge for access and bandwidth. Like a phone carrier charging for a line and for minutes used. Could you imagine paying a different fee for a call to a family member vs a call to a merchant? This is a dangerous slippery slope we are allowing to happen if no definitive action is taken now: ie classifying ISPs as common carriers!
—Hazel Bell, Watchung, NJ

The internet all ready sucks we don't need it to suck more
—Johnathan Dudley, Cumming, GA

This is not acceptable the internet has led to so many opportunities for small companies, given big money more advantage seems to make it even harder to build a business that can power the next generation of prosperity.
—Corbin Hoenes, South Jordan, UT

Dear FCC Committee Members: I am deeply disturbed by your proposed Internet rule changes. As the network that originally created what is now known as the World Wide Web was designed entirely at American taxpayer expense, I believe it should now, and into perpetuity, remain an equal and open resource for all Americans to democratically use. Such a vital telecommunications tool should not be turned into a source of commercial discrimination, where the wealthiest amongst us benefit at the expense of all others. Specifically, I believe there should be an outright ban on any "fast lanes", where corporations, groups, or organizations could charge larger sums for faster service than what is currently available to all. The greed of Internet Service Providers (ISPs) is potentially endless, jeopardizing the access and affordability to many American consumers, innovators, users, and edge providers of the Internet. As such, those same ISPs should not be left free to legally rebut prioritititization issues, in any court. Their avarice would be destructive to us all. Additionally, broadband access needs to be classified as a Title II common carrier & regulated as such, including full transparency regarding specific network practices, performance characteristics, and terms/conditions of service to end users. There is no question that the Internet is the primary telecommunications resource across the USA today. As such, it needs to be treated as all other major telecommunications resources are - a public resource with all having equal access and full disclosure of all aspects of services provided/offerred, including any new services provided. An ombudsperson's office needs to be created, to act as watchdog and advocate for start-ups, small businesses & consumers. That ombudsperson needs to seek out comments on how to ensure all parties, particularly those that are small, impoverished, or just starting up, have access to the office's dispute resolution & enforcement processes. Additionally, whistleblower protections need to be firmly ensconced within that office's purview, as well. Smaller users of Internet services need responsive recourse and protection from the abuses of larger Internet corporations. Finally, the new Open Internet provisions need to cover all wireless (mobile) broadband corporations and useage, as well. Since the World Wide Web is now accessible via multiple devices and formats, it needs to be treated democratically and neutrally across each of them. Whether one is accessing the Internet's resources via a desktop, mainframe, tablet, or smartphone, Americans have paid and paid and paid for a neutral, democratic telecommunications resource they deserve to have remain open and acessible, for all. Too many would be gravely harmed if your new Open Internet provisions were to discriminate between Americans, by creating paid prioritization arrangements , not treating broadband as a Title II common carrier, and/or separating wireless (mobile) broadband regulations/rules from those of all other broadband types. Thank you for listening to my concerns about the changes to the Internet you are now considering. This is one of the most serious issues impacting Americans today and well into the future. I hope that you dedicate yourselves to the highest levels of integrity toward all Americans, while designing the Open Internet provisions. Too many American officials have opted , in recent years, to place profits above people - as evil a formula as has ever been invented. Cordially, J.D. Staton
—Janiece D. Staton, Beaverton, OR

I do a lot of investigating on the internet. If we lose the equality of net neutrality many sources of information that cannot afford to "pay" extra will be lost or require significantly greater time to access.
—Howard B. Weithorn, Sherman Oaks, CA

The Internet our main means of communication with the world and we should have equal access to it as with any utility
—Mr. Mary Ann Graffagnino, Tucson, AZ

The internet is one of the last true bastions of innovation and freedom. Where most of this country has failed and crumbled, the internet has held steadfast. Do what you were appointed to do and stand for true Net Neutrality.
—Kevin Wrobbel, Livonia, MI

I enjoy having access to lesser known websites. Please don't let the big companies get priority!
—Melissa M Nece, Palm Harbor, FL

You are in your position to serve the PUBLIC, not the providers. DO YOUR JOB.
—Richard Harmon, Greenacres, WA

Do the right thing.
—Ileana Hernandez, Rensselaer, NY

Please do not go through with these terrible new rules for the Internet. The Internet is an important resource and allows for people to connect and share ideas that can lead to great and wonderful things for the world. Such blatant discrimination as was proposed by Chairman Wheeler are a truly terrible idea that will undermine the possible great opportunities and ideas that will lead to a better future. Please denounce these terrible rules and make ones that will benefit not just the select few but all of us.
—Km, Fremont, CA

Essential to keep democracy free from those who have all the money, but they should not own our votes! It is important to protect access to free speech--to pronounce it and to hear it!
—Theodora B. Crawford, Berkeley, CA

Everyone deserves equal opportunity to the same type of internet access as the person next to them. Higher speed internet should not be an elitist opportunity. Please give us all the same access.
—Jacqlyn Rohlfs, Petersburg, IL

Allowing internet service providers to do this would be a crime and you should NOT allow this to happen!
—S Rogers, Lynnwood, WA

Net neutrality is the last thing neutral in this country. Now Tom Wheeler wants to end it to kiss up to big money.
—Ry Moran, Salt Lake City, UT

This is so wrong. We the people don't deserve this. We are tskig a step backwards in advancing in technology with this plan. What happened to being the best country in the world? With this terrible plan we will be slipping away and will lose the credibility that makes the US the best. We will stand up as the citizens of this country and demand that this plan be changed. Why should a past cable company employee be making these decisions?
—Andrew Dotson, Duluth, MN

The tiny little bit of democracy that still exists in this country depends on Net Neutrality. Kill Net Neutrality and you kill our country.
—Robert Juelich, Tacoma, WA

I am counting on the FCC to protect the Internet by reclassifying ISPs as common carriers. I hope you take to heart your responsibility to protect the public interest .
—Laura Pines, Monroe, ME

Net Neutrality is important because the internet is the lifeblood of innovation and is the future of our country. The longer that discriminatory practices such as those that could potentially be put in place as a result of the FCC's new rules, the more difficult it will be to change those rules in the future after seeing the consequences.
—Ned Bless, Evanston, IL

The internet may be the most important communication utility in today's world. I have Comcast "broadband" but they have a geographic monopoly and at peak use hours service is already terrible. Please don't make it worse by permitting even slower speeds for users unwilling or unable to pay even higher prices.
—Claire Broome, Berkeley, CA

All citizens should have equal access and communications equality in having their voices heard!
—Richard K. Kurz, Rochester, NY

Some people like myself cannot afford higher rates for higher speeds. This would not only kill the open internet, it would hinder thousands of college students who depend on the internet to complete their assignments. Most of these also work, and depend on home internet to do these. Not to mention, most of these students also struggle as it is financially to make it...why make it even more difficult for them? Do not support this guy's proposal...it is far more detrimental than it is beneficial for anyone.
—Tammy, Palm Bay, FL

USA is not for sale. Grow a pair and do your jobs.
—Amos Yang, San Diego, CA

it ia unconcieable to give the internet to big business- the government built the internet and it belongs to all citizens!
—Ms. Dorothy Binder, Kula, HI

The internet is effectively a utility like power and water, and should be equally available to everyone.
—Michael Smith, Hobart,

I may live in Australia, and so the rules only indirectly affect me, but Australia is taking after the corrupt, elitest, corporatist nature of the United States more and more every day. This has to stop before it goes any further, and indeed should have a long time ago. I will fully support maintaining an equal internet for every service on it, with no discrimination.
—Daniel Lyons, St. Ives Chase,

I fear the voice of the small guy will be lost if net neutrality is not upheld. Help Obama keep his campaign promise to keep the internet neutral so we can continue to reap the benefits equally.
—Frank Pedersen, Dunedin, FL

Hey FCC, we need Net Neutrality. We need ISP's to act as common carriers. Monopolies are bad and this is what is being created. Don't make the internet a place only the rich can enjoy. For a lot of people the computer is the only fun part of their lives. Don't ruin that for them in favor of making the Comcast richer. Please reconsider your plan.
—Doug Nuttall, Wheaton, IL

Because ensuring a free & neutral internet, insures us our continued existence as a free & independent nation.
—Tova E. Samuels, Fair Lawn, NJ

The country is going to be worse off if you make information more difficult for everyone to access.
—Nick, Huntington Beach, CA

Internet pathways were created with the intention of all having fair access at reasonable prices. Competitiveness is expected as we are a capitalist state. But the advantage should not go to those with the biggest pocketbooks! Chairman Wheeler, why are you easily swayed by big corporations?? (something going in your back pocket?)
—Terence Lyons, Monroe Township, NJ

Neutrality has been a basic feature of the Internet from its beginning. There is no good reason to abandon it, and good reasons not to do so.
—Julie Spickler, Menlo Park, CA

i visit sites that have a lot of social aspects about them, you cant let big companies limit those sites because they would be infringing on our freedom of speech, and freedom of creativity. the internet is fine the way it is.
—Dylan Rule, Cape Coral, FL

I would like to see the internet become a public utility!
—Elizabeth OHara, Roseville, CA

Big business should not control the availability of the internet, an important means of communication. Allowing this to happen will stifle open and free enterprise and award unfair rights to pre-established and more successful businesses. There have been numerous large petitions on this issue to your organization, as well as the branches of the government. The masses of voters have spoken.
—Derick Stevens, Vacaville, CA

Because Im not going o pay for internet. No one wants this except for corporations. Businesses are not people.This is supposed to be a country of the people, so listen to them.
—Ivy Welsh, Franklin, TN

Why do we have to have slower internet just because some rich people want it that way? There are more in the lower tiers of the economy and we will vote you out, get rid of you, and do what we can to restore net neutrality. Your plan will not succeed.
—Matthew Ng, Mendota Heights, MN

An open internet is necessary to protect and defend the freedom of expression across the world. History will judge our actions in this important time. This is far more important than increasing the profit margins for a few corporations.
—Sean Tempesta, San Francisco, CA

I am a single mom, not wealthy by any means, and we use the internet constantly. I run three blogs and use the internet daily for information gathering and staying in contact with people. We would definitely be the "losers" in any two-teired internet scenario and it would make our quality of life soooo much worse. Please reconsider this situation and reclassify ISP's as common carriers. The internet should be a vibrant, diverse place - not another corporate take over that results in diminishing it's users to peasantry. Thank you very much for your time and consideration. Sincerely, Kerry A. Vill
—Kerry Vill, Eugene, OR

I am in Thailand and need news from America without interference from big business!
—Robert Swanson, Penn Yan, NY

Net Neutrality is essential to having a prepared and educated workforce in the modern age. Anything that inhibits the free flow of information will further marginalize those who are already at a disadvantage with regard to internet connectivity.
—Keelan Smith, Indianapolis, IN

Until now, the internet has functioned a bit like that great, democratic American institution - the library. Don't let private corporations limit our access to information and communication! Keep the internet neutral!
—Sharon Levine, Simi Valley, CA

It is unacceptable for the internet to be two-tiered. Back-room deals to disadvantage the public are out of the question. The internet, like telephone lines, is a common carrier. We are counting on your good judgement and and democratic fairness to uphold these principles. ISPs must absolutely be reclassified as common carriers. Thank you.
—Christina Roberts, ,

The internet is for EVERYONE!
—Karen Christian, Vail, AZ

We don't want big money GOONS taking over again. Look at what Hollywood CREEPS have done with ludicrous "intellectual property" legislation. It never stops unless you STOP IT!
—A W. Cynor, Anaheim, CA

For most Americans, access to the Internet is available through a very limited number of companies. Recent plans to discard Net Neutrality would subject consumers to the whims of monopolistic communications companies. The network has become a utility, and its access points should be designated as common carriers.
—Rick Simkin, Chicago, IL

Unless we protect access, the net will essentially belong to the wealth corporations. It belongs to the people.
—Joseph Lite, DAYTON, OH

Because the internet is an incredible resource and tool that has revolutionized the way we work, think, act, and play. It should be open for everyone to access and use and it shouldn't be privatized or closed off to anyone and certainly not by private corporations and/or wealthy individuals.
—Jasmin Pettie, ,

The Net is the PUBLIC's domain not to be exploited by corporations for profit. The publics' access cannot be abridged for private purposes and needs to be free from any and all private encroachment by business.
—Jerry Matsui, Seattle, WA

Please do not allow money to dictate people's access to information.
—Peter Victor, Ho Ho Kus, NJ

If financial interests are allowed to govern the rules pertaining to internet access then democracy will be harmed. The internet has become the most important means of disseminating information, which is important to our liberty. Our government should protect that for the People. Chairman Wheeler's plan forsakes that duty.
—Bruce schottland, Round Lake, IL

I began using computers as a student in 1983 and since then, electronic communication and the internet have become an integral part of my life - and expanded my horizons and abilities to work and learn in ways that were unimaginable even 15 years ago. Similarly, the Internet has spawned an incredible amount of innovation in commerce, technology, and communication that has created amazing opportunities and benefited for individuals, small businesses, and the economy and society as whole This transformation has been possible ONLY because of a free and open Internet. It has been the great equalizer of opportunity and innovation because EVERYONE was treated alike and all had access to rapid communication. The new proposal by the FCC is one of the most despicable proposals I have seen in recent years. It panders to giant corporations and the oligarchs who run them, allowing them to control how I communicate, with whom, and at what speed. This is NOT the American way and I am appalled that the FCC would even consider such rules. These rules, if implemented, will destroy the internet as we know it and fatally damage our ability to innovate and create in the United States. The FCC is _supposed_ to work for the citizens of this country and protect OUR interests - not those of giant companies whose integrity, service, and value is laughable at best. I speak from experience, having been a client of AT&T and Verizon. ISP's are common carriers. Its obvious and it is the right thing to do. The FCC should throw out the rules written for Mr. Wheeler by his corporate owners and act to protect the internet and the citizens of this country. Clark A. Dobbs, Ph.D.
—Dr. Clark A. Dobbs, Minneapolis, MN

I think if they destroy the internet by giving big business and give up crappy internet I don't think that's far since we pay for what we get I wish it was better also faster speeds instead of this slow speeds now and if the internet get worse now people are going to stop paying companies will lose so much money why put this stupid rule up screw theres big company's suffer its a shame how this world has become and will be its like we are all slaves
—Earl Walsh, Easton, PA

The united states has been continually falling behind other developed countries in terms of infrastructure, especially internet connectivity. The mass majority of all modern business is done thought the internet and this proposal would further cripple our weakening infrastructure. It does nothing to improve the lives or profitability of anyone out side of the telecom industry, and forces people to pay twice for everything that comes through the internet.
—Jason Berkenmeir, Concord, CA

Keeping the Net neutral allows innovative new technologies take root, and makes the network more reliable. This is not at all dissimilar to the breakup of AT&T that took us from the standard rotary wall phone to the high-tech uses of the POTS system we see now.
—Michael Carson, Brick, NJ

Everyone needs easy access to the Internet- for work, school, or other reasons- not just the rich.
—Marty Rachap, Atlanta, GA

Net Neutrality is important because its something we have lived for since the internet is out, we made it what it is and we dont need any restricitions on it. Thank You.
—Brandon Loyo, APO, AE

The internet is a vital resource for all humanity. Allowing corporations to control axcess to the internet for their profit is unacceptable. You must take action to defend net neutrality for the good of the people and the nation. The new regulations must be thrown out. Internet service providers can not be allowed to regulate internet traffic, they must be classified as common carriers.
—Forest Burkhart, Parker, CO

Net Neutrality is a part of our daily lives please don't turn your backs at us.
—Chris Scholl, Neptune, NJ

The internet is a worldwide utility, time to treat it as such.
—Michael W. Butler, Clayton, CA

The internet is the greatest resorice in the world and to allow anyone to restrict who is able to be on it and how much they can be on it would be a tragedy. Our greatest resource is as valuable as it is because of net nuetrality and the ability for anyone to use it as they can right now. Please group it with telecomunications services so that the world wide web reamains as usefull and free as it currently is, it is for the benifit of the nation
—Zach Welch, Troy, NY

I cannot afford to pay any more for internet access, and the ISP's are not hurting for cash at all. Reclassify ISP's as COMMON CARRIERS!!!
—Stephanie Goodwin, Kent, OH

This is so simple, and I think that you understand it and want to abolish net neutrality because you're greedy. Internet Service Providers own cable companies. Cable companies compete with internet TV services like Netflix. Said Internet Service Providers can degrade the network speeds of Netflix so that their own service is better or more reliable. Consumers have little choice when it comes to Internet Service Providers on top of all this. It would be as if GM owned our roads and allowed only their vehicles to drive faster than the posted speed limit, roll through stop signs, and park wherever they want. Reclassify ISPs as common carriers so there is no abuse of the network that we partly paid for with our tax dollars!
—John Hundley, Valencia, CA

Net Neutrality is important to me because it permits me to be free from oppression and be a True Patriotic American.
—Ryan Gene Schablowsky, East Carondelet, IL

It's unfair to let the carriers call the shots. They are simply delivery services, and they shouldn't have an unwritten tier system.
—Christopher Kirchwey, Cambridge, MA

Small business owners need access to be successful.
—Julene Weaver, Seattle, WA

I refuse to have to pay money for information that should be FREE and FLOWING. This proposal would do nothing but weaken an already weakened democracy in America. I don't think I can even call this a democracy, like it was when I grew up in the 1970's. It's more of a PLUTOCRACY. Shame on you for even proposing this and DOUBLE SHAME on YOU if you approve these new rules.
—Mark Sarcone, Ankeny, IA

The Internet should be a public utility. Please don't let corporations give preference to those with the most money. They've already gotten their way in terms of letting money equal free speech.
—Robert Reichard, Olympia, WA

I am not in favor of censorship. Why are you?
—John de Forest, San Francisco, CA

Please support Net Neutrality. Keep the internet open and available for all. Supporting discrimination according to wealth is grossly irresponsable, the consequences would be tragic, don't let that be on your head. Please protect the Internet by reclassifying ISPs as common carriers.
—Shana Michele Matheson, ,

Freedoom for everyone
—Greg, ,

Internet access is too important to be left to the profit motive alone. Regulate ISP's as common carriers.
—Mary White, Ann Arbor, MI

Please declare the internet a common carrier under Title II of the Telecommunications Act of 1996. The internet is a telecommunications service as much as phones.
—Peter Peterson, Knoxville, TN

It must remain open to all citizens, rich, poor, etc. without exception!
—Mary McGaughey, GrEsham, OR

ISPs should not be allowed to pick and choose which sites get the higher bandwidth
—Ms. Rachel Deierling, Tucson, AZ

I pay my internet bill to build and maintain infrastructure that's available evenly to everyone. I don't want a big company adding money to the pot for preferential treatment. That will certainly distort the representation of individuals, small businesses, and ideas. Allowing businesses to pay for bandwidth is a terrible idea, morally wrong, and anticompetitive. ISPs are common carriers.
—John Burak, Fort Collins, CO

Please reclassify ISPs as common carriers and really protect Net Neutrality.
—GlendaRae Hernandez, South Bend, IN

The Internet is a form of unity which spans across the world. It is this because everyone on the Internet is equal, as no one has jurisdiction over anything more than their own choice of words or perhaps their own website. This is Net Neutrality. If you give control over the Internet in any fashion to any particular entity, this will break equality, thereby breaking the unity, and, as a result, destroy the beauty of the greatest of the modern day's world wonders. I implore anyone who reads this comment to do what you can to maintain Net Neutrality. -sincerely, Adam Price.
—Adam Price, Pickens, SC

Leave the Internet alone. Transition all ISP's to common carrier status. These new rules are thinly disguised theft of the Internet "pipe". Pay more attention to making the Net faster and more secure rather than allowing the conglomerates to take over what, since the beginning of the Internet, has been a level platform. I cannot believe our own government is pushing for these new "net non-neutrality" regulations. Make all ISP's become common carriers and also do not approve the merger of Comcast/Time Warner. It is a gross misappropriation.
—Walter Knox, Wilmington, NC

Tell the FCC to throw out its rules and instead reclassify ISPs as common carriers. This is the ONLY way to protect real Net Neutrality.
—Aaron Laufman-Walker, Chicago, IL

I feel I am already a "victim" of Comcast as my latest bill from them for "bundled" services was $213.00. This did not include any premium services. This was a $41.50 increase from last month. For comparison, my combined bill for my electric, water, sewage, and garbage collection was $160.00 for the same month. I can only imagine what the providers will charge in the future if given a free reign over my internet/phone services. I don't think the Europeans pay these high rates. Why should we? Aren't you to be advocating for all Americans, not just corporations?
—Barbara Beattie, Chambersburg, PA

So disgusted with so called leaders these days. Smh
—Patricia Chambers, Winsted, CT

The Internet offers the possibility of radical democracy! Don't bow to plutocrats and corporate overlords in allowing them to prioritize content from the highest bidder. Let big media compete with start-ups, entrepreneurs and small businesses on CONTENT, not PRICE!!!
—Gordon Brode, New York, NY

Everyone deserves to have equal share in the internet without having to pay extra money for speedier access. Keep net neutrality alive.
—Mary E Heinz, Denville, NJ

central to the Bill of Rihts...FROM a SWORN DEFENDER OF THE CONSTTTITUTION AGAINST ALL ENEMIES, FOREIGN AND DOMESTIC
—Samuel Scharff, Seattle, WA

Internet is as important to everyday modern life as access to health care.
—Trevolyn Twohy-Haines, Chino Hills, CA

Internet service providers — cable and telephone providers, too — are common carriers, and must be classified as such.
—Benjamin Melançon, Natick, MA

The Internet is the largest and most important store of knowledge in the history of mankind. This proposal destroys its value for the sake of already obscenely profitable corporations. Groups with profit as their goal do not have the people's best interest at heart, and if the FCC truly serves the American people, it won't cater to the rich and powerful at everyone else's expense.
—James Hightower, Oakland, CA

Internet service providers are companies with some of the worst customer service imaginable. I believe that these companies already illegally slow down there service at non-peak hours thinking that nobody will notice, thus they are not providing the service they pay for. Giving these companies the power to create a two-tiered internet would turn one of the greatest tools available to the entire population to something elitist.
—Collin Fishman, Annapolis, MD

Net neutrality is tantamount to freedom of speech. The internet is a utility, and equal access and speed for all must be preserved!
—Bertino Marro, Brooklyn, NY

The Internet was conceived with an intrinsic concept of net neutrality. It Is outrageous thse gate-keeper ISP's now want to violate that when they've already made absurd profits despite the notoriously mediocre broadband we get here in the U.S.A. These rules will create a terrible historical president.
—Eugene Scalisi, Camarillo, CA

It is important because I am disabled.
—Jeanne Govoni, Middleboro, MA

Net Neutrality is freedom.
—Edgar Chico Bosque, Aurora, IL

Reclassify ISPs as Title II common carriers! Save the free and open Internet! The internet is not for the corporations, or anyone in particular. The internet is defined by the people who use it. Without the people using the internet, there is only a mass of useless websites. The internet must remain free and neutral to optimize the use of the internet and the subsequent evolution of the content, information, and the internet itself!
—Marshall Ross Winkler, Scotts, MI

As a citizen of the United States of America, the internet has become a part of my life. I could never afford to finish college but the internet has allowed me to learn and prosper in my life. I cannot stand here and allow some single individual to propose a bill that will literally kill the internet a I knew it. All of the opportunities I had growing up will be handed over to the future generations as a crippled, stunted version of its former self. It's a tragedy and a travisty and I'll fight in every way possible that I can to have a free unprejudiced internet for as long as it takes. Having a free and open internet is as important to me as my right to vote. If nothing else gets your attention, I hope that does. Please hear our cries.
—Cody Prince, Greenwood, MS

I don't have decent internet to begin with. Anything slower would be near unusable.
—Anthony Zeman, Paw Paw, IL

Hi there, Letting the worlds largest telecommunications and media company, Comcast, create a pay-to-play internet with a cabal of other telecoms businesses would be a catastrophe for freedom, democracy, and everything America pretends to represent on the world stage. Allowing Comcast to merge with NBC and Time Warner was an absolute abortion of reasonable decision-making and has created a giant, hydra-like, many-tentacled monster which our regulatory apparatus obviously cannot and will not contain. I do not expect a sound decision from this body, the FCC, because this body is staffed thanks to a revolving door between big corporations and government. So it's hardly worth saying why Net Neutrality "is" important to me. It was important. And ya'll done fucked it up. Sincerely, James
—James Neimeister, Chagrin Falls, OH

The Internet is the most recent and valuable manifestations of democracy available to Americans. Once again the federal government (FCC) is about to destroy this vital asset for The People and hand it over to The Corporations to so they can increase their profits at the expense of ordinary citizens. I love my Internet as I have known it since its inception, where it is open to everyone equally, as it should be in a "democracy" which we have held up to the rest of the world as an ideal to strive for. Losing "net neutrality" is its death knell. What a pity!
—Jennifer Humiston, Huntsville, AL

Ultimately, innovation is more precious than profit. It's especially more important than protecting entrenched interests. If we'd been too protective of entrenched interests, we wouldn't even have an Internet. The Internet has an egalitarianism about it that is a great leveler, and not coincidentally, an incubator of innovation. If you kill Net Neutrality, you kill that innovation -- which incidentally is driving much of our economy. Bad Idea. Please reclassify ISPs as common carriers.
—Robert Ewing, Ames, IA

It is my livelihood
—James Wilson, Mountain View, CA

I hold a very small subdomain, and without net neutrality even I won't be able to access it. If I can't access my own website, then how will others be able to see and share my ideas? Granted MY ideas might not be the most valuble, someone else might have cured cancer, but couldn't share it because his internet wasn't fast enough, and no one wanted to pay.
—Colum Cross, Albany, NY

I feel that if the public doesn't have Net Neutrality, pricing and access to the internet will change dramatically as we know it, and it will only give these corporations the ability to be able to control further the access and make it difficult for the public to be able to control their access and costs down the road. Ultimately, it's all about control and profits..
—Timothy J. Larkin, San Francisco, CA

The internet belongs to the commons. It belongs to all of us. Stop corporatizing and privatizing our country!
—Chris Baral, Richmond, CA

The internet is a medium upon which people may converse and share information without fear of discrimination. These rules will quite quickly remove the manner in which many people can use this collection of information.
—River Jones, ,

Having a "Gated Community" on the Internet will really kill the average person's ability to get the information they want and need quickly. We don't want to be like China where news is censored, or like Russia where comments about Putin can put you in jail (beginning this fall). A democracy needs an informed citizenry. This system began as a way to communicate when other modes are down, but if we make it commercialized with fast lanes and slow lanes, and restrictions on which sites can be visited, the Internet will lose its place as the "Information Superhighway" and become another mindless gridlock of commercials. Please reclassify ISPs as common carriers.
—Gloria Short, Fair Grove, MO

Please do it for folks. Not for the rich.
—Thomas Langdon, Bronx, NY

It's not right for those with big bucks to get better internet service. Be fair and avoid such bowing to moneyed folks.
—Anne McManus, Bayport, MN

It would also open the internet to political abuses, and allow the internet to deteriorate even as prices for service rise - and the biggest (maybe worst) companies with money could easily destroy smaller businesses. The big ISPs already get away with lax business practices; this would let them take over the country. NEUTRALITY!
—John E. T. Blanchard, Pittsburgh, PA

I urge you to designate ISP as Common Carriers. I don't support your proposed rules.
—Michael Perry, Milwaukie, OR

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Tamara Hazlett, Algonquin, IL

Net Neutrality has served the internet well so far and if we start charging for speed we are going to miss out on so much creativity and worldwide communication. Please keep the Internet Neutral!
—Damon Tang, Farmington, MI

All Americans are depending on you to keep the internet free and open by passing rules that enforce true net neutrality, without providers being able to set up a system where large corporations are able to get priority speeds to the detriment of all internet users. I urge you to do the right thing and reclassify ISPs as common carriers.
—Jon Lay, Rockland, MA

too many big companies already control our communications; this is sort of the last chance!
—Therese de Vet, Tucson, AZ

Just like the telephone networks, information networks (Internet) must be protected from by Government to prevent abuses and to ensure free and open communication for all. Our democracy, economy, and future innovations depend on Net Neutrality -- where all bits are treated equally without discrimination.
—Keith Steward, Framingham, MA

In Denmark and other parts of Scandanavia, the internet backbone is owned/maintained as a public utility. People in Europe and Scandanavia pay significantly lower access rates and receive much high speeds than we do in the U.S. The internet (especially the backbone) is a valuable public resource--which everyone has equal access to and should not become the private turf of a few companies charging whatever they can get. Mr. Wheeler, I know you were a big player and lobbyist for big telecom. But now you are in public office. Your present job is to act in the interest of the public--doing favors for your contacts in telecom only breeds more public cynicism. When your term of office is over, you can always go back to being a telecom lobbyist, but for now--please--act in the best interest of the American people and support and strength network neutrality. Thank you. Jeff Bloomfield Please do so by supporting net neutrality.
—Jeff Bloomfield, Berkeley, CA

The FCC had been regulating the ISPs before the recent federal appeals court ruling without real issue. The court itself said that while the previous regulations aren't technically allowed, it would be fine if the FCC merely reclassified the internet as a telecom utility. The internet is generally considered as a utility in society now anyway, and this reclassification is an appropriate designation. Please stand for common sense. Otherwise, ISPs will jump on this opportunity to make a new (and expensive) market out of the core principle of the internet: freedom. Equal opportunity access, both for those who view content and those who provide it, is required for a healthy online marketplace; without it, the internet would become a much different place than it is today.
—Liz, Winston Salem, NC

I have created several online startups and this would kill us
—Michael Davis, Boulder, CO

As a supporter of independent media creators (and an independent game developer myself), I find it very worrying that in the future the internet may become yet another market in which large, established companies have priority over smaller independent companies due to their superior funds, rather than creative merit. Do not allow the internet to become anything close to the cable TV model; it is not right for a small set of institutions to be the gatekeepers who decide what art and ideas have merit and should be distributed, which is what will happen if ISPs become able to speed up selected traffic at the cost of slowing down the rest. Furthermore, I find it appalling that this important decision is being put in the hands of a former lobbyist for telecom companies, and it is clear from the way that Wheeler is dismissing the concerns of so many citizens and noteworthy internet companies such as Mozilla or Google that he is involved in an enormous conflict of interest over this issue. The clear, heavily-endorsed solution is to reclassify ISPs as common carriers, and the fact that Wheeler continues to side with the ISPs over the people of the United States is proof that he is not fit for his position. Tom Wheeler should be replaced with a true advocate for consumers and average citizens immediately if the FCC is to maintain any amount of credibility in the public eye. After Wheeler has been removed, the FCC needs to impose on itself strict regulations to avoid such a conflict of interest from occurring again in the future.
—Nigel Kilmer, Seattle, WA

I believe that all Internet traffic should be treated the same, so that I can get the service I am paying for at the speed I am paying for, no matter my use, be it gaming, video streaming, or web browsing.
—Mr. Ryan Cavanaugh, Newark, CA

Pay-to-play will kill innovation and entrepreneurship in the last remaining frontier for achieving the "American Dream". Ultimately, internet bandwidth should be regulated as a utility, and available to everyone without discrimination.
—Anthony Koerber, Chicago, IL

This comment is meant to justify that net neutrality is imperative. If we let the of likes of AT&T and other corporations have their way it would be the downfall of the Internet!!!
—Joyce A. ELLS, Oakdale, MN

The Internet is important to me because of the freedom
—Jeremy Zapor, Blue Bell, PA

Freedom of information is at the core of our society. Don't undermine that bedrock principle.
—David T, Kensington, CA

In another time this would be the equivalent of a library having a high priced card that would allow the holder to take any book in their hands to read, and force those with the lesser cards to access them from across the room through a dirty spyglass, turning the pages with a long stick. Full access to the information, communication, and entertainment services of the Net - NET NEUTRALITY - belongs to all in a FREE society. Could it be that the FCC does not support a free society in the United States of America, where we proclaim that we believe in "...liberty and justice for all"?
—Richard Fullerton, Winston-Salem, NC

The net is a means of free speech and should be available to all on the same terms.
—Penny Cragun, Duluth, MN

Net neutrality is important to me because it means the corporate world does not get the final say on morality. As long as we have a neutral internet, we can know that truth is not being obscured by money.
—William Weiler, Hyattsville, MD

The internet represents everything that America has stood for since our Declaration of Independence. The internet is a community of flowing creativity from all alround the world that will thrive best as it currently is, available equally to all of us. Any reatriction on that infinite flow of creativity will bring that flow to a much slower trickle. As a student, I don't want to make my way into the world with restrictions on how I connect to the rest of it. Thank you.
—Peter Talbot, Culver, IN

Net Neutrality is important to me because I do not wish to be under the thumbs of companies who wish to charge whatever price they wish. It also helps small start up who does not have the money to have the same playing field as the bigger ones.
—Phuc Nguyen, San Jose, CA

The internet's indifference to my socioeconomic status has allowed me to learn, grow, and do more than I ever could have imagined. Net neutrality means that this amazing network of knowledge and innovation can continue to grow and provide opportunities to people of all classes, races, and ages around the world. Please do not let the special interests of a select group of organizations destroy the future for billions. Please reclassify ISP's as common carriers. Please, the future literally depends on this.
—Stephen Surace, Norwalk, CT

Net Neutrality is one of the last bastions of free speech remaining on Earth.
—Annabel Fogel, Oceanside, CA

This matters so that EVERYONE has the same opportunity! It is NOT about giving the big telecom companies an even bigger license to make more profit.
—Malcolm Wellington, ,

Giving an unfair advantage to large internet companies goes against the spirit of democracy. Please do not get rid of net neutrality!!
—Leah Hunter, Tallahassee, FL

Internet access is a utility, open to all on the same terms! And it should remain so.
—Hilary Beattie, Brooklyn, NY

it allows for open and free markets
—Kelley Caudell, Williams, OR

Keep Net Neutrality!
—James L. Holman, Lombard, IL

Freedom of speech is important! With the decline of printed news, it is all the more important for NET NEUTRALITY to be enforced so important new and fresh solutions to economy and other issues be shared without bias constraints that would exist without NET NEUTRALITY!
—James DeShong, Fort Myers, FL

My daughter has a small business that depends upon Net Neutrality in order to survive.
—Karlene Gunter, Rochester, NY

Individuals already face the realities of wage slavery and a growing (ever more difficult to surmount) gulf between the moneyed and the poor. Destroying Net Neutrality will widen not only this rift, but the intellectual gulf that has also been growing between the social classes in this country. The internet must remain an open source of information, free of corporate or political favoritism. This (very American) ideal has already suffered numerous blows. Fewer and fewer options remain to the majority of the American people to earn some kind of life for themselves in the States, and restricting their access to an open internet will only worsen an already egregious disadvantage faced by the poor. "Free country?" What a joke. Stop attacking the few liberties that remain to individuals regardless of their economic status, and leave the internet alone.
—Hazel Jones, Austin, TX

The intermet should be the same experience for both the rich and the poor. Stop catering to ISP lobbiests and actually do what is right for the American public! Corporations will not "do what is right," they will do what makes them the most money. The FCC is supposed to be regulating fot the benefit of Americans, not working to make sure the ISPs can bleed us all dry for access to the internet.
—Miss Jeanette Brown, Reno, NV

Net neutrality is the best thing about the net. Let's keep it that way!
—Gayna Uransky, Garberville, CA

Because the net is the only place we can find honest information that is not messed up by the greedy corporations. It's all that's left of our vanishing liberty. Please do not keep this horrid rule. Treat the internet as a public utility, please.
—Hugh McFadden, Bozeman, MT

Due to the rise of 24 hour news, the quality of national debate has entered rapid decline. The internet is the last open forum for discussion of all ideas, without regard to personality politics. Please protect or right to assemble and organize online by classifying isps as common carriers.
—Logan C Belew, East Canton, OH

Our democracy is at stake. You are a traitor if you sell us out.
—Michael J Nolan, Carbondale, IL

I really want at least one section of the government to be FOR THE PEOPLE. At least one part of the government to not be corrupt. Just one governmental body not to bend themselves over the barrel and lube them selves. Please, work for the people, not for the corporations that spit on the American flag for a few extra bucks.
—Anthony Munger, Phoenix, NY

Don't let big business take over the internet.
—Floyd Van De Vere, Monterey, CA

I sam 80 yrears old and re;y on my computer for many things and conveniences, and I cannot afford any extra expense in using my computer and am therefore fearful that the big communication corporations will do just that.
—Elizabeth Koundakjian, Cambridge, MA

Don't let Internet Service Providers would become the “gatekeepers of the web." Your proposal is not favorable to small business.
—John M. Lara, Wichita, KS

to the hell with We The People, it's all about the money. so what is your kick back for no net neutrality Mr. Wheeler?
—Steve Thorne, Nampa, ID

It is important that we not hand more power to a few mega-corproations
—Karen Smith, Aripeka, FL

Do right by the consumer!
—William Lawn Jr, Marmora, NJ

The Internet shouldn't be divided into slow lanes and fast lanes. That will only serve the few (corporations) while the many (innovators) will be shut out of the ability to learn, read, grow, create and change the world for the better. Technology shouldn't be taken from the masses in an effort to control content and create revenue for companies who haven't kept pace with the evolution of the technology. Doing away with net neutrality could be the action that prevents someone with few financial resources to be able to create something that could be as powerful as the polio vaccine or an energy source that saves mankind. Please keep the Internet equal and open for all.
—KD Armatrading, Phoenix, AZ

I run my own small website. Without Net Neutrality, I have no chance in competing against large corporations.
—Jerish Brown, Los Angeles, CA

Let the market - not the ISPs - decide the winner and loser web sites and blogs.
—Steven Chesney, Brooklyn Park, MN

This has all the earmarks of a Monopoly as the giants consolidate and squeeze the people out of OUR internet. This has to stop NOW!!! FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—James Sisk, Pembroke Pines, FL

Monopolizing the internet to this extent is just WRONG! This time, corporate greed has really gone too far. This plan will do nothing but ruin communication and add expenses that weren't there in the first place. The open internet is one of the few things we have to connect to the world. Can we really afford to lose it all just for money?
—Brittney Wilson, chicago, IL

The internet has become more like a public utility that everyone needs instead of a special service used by only a few people. It must be neutral and impartial for all users, and not be faster and better for those more economically advantaged than others.
—Daniel Amstutz, Greensboro, NC

The internet is NOT a service that should be divided up for the rich and taken away from the less effluent. Everyone who uses the internet should have access to the exact same speed on the internet, and should be required to be provided at competitive prices, not inflated prices determined solely on the whims of the service provider. Any other action taken by the FCC is an abuse of its powers for the benefit of a minority of filthy rich companies.
—Daniel Hulseapple, Middletown, NY

Our country's talent, intelligence, and creativity depend free and speedy and equal access to knowledge and information. Please do not make these unfair changes!
—Jane Mann, Saint Paul, MN

Net neutrality is the only way to ensure that the internet remains the open and free communication network it is intended to be.
—Joel Watt, Hannibal, MO

Too many potential governmental restriction which users of the net do not like or want..
—Ronald Miller, ,

The Internet is one of the greatest achievements in human history; it initially was intended to be a world wide form of communication, and it had evolved into that and so much more. It's become a place where ideas can be shared, dreams can become reality, where theories that were once considered crazy or impossible, can be proven. The freedom of the Internet has made it possible for companies like Amazon and Google to be created, is made it possible for ANYBODY to be able to create their own company, invent products, and for someone who was once poor to be able to become rich. If you stop that, if you make it impossible for these amazing and revolutionary things to even happen, All of you will be remembered for that, as the people who helped to kill the American dream, the people who proved that the government no longer represents the people. So, along with millions of other Americans, I implore you to do the right thing, preserve net neutrality, so the ingenious and creative things Americans are known for can continue to be made. Thank you.
—Quentin R Holmes, Denver, CO

Why are you messing with something that works.
—James Myer, Sealy, TX

All income levels need equal access or wealthy users will dominate it to the detriment of less wealthy, and often more creative users.
—Patrick and Sigrid Huston, Portland, OR

As a small business owner, I think it's important to have a level playing field in order to compete with larger businesses.
—Demarcus Bowser, Southaven, MS

Everything should be treated equal on the internet just as in life. Do you remember the "Separate but equal" policy set for African American? What makes this any different. There should be no discrimination among data on the internet. KEEP OUR INTERNET FREE!
—Jason Neal, Kaufman, TX

The newly proposed Internet rules hinder the use of the internet for many of us. Please keep Net Neutrality and protect the open Internet!
—Laura, Edinburg, TX

This is the last bastion of free speech in the United States and should not be touched in any way, shape, or form.
—Arthur Braunstein, Kingston, NY

I need unbiased information more than people who can pay lots need to indoctrinate me.
—Patricia Blochowiak, East Cleveland, OH

The internet does NOT belong to large companies of hypocrites. The internet rightfully belongs to the PEOPLE. The CITIZENS.
—Murphy Thibodeau, Barboursville, VA

I depend on Net Neutrality and because I choose to live on a farm and grow food for my fellow Americans If your plan goes into affect I wont even have internet. My Husband is a National Guardsmen taking online classes to further his ability to help this nation and if your plan goes into affect he wont even be able to take those classes. Don't take my internet away simply to out more money into the pockets of big company's like AT&T.
—Lola England, Saint James, MO

Because the internet is not controlled by big corporations
—Andrew Sertich, Wood River, IL

Net Neutrality is important to me because it allows me the freedom to navigate the internet as I choose and not allowing the use to be dictated or having to pay fees for its use. Don't we pay enough???
—Tamara Yilla, New Orleans, LA

I am 86 years old, on fixed income, and need my computer. Please reclassify ISPs as common carriers so I can still access what I need to make life bearable.
—Jeanette Davis, Winston-Salem, NC

Tom Wheeler has responded to previous petitions to protect the open internet with assurances that he would do just that. It seems these were empty promises. Do not allow this duplicitous shill to determine the fate of the most important technology of our time.
—Ernst Adrian Henle, Eugene, OR

because theirs more to the internet than business
—Andrew Kroese, Lincoln, NE

Freedom belongs to everybody and not into the hands of a few.
—Barbara Seigerschmidt, Whittier, CA

It should be obvious!
—David Di Gioia, Evanston, IL

This proposal is another example of give it all to the "big guys" and forget about the effect on (little guys".
—Bernadine Hoeft, Milwaukee, WI

Any situation where large companies are given the ability to control the way a public system works should be cast aside. The internet is not a place for monopolies. The internet is a place where information can be, and should be, shared openly and unrestricted (in accordance with copyright etc). This is the driving principal, behind the internet's inception. The proposed ruling is a drastic and unfortunate step in the wrong direction. We already pay these companies enough. They simply want to bolster thier revenues so as to ensure their continued domanance. This is not what our country was founded upon. Companies are supposed to be regulated and swayed away from organizing monopolies. Monopolies along with corporate control, lead to lazy business models. Lazy businesses do not innovate, and are not concerned with the interests of thier customers. Do we really want to hand over control to these types of people? I firmly denounce the current FCC proposed ruling, and require an immediate re-evaluation and re-examination of the impact of such control on We the People. These companies have been wining battles for years, it's time they lost the only one that matters.
—Devon Stern, San Francisco, CA

Do the right thing-- the internet is a pillar of democracy and should be classified as a common carrier since it was developed using PUBLIC MONEY!
—Julie Edgar, Bethlehem, PA

To create "fast lanes" and "slow lanes" as AT&T, Comcast, and Verizon would so love to do would be to block all the sun a plant receives: you might as well stop watering it because you're giving it a death sentence by your other action. The Internet has been one of the greatest innovations the US government has introduced to the world, to allow service providers to privatize it and charge premiums for speed would follow the same path that privatizing our rail systems did: in an area we once led we'll be behind the rest of the world in terms of speed and innovation and no one will benefit. Japan and Europe are already leagues ahead of us in terms of high-speed rail, are we going to surrender another of our innovations to the rest of the world. The free and open internet must stand, and the only way to do that is to classify ISPs as common carriers.
—Devin Henry, Nichols, NY

Dear Federal Communications Commission: FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Damian Floring, Salt Lake City, UT

Allowing the ISPs to put what are essentially tolls on the internet will benefit absolutely NO ONE but the ISPs themselves. The negatives would affect everyone else. This cannot be allowed to happen. A free and open internet is essential to our country's future.
—Matt Grabczynski, Maspeth, NY

The internet as we know it today was molded and shaped by entrepreneurial small business. Mr. Wheeler the internet belongs to all and the consideration of lining the pockets of big business and those who undoubtedly are sponsoring you in some manner has far reaching consequence. The business that will benefit from the changes you are considering already benefit largely. Leave the net alone and please cease this pursuit.
—Michael Denham, Portland, OR

Because it is a great way to connect with people worldwide and to also find other stuff easily. The FCC needs to stop trying to take control of the internet and let us have the freedom to do what we want to do.
—Seth Bailey, Charlestown, RI

Net Neutrality if done right can ensure a free and open internet. Sadly it hasn't been done right quite yet, and the rules currently up for consideration are not making it any better. I know the large internet companies have teams of lawyers saying that "it's not fair" for their companies. Of course, what they really mean is "we can't milk the US population for everything they're worth by restricting access with these rules" but I digress. You really have to think, not what is really good for the companies. But what is good for the entire U.S. population. This is not some product that your trying to make rules for. This is a means of communication, freedom, and knowledge the likes of which the world has never seen before. There is a wealth of information that can be found on it, you can set up rally's, create a business, find love, get married, do live performances, talk face to face to a loved one across the world or even in space, create works of art, find works of art, educate others, learn about anything you can find, share your passion with the world. I personally would not have gotten through college, had it not been for the openness of the internet. Nor would I have found any of my jobs, or met any of the many friends that I have. I'm sure there are hundreds of millions of people including yourselves who would also say the same and more. The internet is not just some object, it is much more than that. The internet is a digital version of our lives. It is no longer something that is a commodity. It is a necessity that will only blossom more as time goes on and will make the world a better more educated and loving place, as long as it well kept and given plenty of room to grow. Please, for the love of God. Do not give in to the large internet companies looking only to make a ridiculous profit by using underhanded discriminatory tactics. Protect our open internet, to ensure it's bright and radiant future. For the betterment of the world.
—Jason Tenney, Kentwood, MI

As a retired computer scientist, I encourage you to adopt net neutrality. It is critical to maintain a free, unlimited transfer of information for educational, corporate, and please uses. The provides of the transfer mechanism should be classified as common carriers. They can then compete with other content companies, but should not be able to block or change other companies content.
—Gary Carson, Westminster, CA

The Internet should remain, or return to, utility status. The two-tier system is inherently unfair and the administration of a two-tier system would impose unfair hardship on service providers who have lesser resources than the major ones, thereby concentrating even more power to the big guys.
—Ross Chamberlain, Las Vegas, NV

There are far too many people for whom access to news and information is already limited. By allowing ISPs to discriminate between who gets access to what based on finances you are further alienating a large number of the U.S. population.
—Sondra Loucks Wilson, Grand Rapids, MI

Open communications are necessary. We need somewhere where someone does not have an agenda, is not buying and selling us. Do not take away net-neutrality!
—Kathy Roberts, Dulce, NM

Ending Net Neutrality does not serve the public interest! It increases the gap between the haves and the have nots by making information a commodity, one that the have nots already can't afford.
—Raymond Kalas, Knowlton, NJ

We already have a country hobbled by economic inequality. To create the solutions and cooperation needed to survive our global problems, we must have the free flow of information. The internet is that source for most of us.
—Dawn Kimble, Boulder, CO

Net Neutrality may well be the only means by which "we, the people" human can be heard over the den of noise enabled by massive amounts of cash being poured into our political system to influence elections and those elected. Corporations are not people or even places -- they are things -- legal and tax constructs -- a tool to enable some of the greediest of the wealthiest among us to avoid personal liability for their actions. Money is NOT free speech. Some cash in an election is a megaphone being used to shout down the voices of others, but the massive amounts of cash now being "INVESTED" in politics (think Koch brothers, et al) is a super stereo surround sound system that all but drowns out the individual voices of the majority of US citizens. Maintaining Net Neutrality is the last best hope to fight off this impediment to the voices of the majority being heard now being used by those who desire to enable economic tyranny of the few over the many.
—LW Dodd, Mount Airy, GA

Let's have no more sloppy logic when it come to handling net! Net Neutrality is the only way to go!...
—Steve Walsh, Gresham, OR

Discrimination of this kind is not what our democracy is about. Urge you to reconsider. Throw out your rules and reclassify ISPs as common carriers.
—Shirley & Stanley Romaine, Great Neck, NY

There are two reasons I think net neutrality is vital to me, and to America as a whole. 1) without it, American internet companies will be at a significant disadvantage. There's a reason companies like Netflix and Google are for net neutrality. Without it, America's lead in internet services will be lost. All to benefit a handful of companies which are functional monopolies. However, the second reason is even more vital. Democracy depends on communication. Tiered internet service, depending on work-around, will erode the robust conversation the internet enabled. I, like most Americans, don't have a choice of carriers. That's not a free market. It's not a market that will take care of itself. The UK has internet competition because they classified common carriers. As a result, they have faster, cheaper internet that no company or companies dominate. It's better for business, and its better for democracy
—Samuel Crockett, Chicago, IL

Net Neutrality is important to me because I have a wide range of interests on the Internet. I like websites from Amazon to indie small websites like channel101.com. Since everyone has easy access to the Internet, it should be regulated as a public utility just like water or natural gas. Fast lanes and slow lanes are unacceptable in this high-tech day and age.
—Angela Miller, Lambertville, MI

Net Neutrality truly helps make sure ALL voices are heard, and makes sure ALL Americans have equal access to the internet whatever their financial situation. A truly open internet is ESSENTIAL to DEMOCRACY.
—Joan Stigliani, Albuquerque, NM

My ability to carry out research and reach patients abroad depends on the internet. Restrictions as to speed are a disheartening threat to ready access. Nora Klein, MD
—Nora Klein M.D., Houston, TX

I am an artist and small business person. I must have the free flow of the Internet in order to stay connected to the world.
—Nina Flowers, Renton, WA

The internet is a place of vast information and freedom. There's a reason it has been untouched for years; because it works without being tampered and blocked. Please, in the name of Nyan, Doge, and Helix Fossil, keep the interwebs free!!!
—Robert Gilbert, Miami, FL

Freedom of speech on the internet REQUIRES internet Neutrality!
—Maureen O'Neal, Portland, OR

Neutrality is the BASIS of the internet and it's role in the world today. It should NOT be in the hands of individuals or individual companies to control it. It should belong to, and be a part of, the freedoms that should be available to US citizens in this day and age.
—Allen Holloway, Phoenix, AZ

The Internet gives the average person a chance to start their own retail store, magazine, encyclopedia, production studio, arcade or even a combination of them all. A few weeks before the proposed Net Neutrality rules came out I had just bought my first domain. It was so disappointing to hear that companies would be able to an "Internet fast lane" as most news outlets are claiming. It was even more disappointing to see how little the Chairman seemed to care about the interests of American citizens. The internet needs to be as neutral as possible. Which means no one should be able to pay for an advantage at the expense of others.
—Rafael Alexander, Bellingham, WA

Internet must be a public utility.
—Donald Holden, Cartersville, GA

Wtf is your problem Wheeler? Did you truly jump to the dark side? Or is this some diversionary attempt to meet in the middle at the last second?
—Gregory Frassetti, Briarwood, NY

Enough with the privatizing of US! Internet is free access to the web! Stop the theft of our internet!
—Charlene Boydston, Pahrump, NV

Represent the common people and not the corporations!
—Patricia Boland, Paauilo, HI

Yes, I really do depend on net neutrality, and so do *You*, even if the solicitors are telling you otherwise. I hope you'll preserve the precious POWER that net neutrality brings to American Innovation and Can-Do.
—Karl Olsen, Louisville, KY

Internet is basic and extremely important for my profession, I'm a teacher!! There is no other tool more powerful for educating populations on a big scale and with lower prices. If we want humanity to live better and improve this world, we need free Internet for better education.
—Lucy, ,

Net Neutrality is the only way to make sure that fair access is allowed for everyone who desires to be on the Internet. There's an old saying that also applies here. "If it isn't broke, don't fix it." The Internet is NOT broke and Net Neutrality has provided trillions of dollars of economic opportunity across the world. The FCC should throw out its new rules, and reclassify ISPs as common carriers.
—James K England Jr, Saint James, MO

If I don't have to pay for faster phone calls why should I have pay for faster internet. The internet should be open to all, especially for those who can not afford the best. It is a learning tool for many students and they should not penalized for their parents inability to afford better internet speeds.
—April Hoffman, Clovis, CA

We need equal access to all information.
—Rachel Herbener, Evanston, IL

The internet is a major form of communication. It should be classified and regulated as a common carrier. I want all the sites I access to be treated the same way, not some fast and some too slow to be useful. The sites I use most would end up in the slow lanes. If the internet is to be provided by private companies and not the government then it needs to be regulated so that everyone gets the same treatment.
—Theo B. Giesy, Norfolk, VA

Net neutrality is the only way to keep the internet fresh and innovative. We sadly lack any real competition in most parts of the country. Please reclassify all ISPs as common carriers
—Pat Kennedy, Spokane, WA

Because, again, the large corporations are taking over our world and we need to keep a free press for the common people. I am already being profiled for every purchase I make and web site I go to. We have to have Net Neutrality!
—Kathy O'Brien, Redway, CA

The internet should be regulated like a utility to ensure that there is equity for all in terms of access. Corporations should not have free reign over something created with taxpayer money.
—Michelle Martin, Franklin, WI

The internet is NOT an entity for the government to control!
—Mrs. Ashley St. Pierre, Pflugerville, TX

I believe that the power of the internet lies the medium's capacity to connect anyone with anyone anywhere any time in a free and open manner. The internet of this moment only requires a small fee in order to use it--internet connection, computer, etc. A two tiered internet, as the FCC proposes, would ruin the internet as we know it, and undermine the very thing that makes the internet so powerful--the freedom to connect with anyone anywhere.
—Alie Fofanah, Eugene, OR

I don't want to be the one left in the dust with this slow internet. I cannot deal with that. This is discrimination because my family cannot afford to pay for even more. This is not fair to those who have the internet but can barely afford things. This is by far the stupidest thing I have ever heard since SOPA. Internet users will begin to stop using the internet if you decide to follow through with this plan and not listen to us. Because we're just people, we obviously don't mean shit to you. We're obviously nothing to you. All you want is even more money, money to keep away from people that really need it. Just drop this entire thing and listen to us. We will not succumb to this idiocy. We will never stop fighting.
—Wynter Mendez, Saint Michael, MN

The networks that provide access to the Internet absolutely are and should be considered common carriers. To not allow them the protections as such puts far too much control over both the flow of information and the ability to innovate and compete in business into the hands of a very small and shrinking number of companies. We cannot rely on promises made by ISPs that are already being shirked by unnecessarily clogging their networks until ransom payments are made. Content owners should not have to pay to access customers that have already paid a fee with the promise of certain bandwidth speeds and unfettered access to whatever content is available on the Internet. To allow ISPs to demand additional payments from content owners betrays the promise already made by the ISPs to their end users. The possible and increasingly likely extinction of other means of access to news and information such as broadcast television, radio, and print media make the importance of ensuring free and unfettered access to ISP networks and the information they carry not only important for business innovation and fair competition, but vital to the health and vigor of our democracy.
—Kevin F Shively, Trumbull, CT

No fast lane, no slow lane, just one lane....for all. We demand that you do what is right for the American people as well as for the economy and continued innovation.. Designate ISPs to be common carriers!!!!!!!!!!!!!!!!!!!!!! !!!!!!!!!! Harry Burcher Capitola CA
—Harry Burcher, Capitola, CA

because discrimination between those who can afford and those that can't.
—Andrea Olandag, Pinole, CA

Since you have no concern for the general public I will have no concern over how much money you and all those that don't support net neutrality have to gain with this. So I will dedicate my time to spread the word and make sure that every congressman that supported this is known and immediately voted out. \
—Vanessa Magarino, Concord, CA

THE INTERNET SHOULD BE A PUBLIC UTILITY! END THE RACKET! PROTECT THE AMERICAN PEOPLE AND MAKE THE INTERNET A PUBLIC UTILITY.
—Manel Saddique, Los Angeles, CA

Small businesses (I really mean micro businesses, like Mom and Pop, and work from home Moms) would be severely impacted by disasterous two-tiered Internet. The Internet has opened great avenues for us all. We must all be equal. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Michal Bouilly, Camarillo, CA

Please reclassify ISPs as common carriers.
—Hal Chambers, Chicago, IL

PLEASE DO NOT!
—Bakermanb@yahoocom Baker, milton, NY

Net neutrality is critical for future innovation and economic development
—Ray Kaplan, Bogart, GA

Because net neutrality offers me a great chance to offer my viewers great quality streaming entertainment for long hours if this goes on i will be out of a job as my isp will start capping my bandwith and throttling me
—Robert Brevard, beltsville, MD

Allowing ISPs to effectively throttle Internet traffic will impact the open, free (as in "thought" and "speech") exchange of information and innovation on the Internet, as these companies will do because they are beholden not to these ideals but to the almighty dollar and their share holders. Because they have a special interest in slowing all traffic unless payments are made by the deliverer and delivered (per Helgi Walker, Verizon lawyer "my client ... would be exploring [a two-sided market]", Verizon v. Federal Communications Commission, 11-1356, U.S. Court of Appeals for the District of Columbia (Washington).). Reclassify them as common carriers so that it's at least HARDER for their special interests to limit my access to what I would like to see, or not to see.
—Zach Hatch, Boise, ID

is time to fire Tom Wheeler for being a traitor to the people, at least fired him...not time to put him against the wall yet.
—Nando A., des moines, WA

I think we need to tell Chairman Wheeler that he needs to change his mind & come out to tell the public we demand that the internet is for the public interest, not for the corporations. I know there might be some politicians & CEO's laughing about approving discrimination, but these new rules don't go far enough. We need to tell the FCC to fight back against. We know it's an election year & if the Republicans take back the Senate & keep the House likely, this could be another death knell for our Democracy. Please tell Congress to tell chairman Wheeler that these rules a mistake for the American people & that our internet shouldn't be privatized.
—Derek Gendvil, Las Vegas, NV

Net Neutrality is completely necessary to insure uninhibited, non discriminatory acess for all citizens to the Internet. Do rhe right thing, and fix the classification.
—Dan, Saint Paul, MN

I don't have any choice in Broadband provider. Your discussion could raise my cost !
—Michael Molder, Newberry, SC

Please reclassify internet service providers as common carriers so as not to end Net Neutrality. It is very important that all internet users are on a level playing field with no favorites. Thank you for your consideration for the average American citizen.
—Jean Dahlheimer, Hamel, MN

We can't live in the fantasy that consumers have a choice in their providers. Regulation needs to happen. Citizens need help.
—Wyatt Tigert, San Francisco, CA

The Internet is an amazing creation. There's never been anything like it before -- we've been able to watch as the entire world communicates, without limits, and to see what humanity (not just bits and pieces of it) comes up with as a result. To regulate and to restrict that would be the death of this grand experiment and all the future things that may come of it. We need this, especially as Americans. The Internet is the one place where the American Dream still lives. With enough luck, knowledge, or ambition, anyone who can access a computer can find a way to make it online, and it should stay that way. The new regulations would make it easier for those who already have to get further ahead...just the way it is everywhere else. Please, let the net stay open and free. It is far more valuable to everyone as it is now.
—Molly Lemke, Camp Hill, PA

It is absolutely unacceptable for Internet service providers to have control over the content their customers access. This is a violation of our freedom of information. Allowing big businesses to impose what is essentially censorship on the people of a nation is a move worthy of a dictatorship, and it is downright unconstitutional! Furthermore, a fast and a slow lane would only exacerbate the gap between rich and poor. America stands for FREEDOM and EQUALITY. If you allow this violation of our principles to stand, you are betraying our country.
—Felicity, Forest Grove, OR

Please call it a utility and regulate as such. Many people on fixed incomes need the internet for ordering meds and other business transactions. Small business needs it too. They can't afford to have to pay more. This could have recessionary effects to two-tier the internet.
—Jane Mahoney, Oregon, WI

Internet access should be a utility with suppliers classified as common carriers. Compared to the rest of the world, our broadband system basically sucks.
—Michael Monteleone, APO, NY

I understand that the goal of the large ISPs is to extract as much money as possible from the public. Since they have an oligopoly on Internet access, they should, however, actually provide a NEUTRAL service, as Canada regulates, not a gross sludge fund.
—Kerry Crouse, nashua, NH

Chairman Wheeler, I know how easy it must be to become submerged in the politics amd power of Washington DC. I have grown up in Oklahoma and Texas and have never been in politics nor have I had to contend with all of the extremely powerful forces that you deal with each day. I can assure you that I strongly believe that you are doing your best. But, sir, you must see that the special interests are wrong on this issue. It is imperative, for people like me, that all ISPs are classified as common carriers so that the average citizen has equal access to the Internet. Special interests did not conceive of, design or produce the Internet or the Web. People like me did that-and they did it for the good of society. We know what the right thing is-please just do it.
—Mark Mark McFarland, Austin, TX

An open internet is likely responsible for the development of countless new technologies, which would not have developed with paid prioritization. As we strive to progress as a nation, we seek to expand accessibility to the internet such that it is ubiquitous, like other utilities. To achieve this, we need to ensure there are no artificial barriers to internet access and capabilities provided through the internet. Reclassification protects the consumer and promotes economic growth.
—Charles Galyon, Knoxville, TN

The internet was designed to belong to everyone, not only the rich. Keep it that way.
—Susan Lozano, Kelseyville, CA

Please stop the attacks on Net Neutrality once and for all by reclassifying the Internet as a common carrier.
—Edwin Philbrook, LATHAM, NY

A free and open Internet is important for independent businesses, as well as to anyone who wants to read unbiased news that has not been sifted through the filter of our mostly-corrupt media sources.
—Dianne A McDowell, Eaton, NY

Don't discriminate!!
—Kathy Colton, Cedar Rapids, IA

We need the internet to provide a clean, unfiltered source of firsthand information to people across the world. Limiting it in any way is the equivalent of censoring society.
—Saba Dunbavan, ,

Net Neutrality is vital to keep the internet as a basis of democracy.
—Gloria Gaspar, ,

An open Internet with a level playing field is important for a democracy. Otherwise,it is the corporations that will dictate what we watch,or the size of our wallet.
—Victoria Crampton, Bozeman, MT

We need access to all information equally! Anything else amounts to censorship!
—Patricia Ann Liske, Falls Church, VA

I care about Ne Neutrality.
—Michael Burton, Emeryville, CA

Please keep the internet neutral and keep the important principle of net neutrality.
—Darryl Nordstrom, Honolulu, HI

It's freedom. Equal freedom. They want to destroy that for more wealth. True capitalist, that's evil.
—Eric Torres, New York, NY

Net neutrality is a big issue with me as a private citizen, a retiree living on a fixed income. If you allow rampant discrimination on line then you set all of us up for unfair and greedy rate hikes. Sure, they say one thing now, but later they change their minds, voices, positions. I want a free internet. And unless you are being paid by some pac or lobbyist, then you want a free internet also.
—Bill Hamilton, Wichita, KS

Why are you all bent on the Destruction of AMERICA!!! Is money that important??!!
—Rod Steskal, Clay Center, NE

Government by, for, and of the people. (No corporations mentioned anywhere in there...)
—Tim Talbert, Cedar Rapids, IA

The People overwhelmingly support Net Neutrality and a few corporations oppose it. Who are you working for?
—Paul Deeter, Keaau, HI

Please let the common person have equal access.
—William Jaskowiak, Eau Claire, WI

Chairman Wheeler, The internet has become in many places around the world the only instrument of free speech. This freedom is one of our most basic rights in the United States of America and it MUST be protected at all costs. Regulation of the internet is a huge step in erasing that instrument like it is in China. The FCC must keep its hands off the internet even under the pretense of business regulation. The internet was created to allow the free flow of information between people and institutions. It MUST remain as such.
—Fred Barthell, Santa Maria, CA

I support non-profits and ending net neutrality would destroy them.
—Houston Wong, Kirkland, WA

I as an American value Net Neutrality as the only way to have even a slight chance at getting back our democracy from the corporations that run it and you now.
—Steve Adler, chicago, IL

Please pay close attention. Thank you.
—Patricia Byers, Kingman, AZ

A single, self-serving company does not have the right to dictate allowable content and its worth to its customers. The company is there to provide a service, not filter the service for the customer. ISPs should be reclassified as common carriers.
—Dana Lopez, Rochester Hills, MI

I get so disgusted that absolutely every facet of life in the US turns around the almighty dollar. The internet is a tool for the world, with all due respect, stop trying to make another #$%@* dollar.
—Margo Hamilton, Sonoita, AZ

After years of dial up service in the slow lane now the FCC can let the ISP put the breaks on the system so they can charge more for high speed connections is not net neutral in any form.
—Lee Terbot, Colorado Springs, CO

I use the internet as a utility. It replaces my phone in some instances, I use it's FaceTime feature so I can see as well as talk tomy kids and grandchildren, who live half the country away from me. Without true neutrality, our connection will in the slow lane, which will spoil the experience. Why should I be confined to the internet sites that the highly profitable ISPs decide to deliver on the fast lane? Their political and social interests may vary substantially from mine. The two lane approach opens the door to political "Big Brother" who feeds us the information that they want people to see. You can prevent this, by favoring the interests of we the people, rather than the interests of wealthy and powerful corporations.
—Kent Wilson, Glenview, IL

Allowing ISPs to to force us to pay extra fees or suffer slower service is like letting a power company force us to pay extra fees or only power half the lights in our houses. Also, Net Neutrality allows new small businesses to compete on the same level as established businesses. I don't want to see innovation stifled by an ISP's greed.
—Daniel Ladror, Chicago, IL

Freedom should be for all and not controlled by any entity regardless of what form. Internet providers are carriers and nothing more. Why is our government allowing it to be controlled by corporate giants? The internet should stay free for all and ISP's should be a carrier as that is all they do, they carry the signal.
—charles Sloan, Rocky Point, NC

Big money owns the TV News & the newspapers - freedom of speech is more about who can have pay to have their "truth" (if you can even call it that) shouted the loudest & the most. The internet is the last refuge of the free. Don't let big money take that, too.
—Marni Wilson, Albuquerque, NM

Net neutrality is of critical importance to American citizens, commerce and innovation. I pay for Internet service at a particular speed and I should be able to use that service to access to content of my own choice without interfence, interruptions, or slowdowns caused by Internet Service Providers.
—Mitch Voehl, Eagan, MN

We need access that is equal for all to important information online.
—Sandra Zylberman, Owings MIlls, MD

I want the internet to stay available to me, not just the businesses.
—Richard W. Thrower, Spokane, WA

Remember free speech? It applies to EVERYTHING! When you mess with free speech, you're messin' with ME! Quit your ass-kissing to the corporates!
—Julius Rasmussen, CLOVIS, CA

We all need equal access to both large businesses and small businesses, corporate media and independent media. Without equal access to both, innovation and communication will effectively wither and die.
—JT Smith, Sellersville, PA

I don't want the big Internet company to be able to control the Internet and make us pay more. It cost enough as it is. They should not have control. Thank you for your time. Michael Mariarossi
—Michael Mariarossi, Plant City, FL

Allowing ISPs to play favorites is like allowing the DoT to play favorites. Imagine it every Walmart had a highway, but every mom and pop shop was forced to build on an unpaved, single lane road. That's what the end of net neutrality will do. The big sites will be able to pay for a fast track, but all up and comers won't. It would mark the end of any true competition on the net. Companies won't have to buy their competition anymore, just pay the ISP for priority and watch the competition crumble.
—Brandon Allendorf, Columbia, SC

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Bryan Yarberry, berwyn, IL

In the digital age, this is the best easiest statement government can make that it represents the people (not corporate personhood) and it's not just about democracy, it's about what's good for the sustainable furture of America and American ideals.
—Chuck Jaffee, Grass Valley, CA

don't control our internet freedom we face enough discrimination in this world
—Mandy Croft, ,

Equal access means broader development and greater democracy for all
—Irving Lee, New York, NY

With the net providers buying the best Congress money can buy, let us do something novel like ensure there is adequate competition to benefit the consumer and the world in general. The internet is a utility and should be heavily regulated as such to protect the consumer.
—Don Ely, Tacoma, WA

This flies in the face of EVERYTHING about net neutrality. The internet being free and EQUALLY prioritized, no matter what sites you're visiting, is one of the best things about it. This will quash new businesses trying to start up, especially social media businesses. Internet access is A PUBLIC UTILITY and it should be regulated as such.
—William S Irvine, arcata, CA

Net neutrality is important to me because all internet traffic should be treated equally. Packets should be equivalent to water or electricity. Discriminating with "fast lanes" (or any other throttling) will fundamentally change the internet and will negatively affect current and future generations. Let's progress not regress!
—Zachary Saunders, Springfield, MO

Democracy depends on equal access to information, not for those who can afford it.
—Andrea Lieberman, Los Angeles, CA

Net neutrality is freedom of speech and freedom of expression, it is inherently wrong and more than likely illegal to require the use of those rights to sit behind a paywall.
—Brandon Doss, Carl Junction, MO

We deserve a free and open internet, without net neutrality corporations willl be the dictators of our internet.
—John Paul Markham, Princeton, KY

I use the internet for work and school. If it is throttled back based on the sites I use or the searches I preform, it will not only anger me but will also take away from the service I pay for. If it is bad enough I will look into lower cost or free solutions.
—Ron Morgan, Lexington, SC

Please don't take away the last place where race, class, or sex have equal freedom.
—Elizabeth DuPree, Adel, GA

At the beginning of our great experiment [Democracy for the western hemisphere], our then citizens believed and stated that a dynamic, free and independent press was absolutely essential to success of our new democracy. The same principle is true today. We remain in monumental need to an independent and free media, our internet. To succeed and evolve, our Democracy needs a media free from government and corporate control. Please act to reconsider and pass a vote and document to keep the 2100s media free and open.
—Robert Hilgenberg, Everett, WA

I'm 13 years old and want to be an online enterprenuer. If true net neutrality is taken away then you take my dreams away. Please reconsider this move.
—Braden Frondorf, Cincinnati, OH

Internet Service Providers are simply that. Nothing more. They do not deserve any right to discriminate on what content goes where and at what speed. We (US citizens via govt proxy) are allowed to design these systems (internet) to maximize/democratize the benefits to the users of the system. Our government exists to protect and support the citizens of this country. An ISP is a means to support this goal, and should not be confused as having rights that are allowed to significantly harm those of real, breathing US citizens.
—David Hecht, Indianapolis, IN

Facing retirement and a fixed income, like many seniors I hope to have access to all Internet options in spite of a low income.
—Karen Fletcher, Waynesboro, TN

Money is not free speech.
—Joanne Rauch, Warren, OR

Equality, plain and simple. Look it up.
—Jessica Reddy, Hamilton,

As an independent artist, it's difficult enough to reach fans, listeners and potential customers online. If these new rules are implemented, it will become nearly impossible for me to find and cultivate new commissions, performances and to develop new markets for my future recordings and concerts. I urge the FCC to reclassify the ISPs as common carriers to facilitate opportunities for individuals and businesses of all sizes and income levels.
—Mark Taylor, New York, NY

The simple fact that there would be a "fast lane" and a "slow lane" simply isn't fair. PERIOD! Big internet providers (ANY internet provider for that matter!) SHOULD NOT be allowed to "play favorites"! This is going to do more harm than good, and should NEVER HAVE been considered in the first place! KEEP NET NEUTRALITY!
—Cassandra Morris, Summersville, WV

The Internet, as envisioned by former Vice President Al Gore, who famously referred to it as the Information Super Highway, was created as a public resource, to which all who seek to avail themselves of its content should have equal and unfettered access.
—Nick Tsambassis, Clarksville, TN

Small businesses, start-ups, and individual bloggers would be especially hurt by a two-tiered system, since they wouldn't be able to afford paying extra fees for an Internet fast lane and stay competitive. Don't let Internet service providers choose winners and losers online!
—Rebecca Borrero, Bellerose, NY

I work for a small company (under 5 people) that depends on the internet for our business. We provide remote support using the internet for our customers who do not want to pay for travel. Avoiding travel times to customers in different cities also allows us to support more customers in the same business day. All businesses should have access to the same information pipelines, just like we all have the same phone lines to talk and paved roads to drive on. Allowing the internet service providers to decide who can pay for faster access is like allowing cities to decide who can drive on the interstate and who has to take back roads. It will force businesses to fail and close and will make it harder for new companies to start and to innovate in the modern world. Do NOT allow this two-tiered internet. Protect Net Neutrality. Thank you, Mark Earnest
—Mark Earnest, Waukesha, WI

Equal and fair access to the internet for all is important for social justice in our country. We do not want to live in a world where those who have massive financial resources can monopolize the usage of the internet for their financial gain while the rest of society is left with the "crumbs" and leftovers.
—Ron Torretta, Canon City, CO

The Internet is up there with food and shelter for me. Don't do this to us.
—Michelle, Loma Linda, CA

We need net neutrality because we need competition. Competition is the reason we are where we are today as a nation, having led the world in so many parts of society like art, technology, aerospace, etc. Not having net neutrality puts the entire nation in a corner like my entire town, where we have exactly one choice for or internet. If we want to pay less or move to a more reliable option, we absolutely cannot. This nation was built on competition and letting the government destroy this is a disservice to almost half a million people and burying the hatchet on letting this great nation fall behind the rest of the world voluntarily by letting the the few, the corporations, dictate what the many can do and see. At its root we are becoming an oligarchy, letting the rich lead and control us, and destroying the democracy we once thought everybody deserved.
—Marshall Burns, Kutztown, PA

In a democracy, it is assumed that each of us is starting upon a level playing field. Giving preference to those with the deepest pockets simply trashes that notion. As a trusted, public gatekeeper, would you want to retire knowing this happened on YOUR shift?
—Duane Hanson, pdx, OR

Like so many others I work hard, long hours for my money and creating tiers for the speed of internet is free enterprise, but poor or rich we all expect the same level of service that is affordable.
—Bob macias, Brighton, CO

Net neutrality is important for freedom of speech, equal opportunity, fair pricing and not only big business and corporation to take advantage of.
—Jeff McCaleb, San Antonio, TX

A free internet is like air. We all need it to breathe. How do you think it would be to breathe through a straw?
—Daniel Hilburn, Mesa, AZ

Net neutrality is the key to entrepreneurship and an internet that can lead us to the future of innovation
—Amy Lourenco, Leesburg, VA

YML livelihood as a Japanese-English translator and expatriate depends on Net Neutrality. Keep it intact.
—Michael House, Redwood City, CA

The last thing we need is additional clamping down on our freedom of speech. Haven' t the past 15 years been enough!?!?
—Michele Eason, Montrose, CA

I want the internet deriver to be declared a utility and under government control not in the hands of private business whose only concern is personal/business profit.
—J Stufflebeam, Oregon City, OR

I'm on Social Security. And, I'm tired of paying through the nose for what should be considered the same as old fashioned phone service.
—Charlotte Edwards, Summerville, SC

I want open internet to continue as it should. I want net neutrality. Thank you.
—Judy Edgar, Phoenix, AZ

Net neutrality is one of the tenants that allows the internet to be the single greatest collective repository of information in human history. ISP's don't own the internet they have no right to offer premiums for prioritized traffic that well inevitably cause slowdowns for all traffic that is not prioritized. If you have any shred of responsibility to the American people you will fix the wording so that Net Neutrality is legally enforceable.
—Ryan Morris, Juneau, AK

My college student sons and I depend on the open internet for learning, communicating, telephoning, bill paying, non-profit volunteering. The internet is our little family business' portal to the world. It is a means of moving the dial on community engagement around social and environmental justice issues and it is the best and farthest reaching tool for democracy the earth has ever known. You are charged as public servants to protect the interests of your constituents – The People – over those of any commercial interest. You must act to protect the internet, and to keep it open and just. My family begs you to take your role of stewardship seriously and protect us and Americans everywhere by declaring internet access via broadband, wireless networks and public wifi, an essential public communication service.
—Kimi Wei, fair lawn, NJ

I want all content providers to have equal access to the internet.
—Miriam Dunbar, Fairbanks, AK

It's not fair to make people pay more or less for the Internet. I use it for everyday purposes like social connection, paying my bills, budgeting my business, networking, research, and pleasure. We all use the Internet and the people who use it the most are not the people who can afford to pay lofty fees for being able to use it with ease. DO NOT allow these laws to take effect. I promise you, the quality of life for people all over the world depend on that.
—Juli Sellers, Sammamish, WA

As a disabled Vietnam veteran I live on a limited budget and depend on at least a modicum of competition to keep comcast/att prices in line
—Terry Hockett, Lake Bluff, IL

I care about net neutrality.
—Dawn greaves, Emeryville, CA

Reclassify as common carrier with liberty and equal access for all.
—Paula Gibbens, mesa, AZ

Net Neutrality is NEEDED by not just the American Public, but the entire world. Look at the global connectivity the internet has spurred. Do YOUR part as an FCC chairman and shut down wheeler!
—Ben Loesch, Los Gatos, CA

The FCC is supposed to be a citizens advocate not do the bidding of the corporations in their efforts to squeeze more money from the citizens. A two tiered internet would stifle innovation and free speech. This is an attempt at a corporate takeover of a government created program that benefits tge citizens. Reclassify ISPs as common carriers and stand up for the people.
—Adam Gluckman, Dallas, TX

Please keep the internet open and not better for the highest bidder.
—Adam Booth, Edmond, OK

There's nothing else that the uber-wealthy and corporate elites haven't taken over. The "people" will have NOTHING if you don't protect net neutrality !!! Please !!!!
—Steve and Roberta Raps, Eaton, OH

If the FCC does not re-regulates broadband internet as a public utility, what we will end up with is nothing short of the corporate takeover of the internet and an end to Net Neutrality. This is unacceptable.
—Guillermina Aguirre, Westminster, CO

If you do this..... I'll go outside again.(rampage)
—Michael, Garland, TX

The Oligarchs own enough....keep the Internet tubes free and equal!
—Joe Wasson, Fort Smith, AR

In this modern age, equality includes equal access to information of all kinds. The internet is the source of information for now and for the future. Leave it open to everyone the same.
—Donald E. Britt, Princeton, MN

Wheeler's plan for "net neutrality" leaves too much ambiguity, and will ultimately be bad for consumers. The only benefit is for the cable companies and the lawyers who will represent them as the intentionally ambiguous phrasing is brought into the court system. The FCC needs to stand up for people, not companies!
—David Schubert, Minneapolis, MN

IT IS THE LAST DEMOCRATIC MEANS OF COMMUNICATION.
—Ana Coria, LONG BEACH, CA

A free and open internet is essential to freedom in today's world. Do not side with corporate power over the needs of everyday people. Our tax dollars pay for you to do the right thing and protect our citizens from those who would take away our freedom of free and open communications in all forms.
—Aida J Sheets, St. Petersburg, FL

We have come to the point where many small businesses and communities make use of the internet to conduct their business. It's because of the open internet that smaller businesses are able to find customers, aspiring journalists can report on their communities, even if they're reporting information that large entities may not want to have a spotlight on. It's because of how pivotal the internet has become for society to function, it is only logical that it should be classified as a common carrier service. We depend on it for business and communication, much like telephones. Allowing for the two-tiered internet would undermine that.
—Stephen Romney, Salt Lake City, UT

Every Internet user has an equal right to this global network. As my dear Dad always said, "If it ain't broke, don't fix it." Please keep the Internet neutral or I might be losing the only contact I have with family living outside the US.
—Paula Fougere, Seabrook, NH

The only truly free media we have left.
—Niels Finsen, Liberty, PA

costs are multiplying everywhere. Please don't charge us more to use any part of the internet universe. It should and must be equal and available to all at the highest possible speed.
—Gerard T Redpath, Charlottesville, VA

Dear FCC, Net Neutrality is important to me because everyone has the right to have all access to information everywhere at a equal and fair low price. Please reclassify ISPs as common carriers. Thank you for hearing me out.
—Raymond Yee, ,

Protecting smaller businesses and consumers should be the focus of any proposal regarding the future of the internet. The idea of faster speeds in exchange for financial considerations is a blatant attempt at a cash grab from companies that do not have the best interests of consumers in mind. It will stunt growth and progress of small businesses in a time where it is vital that they succeed.
—Andrew Klingensmith, Pittsburgh, PA

Please google and read "Fourteen Defining Characteristics of Fascism" by Lawrence Britt. 2 pages. We are close to 14 of 14
—Steve V Eklund, Sallinas, CA

Keep things simple: the Internet is content, the ISPs carry it, not produce it. Classifying them as common carriers reflects this reality and avoids creating special regulations when we already have regulations in place that could deal with the situation.
—Morgen Peschke, SEVERN, MD

It's important to me because anything I don't know about politics, the news, or how to do, I look up on the internet. People shouldn't be charged money for the pursuit of knowledge.
—Chris, Cathedral City, CA

Keep the Internet a LEVEL PLAYING FIELD, without special privileges for those who are wealthy or more powerful politically that the regular user!
—Patrick Young, fresno, CA

A
—Nathan Jones, Oklahoma City, OK

The proposed rules are anti-democratic and amount to giving away a public asset to the private sector, thus allowing a couple major corporations to control content and accessibility in accordance with their own political agendas and profit goals. This set-up does not serve the American people, but rather is a capitulation or responsibility on the part of the FCC. Do your job and ensure net neutrality, Reject the current proposed rules.
—Gary R Cook, RIO NIDO, CA

My service sucks,my options are limited,and this proposal would just make it worse.My friends are even worse off. Don't do this.
—Pete, Whiting, IN

Please show your courage and do the right thing. It will be hard. It may be "war". But your forefathers fought wars and won.
—Thomas E. Tracy, Houston, TX

This, an many other rules and proposals made by you guys, are all going to do more harm than good. You need to think more about the innocent people that you are SERIOUSLY harming by doing this!
—Nathan Smith, Vancouver,

It is vital to our countries technological advancement to keep the internet open.
—Andrew Riggs, Pahrump, NV

Dear Federal Communications Commission, FCC Chairman Tom Wheeler's plan will encourage and allow Internet service providers like Comcast, Verizon and AT&T to create a two-tiered Internet, one fast lane for the very wealthy and one slow road for the rest of us. This is not appropriate for our system of democracy. Wheeler's proposal would kill the open Internet. Millions of Americans depend on Net Neutrality! I demand that the FCC protect the open Internet by reclassifying the Internet Service Providers as common carriers. Thank you, Kathleen Kerner
—Kathleen Kerner, Valencia, CA

No fast lanes for the rich on the internet.
—Brenda Boren, Bethany, OK

The Oligarchs will buy up the internet to force their views on the nation
—Charles Blume, Indianapolis, IN

I lead a social justice group and depend strongly on swift, reliable internet for communication. Please continue to insure Net Neutrality by reclassifying ISPs as common carriers -- just like the modern telephone!
—Daniel R. B. Fary M.D., Fort Atkinson, WI

I'm tired of being screwed by the big guys.
—Leroy Frankel, Longmont, CO

Educators and Students need equal access to ALL information - not just the info that major corporations decide is important.
—Brent, Costa Mesa, CA

Net Neutrality is important because it allows us to use the internet the way we want
—Antonio Gonzalez, Ocala, FL

Everybody should have equal rights in using the internet. I am tired of corporate takeovers of everything. Please make sure that net neutrality continues for everyone.
—Linda Parena, El Sobrante, CA

Having a two-tiered Internet, in which wealthy persons and businesses have an advantage over everyone else, is unhealthy for our democracy, for businesses, and for my own work. I need to be able to access a wide range of sites and information as I work to build my own business, yet I am only at the beginning of this process. If a two-tiered "pay for better play" system is instituted, then I will be able to make as much progress as I would on a truly open Internet. PLEASE re-classify the Internet as a telecommunications system -- which it is! Make the Internet truly available for everyone in the US! Throw out your proposed pro-big-business rules and make the Internet permanently open for EVERYONE!
—James Findlay, Los Angeles, CA

Net neutrality is important in protecting free speech in America, especially the free speed of average citizens. Do not take away our free speech.
—David Chen, Lewistown, MT

The Internet belongs to everyone, and everyone should have equal access, period.
—Roger Keith, Albuquerque, NM

Because the Internet is the modern day equivalent of the public square so often spoken of in the writings of men such as Thomas Jefferson. For free speech to mean anything, we cannot have "preferred" speech based upon commercial interests.
—Ms. Stacey A. Ward Esq., Los Lunas, NM

Please don't allow discrimination online based on who pays ISPs. All online content should be equally available to all users of the Internet! Without Net Neutrality, small and medium online business will be in unfavorable position. Online start ups will have much less chances to survive. I demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Mikalai Panasiuk, Bellevue, WA

The Internet is replacing telephone and television services in many places. These services don't have tiers. I believe that ISPs should be treated as common carriers.
—Martin Rost, Islip Terrace, NY

Because I've come to depend on the even modestly fast American 'high-speed' internet. Japanese high-speed internet, last I heard, was 18 (!?) times faster. Dont slow us down, speed us up, thieves…
—Ted Voth Jr, Madison, WI

I am partially disabled and am unable to leave my home without assistance. The internet is my source for news and contact with other people. I don't think big communications companies should be able to cut me off from the outside world or decide what websites I can visit. I am also afraid for our faltering democracy. It's obvious who big telecom will support and whose message will be censored. I won't tell you it's your responsibility to protect public access because I know you don't care. The only reason we have this comment period is because our wrath took you by surprise. We haven't lost it and you will feel it again every time you try to cut us off from the outside world. Make the internet a public utility.
—Debbie Bremner, Shoreline, WA

Please let the internet remain a level playing field for all share ideas!
—Michael Garza, amarillo, TX

My business would be impacted by being forced into the proposed internet slow lane. Please classify internet ISP providers as common carriers.
—Karen Murphy, Bellingham, WA

I feel that the Internet is already run by enough companies. A adding amiddle man (or company in this case) is going TOO FAR! All Internet service providers should be classified as common carriers.
—Jesse Smith, Pearland, TX

As a small business owner who conducts ALL (100%) of his business ONLINE, it would be absolutely horrendous for this to happen. If ISPs are not reclassified as common carriers, I could literally go out of business. My livelihood ruined. Is that what you want on your conscious? Knowing tens if not hundreds of thousands of small business owners will go out of business and drop down to poverty, and that it's all your fault? How can you lot sleep at night knowing you had the power to stop this, and still allowed the extremely rich to get richer by screwing the little guy.
—Aldo Barreras, Miami, FL

Giving the Internet to corporate greed is abdicating your responsibility. The Net is a common carrier, same as telephone service was a generation ago. SHAME on you for whoring to corporate greed!
—Jan Lindner, Columbus, OH

FCC: Have you ever thought about why the internet is where it is today? The open and free nature is what has allowed it to grow and become what it is today in not a whole lot of time at all. After seeing such amazing results, you want to inhibit it. You take advantage of the hard work from the many involved, and then tell the many that it's no longer going to work the way the many want it. Essentially, you want to destroy innovation and growth. That is what you are trying to do correct? If you would like to destroy future innovation and exponential knowledge growth for all, please continue doing what you are doing. If your true desire was in the best interest of all, you would sincerely reconsider what you are trying to do here-- Because it really sucks.
—Philip E Saltsman, Tampa, FL

I use the net to do research for Work (Critical Care RN), For Play, My Kids education and to enhance my life. I don't need anyone telling me what i can or cant do, especially for a profit. Thanks You for listening and please do not allow this change to happen.
—Seth, Fort Collins, CO

I am an IT professional and started working before the Internet became widely accessible. I have witnessed the explosion of creativity and innovation that the Net has fostered. Please don't start trying to clamp down and control it! You'll kill everything that is good about it!
—Carla Robinson, Tulsa, OK

The internet is a place for individuals and small businesses to be creative and connect - it is a vibrant and exciting community due to the efforts of individuals. It belongs to the people not the giant corporations.
—Barbara Cohn, Carlsbad, CA

The Internet is not the place to allow fast and slow lanes, all access needs to be equal. Don't sell out the internet as we know it, and the only way to do that is by having New Neutrality be the rule and norm.
—Diane Marlo, Wrn., MI

I provide a non-profit music blog that couldn't possibly compete in a two-tier system, and is far too strapped to pay for fast-track access. I do not want to take this down, but the quality would suffer and users would no doubt be driven away.
—Jon Cosby, Seattle, WA

The last bastion of free press for the common man. Stop ruining the American Dream for the little guy just so the fat cats can get fatter.
—David Scott, Yakima, WA

Net Neutrality is important to me for many reasons, one of which is that much of the infrastructure was not created and is not owned by the service providers, but by public means. A free and open internet is vital to our country. Communication should not be limited in this way, as it will limit the reach and growth of the creators and investors of our future. Please. Reclassify ISPs as common carriers. Please. Don't ignore the voice of the people in this. Please.
—Ann M, San Jose, CA

As someone who is getting into the arts industry, I've seen time and time again that having an internet portfolio, particularly your own website, is very important for putting yourself out there and getting a job. In essence, I need something online to help me get a well paying job. If net neutrality were put to an end, I could face a very serious problem of how to get my artwork to possible employers. These companies could make it so smaller websites, like an online portfolio, are difficult to find, or never get seen. In that case, you're creating a problem when, for example, a company in New York can't find the artist that best suits their needs because that artist lives in Georgia. In a normal case, the company in NY could look up artists that suit their needs across the us with just their computer. But if these companies can't even reach the artists, how will anyone be happy? Also, I do not want my internet provider determining what I get to see online. If my company gets in a fight with a major website I frequent over some fees, I'll be left the victim when I can't even access the information I want (remember time warner and cbs?). Think what would happen if this was between time warner and Facebook. Sure, the company could create knockoff or copycat websites, but is it really social media if only people from one internet provider HAS to use that website because we get cut off or slowed down from one? It's like going to Walmart and only the great value products being available- a limit wouldn't make sense. The internet thrives on it's availability to everyone, not on the limiting of communication. Please take my words into consideration before acting on any decisions. That is all I can ask, so that is all I will say. Thank you for your time.
—Nicha Meyer, Rowlett, TX

We need open access to the internet.
—Stacy Grossman, Columbus, OH

The internet is the people. It's freedom is ours. Giving control over it to greedy corporate interest is trying to give them control over the lives and minds of a free populace. This must not happen!
—Steven C Andrews, Santa Rosa, CA

Not everyone is wealthy enough to afford the best of everything. Stopping this is important because adding more discrimination within society should not be allowed. Discrimination against those who are disabled or aged will be punished. Elizabeth P.Dodson
—Elizabeth Dodson, Twin Falls, ID

Look, im on SSDI and im already disenfranchised by most people, now there should be no fast or slow lane...you are acting like IRAN, have some decency for the REPUBLIC FOR GOODNESS SAKE. ethically you are wrong, you lack ETHICS!
—Rebecca Trammell, Cedar Park, TX

In a few years I may look back to remember the days when anyone could put up a website on the internet and create something for anyone to see. Then I'll remember the day the FCC wouldn't stand up for the public interest and allowed the established corporations to limit our freedoms and expression in the name of greed. DO WHAT IS RIGHT...for everybody.
—Edward Marx, Oxnard, CA

Because own markets are the best, especially open markets that don't actually hurt/hinder people.
—William Morroe, Racine, WI

Keep your hands off our Internet. It works.
—Marilynn Jerry Wadden, Des Moines, IA

Keep the Internet equal!
—Amanda Williams, Poolesville, MD

Net Neutrality is absolutely important because people have a right to free information. Not only that, but the internet has been untouched for decades. Fuck the big corporations who just want to make money off of it. Sure, ISP's are the ones who allow access to the internet.. But it's THE PEOPLE who keep the internet alive. Stop trying to control everything. Tom Wheeler, pull your fucking head out of your ass. I don't care if these corporations are bribing you with millions of dollars.... Have a conscience and change ISP's to common carriers. SIMPLE. END OF STORY. EVERYONES HAPPY. Fuck Republicans.. They are extremist WANKERS. Who gives a shit if a few of them have a cry. Tom Wheeler, I've read that you have also said that you disapprove of discrimination. To this I ask, how would you feel if your FCC website was slowed to the point where NO ONE could access it.... YOU WOULD FUCKING HATE THAT. Just STOP trying to make money by controlling something that should be FREE. ISP's control the internet because companies have capitalised on top of the already existing internet... That's IT! If ISP's didn't capitalise on the internet, it would be controlled and accessed through EASIER, CHEAPER means. So tell the Cable and internet companies to go FUCK THEMSELVES and keep the internet NEUTRAL!
—Peter Ormsby, ,

Stop this big business manipulation of the American public!
—Rb, Flint, MI

The net is the one place where almost everybody is equal. We can't screw that up.
—Steve Gibbons, Springfield, OR

The net is the one place where almost everybody is equal. We can't screw that up.
—Steve Gibbons, Springfield, OR

In order for creativity to be encouraged, Net Neutrality is necessary. Creative minds need a certain amount of leeway to bring their creative thoughts to fruition. Killing the open internet would be sabotage to all of the creative thought that we experience on a daily basis. Keep the internet free and flowing!
—Rene McIntyre, San Francisco, CA

I want an internet that is open and free, giving no preferential treatment to those who can pay for top billing or fast service. In other words, don't mess with what we have now!
—Sharon Smith, Dayton, OH

The internet is the last free and open forum in which honest debate occurs and through which the masses can easily access large amounts of information. Unless you prefer the world of the Dark Ages in which the wealthy lords had all the information and their vassals were kept uneducated and in the dark, you should see to it that Net Neutrality is maintain and oppose any efforts to change that.
—Edwin M. Jackson, Houston, TX

If you want to crush the only new entrepreneur avenue in a generation and ensure that China, Russia and Europe will be the new cradles of software products and jobs then these rules are a great idea.
—Jason Pirie, Hooksett, NH

I am a retired educator who is a lifelong learner. I rely on the Internet to continue learning. I can barely afford Internet access now. I cannot afford to pay anymore. Our democracy is based on equal access. Don't betray our heritage.
—Linda Ahart, West Roxbury, MA

I rely, like so many of us on a fast internet. It is needed as lot of my elderly friends depend heavily on this fast internet for information on their health, news which I pull together and hand it over. I use it to buy certain medicines and items which are not ready availably for them anymore, as a lot of shops have shut down. So the businenss community will loose out if the internet is artificially slowed down. I need it to look for new jobs for me to watch TV and so on.
—Petra Ricketts, ,

Dear Federal Communications Commission: FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Julio A. Segarra III, Seymour, CT

I pay $50 bucks a month for faster internet. I shouldn't get ripped off into paying more.
—Paul Kruse III, Merritt Island, FL

We live in a world increasingly defined by those that already have everything. While the rest of us watch what we have slowly and methodically erode. Don't let something built specifically for the greater good become yet another symbol of class distinction and a bitter denial of equal services.
—Eric Fenton, Bountiful, UT

Net Neutrality is the wellspring of online democracy. Allowing telecoms the ability to charge more for a "fast lane", creates a perverse incentive for them degrade service to the "rest of us", which will drive more customers to the fast lane. Infrastructure improvements, or lack thereof will be cover for Censorship-through-sloth as sites that don't pay more slow down, losing viewers. Keep the playing field level. The current model provides historic profits to the telecoms.
—Dean Keesey, Oakland, CA

The ISPs do not provide the content or available services on any websites other than their own, they only provide the ability to connect to the internet. They should not be able to dictate which websites/services people can choose to use and by extension which online companies get to even have a shot at being successful.
—Melissa Albright, Federal Way, WA

The concept of common carriers has served millions of Americans well in the telephone industry and has allowed providers to make reasonable profits. Classification of internet service providers as common carriers is the only way to insure true network neutrality.
—Ian Reid, Lake Oswego, OR

The everyday consumer needs fast internet just as much as companies. If you slow the internet down for us, many services everyday people use will lose consumers because their speed are too slow for them.
—Victor Tang, Cupertino, CA

US citizens should not be put at a disadvantage with other developed countries with a plan as proposed by chairman Tom Wheeler. Return our ISP's utility to the designation it was prior to the Bush administration... COMMON CARRIER!!!!!!!!!!!!!!!!!!!!!! !!!!!
—Kevin Allemann, Harrisburg, MO

Think about it: The Internet, the World Wide Web is a sea of interconnected information used by billions of people the world over, myself included. Why make it accessible only to those with enough connections or deep pockets? It is practically the same as right to live and we all have that right. Why make a decision based on another one person's greed than make the right and just one? Think about it.
—Max R. Carlson, San Francisco, CA

The internet is the last open place for equality. Please don't change that with your proposal to kill the open internet.
—David Farr, Crystal, MN

My ability to get quick and unfettered access to the internet is essential for my job and for keeping all citizens informed about the events of our times, without a corporate, profit-orientated gatekeeper. Label internet ISPs a common carriers because, in all senses of the term, that is what they are!!!
—Steve Mudd, norwood, MN

Limiting the internet is the equivalent of putting toll booths at every intersection and penalizing poorer drivers. Protect Net Neutrality.
—Hunter Holmes, Portland, OR

It is absolutely absurd that something as vital to daily life, commerce and culture should be allowed to be portioned off at will by corporations with zero interest in the free flow of information. Absolutely abysmal that the issue could even advance this far.
—Mr. Daniel Powell, Portland, OR

I have a small non-profit website that I created with my brother and the disappearance of net neutrality would kill our small site!
—Tracy, Portland, OR

Net Neutrality is veey impotant to me. I don't live in China or middle east.
—Mohsen Shenas, whitewright, TX

As a small business owner, this ruling will clearly hurt my ability to complete. Don't let kill the Golden Goose that the free internet has been!
—Tom Flint, Valliant, OK

Net Neutrality is essential unless you are trying to control masses of people which we are too informed to let happen. Change the rules.
—Molly Taylor, Cotatic, CA

Any move that leads to any kind of two tiered price system where the haves and the have-nots do not have equal access is bad for all Americans. It's time to stop this trend in this country. Healthy competition leads to fair prices for everyone. Full Internet access should not be decided by income level.
—Doryce Seltzer, White Plains, NY

Throw out its rules and reclassify Internet service providers as common carriers. As a citizen and small business owner a neutral fair internet is absolutely necessary.
—George Rawalt, Whittier, CA

I believe in Net Neutrality because it's one expression of our Constitution - life, liberty, and the pursuit of happiness. The internet needs to remain FREE and accessible by everyone regardless of income, gender, religion, ethnicity, and any kind of discrimination, including the discrimination of what I can and cannot use the internet for. It's a resource that is common as air, water, and the sun. As such, it should be reclassify as a basic utility for everyone. That means its for the benefit of everyone rather than the control and gain of corporations who can't think on their own or do anything except through the few people who run them. Our society cannot continue down this path of power, control and greed for the few while the many are made to suffer. For this path has only one end, collapse and annihilation. The history of our species is rampant with this from every empire that has ever existed, including the first democracy in Athens, Greece. The public's welfare must be first and foremost, not the sole welfare of corporations who already control and own so much. For without the public, there is no country, no Constitution, and no life. I ask you to join us and stand for the people: reclassify ISPs as common carriers. Protect the rights of the people that all of our children will have a country and a home to grow up in rather than a cage.
—Alixen Pham, West Hollywood, CA

All content sent through the Internet should be treated in the same manner, without the telecom companies being able to pick winners and losers to increase their profits. If the telecoms are allowed to charge for "fast lane access" it will stifle innovation and make it difficult for a start-up to compete.
—Stephen May, Sun City, AZ

You really don't care, do you, FCC?
—Jim Sells, Red Bank, TN

The cable companies are already charging too much for programing I don't want.
—Georgia Shankel, Chicago, IL

Every citizen deserves to access the internet unfettered by laws and monetary restraints.
—Maude Nagle, Hamilton, OH

Net Neutrality was the basis for what today is an incredible form of communication and commerce, don't destroy this for some short term corporate profits. Don't destroy, but build it up.
—Abram Blitz, SANTA ANA, CA

The internet needs to be the voice for democracy and if Net Neutrality goes away there is a very real risk that voices will be silenced. ISPs are no different than other common carriers and as such should be so treated.
—Mr. John Countryman, Yelm, WA

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Ian McKinney, Albany, OR

The net is a great asset to all of humanity. It should never be turned over to private intrest to be throttled by monetary demands.
—Noah Reon, Mandeville, LA

Our roads are not just for the rich, and neither is the internet.
—Will Pelletier, Chapel Hill, NC

I love the internet. I do business on it every single day, connect with friends, make new ones, make art, make money, share knowledge and lots more. I love that the internet is a level playing field, where good ideas can flourish on their own merits. It means that real excellence and innovation can rise to the surface, thrive and grow. This what net neutrality means to me. I firmly believe that this freedom and flourishing of excellence and innovation would not happen with a two-tiered internet based on money/fees. It would slow us all down. Please throw out FCC rules and reclassify ISP's as common carriers. Please protect real Net Neutrality. Thank you.
—Rachel Davies, Kihei, HI

Reclassify Internet service providers as common carriers. No you shouldn't be able to funnel traffic which while there is open to look at all their personal information. I don't care if it does stop terrorism the government has gotta back off. The internet wasn't created so the government could feed off of it as it sees fit. Just change things so they stay neurtral and accept that extra cash the government would be raking in never gonna happen.
—Kiley William Blass, Catawissa, PA

The internet is amazing, and it should stay that way. No one likes boundaries.
—Ben Plath, ,

We deserve better internet service than in China where content is limited by the provider. The internet is most important for free speech. Why should the provider have such control over what used to be a government service ??
—Martin Springer, washington, DC

equality
—C G, San Diego, CA

ISPs should NOT be allowed to act as gatekeepers. An informed public is essential for a functioning democracy.
—Cecily Stephens, Pittsburg, KS

High prices and poor quality is what consumer will get. We are dumping cable tv because of this. This is just another example of corporate greed that will in the end kill jobs and innovation.
—James Bradley, Media, PA

I can't afford to have a computer at home. For Internet access, I depend on free public-access computers that are available at the local public library, or free wi-fi service (like that which you might find at your local coffee-shop). Once Net Neutrality ends, which the new rules make almost certain, the "slow lane" will make it much harder for people in my situation to access websites on the Internet. Those free public-access computers at the library? They are time-limited. And the slower a website loads, or the slower data downloads from them, the less effective time a person has to use that part of the Internet on those free library computers. Without Net Neutrality, you are effectively penalizing anyone who has no choice but to use a public-access, time-limited computer. And if that person is simply trying to email their government representatives, or make use of an Internet petition (which most petitions are, nowadays--like this one), you are effectively limiting the access to their government that people in a democratic republic are supposed to have as citizens. Protect Net Neutrality! Restore the Open Internet!! Classify all Internet Service Providers as common carriers, just like telephone service providers.
—Matt Loach, Plattsburgh, NY

I spend a lot of time on the internet and I want the ISPs reclassified as common carriers so we have true net neutrality.
—Howard Steeley, Olympia, WA

If the open internet ends then their is not much reason to spend big bucks to even be on it . I will just give up and quit .
—Dave Howard, Reynoldsburg, OH

The nation shouldn't place complete trust into an entity who's sole purpose is to make it's owners richer. If corporations are allowed to control the traffic flow of the internet, we are placing the last medium of accessible public communication to an entity that is widely known to be motivated by the pursuit of profit. This country is already owned by the 1%'ers. I implore the FCC not to allow the 1%'ers to have the power to control the most powerful voice the rest of the 99% of the country has.
—Dexter Dimasuay, Long Beach, CA

Innovation and the free flow of ideas are the very core of the Internet. They can now only be preserved through reclassification.
—Carmine Macchia III, West Hempstead, NY

I ran (and hope to again) a small Internet newspaper. Slowing down the Internet would kill my business.
—Karen Boehler, Roswell, NM

You BASTARDS leave the Internet alone. (Obama and your shit for brain minions!)
—Gary Bennett, bellingham, WA

Change the internet, you change how the world works. Not to mention piss off thousands of people. Don't be stupid.
—Taylor Davison, Helena, MT

I care about net neutrality.
—Carol Hannah, Wilmer, TX

Net Neutrality is important to me because I need the internet for school -- University. To have me pay thousands of dollars to go to school and then have to pay a lot of money to use educational aids is ridiculous. I also should be able to relax on the internet for free and not have to pay for my internet and whatever website I want to be on.
—Jessica Williams, Kirksville, MO

I strongly disagree with the notion that broadband internet providers are not considered common carriers. They should definitely be considered as such.
—Jan Boshoff, Tulsa, OK

there WILL be unintended consequences . people will not need to upgrade their electronic devices if the only way to utilize the new functions depend on paying up for faster internet. I haven't bought a new computer in years and at this rate I guess I won't need to.
—Bill Jamison, spring, TX

The internet is where myself and nearly all of my fellow 20 somethings go for news, both global and domestic. I use it to research for elections, I use it to stay informed on global human rights issues, I use it to watch what the economy is doing, I use it for everything that can be most important for making an informed and intelligent voter. Also, like many other 20 somethings I do not have a high paying job. I live with my parents. If I was not a dependent I would be below the poverty line. I cannot afford to pay anymore for information on the internet than I do right now. I strongly believe that open Internet is essential to today's informed voter, and a loss of Net Neutrality would be a blow I will regret not only for myself but my peers, family, children and Americans.
—Chelsea Miller, Plymouth, MI

One of the exciting facets is the fredom to go to any active web site. To limit the freedom of the internet would deal a critical blow to what makes the internet so wonderful! Please do not fix it when it isn't broken!
—Mark Lee Severns, Phoenix, AZ

I do not think the FCC should be involved in anything that has to do with the internet. Please withdraw your agency from anything that has to do with the internet in any way.
—Cynthia Welch, Hearne, TX

Net Neutrality is the one thing that lets us connect and interact by making friends over common interests like astronomy, theoretical transportation designs, or the continued peace and protection of the human race from potential dangers through shared information exchanged like dangers in space.
—Michael Gray, Butte, MT

The internet is not all about big businesses and multi-millionaires. In fact most of those big businesses on the internet today were little fish or nonexistent 20 years ago, it's as important today as it was then that everyone have the same access without preferential treatment. Without that guarantee how will the next great strides in our economy come through. These huge companies aren't about innovation and paradigm-changing technology, they're about maximizing profit, minimizing competition, and keeping things as much the same as they can.
—Christopher King, Diamond Bar, CA

Many of the Websites I read will be gone if we do not retain Net Neutrality
—Susan Delles, Rogue River, OR

Small businesses rely on the equality of the internet to compete with multi-million dollar corporations. Allowing companies to pay for "fast lane" access would give them an unfair advantage over smaller businesses who can't afford to pay the extra fees.
—Matt Conley, Marion, OH

Keep the internet open! Don't let corporations take away this freedom of speech and silence those who can't or won't pay!
—Jen Bainbridge, Bellingham, WA

The Internet does not need any Corp. or Gov't intervention that ends up costing more and restricting us more. Net Neutrality!
—Virgil Dempsey, Leadville, CO

I should be able to access what I want without your opinion on the matter.
—Alejandro Gonzalez, Passaic, NJ

I'm an entrepreneur working on multiple Internet companies, as well as software. If you end Net Neutrality, the feasibility of getting these projects off the ground will stagnate, thus hurting the economy. If you end Net Neutrality you hurt the economy, something we cannot afford to gamble on right now.
—Joshua Voydik, Del Mar, CA

ost Americans, they have no choice for all the information, data, entertainment coming through their house, other than their local cable monopoly. And here, we have a situation where that monopoly potentially can pick and choose winners and losers, decide what you see, how interesting and interactive it is, how quickly it reaches you — and then charge whatever it wants."
—Rosemarie Waiand, Houston, TX

It might be our last chance to prevent us from losing democracy alltogether
—Serge, Athens, OH

Communication is the lifeblood of democracy. The internet is our primary tool for that purpose. It MUST be protected.
—Peter O. Childs, Miranda, CA

The Net should be equal for everyone.
—Brad W. Nelson, Oxnard, CA

NET NEUTRALITY IS VITAL
—Stephen Brockmann, Indianapolis,, IN

Net Neutrality is the most important part of the structure of the Internet. Quit playing into the hands of big business. This proposal would kill the open Internet. Instead of this nonsense you are proposing. Reclassify ISP's as common carriers!
—Steve S DeGregorio, Trenton, MI

Innovation requires a level paying field. If the Internet is tilted towards the ones who can already afford it, the innovators will be unable to compete.
—James Keplinger, Bloomington, IN

As a small business owner, I would lose a competitive advantage if people can simply pay more for higher speed. Net neutrality is critical to level the playing field. Please relcassify ISPs as common carriers.
—Alison Gartlan, Eugene, OR

FCC, wake up. It is the 21st century now. Your scare tactics are so 20th century. Your head in the sand shows you don't know that we Americans want to step forward. You are so busy protecting the outdated, soon to be busted trusts that you are barely functioning except for the rich 1%. Hauling in big paychecks on our dime and doing nothing to earn them. Wake up and make the internet free with good management common carriers classification. BTW, Tom Wheeler lies.
—Judith Nappe, North Bonneville, WA

Just why are you ruining the Internet!? Do you really think your new rules will cause ISPs to make more money? I just bet you that most websites won't pay an ISP more money to get on that "fast lane". Since most websites won't pay more money to ISPs to get onto that "fast lane," they will not artificially be made faster. Since most websites will be rendered useless due to their speed, most people who visit the Internet on a regular basis will choose to go to somewhere other than the Internet. Thanks a lot! That will ruin the Internet! Just leave it to the government to ruin everything!
—Lester E. Rees, Mott, ND

To allow startup companies the chance to enter the market and compete with established companies. In that way innovation is preserved.
—Robert Scofield, Woodland, CA

The Internet is a utility. It is provided, in our house, by a utility company, Verizon, and billed with our telephone bill as part of a package. It is an essential service today, the same way heat, electricity and the telephone are. It is basically a communication service, communicating with book (reading, research, etc.), companies (purchases, questions, complaints, entertainment), and other people. To classify the internet as anything but a utility makes no sense. The only reason to do so would be to pump up profits for already well performing companies.
—James McGinley, Philadelphia, PA

Reclassify ISPs as common carriers. No pay-to-play, multi-tier "service" nonsense.
—Mike Welte, Monroe, NJ

Internet means really the only world where all the people on the Earth can be connected together without any borders. Why do you need to make any? Real borders in the maps are not enough for you? You need just MORE? More bordes for more money? WHAT gives you the right to behave like a half-God, to make this decision. That you are sitting on the right chair?? Remember what luck did you get sitting there. Or do you want to JUST divide people and companies, because of "all are equal, but some are more equal than others"?? Did you read that clever book where this sentence comes from? We are living in modern times, not in the Middle Ages, when it was common to divide people at noble ones and plebs. Don´t recur back to the Middle Ages rules. I though people had learned. Why do - you powerful - think that you are irreplaceable, that where you sit, you´ll sit forever? Are you perhaps immortal? No. After you another men will come. Don´t think what those new rules will bring to your pocket - only. Think for the future.
—Zuzana Ulrichova, ,

The proposed rules would cause irreversible damage to the Internet, giving the ISPs complete freedom to discriminate content as they please and destroy any internet-based buisness they want. It is imperative that they are reclassified as common carriers to protect the Internet from that.
—Krzysztof Bieniek, ,

The internet should be non-discriminatory towards all users. Thank you.
—Kevin Woodworth, Little Elm, TX

ISPs are utilities like electric and gas providers. They need to be regulated as such.
—Michael Reich, Glendale Heights, IL

The internet should be free to all. In the future If i plan to start a company and we use the internet as part of our business model
—Allan K Chapman, Toledo, OH

The new rules are bad policy for a utility, which the modern internet is. Classing this "new" utility as a common carrier just makes good logical & policy sense.
—Erik Andersen, Chewelah, WA

I think the lack of net neutrality is just a money maker for your corporate sponsors and a way to control the internet. Internet speeds have been down and I pay $70 a month for internet just so it can be restricted by internet oligarchs.
—Carolyn Davis, Morongo Valley, CA

I feel inferior to second and third world countries because we pay more per capita for bandwidth that belongs to the public to start with. How about these corporations start paying on the free handout leases or discount the services to realistic prices to repay the public for capitalizing on something that does not belong to them?
—Steven Simpson, Glendive, MT

A two tiered Internet is a death sentence to a great component of what democracy is.
—Regine Bohar, ,

The main issue is the whole freedom of speech thing. Throwing out net neutrality is taking away a form of communication all to make a quick bucke. Forgery, fraud, malicious activitie, and most imuortant, treason, are all in line to flow through heree. Just because youare the government, doesn't mean the people don't matter. You guys work for us, not the other way around.
—Dommer laric, Grand Rapids, MI

the internet has contributed to freedom in more ways than I can mention in a short note. In addition, new jobs, businesses and perspectives are offered to a larger audience than ever before in history. Why would this freedom of expression and way of life need to have a price placed upon it?? Why not let those who wish to pay for more immediate action, have the choice to do so, while letting those who do not be allowed to make that choice?? or at least have trial period for those options, to observe what the majority of web users wish to use??
—Farrel Williams, McAllen, TX

Who are you to set up a class of have and have nots.....this is not India with a caste system!!!
—Abigail Howes, Berkley, MA

I can't afford to pay extra for certain sites I visit. The airways are Ours, not the corporations. The internet should remain accessible to all for thesamre rate.
—Spencer Stall, El Prado, NM

The internet was working just fine before corporate lobbying got you fine people at the F.C.C. to give in to your greed. The internet was financed by the taxpayers and does not belong to the telecoms, or to elites who think they deserve better access than others who use the internet for work, school, play. Quit tampering with something that isn't broke just because you want extra income beside what we, the taxpayers are already overpaying you.
—Sean Thompson, Riverside, CA

A two-tiered internet hurts consumers. It hurts men, women, children, teachers, police, fire fighters, soldiers. It hurts Americans. Net Neutrality can protect the nation and the people you serve - for better or worse - from open discrimination policies, from obscene and unnecessary price hikes, and from companies suppressing access to information for personal reasons. These are the floodgates, and there's no reason to open them. Protect us from discrimination from corporations, who use ideas like "fast lanes" and "multi-tiered" internet as a proxy to circumvent the need to innovate, or improve their service in a meaningful way. Instead they intend to put a sizable portion of the nation on the chopping block to offer a better service to those who can afford it. I want Net Neutrality.
—Brook Brownfield, Spokane, WA

Access to information is the core of our democratic system of governance. No website should be given preference over any other. How could small businesses compete? How could minority opinions in politics get a fair hearing? Equal access is imperative.
—Jan Cohen, Boonville, MO

Law of equal liberty
—Travis Rickett, Wichita, KS

Differing fees for different service levels suggests to me a violation of freedom of speech. Those with more money can shut out others.
—Stephen Vandivere, Centreville, VA

Net neutrality has become one of the essential cornerstones of the internet. This not simply because of business or innovation, but because it has become so pervasive in our lives through the communication and sharing of ideas and invention. With the impact that the internet has on our lives,we should re-think how it is classified. Thus I strongly encourage that the FCC re-classify ISP's as common carriers. This may be a long and difficult process, but it is worth it in the long run so that the internet is properly handled and regulated.
—Patrick Cole, Lansing, MI

The Internet should remain open for everyone.
—Cynthia Claro, Oklahoma City, OK

Don't change how the internet works now! Don't allow last mile providers like AT&T, Comcast & Verizon dictate what users of the internet can access, which is what you will be doing if you enact new rules that allow service providers to charge web sites & internet applications for access to a "fast lane" for their content to be provided to end users. Please reclassify broadband as a "telecommunications service" so that the Internet stays open and free of corporate gatekeepers.
—Ken Stacey, Hudson, MA

The internet is a necessary utility just like water, gas, garbage, public television, etc. It is the government's responsibility to protect the quality of and guarantee access to this utility for it's citizens. Do not give free reign over this vital resource to capitalist companies. They will degrade the product to maximize profit.
—Keelan Johns, Salt Lake City, UT

Keep the internet open and equitable for all.
—Richelle Boller, Fountain Valley, CA

In my opinion a two tiered internet is bound to favor the major providers such as ATT and Verizon and be more costly for consumers and not only because that is the current trend but an obvious opportunity for profits for the providers.
—Suzanne Schmidtke, Universal City, CA

Once again, our government is standing with the wealthy corporation to make them wealthier, rather than the people of America. We need real governance and not a bunch of bribed sell-outs.
—Daniel E. Chase, Portland, IN

Please try to understand how much innovation will be stifled if net neutrality ends. It contradicts the free exchange of information the internet was founded on and what makes it great. A two tiered service will completely destroys the hope of any start up looking to compete against established companies with vast amounts of capital at there disposal. This is a slippery slope.
—Paul Terrasas, Modesto, CA

As a small web site owner operator, this is very important to me. We need the closest possible flat ground battlefield.
—J R. Jarvis, Seattle, WA

As a freelance illustrator and person of color, I depend on the internet in order to reach my audience and tell the stories I wish to tell. As an American, I depend on the internet in order to help me with day to day life--news, paying bills, keeping healthy, voting, applying for jobs, staying active in my community. I need Net Neutrality, because as a regular human--not a multimillion dollar corporation--I'd have no chance of survival. Killing the open internet would kill America's voices and people. If you really, truly care about your fellow Americans, you'd reclassify ISPs as common carriers.
—L Planas, Alameda, CA

Absolute BS! Stop this madness!
—Requiem J, Wahiawa, HI

It's not fair to have one set of rules for the rich, and another for the poor.
—Ricki Iannitti, Hamilton, OH

I'm sick of paying taxes and the rich 2% pay bloody nothing and now they are taking away our net neurtrality. No wonder the 2% are hated more than pond scum and cockroaches.
—Mary f Brady, Dubuque, IA

The whole benefit of the Net is its universality and freedom of access. Anything which infringes on those principles must be resisted.
—John Birkbeck, Seattle, WA

As I already said, these rules are total bullshit. The US already pays more than other developed nations for internet access and this will further worsen the situation. There is no real competition amongst the ISPs amd this will only make matters worse.
—Abhishek Singh, ,

Mr. Wheeler's plan would be just another display of the "haves" lording it over the "have-nots"! The Internet must remain egalitarian for all people on this planet!
—Sharon Fummerton, ,

We need the ISPs classified as common carriers. The internet is a VITAL communication and business tool. The ISPs have zero competition and can force Americans to take whatever they choose to give them. This is a ridiculous situation for something so important to our economy as the internet. Reclassify the ISPs as common carriers now!
—Shai Azoulai, Solana Beach, CA

Most of the internet sites I visit regularly or even only occasionally are unlikely to be granted the corporate fast land. I see no reason why my tax dollars should have been used to create a common carrier that discriminates against me.
—Norm S Conrad, Seattle, WA

Discrimination really. Sounds like I am living in China. What kinda crap are you trying to pull?
—Alex W Kovalchuk, Topeka, KS

We are aging, our income is shrinking, as is the purchasing power of each dollar and we rely on the acccessability of a neutral internet.
—Nancy Dean, Norwich, VT

Net Neutrality gives us the ability to view content made by everyone, not just content put out by the highest bidder, this is the internet after all not cable television.
—Mohamed Alturkistani, McKinney, TX

Our freedoms are not for sale. And we are tired of them being stolen from us.
—Doug Westendorp, Minneapolis, MN

This is wrong for consumers. By allowing broadband providers the ability to control bandwidth for those who can afford to pay the most, consumers get the short end of the stick. There needs to be provisions in place that guarantee adequate bandwidth for consumers well into the future as well as increases in speed as demand continues to accelerate.
—John L Wolfgang, Bensalem, PA

The internet is a valuable public good. Please side with the public, and not the interests of few. Thank you for listening.
—Bryan Claro, Oklahoma City, OK

While you may monopolize on a seemingly sleeping and inoculated population to push your elitist agenda THE PEOPLE will fight back. There are those who are no longer sleeping. Goodbye matrix.
—Ray, Lancaster, NY

As a entrepreneur, the Internet is a important tool to me. Creating paid "fast lane" access and removing Net Neutrality will burden start-up and other small business which are the future. Don't do it.
—Ronald Dibble Jr., Lakewood, CA

net neutrality is equality!
—Geoffrey Mole, Denton, TX

Internet has become a necessary part of our modern life. Therefore, it is unthinkable that fast and good quality connections only are available to those who can afford it. Besides, people must be able to decide for themselves what they want to use the internet for. If some company decides what's good and what not, that's the end of democracy and comparable to the end of freedom of speech.
—A Eenkhoorn, Lander, WY

I am a small business owner and I depend upon ease and accessibility for both website and email correspondence with my clientele. As a sole proprietor such communication, if it cost more or was limited by speed, would impair my work and ability to earn an adequate income in my business. PLEASE, do not impair the net neutrality from which we benefit equally today. Thank you. Len Lowman, LCSW
—Len Lowman, Little Rock, AR

Access to the internet should not depend on money...that is like making you pay to have freedom of speech.
—Julie Cain, Sturgis, MS

"Open" is not "Net neutrality." My Internet connection is slow enough already. I both create, and follow small academic and non-commercial sites and blogs. Fast lanes would ruin my experience and handicap my clients. Fast lanes would be yet another serious roadblock for innovators and startups. A terrible idea.
—Linda Price, Kearney, NE

I work from home. Net Neutrality keeps my work expenses low. If you allow this absurd plan to discriminate against the poor or those who do not want to pay more for the internet they are used to, it will drive up costs for anything that relies on the internet. Stop this insanity NOW!
—Curt Kliewer, Chilliwack,

The tremendous growth and innovation around the Internet has depended on all traffic being equal. Internet access is a utility, period. It shouldn't matter what's in the packets I transfer through the connection - my provider should treat all traffic exactly the same.
—Kevin Brice, Bellevue, WA

Please leave the internet open for the free and unhindered exchange of ideas. This is one of our greatest achievements as a civilization, don't gridlock it by allowing service providers to charge special access fees. Thank you, Kate Wageman, RN
—Kate Wageman, Burlington, VT

The internet is the last bastion for honesty - do not censor the poorest amongst us.
—VadeM, Phoenix, AZ

PLEASE do NOT allow those companies to undermine what the internet is and always has been about!!! When the internet got started it offered the promise of a means of communication that we would all have access to. For practical purposes the new rules are the end of that dream. What else is new right??! But it's horrible!!! PLEASE DO NOT LET THAT HAPPEN.
—Sam Ashley, Lancaster, CA

FCC: Throw out your rules and instead reclassify ISPs as common carriers. This is the ONLY way to protect real Net Neutrality.
—Robert W Moody, Tallapoosa, GA

Stop lobbying the government against us! Corporations are taking over America (and the world) and this is just another step in the WRONG DIRECTION! Tom, do not pass any bills that let them charge for data, ISP's have traditionally not charged for bandwidth, and it has been that way since I entered the ISP business back in the 90's. It is NOT a time to change because something is "new". This idea is trash, and it's just to make more money by making the common people suffer! WHY? If anything, pass a bill telling these companies to increase their Bandwidth and speeds to that of other first world countries like those in europe where people pay $60 for a 120 MegaBYTE connection up AND down. No more of this"6 megabyte connection" but we only download at 500 KB, and get 100 KB of upload. MAKE EVERYTHING CLEAR TO EVERYONE! This is wrong, and these companies are wrong, marketing schemes are ruining common knowledge, and misleading people with lies and fraud. These companies are no better than someone selling snake oil as a cancer cure! >:(
—Kevin Ballard, Calhoun, GA

As an IT professional for the past 30 years, I have seen the Internet grow and blossom. It has provided me with innumerable new experiences and a vast wealth of information. You are killing that in the name of additional profits. Shame on you.
—Frank Riha, Cleveland, OH

The internet should not be for sale to the highest bidder. It may be the last vestige of an America where a regular citizen can compete and succeed against big money monopolies on a even playing field. The last place in the American economy where innovation and success cannot be crushed by the big money establishment. In other words, an open internet is pretty much the last, best hope of achieving the American Dream. Couple that fact with the fact that democracy does not work, and cannot survive, without an educated, informed citizenry and the best source for information is a free, equal, and open internet and you have to be stupid or corrupt to not see the necessity of reclassifying the internet as a "common carrier". FCC chairman Tom Wheeler talks the talk for net neutrality, but he doesn't walk the walk. He speaks out of both sides of his mouth...speaks with a forked tongue. Duplicitous. So what is the story with FCC chairman Tom Wheeler? Stupid of corrupt? One thing for sure. He is wrong about letting the internet be tiered for corporate profits. That would be a disaster and a tragedy for all Americans and the nation. Eliminate this power grab and reclassify the internet as a "common carrier" forever.
—Gary Alderette, Santa Rosa, CA

The internet should not be ruled by money and corporations. It should remain as it was intended and created - open and free.
—Mr. Eric Mastro, Cary, NC

I have been using the internet for about ten years now. It has become a very important part of my everyday lifestyle. And this idea of a fast and a slow lane is almost devastating. Please throw these rules out.
—Subhajit Sanfui, Kolkata,

Do not end net neutrality! Protect DEMOCRACY!
—Susan M. Blubaugh, Milford, NJ

Please do not permit internet servers to offer "fast lane" service for people and business wealthy enough to pay for special privileges. The FCC is supposed to provide a level playing field for all users. Linda Keir
—Linda Keir, Sandy, OR

Under Net Neutrality, the internet represents freedom and equality for many people and organizations. Protect us! Don't cancel Net Neutrality!
—James Costa, Albuquerque, NM

The internet should be neutral and not based on who pays the most to have the fastest connection. Otherwise there will be an imbalance and this will mostly affect small and medium scale businesses.
—Autumn Kennedy, Culver City, CA

Keep the internet fair and balanced for ALL.
—Myrna Castaline, Boulder, CO

Killing net neutrality will squash innovation on the web.
—Aaron Ekstrand, Carbondale, IL

The net neutrality has been a boon to the American people and to destroy one of the few good things we all enjoy is wrong. A few greedy companies do not have the right to run the internet for their own avarice. Deny them this and let the Internet continue to be the great communication and social network it is now. It doesn't belong to anyone and should never be subject to anything ever again as it is now. This was started by the Darpa agency and was given to the American people. It was not given to greedy corporations for good reason. Please allow net neutrality to continue and put an end to the cancer that is corporate greed.
—Robert Clark, Wichita, KS

We need competition between all providers, not just the Big Boys!
—Nancy K Brown, Black Mountain, NC

In this day and age, the Internet is a requirement for life. Our children have to have it for school. Adults, and young adults need it for work, or to seek work. The information exchanged between various entities and people around the world are what keep the internet operable at all, through software and protocol updates and patches. Many VOIP companies both large and small provide many people with reliable telephones and businesses use them for conferences. Considering how and why the internet works, ISP connections, just like telephone service, *IS* a common carrier. The ISP is just a transport layer, just like Telcos were in the past (and still are). Also, phone service itself is at jeopardy with the proposed rules, as almost all voice traffic around the world is carried by the internet! Please, reconsider this ruling. Web traffic, from applications, work, school, and even voice, is a required part of today's life, and only works because of network neutrality.
—John Thomas Banks, Raleigh, NC

The internet is the greatest equalizer we have ever seen. If you strangle it in the name of corporate interest, you are simply handing the best tool we have ever had for educating our children to those with the most cash. It will become another way to segregate society
—James Molesky, West Palm Beach, FL

An open, common Internet and open lines to obtain info are extremely important to me and to all citizens. We cannot have a two-tiered system that relegates some users (those who pay a premium) to a slow lane. Protect the interests of us to have unfettered access to the information and interchange we find so vital. Information must not have to pass through a pay-gate to reach the end users. We need net neutrality and if the concept of common carriers will accomplish this, that would be a good approach
—Mollie Steward, Bridgeton, NJ

How dare you let BIG BUSINESS win again, against the PEOPLE. All of you are bought and paid for by these corporations and filthy rich people, who want to destroy this country and the rest of the world! Enough is enough! I am one of the millions of people who are living from paycheck to paycheck and barly making it! I can't afford another thing, that I need, with payment just so I can get on the internet faster and/or pay extra just to get something that I can get already! Enough! Enough! You are as corrupt and evil as the fucking 1%! I want my tax dollars back! WE, the people, pay for your ego-inflated job that you don't even do, except to give the RICH MORE!!! ENOUGH!!!
—Phillip Cooper, Houston, TX

Net Neutrality is important as it the Web is the greatest source of free speech anywhere, has enabled countless corrections of civil rights, enables communication on a level exceeding even cellular phones' potential, etc....and a lack of Net Neutrality, offering favoritism to Web access as a whole, be it to private enterprise, to religious zealots, to political SuperPACs, etc., completely guts that. Cut this cretinous hogwash out and keep the Net Neutral.
—Christopher Borriello, Seattle, WA

The internet is truly democratic, and giving preferential treatment to the companies and corporations who could afford to pay for the so-called "fast lane" would destroy the level playing field as it currently exists - where a solitary blogger, a non-profit company, or a grassroots movement enjoys the same level of access to the public that an Amazon, Comcast or Wal-Mart does. The idea that one can preserve the open internet while creating "fast lanes" is self-contradictory. You can't have it both ways.
—Michael Olcsvary, Lynnwood, WA

Junk your present rules and instead reclassify Internet Service Providers as common carriers! This is the ONLY way to protect real Net Neutrality!
—James C. Stevens, SEATTLE, WA

Internet is a a PUBLIC UTILITY for information that must remain free, open, and NEUTRAL. I am OPPOSED to any ruling that allows Big Telecoms to give faster service to preferred customers who pay extra.
—Stephanie Stout, Houston, TX

We depend on the internet in our daily lives to receive all information in a timely manner. It should not be a tool only for those with deep pockets.
—Lynn Barbieri, Great Barrington, MA

The Internet is a public service like the library or schools. If you take this away you will be taking away the very best our society has to offer it's youth.
—Danika P Risher, Kirkland, WA

The internet has become a critical avenue for information sharing, community building, and public education. Its continued existence as a neutral platform, equally accessible to all, is vital to the health of our democracy.
—Karen Newman, San Luis Obispo, CA

Too many people rely on the Internet. Don't mess it up.
—J Geldermann, Lancaster, CA

It's time for our government to work "for the people" and not big business! Stop the greed!
—Laurie Sherer-Weinsier, Marietta, GA

You sent an email saying that you would protect Net Neutrality? Why did you lie?
—Rita Meuer, Madison, WI

I mainly utilize minor Internet vendors. A tiered Internet would would mean I'll wait longer for service - and that's not fair. Net Neutrality is fair - and it's democratic, and it supports the practical and creative activities of all Americans. A tiered Internet would not support these ends.
—John Gittins, North Brookfield, MA

should be free,without the haves having it all.
—Howard M. Lau, Flushing, NY

As a software engineer and entrepreneur, an open internet means the products and services I make have a fair chance at success and aren't dead on arrival. As a consumer, it means I have the choice to access the content and services I choose instead of what my ISP chooses for me. Maintaining net neutrality is vital to both of these aspects of my life.
—Andy Morris, Norman, OK

As long as people have limited access to providers and you guys continue to allow mergers between competing companies. An example is the current merger with Time Warner and comcast or At&t and Direct TV which does nothing besides make it so the big companies can charge whatever they want. FCC throw out your rules and instead reclassify ISPs as common carrier
—James Muller, Salt Lake City, UT

Net neutrality supports the equal opportunity which is part of our American tradition. Net neutrality gives me equal access to email businesses: to take it away is to promote control by the highest bidder, an anti-American change.
—Sharon Larson, South Beloit, IL

Comcast already has a 2 tiered system with internet service, & they charge way too much for it. Also is the only service provider in my area, except for satellite
—Candy LeBlanc, Placerville, CA

Net neutrality is important to me because the internet us vital to the world and limiting access to it would be criminal; The telecommunication companies aren't going to use this law to make new super fast lanes. They'll slow down everyone and make our current speeds the "fast" lane. This blind trust the FCC has in our telecoms companies shows the world just how little the FCC actually communicates with the people of America.
—Nicholas Chen, Castro Valley, CA

Do your job, assholes. Your duty is to the PUBLIC, not the CORPORATE propaganda machine that is destroying our country. Traitor!
—Arlene Boyle, Phoenix, AZ

This proposal would kill the open Internet. I depend on Net Neutrality and desperatey wish to ask that the FCC protect the open Internet by reclassifying ISPs as common carriers. Is money worth the future of the country as we know it?
—Jeffrey Thomas, Geneva, NY

I want to continue to have equal access to all websites and do not want have a slow connection because I chose not to consume from the major corporate web sites.
—Nathan Klein, Anaconda, MT

Net Neutrality matters to me because the internet has been the protal of the unkown and land of equal opportunity. By allowing tiers of internet, innovation will be strongly stifled and many great companies and websites that are leading today may never have gained the same influence and traction.
—Iain Nash, Lookout mountain, GA

This is no different than ensuring that telephone service would be available to EVERYONE decades ago. Please reverse this terrible trend and keep Net Neutrality! Thank you!
—Robert Augello, Escondido, CA

I'm for an open internet! Net Neutrality is important as a whole and should remain open and unrestricted like it already is. You guys get enough money and taxes as it is without having to touch the internet!
—Chris Hunter, Shreveport, LA

My entire life will be effected. I work mainly on the web for a small start-up company. I am also a freelance illustrator. I witnessed the internet as we know it come into being and was lucky enough to see an amazing boom of innovation. I grew up with it. The entire world can be brought together in ways that past generations would consider a form of magic. What the FCC is willing to do will restrict the magnificent freedom and truth that the internet is capable of. The world can only get better when we face the truth in front of us. The net is home to innovation, and communication. Businesses already thrive on the internet, the individual has the power to be a successful entrepreneur. I myself pursue my entire career through the web. Americans who say this country hasn't been headed in wrong directions are ignorant. The freedom and truth of the web as it is remains one of the only remaining "American" parts of this country and putting it in the hands of out-dated conglomerates is short sited, un-patriotic, and foolish, and inconsiderate to humans world wide.
—Brendan Mauer, Richmond, VA

It is bad enough that with the rise of the misleading fox news and other ridiculously slanted media, that people today think that climate change is not real, that the government is our enemy, and that even sensible gun regulation is somehow unAmerican. Net neutrality is important, no, vital, to the survival of our Democracy. It is important that real facts can get out to the public. No company should be able to control the flow of information over the internet.
—Blayne Goodman, Livermore, CA

Hello, Please reclassify Internet service providers as common carriers. This is the ONLY way to protect real Net Neutrality. In Romania we really know how it is to have very fast internet for everyone and we would like for this option to be available everywhere in the world. If Romania afforded it, i am sure that many other countries will afford it. Just make sure it's not more proffitable to just keep the old internet infrastructure in place and even more, limit its traffic depending on the ISPs subjective wishes. Please do your part of the job, as providing legislation that would serve the people in the long run, and freedom of speach, not just the ISPs and their profits. Thank you very much!
Alexandru Peptan, Bucharest, Romania
—Alexandru Peptan, ,

Net neutrality is essential for the future prosperity of the US.
—Larry Lohrman, Salem, OR

The internet is a public domain and must remain so. IT IS NOT A CORPORATE ARENA-IT IS BY THE PEOPLE, FOR THE PEOPLE AND IS INTEGRAL TO OUR DEMOCRATIC VALUES!!
—Scott Chapman, San Luis Obispo, CA

My research on cancer and hypertension depends on large datasets from academic institutions around the world. These can take hours to download with a good internet connection. In any given project, we may transfer dozens of these files to multiple machines. Already we are starting to lose some of our best talent to research communities overseas. Restricting access to high-speed connections would stifle scientific research and further threaten America's competitiveness.
—Mark Rogers, Fort Collins, CO

Everyone needs to have access to the internet, REAL access, not the ridiculous second tiered farce providers are trying to push, especially those people who would only have the second tier option.
—Linda Ault, Huntsville, TX

I live in an area with an internet provider, Time Warner, that maintains a monopoly on acceptable internet service. If there were provisions allowing for new companies to compete with existing giants like Time Warner, net neutrality would not be necessary. However, as it stands, consumers like me have no realistic options to approach a competing company for internet service. Americans like myself need the protection of the government to prevent our service providers from degrading certain services at the expense of others. They will essentially be picking business winners and losers based solely on collected rents and the whims of management. Please act to protect the internet as it currently exists.
—William Dawson, Raleigh, NC

Protect access to internet for all not just those best equipped with cash to get there first .
—Deasy Bamford, ,

The internet needs to be an even playing field and not skewed in favor of those with money and power. This is the only way to maintain a true and free democracy!
—Jerome Comeau, Minneapolis, MN

Because open Internet is a right for all, not a privilege for the elite!
—Michael Oghia, Jackson, KY

Giving an edge to corporations that already dominate in their respective markets is detrimental to the development of smaller businesses as well as detracting from the competitive nature of the business environment. Its practically an oligarchy (BAD.) already the way the communications market is nowadays, and this would not only make it even harder for that to change in a desirable way for consumers, but it would make it worse.
—Evan Grassi, franklin square, NY

Net Neutrality is necessary to preserve our freedom of speech and our democracy. PLEASE keep net neutrality. I do not want money to decide what news source is available.
—Molly Schreiner, Avon, CO

Equal access to the internet for all income levels is essential in today's economy. This country needs to take a stand to support that freedom of access and be an example to the world.
—Margot Gwin, Desert Hot Springs, CA

The Internet has inspired an unprecedented amount of innovation. Anyone can imagine something great - an application, a web site, the next Facebook or Twitter - and make it a reality because the playing field is level. Their innovation isn't squelched by big businesses who don't want the competition. The new upstarts are just as available to someone like me as the big companies are. However, if this proposed set of rules becomes a reality, that will all become a thing of the past. These rules will allow big businesses to "buy" better Internet access than the small upstarts, putting the small companies at an extreme disadvantage. It will also allow the ISPs to demand more money from anyone who wants decent access to the people who surf the web. Those companies that don't pay or can't pay will effectively be pushed out of business. This will also give the average consumer fewer choices for where they want to take their business. I know that the new rules supposedly specify that this cannot happen, but only an idiot would believe that. Taken in entirety, the rules will completely destroy Net Neutrality. Net Neutrality must be preserved; this is so important. The proposed rules must be thrown out and the ISPs must be reclassified as common carriers. We already pay far more for poorer access to the Internet than many other countries do. Don't make it worse for us by destroying Net Neutrality.
—Janetha Beck, North Chili, NY

What makes an ISP any different from the telephone? They do the same thing. They are both 'common carriers' and should be treated equally.
—Ransom Greenfield, Ventura, CA

A free and open internet will encourage a healthy and viable small business growth, the backbone of US economy.
—Joseph Robertson, Stevenson, WA

Make Companies only Common carriers! Throw out these new rules that you have no right making in the first place! The internet does not belong to YOU!! So get off your high horses and stop putting flags in everything claiming they're yours! If we are ever going to have a huge economic crash this will only further the gap between poor and rich because you people take advantage of us! Quit now before its to late.
—Aj Shannon, Ingalls, IN

Net neutrality allows for everyone who is not a service provider, or stinking rich, to browse the internet for whatever they wish to learn about, be entertained by, or to express their individuality and opinion on. That is all done as of right now, so FCC chairman Tom Wheeler, your proposal is still not garnering approval from the millions upon billions that use the internet for the reasons stated. Do you really think that you will be allowed to get away with this garbage. Service providers have always been common carriers and should continue to be just that. Quit feeding us your bullshit because we will always defy you the satisfaction of getting your way with us, YOU DO NOT SPEAK FOR THE REST OF THE WORLD, WHEELER. YOU ARE ONE PERSON AND OUR NUMBERS WILL ALWAYS OUTWEIGH YOUR OWN!!!
—Austin Ross, Sherwood Park,

Tom Wheeler: Net Neutrality is important to me, because I'm a startup entrepreneur. The fact that I can think of a product and just deliver it on the web that can be just as easily accessible to millions out there as a large company makes it possible for me to compete against incumbents, innovate in spaces that have stagnated, and quickly iterate on a product with a customer-first mindset. If it costs me both time (in terms of setting up the fast-lane for people to see my product), and more money (in terms of paying a lot of money for the fast lane), then that's all barriers to entry that will only favor incumbents. The proliferation of all the fantastic services that have sprung up is the result of lots of people trying lots of things, and being able to do it with little cost, on a level playing field. Take that way, and you'll be hurting a large chunk of the few parts of the American economy that's actually doing well, that's actually growing, and that actually has a role in inventing the future. Throw out your rules, and reclassify ISPs as common carriers. You'll be doing us all a favor. William Chung
—Mr. William Chung, Mountain View, CA

i would like to continue to have unhindered fast access to what I need to access online using any internet provider, without having to rely on old fashioned and expensive triple play cable company plans that favor data transfer speed only for what the big cable monopolists allow.
—Arjan Brussee, Redwood City, CA

Destroy net neutrality and you will destroy the internet, and everyone will hate you forever (except the people making stupid amounts of money of course). Basically destroying net neutrality destroys what makes the internet so wonderful. Without net neutrality the internet will no longer be a place where ideas can be expressed equally, but instead a place where someone will be able to decide which ideas they want people to see and to share. It will give internet providers an overwhelming power. All of this aside, it will slow down the growth of the human race, as the rate of information and new ideas will be reduced/controlled and selected. It will give unfair advantages to people/organizations with money, or people/organizations who are 'friends' with the internet providers. Basically getting rid of net neutrality is a terrible, stupid idea. Please don't do it.
—Christopher McGahan, Kirtland AFB, NM

I do not want to be treated as less worth just because I'm a private citizen and not a big corporation. ISPs must be seen a common carriers providing a service to all.
—Mike Tobin, Melbourne,

Net Neutrality is important so there is not a corporate takeover of it and of free speech.
—Sef Magrath, Spokane, WA

FCC Chairman Tom Wheeler's plan will create an apartheid of an Internet; I don't think that is something you should be facilitating.
—Daniel Hooke, Rowville,

Internet access should be a fair playing field. I want to be able to access whatever website I want, not just the websites that can AFFORD for me to see them. How will Non-Profits be able to afford a world without net neutrality?
—Kimberly Pedersen, Sonora, CA

Classifying the Internet as a common carrier is the only reliable and consistent way to assure equal and open access for all.
—Michael Griffin, Saint Paul, MN

Don't take away our right to freedom of information.
—Randy Hoepker, Canton, IL

I want my kids to have the same amount of access to information as I did growing up using the internet for information for school and personal projects. Everyone should be allowed the same amount of instant access to information. The fact that this plan would make it more favorable to who ever has the most cash is a very vile tactic for extra cash.
—Kevin Mendoza, Stockton, CA

The public domain has no lobbyists, no political action committees, and limited defenses. Yet it is a wellspring of cultural progress. While much of the net neutrality debate focuses on the internet-as-public-utility argumnts, oft ignored is the issue of *content* provision. Public domain content, and the means by which it is accessed, will certainly be slow-laned. While peer-to-peer is derided for it's piracy potential, it's also dramatically reduced the cost of provision of public-domain materials while increasing accessibility. Much of the content that I utilize is legal, freely available public-domain material and absolutely critical to my work. This will cripple innovation and development when new public domain materials - including academic works, software, and research materials - get slow-laned because they are not profitable. The creation of a two-tiered internet is a short-sighted investment that benefits a privileged few at the expense of a functional network.
—Nick Eddy, Columbus, IN

Give us the public carrier that we may be aware of these last days, this final time. Allow us to watch as democracy and civility slowly slip into the great oblivion of "everything has a price and you don`t have enough."
—David Black, Tucson, AZ

The internet is a powerful agent for the kind of political activism that keeps our democracy representative of the american public and not just those who have the money to buy fast track,preferential access. As a senior citizen, I rely on a net neutral internet to inform me about pending legislation and communicate with my representatives in Congress, as well as to support persons and causes which I think benefit our country. Only by your reclassifying ISPS as common carriers can you permanently remove challenges to net neutrality and assure that the democratic promise of a government of the people,by the people and for the people continues.
—Meredith Einaudi, Stanford, CA

As a researcher and college faculty, my professional work absolutely relies on a fair & open Internet with net neutrality. Please ensure that this standard is upheld.
—AD Butz, Portland, OR

Dear sirs, Please continue to classify internet providers as common carriers. Neutrality is important to myself as well as future generations because America is home of the free and what better way to send a message to the world than by one of America's greatest invention that is used around the world ! Sincerely, John P. Hamilton
—John P. Hamilton, East Chicago, IN

WHAT?! YOU ARE NOT SCREWING US ENOUGH ALREADY!!!!
—Karen Laakaniemi RNC MSN CNM, Pensacola, FL

Net Neutrality is the base of today's global society and business. What you are doing could mean the end of modern communication and destroy any chances of small businesses that depend on the free internet to succeed!
—Robert Glavak, ,

If we want a healthy democracy, we NEED net neutrality and an open internet, not dominated by huge, greedy corporations!
—Kevin B Havener, Chicago, IL

My 90-year-old mother lives in an assisted living facility. She watches very little television, but still enjoys watching tennis. Comcast cable is the only way for that to happen and they are gouging her to the tune of $80/month. This is exactly what will happen to the internet and it is unacceptable! The internet is a common carrier. It must be classified and regulated as such.
—Daryl J Shute, Littleton, CO

well this seems like a no brainer, it has to do with my freedom to experience the same internet as anyone else! it has to do with the education of my grand children , medical records, on and on! i am not going to stand still on this I refuse to be sold down the river to line the pockets of the rich and selfish with my money! as in transfer of wealth, do your job! you were hired to protect all the citizens not the few
—Fred Coplin, Saint Petersburg, FL

I was a grad student in Computer Science at the start of the Internet as we know it. An open Internet has broght the world to where it is now based on equal access to information. Changing this in any way goes against everything. Do not cave into the corporations that want to make even more money by changing the playing field.
—Michael Brown, San Miguel, CA

Save Net Neutrality! This is a gruesome proposal and we cannot afford the extra fees! Internet was created by several parties, including military, government, professors, etc. These companies do not have the right to claim ownership and implement charges at their convenience and will.
—Fabiola Aguilar, San Antonio, TX

Having a free internet allows us to be free just like how America is supposed to be.
—Elizabeth Y., staten island, NY

I do not understand how proposals to hinder net neutrality are still making their way though. People are suppressed enough as it is. Even some companies want to make sure there is real net neutrality because their business depends on it. We the people depend on it. I support net neutrality.
—Bryan Blacksmith, Las Vegas, NV

Net Neutrality puts all opinions on an equal playing field on the web, allowing for freedom of thought to be exercised. This freedom defines free men. Let the people be free.
—Tanguy Wattinne, Los Angeles, CA

Why are you giving away our internet a piece at a time? We should all have the same access and not allow the faster lanes for only those that can afford it.
—Manuel Rivera, Rosendale, NY

In the 80's, you always had those post-modern dystopia films about how the future is rules by corporate giants and the government is nothing but a figurehead. If we don't reclassify all ISPs as common carriers, we'll be well on our way to making that a reality.
—Craig Apfelbeck, Poulsbo, WA

I want to access every site at the speed not two tiered
—Rosli Omar, Kuala Lumpur,

Do you really think it sounds fair to make me pay even more on top of my $250 cable/internet bill, just because an ISP decides it wants more money for certain sites? This is supposed to be America, you people are supposed to be protecting us. Please protect your first amendment right. Don't limit our freedom of speech.
—Maggie Holman, Troy, NY

We will never accept this betrayal!! This goes against everything democracy stands for we will never stand for this!
—Caroline Scullin, West Chester, PA

The Internet should absolutely be one of the Commons!
—Louise Fjeld, Loveland, CO

Not having Net Neutrality means having a hidden tax to the consumer. My decision on the .com I do business with shouldn't be based on the big guys paying for a 'fast lane'.
—FCC Chairman Tom Wheeler, Birmingham, AL

Dear Mr. Wheeler, In just twenty years the internet has fundamentally changed the way we communicate and obtain information. It has empowered and liberated many, and doing so it has changed much of our society for the better. Net neutrality has been instrumental to this positive change, and reigning it in would certainly be detrimental to its organically innovative nature.
—Menno de Boer, Redondo Beach, CA

I don't want internet providers to control which sites function quickly and therefore which sites I or other people will use more often. This is an undemocratic. This creates an unequal playing field. It would be like having better telephone quality for some people and not others, depending on who you were phoning.
—Chris Berryman, ,

The Internet belongs to everyone, not big business that will put a No Trespassing gate across it.
—Orion Lyonesse, Lake Stevens, WA

I do not think that it is a good thing to allow the providers of the internet to be able to extort money out of content providers. The slope to a dangerous internet is a steep one, if we give power like that to corporations that do not have a free internet at the heart it will be a matter of time that only partners of said ISP's will then be the only ones getting decent service. We should not have to be a part of an internet that you have to pay protection money to be able to run a viable internet business. this is not what the internet is or was ever about. They are common carriers as it was made in the beginning. Give me Net Neutrality or give me Death!
—Justin Latham, Benson, AZ

The internet belongs to the people--NOT to corporations who can bastardize it & try to make millions off it. It belongs to ALL the people. Throw out your rules & reclassify ISPs as common carriers. WE the people have spoken....
—Sherrie Munday, Boulder, CO

My small business depends heavily on Net Neutrality. Losing it would mean the loss of my livelihood, as well as for many others. Greed does not have to rule the world. Net Neutrality should be protected.
—Katy Picard, Warren, MI

Net Neutrality is important because it was guarantee the freedom of speach online. If Net Neutrality goes down the internet will disappear slowly because people whose opinion is rejected for wrong reasons will cease to use it, which will make a lot of personns as the opinions who are likely to be slowed down/ rejected are the one in favour of human rights and democracy. Indeed companies from the IT sector will suffer huge loses as more are more people will stop using the internet. And above all people will search and eventually find another way to replace internet by neutral communication network.
—Charlotte Cremaschi, Chalons en Champagne,

Net Neutrality matters because it's the main mode of communication. It should be classified as a common carrier. Our telephones, texting, social networking all function over the internet. It isn't a luxury. It's a necessity. No one should have to live life in a permanent " slow-lane!" We need to catch up with the rest of the world on this one, not move in a direction that moves us farther to the rear of the bus, so to speak.
—Mark X. Hatfield, Evansville, IN

I would never have time to wait for a slow and substandard internet.
—Corrine Molling, Onalaska, WI

Do not do this. It's akin to allowing the banks to crash the economy because they say they won't risk too much money... Don't go down in history as the scum that destroyed the internet.
—Robert Muller, Ballston Spa, NY

Monopolistic communication carriers like Comcast cannot be trusted to look out for the best interest of Internet users. Like public transportation telephone companies major Internet cable providers should be designated as common carriers, and serve public interests, not private profiteering. The FCC was created in the early 20th century to protect the airwaves and communication channels as a public good. Please follow the FCC mandate to support the public good, not private corporate profits, by supporting Net Neutrality.
—Bruce Wolcott, Seattle, WA

Hey 'Bama!! You promised 3 things that matter to me and got my vote: 1) Health care reform. 2) Financial services reform. 3) Strong Net Neutrality. So far you've delivered on ZERO of the above. Change we can believe in? Nope. Just another high priced whore, selling out the voters who elected you in the first place to the highest corporate bidder! Change we can believe in? Nope. Not even close. Business as usual: Government by BIG BUSINESS, FOR BIG BUSINESS. May you rot in hell.
—Ken Gunderson, Boise, ID

The internet needs to remain an equal frontier for everyone. To allow companies to control it's access is a great injustice to everyone and against the principles and purpose for what the internet is originally intended.
—Chris Dale, Windsor,

This is a bad idea. What is next? Putting computer chips into infants to control what they are able to say? Your position in life has no bearing on your actions online. This tool is liberating to people being persecuted. This tool is empowering to those who do not have access to education. We could go through with this plan to place rules on the internet, but only if you want to slow down human societies progress to a better future. If you let money decide what the currently free thinking internet is allowed to do then money will hack away anything that makes this vast wealth of knowledge worth while.
—Ryan, ,

I do not see a need for further control of an internet that's already having to much regulation put upon it.
—James Chaney, Mesa, AZ

Because I think it's wrong, I can't afford it & social media gives me a life I'd otherwise not have. As I'm a shut in. Please don't take it away from most of us! We cannot afford it. Please & thank you!
—Teresa Segal, Hemet, CA

This proposed plan sounds very discriminatory. Please re-engineer your proposal to aid in internet equality.
—Devin Peyton, San Jose, CA

Seriously? Why in the name of all that is good is this new plan of Tom Wheeler's even being considered? Is the FCC full of That Many idiots? Honestly?
—Felicia La Belle, Warrensburg, MO

These proposed rules are contrary to the open exchange of information and ideas that the internet is based upon.
—Mikkel Ridley, Oakland, CA

It is completely unfair to let service providers dictate what internet users can see. We pay a blanket fee to explore the countless possibilities presented to us by the internet. Information, group forums, art, music, even pictures of cute animals to cheer you up on a bad day, and new content is being created every second. The internet is called cyberSPACE for a reason. It's infinite. Killing net neutrality would destroy many of those infinite possibilities and resources. It would violate free speech. Don't do this. Keep the internet open to everyone.
—Laura Shapiro, Denver, CO

We should have Freedom of Speech. If Net Neutrality isn't adhered to, our freedoms will be lost, with the biggest bidder making the playing field uneven. They shouldn't get faster lanes because of having more money to play. Not fair. I cry foul. Don't let this happen.
—Camilla Bowman, Lebanon, IN

Abolishing net neutrality will stifle commerce by de-incentivizing innovation, threaten digital democracy by allowing moneyed-interests to boost delivery speeds of content (to the detriment of others) and basically undermine the very essence of what makes the internet so powerful and unique.
—Jacob Resneck, Petaluma, CA

Internet Service Providers ARE common carriers. The simple, obvious and fair thing is to reclassify them as such.
—Don McClure Jr., Champaign, IL

Access to all kinds of information, from all kinds of sources is very important to me. Killing net neutrality will rob me of that ability.
—Dorothy Lewis, Norton, KS

Because Net Neutrality allows for something that's a lot closer to my idea of modern-day democracy than the actual democracy that governments seem to employ. Everyone votes, not for one or two people to do whatever the heck they want once they're picked, but for all to cast a voice on new and previous rules. Removing Net Neutrality would create way too many ways to undermine this.
—Michael Hansen, Aarhus,

Information should not be witheld from the poor and underprivileged in the interests of big business. In Australia our internet is already one of the slowest in the world, so we understand the crippling effects of a "slow lane". It's disgusting. The internet is for everyone.
—Jayde Hunt, ,

The internet is where my friends live!
—Caitlin Segal-Mains, Yakima, WA

Please keep access to the internet equal for everyone!
—Maya Kurtz, Glenwood Springs, CO

It is of the utmost importance that ISPs be reclassified as common carriers in order to protect Net Neutrality. Access to information is essential in a democracy. To protect Net Neutral access to online content and applications ISPs must be reclassified as common carriers.
—Ross Emmerson, ,

Let's keep network neutrality for as long as we can.
—Daniel Morrisey, Petaluma, CA

Because it's proposed rules are dumb, and shafts anyone hoping for a choice outside America.
—Emily Knox, ,

My internet service is already poor. If corporations take greater control, it will be worthless. Don't allow corporations to buy our public information services online.
—Stephanie Johnson, Durango, CO

The ability to have high speed internet is something everyone should be able to have in today's modern world. If companies are allowed to control who can and can't have high speed internet based on standards they set it is denying those without the ability to meet those standards a chance to experience what a privileged few can. Save Net Neutrality and do not allow internet providers the ability to exclude those Americans that they do not feel are worthy of high speed internet.
—Chris Nehring, La Porte, IN

Information flows freely. You can be a part of it or you can watch it shrink around you. Take heed, history is watching.
—Christopher Chun, Concord, CA

Equal access for everybody!
—DMD U.S. Army (Ret.) Douglas KInney, Otego, NY

Net Nutrality is important to me because it is a massive knowlege and entertainment base, with no discrimination on who gets what when.It I a powerful tool for the better of all man-kind. Allowing coorporations to desdiscriminate what we have access to is downright un-american, and can spread ignorance while also serving to support the provider's own political and economic agenda. Failure to protect we the people and supporting big business is dangerous. I've noticed there were the words,"within a reasonable means", dealing with how much a corporation can slow our internet speeds down, but who is making sure their measures are "reasonable?" The government is already spiralling in debt, and a separate entity to monitor such action would prove both an inefficient use of my tex-dollars, and more cost to our government. On the other hand, are the corporations expected to regulate themselves? I hope to God not. Remember, the interests of the people and the interest of big business rarely are parallel. Whatever your decision is will be written in the history books and read for decades beyond all of our time's. Our children, our grandchildren, will look up at us and wonder if we really did the right thing. I hope we can tell them,"Yes, wedid do the right thing." Thank you, Mr. Wheeler. I sincerely hope you choose the correct path, because hell hath no fury like an American scorned. , Tarron
—Tarron Clary, Waupaca, WI

Please recognize ISPs as Common Carriers, which is simply the reality. Democracy itself is dying if you do therwise.
—Tim Baer, Vashon, WA

I always knew cyberspace should be free, ever since I was young. Why must VZ screw up cyberspace for its own profit? Corporations are NOT PEOPLE, NO RIGHT TO PROFIT, MONEY != FREE SPEECH!
—Michael Dotson, Carterville, IL

Stop trying to ruin the internet you have no idea what you are getting yourself into , doing this will result in more strikes
—Maks drzezdzon, ,

Shame on Chairman Wheeler! He says he stands for one thing yet supports the exact opposite behind the scenes.
—Sean Dorsey, E Taunton, MA

The gate keepers will soon be creating their own their own content, and when they do they will stifle any competition and alternative choices by overcharging for fast enough access.
—Tim Kilbride, Louisville, CO

I think its important for us as citizens to be treated equally. Therefore, taking freedoms away from citizens slowly degrades our ability to prevent unhappiness. I challenge you to consider the consequences! Thanks,
—Jeremy Burgess, Auburn, AL

The same freedom of freely choosing services in all of "real life" needs to be on the Internet as well. ISPs should deliver ALL data I ask for, not what they want.
—Daniel Börresen, ,

My one-man business is 100% dependent on the Internet and often involves the transfer of large files. Much the same is true of millions of other small and medium businesses. It is long past time that the big ISPs were reclassified in keeping with business fairness and the openness to entrepreneurship that has created so many great companies and products in the past. Allowing a two-tiered Internet is a recipe for suppressing competition and innovation. We demand a truly open Internet!
—Adam Cornford, Oakland, CA

I work in a pharmacy, an independent, and we need a fast working connection to send to insurances and receive e-prescriptions. And we can't pay top-dollar for it all the time, and if this happens it will take out the independents.
—Jennifer Chen, Indian Head, MD

The FCC Chairman Tom Wheeler is a former lobbyist for the cable industry. The rules the chairman is trying to push forward is in contrast with the FCC's role in the government. It will stifle innovation. Allow the ISP's to push there views on the American people by slowing the "lanes" to information they do not agree with or is critical to them. On the Internet information is communication. Communication is speech. Speech needs to be free and open for a healthy government and society. The 1st Amendment should not be censored but encouraged.
—Ilea Martinez, Plainview, TX

The internet should be a utility like energy and water. The amount of business and other things the internet is used for should not be restricted or altered for profit of anyone other than the consumers. Since it is the consumers who are taking a stand against this, there should be no question as to how bad of an idea this is. It has the ability to send this country in to nation wide riot.
—Robert Miller, Redding, CA

Since the implementation of the internet, it has been an open vehicle of communication and information. For ISPs to be able to say what their customers can and cannot do on the net is unthinkable. To be allowed to establish a dual system that goes beyond paying for service rendered is a poor idea. Startups and independents will surely suffer under this poor decision by the providers. Help us keep the net open for everyone, and stand up against the ISPs and cable providers. Reclassify broadband as a communication medium.
—Christopher Stoddard, Lawrenceville, GA

This proposal will kill the free internet!
—Caleb Long, Montgomery, AL

Music and friends. All that keeps me going. Don't take that away from me.
—Brendan Johnson, Albany, NY

As international standards go, the USA is a laggard in the internet races. Never mind that we invented and built it. We're not even in the top ten today (See below.) Fact is, we're barely in the top 50%. Why is that? The 'for profit' system we've built around our internet discourages improvement. Improvement in a system this broadly spread, geographically and socially, requires a continual technological improvement, which requires capital. The contemporary business model attempts to shift capital requirements downstream to a contracted provider, who tries to do the same, on an ever smaller scale. As a result, connectivity is never improved because no one is willing to spend time and money on it. If we allow profit to control internet connection speeds, it's guaranteed we'll be in the bottom ten. For a profit-driven enterprise, there's no incentive to improve the product when the customer has no where else to go. It takes the social conscience of a government to make that happen. Top 10 in Desktop Speeds (in seconds) Slovak Republic (3.3) South Korea (3.5) Czech Republic (3.7) Netherlands (3.9) Japan (4) Denmark (4.3) Switzerland (4.3) Sweden (4.5) Belgium (4.6) Norway (4.8)
—Carl Clark, Redondo Beach, CA

Without Net Neutrality an important part of modern life will be crippled. Corporations like AT&T, Comcast and Verizon WILL strangle creativity, economic development and political activity via the Internet. Reclassify ISPs as common carriers.
—Randal McGavock, Denton, TX

The Internet should be a public utility, equally available to everyone no matter what their income or social status. Do not create second or even third class Internet users.
—Karl Sittler, Marion, MA

The internet is a utility and part of the commons which all Americans should have equal access to.
—Kathryn Riley, El Cajon, CA

Because I don't think internet activism should be shut down.
—Paul tidwell, Tigard, OR

The internet is really the only thing that keeps me out of the brink of poverty.
—Jesus Vizcarra, Gardena, CA

The internet is a public utility not a private product to be marketed to the highest bidder. Putting control of the internet into the hands of profiteers is not in the public interest. These corporations already make outrageous profits off of the internet, a service that they didn't create and have no business controlling. Enough is enough.
—J T. Smith, Clarksville, TN

so we all get the same speed
—George Cornell, pleasanton, CA

The Internet, as it is currently implemented, is a shared resource. It is important this resource continued to be shared equally because the Internet distributes knowledge and that promotes freedom for all users. If some get more bandwidth, others will get less bandwidth and the value of the Internet will be decreased for those who are forced to live with slower access.
—Ron VanAbrahams, Citrus Heights, CA

Corporate ownership of every medium is against everything this country should stand for. This give away is a step to far.
—Jerry K F Chilson, Enumclaw, WA

As a musician, the internet is a very useful tool and for me to contribute creatively to society, I have to know my government will defend my right to an open and free internet!
—Kenny, Goodlettsville, TN

You either protect the public interests or you are clearly in the service of corporate interests. This is not subtle nor ambiguous.
—Joel Hawthorne, Oroville, CA

The Internet is THE major conduit for democracy and freedom across the world. Allowing the creation of a two tier system is the beginning of of net censorship by non neutral powers.
—J Taylor, ,

Everyone depends on the internet these days, and it should be open to everyone equally, not a two tiered system of haves and have-nots. There's more than enough income inequality in this country now; don't add more to it.
—Patricia Panitz, Seattle, WA

Your proposal threatens the free and open platform to share ideas and information to line the pockets of a few wealthy CEO's. Taking away the rights of the many to enrich the a few should ring some alarm bells.
—Jonathan Zito, Chicago, IL

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Mark Parton, Stevensville, MT

When I hear about an "Internet Fast Lane", some way corporations can pay for preferential treatment, it doesn't sound like something that will help me, or anyone low-income, or any small business... it sounds like creating a slow lane for everyone except the wealthy people and the giant corporations. I want equality. I want to pay for Internet service, and then not have to worry about whether the people hosting the webpages I want to access can also afford to pay to use a special "fast lane".
—Gregor Passolt, Seattle, WA

Net Neutrality means the difference between a free and open internet, and a garbage cable subscription.
—Matthew Baer, Pemberville, OH

Your responsibilities are to the Citizens of the US, NOT to a few, favored private corporations. Please protect the public!!
—Richard Frith, Seattle, WA

"All men are created equal." If corporations are "men," as the Supreme Court has ruled, then they don't deserve preferential treatment when it comes to what is basically a public utility. Do you believe in "We the people," or 'we the corporations?'
—Winn Wilson, willimantic, CT

WOW! YOU REALLY ARE A BUNCH OF CORPORATE WHORES.
—Ggeorge Loveday, GRASS VALLEY, CA

Net Neutrality is important to all citizens of the United States of America. It is unfair to allow this monopolistic companies AT&T, Comcast, and Verizon to own something that's supposed to be free for everyone. The idea of putting web surfers on a slow lane is right down ridiculous.
—Edgar Robert, Hialeah, FL

I have enough trouble with getting a fast connection, let alone getting the speed that other countries routinely supply. Do not drive a wedge between the rich and poor to further the greed of the ISPs.
—Leigh Hill, Felton, CA

Chairman Wheeler: I came of age in a time when the internet was just starting to expand and become accessible to society at large, and as I've grown up I've watched the internet--with all its discoveries, pitfalls, and triumphs--blossom into an amazing source of knowledge, support, and global exchange. Net Neutrality is crucial if that free exchange of information and ideas is going to continue. To impose any of the rules that have been proposed as part of the FCC proposal would be akin to muzzling more than half of the united states population (the poorer, non-influential half of course) and calling the result a democracy. Furthermore, it would damage the very spirit of entrepreneurship and innovation that has given us so much of the technology we have and covet today. Please protect this vital resource. Uphold net neutrality. Sincerely, Camera Ford Brown University '16
—Camera Ford, Providence, RI

If the FCC hands over the internet to the ISP's with this plan it won't be long before they are themselves put out of business by the companies they gave it over to. If they maintain Net Neutrality they will have the mandate to continue to protect to do so.
—Lindsay Dyson, Petaluma, CA

These companies already screw their consumers. We all deserve net neutrality, not just big business again.
—Judy Chun, Concord, CA

I care about new neutrality
—Lee Davenport, Pleasant Hill, CA

Hello Mr. Wheeler. Internet neutrality shall be kept the way it is. The steps you're planning to take are nothing but bad. You will destroy the internet allowing easier spying and electronic molesting of the users like me. I know that's what you want but you should think again. Think for the people who pay your salary. Not those who bribe you. Have a nice day!
—Stefan Deliyski, ,

Ending net neutrality would be taking freedom of choice away from internet users. It would be the Citizens United of the internet and would result in the fastest download and transmission speeds being available only to the highest bidders.
—Justin Picken, Vail, CO

Please, as someone who has been around since the true birth of the internet, who remembers baud modems and BBSs and MUDs, PLEASE reclassify ISPs as common carriers. This road was meant to be open.
—Jonathan Finite, Beaverton, OR

Free speech for all, not just the ones who can pay the most!
—Robyn Cleaves, Tacoma, WA

We can't live a normal life in America today without the internet. The internet is necessary to all Americans. The internet should be considered a public utility. Please don't let rich corporations take that away from us.
—Diane Kupelian, Bethesda, MD

In view of the evident lack of competition among fixed (non-wireless) broadband delivery (cable and fiber “ISP”) in most markets, in view of the fact that wireless (satellite or cellular) broadband is and will remain for the foreseeable future considerably slower and less cost-effective than fixed broadband (and truly serve only remote or mobile users respectively)... And in comparison to intensely competitive global markets, where we see American broadband lagging both in raw speed, performance/price, and general availability across the nation, exacerbating the “digital divide” of haves and have-nots... Fixed broadband is plenty profitable. So why not the necessary investments? No incentives for each de facto monopoly to invest in their infrastructure. And indeed there are two very revealing examples that illustrate this. First, we see that each foray by Google to lay fiber in a local fixed broadband market has shaken-up the incumbent very narrowly in that market; and we also see that municipal and locally-owned fixed broadband roll-outs in communities nationwide are being pre-empted or challenged by anti-competitive ALEC-driven legislative pressure. The proposal to ratify extortion — pay to play “fast lanes” — by fixed broadband providers is completely misguided; another attempt at the self-regulation model that has lead to such dismal outcomes in every other industry. Instead, there are two clear approaches to solve this problem. First, we can accept the argument that infrastructure is expensive to maintain and upgrade, and that it is prohibitive for competitors to enter into existing markets. In this case, the monopolies need to be classified as common carriers and be regulated as utilities. Second, we can remove barriers and promote competition at the local, municipal, and regional levels. This seems more difficult to accomplish, and would also incur unequal rates of deployment and long delays before competitors could have an effect. So not a productive direction. But worse yet is the current proposal, which devolve primarily to the narrow economic benefit of the incumbents -- with clear dangers and uncertain benefits to We The People.
—Robert Spector, Somerset, NJ

Please,its the one thing we we have!
—Jennifer Gutierrez, Willmar, MN

Freedom of speech and communication is an American right! Please protect Net Neutrality.
—June Stepansky, Woodland Hills, CA

We must have an internet with equal access to all. ISPs are providing a public service, and should be classified as common carriers. THIS IS ESSENTIAL FOR A FUTURE OF FREE EXPRESSION AND EQUAL OPPORTUNITY. Don't destroy the internet! Commercial success should depend on quality of service and content, not on being able to buy priority placement. Small businesses won't sand a chance. Right now, ISPs have a monolpoly in most markets, and there will be no competition for those that purchase priority bandwidth. DO THE RIGHT THING.
—Mr. Rob Nienburg, Palm City, FL

Please represent the individual people of this country, not the "big guys"....we the people have very little left to help us gain information that we choose.....
—Paula Gooding, Seattle, WA

Do not simply favor corporate profits!
—Ryan Weller, Orwigsburg, PA

Do not bring the Caste System to the internet. it will change the basic nature of the internet. Maybe that is what you want. I hope not.
—James Thompson, Santa Monica, CA

I think you know why equal, public access to infrastructure is a good thing. I'll just say that I'm really disappointed. You can affect lives in a way most of us can't. And you choose to use that power to be a troll under a bridge. I can't imagine that's what you grew up wanting to be, yet here you are. Charging companies for premium access to consumers - I wished it stopped at putting a few coins in your pocket but it doesn't. It's going to rig a system to favor the advantaged for a long time to come. Eventually, you or one of your descendants is going to be on the wrong end of that stick.
—Max Lin, San Francisco, CA

Stop your proposed terrible internet rules! The internet is a critical utility for global commerce and communications and this proposal will enable deep pocket companies to pay for a critical competitive advantage, crushing entrepreneurs, and small businesses -- the source of most major innovation driving the success of the internet in the first place. You should be protecting Net Neutrality, for everyone -- not creating and enabling a class system that has been opposed by every major successful internet company.
—Michael Klieman, Belmont, CA

FCC, perhaps you have heard of the First Amendment, freedom of speech and expression, the Constitution... Then STOP SELLING US OUT TO THE WEALTHY CORPORATE IDIOTS AND PROTECT NET NEUTRALITY!
—Billy Angus, Hamilton, MT

Net neutrality is the only thing that keeps the internet as a fair way to do business in a large chain dominated economy.
—Ereck Schwartz, Huntington Beach, CA

The proposal by definition is a discrimination against startups. How will they be able to launch services on the slow Internet lane to compete with the big guys on the fast, highway lane? What will FCC gain from killing the startups where they have launced great producst that we use everyday? How will Facebook be launched globally on the slow lane? How will Twitter? What about IFTTT? The proposal to end the net neutrality is plain wrong. Listen to what Google, Amazon and all the big tech companies are telling you. Despite they will be the ones who will benefit from FCC's proposal, they are fighting against it. Just think. You are doing wrong.
—Tolga Balci, ,

KEEP THE INTERNET AS IS!
—P M, CHICAGO, IL

PLEASE throw out your proposed rules and instead reclassify ISPs as common carriers.
—Inga Dahl, LONDON,

You took an oath where you promised to uphold and defend the Constitution against enemies both foreign and domestic. Multinational corporations are, in effect, "foreign" powers. Whether or not they are already or could become our "enemies" is debatable. Many of them, including some of the ones that you want to turn the Internet over to, have repeatedly shown that they will inevitably put their own private interests above those of the American people. Currently, self-serving private interests control most of the major communications systems in our Country, including TV and most of the major newspapers. The Internet is and should remain both an outlet for uncensored and unbiased news and also an open and public forum.
—Tim O'Hanlon, Waimanalo, HI

For the good of humanity. Free access to information creates an educated free public that can work together to solve our common problems. The marketplace of ideas should be open equally to all.
—Katie Rouse, Parkville, MD

The net neutrality is one of the things the internet has but the real world dont have. The online gaming industry could almost crash and if it crashes the social parts of gaming will die.
—Johannes Andersson, Schenectady, NY

It is wrong to allow carriers to set prices that discriminate against the average person. If you pass this, only the rich will be able to afford the faster Internet, and the promise of equal access for everyone will be broken. This is clearly another case of big business setting the rules and leaving the rest of us out in the cold if you allow this to pass.
—Mark Poland, Palmdale, CA

Just because it works for other countries where the Internet is limited and censored does not mean it'll work for us. There's a reason we're a democracy. There's a reason why we have the rights we do. There's a reason why people from other countries want to live here. Please don't take that away from us. Don't murder our rights. Don't try to limit creativity and jobs for future generations. We need to move forward not take a step backwards . Let's leave a better and enjoyable world for our children with no limitations.
—Erin Spence, Austin, TX

Net neutrality works just fine since equality is a core value of democracy. No need to fix something that isn't broken. A fast lane on the internet violates the basic principles of equality on which democracy depends. Keep the internet open equally to all!
—Marian Lotz, North San Juan, CA

Ending net neutrality is like hammering one of the nails into Jesus as he lay on the cross. The other nails, like deregulation, ending campaign finance limits, the Patriot Act, and allowing corporations unrestricted access into the political realm have stripped from America most of the principles and freedoms that made us great. Don't be the final nail in America's coffin. Ending net neutrality will, in essence, end equality in America. That is un-American! Be a REAL PATRIOT and stand up for real American values, not corporate interests. Thank you for listening.
—Amy Orlauski, Los Osos, CA

I play internet games and I can't afford a faster internet service.
—Terence Rieth, Lewisville, TX

It isn't fair to change the rules of the Internet being free. The FCC didn't create the Internet so they shouldn't have this right!
—Janice Feeley, Fremont, CA

Net Neutrality allows me to go onto any website from anywhere around the world, connecting me with the rest of the world on an international level. Without it, such a thing would be impossible.
—Ian Torres-Brown, Springfield, OR

I'm English, but the decision on this act is going to affect me and other internet users throughout the world. If I suddenly have to pay extra for reasonable speeds, that's going to cause so many problems for me. It doesn't even have to be every internet service, just the juiciest miracles that'll net ISP's the most cash by forcing them to pay a premium- high-traffic or data-heavy things like email providers, online gaming, YouTube and so much more. If we're unlucky, they'll do it to every site, and the ones who can't afford a premium access plan will find their traffic plummeting. It wouldn't surprise me if the ISP's were paying anyone out- they'd have it back in a matter of weeks, if not days. This isn't the case for normal people, though, and it is imperative that this doesn't happen. Please, for the sake of every internet user on the planet, classify ISP's as class two common carriers.
—Alex Phelps-Jones, ,

All data on the internet should be treated equally and without discrimination.
—A Belanger, Windsor, CT

We are counting on you to do what is best for the people, not the business. The internet is a leveler and it should be free and equal for everyone. Please do the right thing.
—David Netting, Pottstown, PA

It is my right under the First Amendment. To pass these rulings, and laws, would squelch my right to freedom of speech, and expression. I urge you to stop this insanity, and keep our internet free, and neutral, by reclassifying ISPs as Common Carriers, like they should have been in the first place.
—Anita McInnis, Bellflower, CA

Whitout net neutrality we kill the economical power of inovation in the heart of web.
—Xavier Hape, ,

The internet should remain accessible to everyone. Those with wealth already control too much. It is the responsibility of the government to keep the internet neutral. Gordon Rowe
—Gordon Rowe, des moines, IA

Good access to the internet is crucial in the world today, even in the poorest countries. It is clearly infrastructure of scope and importance exceeding the telephone. Given that our government saw the importance of regulating telephone line providers as common carriers it is obvious that the same status is appropriate, indeed necessary for Internet Service Providers. Please reclassify ISPs as common carriers. Thank you.
—Kenneth Belcher, Chicago, IL

Please rescind your proposed plan to alter the nature of the Internet. It is not at all in the interests of the American people. If, over the past two decades, the Internet has been able to have a vast impact on American life, it is because it has mainly been an instrument of communication and communal interaction, & as a marketing tool it has been an excellent engine of innovation, one of the few true such that America still retains. This is largely due to access to its potential being molded by the needs and desires of the individual user, not those of corporations and corporate interests. To take control over access from the user and hand it over to corporations at this late date, as your proposal would, would give them the power to strangle all three things: communication, interaction and innovation. While you don't specifically propose ISPs switch to the cable television model, where the providers choose the offerings available to the user & allow them to choose from the menu rather than all possibilities (as the Internet is structured now), it isn't difficult to envision that model being installed, as cable companies in particular have desired that model since they began offering Internet service. You have proposed rules that would supposedly preserve net neutrality, but these are flawed and unnecessary. Flawed because they would essentially allow cable companies to procede however they like and deal with complaints - of crippled bandwidth for "unprefered" websites, of restriction of access to websites entirely, etc. - and then until arbitrated by a government official. Unnecessary because that additional layer of implicit permission and government regulation can be done away with simply by listing the Internet as telecommunications - something the FCC could do effortlessly - and reaffirming the Internet as a place where such practices are simply not condoned, rather than opening the door to them in the first place. This is not the time - there is not a time - to increase inequality on the Internet. America has benefitted greatly from a free and open Internet, and the FCC should be doing what it can to keep it free and open instead of making it less free, less open, and far less competitive.
—Steven Grant, Henderson, NV

The internet will be taken over by corporations and become useless to people who can't afford big fees, like retired people, for example.
—Don Minnerly, Portland, OR

People deserve to have internet access that isn't more monetised than it already is, especially those who can't or can barely afford to pay for extra subscriptions, or else have to deal with throttled internet. Don't limit the internet to cater to the already rich and privileged, while shutting out those who may use it as one of their few sources of education, communication and entertainment.
—N, Erwinna, PA

Chairman Wheather – your proposed agenda for the Internet is utterly indefensible! The Internet should be used only as a COMMON CARRIER! No other option should even be tolerated by ANY American citizen! You have ABSOLUTELY NO EXCUSES WHATSOEVER to even begin to think about tiering prices at all!!!
—Stuart Borman, San Antonio, TX

NET NEUTRALITY IS A TRUE FREE MARKET. REMOVING IT ISN'T FREE, IT'S RESTRICTIVE TO COMPETITION!
—Ethan, Bryan, TX

A free and open internet is the single greatest technology of our time, and control should not be at the mercy of corporations.
—Mike Emerson, Ellensburg, WA

The decision by the FCC will have effect far beyond the US and will mean travelling the information highway with the brakes on. Net neutrality opens the door to a synergistic multiplier effect but two tiered structure locks out many sources from many people as it changes the payment structure.
—Richard Fahlman, Gillies Bay,

please take charge of this matter and put us before the money
—Diane Di Vittorio, Oakland, CA

The net should be a FREE, OPEN, and EQUAL resource for everyone to use. Any commercialisation, consumerisation or the creation of a two-tiered internet is completely abhorrent to me and a should be illegal! ISP's are common carriers. The FCC need to throw out any rules that create a two-tiered internet or fast lanes. It is vital for the globe that information is equally and freely available to everyone regardless for their wealth or geographic location! Discrimination is illegal! No person, company or corporation should have the power to control online content! Perhaps Barrack Obama's words should actually be implemented - that any attacks on internet freedom are fascist and despotic, any control on internet freedom should be illegal! DO NOT implement the proposed changes to FCC rules regarding the internet!!!
—Nick Chugg, Hobart,

The internet has been a level playing field of creativity that has enabled companies such as Google. With an optional paid "less congested" lane, a two tier internet will emerge over time (as the performance gap between paid and unpaid grows) stifling newcomers that could one day be the next Google. That could leave non-US companies in the driving seat for the next generation of internets business.
—Neil Mitchell, Gilroy, CA

As a librarian, I know how important free and equal access to the internet is for all citizens seeking information. Don't price out the public.
—Lana Touchstone, Vallejo, CA

We cannot make fast internet available only to those who can afford to pay! This will quickly become yet another arena for unfair power mongering by the wealthy. Our democracy continues to take blow after blow by the influence of the rich.
—Leslie Dee, Savage, MN

Net neutrality is important to me because if the internet is tiered I am sure those of us with less money will get slower internet or will be asked to pay more and my access to progressive media will be limited just as the mainstream media now does not discuss the real issues like NSA and Fast Track and Free Trade and Monsanto taking over all the seeds. Giving Corporations more power just steals from the rest of us. It always does. And to say other wise is like the Supreme Court saying giving corporations the rights of people will not corrupt politics or saying this nation no longer has racist problems. These things are all blatant lies.
—Lorna Paisley, East Dubuque, IL

Dear the FCC, Let's not pretend that the market is an unbiased place. If you put the equality of the internet on the chopping block like this, it is no longer free. Political and monetary ideologies will have free license to censor anything they choose without recourse. All the prejudices and inequalities that currently rule in this country will reign online, too. Maybe you haven't pitched it this way, but that is the reality that will ensue. I hope I'm wrong when I assume that this is your aim. Are you really already bought out? The United Nations has already taken the position that access to a free internet is a basic human right. I know we live in a country that is notorious for egregious human rights violations while simultaneously chiding others for lesser crimes. Do you want to continue to be a part of that? We like the internet. It makes good things happen. One of those good things is that our voices get heard. You're supposed to be looking out for our voices.
—Peter Wong, San Francisco, CA

Information should be freely available not governed by 'who can pay the most can have the loudest voice' which would be the result if American companies are allowed to have their way.
—Mark Hutchings, ,

A bunch of men & kids are on a sinking ship & the men can PAY for a spot on a lifeboat. So, let the kids drown ? THAT !!!
—Jimmie Hultman, shelby, NC

The internet is a critical resource for people around the world, with essential features of modern life (including banking, paying bills, access to government, education, and business) depending on it. Overturning net neutrality puts all these things at risk by allowing ISPs to discriminate in the service they provide.
—Aedan Lake, ,

When the FCC was created, nearly ninety years ago, its primary purpose was to regulate America's mass media (mostly radio at the time) to secure for all people public service programming to serve the public interest, convenience and necessity. As new mediums came into being that basic requirement was applied to each, even though major media owners often claimed their basic purpose was to produce profits. The prevalent but misguided notion that the Internet is not a mass medium is simply an acknowledgment that its technical quality and its means of distribution is different than over-the-air broadcasting or cable connections. The loss of media public service as the FCC's proposal to kill the open Internet is severe blow to democracy and that the FCC has lost site of its chief purpose is to insure that all mass media serve the public interest, convenience and necessity. Unfortunately, it is this blind spot of the commission that leads to such sad fulfillment of the reason for which it was created. The FCC must assure Net Neutrality is secure for all people until such a time as the Internet has been supplanted by the next new medium!
—Ben Gums, Jamestown, ND

Throw your rules out the window. Reclassify ISPs as Common Carriers!
—Freddy Polanco, Lynwood, CA

I depend on easy and affordable internet access!
—Steve Aydelott, Bend, OR

The internet should stay open and free. Please do not allow only those with big money to control this important medium. Please do not implement the new Net Neutrality rules, things should stay as they are. ISPs should be classified as common carriers. Content should not be discriminated against. Thank you.
—Scott Hartsfield, Camas, WA

It's as old as TV. It failed in the 1950s with Movie-Vision. It failed in the 1960s with WHT. It failed in the 1970s with QUBE, the 1980s with TV!nteractive, the 1990s with WebTV, and even in the new millennium with Enhanced DTV. It's the Same Damn Dream: a two-way pay-TV scheme to jack advertising directly into our heads. Time and again it's met with consumer apathy or rejection, and time and again it's been pushed by Big Media. Pushed and pushed and pushed and pushed. Meanwhile, the Internet happened. Suddenly, WE could determine the content, or even create it, and it would be available worldwide for anyone to view at will. But now the Same Damn Dream is back. Allowing Big Media--who now include the big ISPs--to pick and choose who gets priority access would effectively turn the Internet into yet another two-way pay-TV scheme. True, "Imminent Death Of The Net Predicted!!!" scares are as old as the Internet. But this one's real. Allowing this latest incarnation of the Same Damn Dream to become reality would result in massive consumer backlash. Don't let the Internet suffer the fate of Movie-Vision--protect Net Neutrality!
—Mark Alexander, Fayetteville, AR

We are a small web based business that we love evan though it has narrow profit margins. Without net neutrality we could not compete with larger companies and will be put out of business, not because we do not sell a quality product. The internet is a public utility, why don't you understand that and protect my rights?
—John Crawford, Newport, OR

I fully understand that the FCC is in the telecommunication industry's pocket and that your purpose is to further their wishes, but wouldn't it be good if your agency actually did what it was created to do; serve the public (not corporate) interest? It is abundantly clear that by ending net neutrality, not only will the Internet become a two-class reality, but the providers will impose censorship on our access to any kind of information that does not serve the corporate (read conservative) agenda and sensibilities. Just saying.
—Lauren Rivka Goldman, San Francisco, CA

The internet is a public service, it is a conduit for everyone's thoughts and opinions. We should not be controlling that.
—Mary-Sue Elfman, Houston, TX

The internet has been a fair and evenly balanced resource for many of us who use it. Changing this to allow the wealthy corporations to control the speed of it will destroy what has been an open and accessible resource for all - no matter their socio-economic status. This is giving WAY too much power to a few mega-corporations. Our freedom of speech is threatened by the possibility of this plan.
—Genevieve Cormiae-Foster, Portland, OR

Allowing the merger between the two worst internet providers in America proves the FCC to be a joke, beholden only to corporate interests, with no regard for the consumer and greater good.
—Barney McComas, Berkeley, CA

Net neutrality is important for the opportunity of innovation. Without it, business will become reactionary. Without it, the United States will set itself on a trajectory of becoming completely irrelevant on the world stage.
—David Monasevitch, Lihue, HI

Without net neutrality there will be higher barriers of entry for new companies and new ideas on the internet, thus slowing innovation
—Anders Ivner, ,

Net Neutrality is the conduit of my livelihood, my citizenship, the bulk of my relationships, and my civil rights. You do not have the mandate of the American people to destroy it.
—Michelle Gale, Coconut Creek, FL

Favoring those willing or able to pay more for faster internet is wrong. The FCC must classify providers as Common Carriers in order to maintain equality. Allowing a two-tiered Internet will have the effect of adding a tax burden to the common person for the purpose of providing increased profit to what would otherwise be a Common Carrier.
—Michael Patton, Englewood, CO

The Constitution Of The United States matters. Allowing corporations to block free speech and free assembly would be treason.
—Scott Vanrossum, Milwaukee, WI

This will be bad for start ups and job creation.
—Mr Robert R Racine, Mesa, AZ

GOVT INTERVENTION ANDSUPERVISION OF THE INTERNET IS NOT WANTED OR NEEDED!!!!
—Eugene Howard, Franklin, TN

The Net neutrality it is the true nature of Democracy
—Jorge L. Lizárraga Lizarraga, la paz,

We want privacy,and freedom.
—Espen Helverschou, slemmestad,

I really don't like the idea of my internet connection being policed by large corporations that don't have my best interests in mind. The internet is the only place that I can reliably get my news anymore and stay current in the world. To lose my online freedom would be a detriment to my current standard of living; it would be similar to being restricted from freely visiting public areas in my city.
—Zack Holmes, Canyon, TX

In a globalized era in which humanity faces unprecedented change and uncertainty, our ability to share ideas and communicate across communities, nations, and generations is imperative. The internet is the best tool we have available for this. Allowing those with wealth to have better access to our collective knowledge and communication networks not only imposes unfair economic disadvantages and barriers for upward mobility to those without, but it sets a shameful precedent. Ending net neutrality says to future generations that we value wealth and greed over our collective ability to share knowledge and speak freely. Our Ideas are not the property of these ISPs. Allowing them to segregate access to our knowledge and ideas would be a terrible legacy. Instead of trying to improve internet access and infrastructure for some, we should focus on doing it for ALL.
—Daniel Miller, Eugene, OR

keep the internet open and free no corp favoriteisem
—K Lucas, Westminsrter, CA

People with low income should not be cut off from normal internet access!
—Ernst Lammer, ,

Net Neutrality is a last bastion of true equality in our once great nation. It needs to stay that way!
—Jamie C Thompson, Sparks, NV

FCC are idiots why would they change something that has been working soo well the past years just so they ca money out of us , I find it pathetic
—Sunny, London,

The issue here is obvious - profit vs individual rights - another brick in the wall on what is best for our collapsing society. Welcome to the oligarghy...
—R Peterson, Floral City, FL

Neutrality leads to a fair and balanced system
—Franc Karpo, ,

Because doing away with net neutrality is a blatant violation of the 1st Amendment of the US Constitution. If there's going to be competition on the internet, it greatly needs to be on a very level playing field.
—B Thomas Diener, Albuquerque, NM

Your chance to show you are NOT Fascist Coercion Committee
—Di Iuliochiacchia Sandro, ,

Protect the Internet as it is: a medium for all to communicate without discrimination, harnesses, and the thousands of straps of bondage that the for-profit corporations would like to add to it (They already have loaded it down with ads.).
—Angela Bellacosa, Seattle, WA

Because money shouldn't determine a websites importance. The internet has always been a relatively even playing field, let it remain that way. I understand its mild stimulation of the economy, but I just can't agree with this action. Legalize pot and tax the stoners, jesus, or raise alcohol tax. Gahd.
—Cole Lindenbach, ,

The United States of America became what it is due to protections of freedom and equality. With these proposed plans the internet loses these. The internet is the most powerful system of information and communication in the world. If you allow a few big corporations to control the flow of this information and communication, our economy will be stifled, innovation will be blocked and stymied. Americans will be starved of open free press. Please reclassify ISP's as common carriers.
—Austin C Germer, NOVATO, CA

The Internet is too important to public information and public discourse for us to allow it to devolve into nothing more than a pay-for-play advertising medium. ISPs must be administered as common carriers or they will follow the money wherever it goes.
—Lance Williams, Toluca Lake, CA

In what way are ISPs NOT common carriers??? The Internet carries the most important communications we have today - don't dodge the responsibility of keeping it open to all
—James Russell, Chicago, IL

Net Neutrality is the reason why our country has prospered by leaps and bounds in the Information Age these past three decades. These new rules that Chaiman Wheeler has passed is threatening the livelihood of small businesses and the people of this great nation. Please, I'm asking you to re-think what you are doing. Don't destroy Net Neutrality. Don't hurt America.
—Lawrence Cheung, San Jose, CA

Free and open communication is at the heart of democracy.
—Phil Johns, Plymouth,

Net Neutrality is vitally important.
—Warren Land, Pensacola, FL

Ending net neutrality for special interests is not fair and goes against the true purpose of the fcc; free access to information is key for our future generations and essential for a real democracy.
—Peter Louis Amaduzzi, Menlo Park, CA

Virtually everything I use the Internet for--from political action to research to submitting my manuscripts to my publishers to getting my contracts from my agent--will be put on the "slow lane." I cannot afford what Netflix can, and neither can the sites I use. And yet, MY TAXES helped pay for the development of the Internet, as I am 63 years old and have worked since I was 15!
—Mercedes R Lackey, CLAREMORE, OK

Net neutrality is the fundamental cause of the unleashing of online American business creativity. Kill it and you kill th goose that lays the golden eggs.
—Martha Koester, Seattle, WA

The internet is not a place for big business to interfere. It is one of the only last bastions of free speech where people can share ideas and have access to unlimited amounts of information. Censorship, or its online equivalent, is unacceptable on the internet. The access to information should be equal and consistent not biased on what multinationals can afford to pay for.
—Zachary Maher, Modesto, CA

The internet has become a crucial part of our precious democracy; it must have no impediment.
—Honora-Bright Aere, Blodgett, OR

Those who control the Internet will control the public consciousness.
—Laurie "Ryan" Norton, Durango, CO

The internet of things connect countless business, entertainment and social systems, applications and ecosystems. If you screw with the pipes, you unbalance it all.
—Brian Ulm, Monrovia, CA

As a startup entrepreneur, I need the internet to be fast without any additional costs. Some of the biggest and most profitable companies in the world were startups once and they would have absolutely needed the same when they started up. By allowing corporate sponsorship you are allowing for monopolies to form. Worse still - you may very well be removing free speech. We don't care if your government makes empty promises about not abusing the powers to control the internet - but what about the next? If you enable big money to control information you are essentially throttling a free and open democracy so that only the richest can take part. I want none of it!
—Mathew Henson, London,

ISP's are, in reality, common carriers. Please classify them as such. If you want to protect open communication, there is this simple fix. Please ignore the revolving corporate door, the financial and political pressures, and do the right thing for democracy. Thank you.
—Janet Tache, Penn Valley, CA

The internet must remain open for information to flow freely and people to meet and ideas to be exchanged!
—Wilfred Damhuis, ,

These Big guys make too much as it is! Why not require them to provide high speed (fast lanes) for us all without charging extra fees?! Keep net neutrality at the very least and do not kowtow to the Big guys (like AT&T, Comcast, Verizon, etc.).
—Ronald E. Kaufman, Spokane, WA

im telling you again... leave the internet where it sits right now.are you people so hungry for money? dont you have enaugh yet? leave it be ....its the most beautiful thing in the world..to be able to acces what information you want at any given time is very good... why would you want to change that? the internet is of the people and should remain just like it is today!
—Apostol Petrut Petrut, ,

I know we live in corporate world today, but I also know we live a lot of our lives online. We just have to assess if we appreciate a human life more over the money. It's that simple. If this is going to be real, then we have already lost the battle, and we mind as well can move to Syria, because we have no vote over this. In the name of invention and American dream, I ask you not to do this, not to sell out yourself for a new house or boat or plane.
—Dominik, ,

Meaningful democracy may already be dead in the United States, as the noted Princeton/Northwestern study asserts, but its hope for rebirth appears to lie with a neutral internet. If corporate elites assert control of it, the hope dims to nothing.
—Evan Kroeker, Carbondale, IL

WHEELER, YOU WROTE THAT YOU WERE IN FAVOR OF AN OPNEN iNTERNET, BUT IT LOOKS LIKE FAST TALK FOR A TWO-TIERED INTERNET. FORGET COMSAST AND VERIZON, WHEELER. WE ARE NOT GIVING UP ON THIS FRIGHTFUL TACTIC YOU GOT GOING. DR. PW BROOKS
—Prudence Brooks, GLENDALE, AZ

Net neutrality represents the philosophical underpinnings of the Internet. Everyone has an equal voice and small businesses and ideas with merit can grow without worrying too much about whether your ISP likes it or imposing fees that might cripple it. Without Net Neutrality the Internet might become a place not unlike the real streets where the same five stores dominate every street corner. Net Neutrality and common carrier status isn't going to hurt these companies, it just decides what the playing field will look like, and gives us a chance of understanding how the game is played.
—Cameron L Palmer, Garland, TX

For small business to have a chance at competing with big corporations, the rules that are being suggested, must not be acted upon. Gone will be the days that local mom and pop shops have a chance of making real profit via the Internet. This will directly affect the hospitality sector as chain restaurants will dominate local business' and mcdonalds will become an even bigger part of the North American life style. I personally plan on opening my own restaurant some day, and I really hope that you look out for the average consumer, protect net neutrality and protect our right to succeed as entrepreneurs.
—Andrew Murphy, Niagara Falls, NY

The internet has become an integral factor in our precious democracy; it must meet no impediment.
—Honora-Bright Aere, Blodgett, OR

Free the internet, no rules!
—Wilson, Martinsville, IN

I can't afford TV/cable. The internet is all I have. It should be treated like any other utility. Gas, electric etc.
—Linda Ehrisman, Gasquet, CA

Because I want to be able to find information workout interference from anyone. And I pay the IT'S a lot of money for access to the Internet.
—Thierry T Takara, Lanham, MD

Internet is a knowledge sharing platform. It's intention was to freely share knowledge. It intention should be preserved.
—Grace Jackson, San Jose, CA

You have a responsibility to the Public's longterm interests here, and that serves not only our economy but democracy.
—Larry D Nooden, Ann Arbor, MI

I believe that open internet to all citizens is very important. We need less big companies who are only interested in their bottom line taking charge over things that in this current generation is almost deemed a absolute need. Within the past 10+ years e-mail has taken over regular mail. Us citizens do most of our shopping online especially during the holiday season, we connect to loved ones when they are far away. All citizens should have the right to the same internet as everyone else does. Thank you for your time.
—James Cranston, Bussey, IA

A purchased fast lane would lead to the death of the kind of entrepreneurship the 'net fosters now.
—Linda Quinet, Windham Center, CT

how can you sell your internet to big corporates? if you continue, you only prove to the world that the united states is a corrupted country and that u should be ashamed of yourself.
—Sebastien Lautie, viroflay,

Net neutrality is important to me and I don't want fay lanes created. Leave the Internet the same.
—Aaron Smothers, Minneapolis, MN

The net is one of our few defences against the criminal corporations represented so blatantly by Tom Wheeler and the FCC.
—Vic Norris, BOIS GUILLAUME,

Net Neutrality is important because of equal chances. On the internet, it is important that everybody has the same chance of speak, and you proposal would deny that to the poor.
—Joren Swinnen, ,

Net Neutrality is the base for comunication between people. If this will stop it means the end of free information and free personal expression with dignity and respect. What FCC wants is enslave mankind and treat us like idiots and there is no argument against it, except that this is not what people want, its what rulers want. They want slave and people who don´t know that their are slaves.
—Eva Traumann, Stadtoldendorf,

A tiered Internet, especially in this economic climate, is a plan that would mean Internet usage contraction, the exact opposite of what is occurring in the rest of the world. Internet rates and service in the U.S. are already substandard when compared to Western Europe where an Internet connection, cable TV and telephone service can be had for less than $60/month. It would be ironic if corporate greed is allowed to derail the growth of the Internet in the country that invented it.
—Fran Grabenhofer, Addison, IL

The net transfers public data akin to a telephone utility that transfers public talk, akin to electric utilities that transfer power, akin to gas utilities transferring natural gas. Therefore these are all utilities for the public good and should be regulated as such.
—Jere Sponagle, Glendale, AZ

Because a free and open internet..... "is the single greatest technology of our time, and control should not be at the mercy of corporations. ....stimulates ISP competition. ....helps prevent unfair pricing practices. ....promotes innovation. ....promotes the spread of ideas. ....drives entrepreneurship. ....protects freedom of speech."
—William Sherwood, ,

Money seems to be all that matters. But on the internet, a single person with a good idea can generate more interest than all of Viacom's advertising money put together. But if you make bandwidth reliant on money, you just further shift us into a plutocracy. I'm on the internet a lot, and have great interest in small, niche, money-poor sites. You are forcing them to either start charging for something that was hitherto done altruistically, or just cave in and die to larger corporations. It would severely hurt my life if net neutrality is ended. If net neutrality ended, I would do everything I could to NOT support those who abide by it. The internet is about information, and sharing in a way never before possible. Don't give further power to those with money to control information.
—Red, Damascus, MD

NO DEMOCRACY WITHOUT NET NEUTRALITY!
—Bernhard Wahr, O Brien, TX

NO DEMOCRACY WITHOUT NET NEUTRALITY!
—Gloria Lucía Wahr, ,

Freedom of speech, choice & interests
—Pat Duff, ,

Seriously. We need an open, free internet. This is why it has thrived to date, not through some terrible notion of competetive advantage. Please sort this.
—Mike Ellis, ,

Mr Wheeler, your proposed plan is outrageous. It would create a two-tiered internet and that would mean the end of the internet as we know it. You should withdraw your proposal or resign, because if this is approved you would have failed in your position as FCC chairman.
—Sarantis Karakatsanis, ,

Ner neutrality gives small businesses a chance to succeed and small business provides most of the employment opportunities for young people.
—Martin Potter, ,

I am getting older and it is all ready not getting any easier to pay the bills as is, if I have to continually pay increasingly more expensive rates for service or be limited in my selection of content or speed of loading content is compromised by ISP providers until I cough up more and more dollars, No! No! No! No!
—James Brunkow, Portland, OR

As a small business owner, I expect media from my web site to have equal status on the Internet. Creating a system where companies can pay extra to get special treatment would harm small companies like mine and kill technology innovation.
—Caleb Ruth, New York, NY

Net Neutrality is very important to me because it allows openness and full freedom on the Internet,which is what the Internet mainly needs to keep it flourishing and alive.
—Steven Millan, Las Vegas, NV

It is utterly depressing how the dystopias of past decades are getting their chance at reality now and it should be blatantly obvious that it is your responsibility now to stop this before it becomes just one more case of the way things slide down until suddenly we're at the bottom of the pit and everyone is wondering "how could it ever come so far"
—Silvana Leiss, ,

I am retired and living on Social Security alone -- I can't afford to pay for a higher tier to use the sites I use now.
—Carol J Lapetino, Downers Grove, IL

Net neutraility expresses our true freedom of speech and information sharing. The end of net neutrality will have very negative consequences and will simply send us back to the middle ages. Ending net neutrality is putting the financial interests of few powerful elites over billions of men and women.
—Dor Peer, Ottumwa, IA

I believe in equality and power to the people, not just the rich minority. People use the internet for everything from education to entertainment, and we all deserve equal access to it.
—Chloe Norling, ,

The US already has one of the most expensive and slowest Internet (http://www.bbc.com/news/magaz ine-24528383). Your recent "slow lane" ruling, as well as revcent consolidations in the industry, is only going to make this worse. The FCC should instead focus on first ensuring net neutrality as a base rule, then opening up the market to new competitors (cities, local operators, etc) in order to improve quality and reduce cost for all. These are necessary to keep the US at the forefront of the world nation in terms of innovation and quality of life.
—Nicolas Ganivet, Denver, CO

ok you want to what now? really ? you really think that a spineless act like this will help you try and define the rich and the poor on the net leading to obvious discriminatory attitudes and dismissive assumptions? here the deal, grow up! the internet can no be controlled regardless of how pretty you paint your words! your rules are an insult and I am ashamed to even have to spend my time telling a bunch of children to watch what they say and be careful of what you do. throw out your so called rules stop with the fat cat favoritism and stop letting mindless billionaires tell you how to run things and grow a flipping back bone for a change! throw out the rules because this will not go unchallenged and it will not be tolerated!
—Mr. Paul C Johnson, Las Vegas, NV

Net neutrality is extremely important to me. The FCC has allowed far too much concentration of news and broadcast media into too few corporate hands already. Now it the chance to hold fast on the most universal of media still left to us.
—Mary Kissane, Saint Louis, MO

Net Neutrality is the basis for our internet usage and it always has been. So many countries have already made sip's common carriers. Without a common carrier ruling the internet would soon devolve into a corporate feeding frenzy. We have to protect our last access to this most important freedom of speech before this. If not I am afraid we will lose all of our freedom of speech zones. Ariel M. Faye
—Ariel M. Faye, Parma, OH

I really don't like the greed of the big ISP companies , they always want more, meaning more money for their services. I'd really like for some services to stay free.
—Tiles Bakeerv, ,

We in America have been getting terrible internet service compared to many other countries, and have had the "privilege" of pay more for it. Why are we going to allow these companies who only care about making a buck push us even further behind?
—Jimmy Misner Jr., Atlantic, IA

The proposed rules are antithetical to everything the Internet stands for (and against the very nature of the web as envisioned by its creators). Openness and equality are not optional, they are integral to why the Internet has - and continues to - be so essential to so many facets of our lives. Scrap these terrible plans now.
—Ed Melly, ,

Net Neutrality is important!
—Joshua Lindstrom, ,

Because we are ALL equal in rights.
—Romeo Lungu, Sallanches,

I'm paying my providers for a specific connection speed. My and sp many others moneys worth is at large. We have paid for a service, with this the services we won't get what we pay for and as a developer I am dependent on certain requirements. Having to pay extra for a service I'm already paying for is both damaging for my economy and my business. This is not something I had expected to see.
—Per Blom, ,

Net neutrality is part of the re-enabling of small business, giving them to wherewithal to create the kind of true competition and real free market that we haven't had in more than a generation. To allow giant corporations, fresh off their triumph with a Supreme Court which has essentially declared them to be a special class of person with all the rights and privileges citizens are guaranteed in the Constitution, but subject to none of the sanctions to buy their way into a competitive advantage over other businesses is to end all possibility of a real, functioning democracy for the future. Networks- whether the world wide web, networks of people trading goods or services, networks of small energy producers or networks of independent news producers are part of an emerging system which has the potential to solve the crucial, potentially terminal problems of our age. The internet is its backbone. To allow tiered access renders it a paraplegic. The companies that supposedly benefit from this will not last long in the age of declining demand and increasing network interruptions that this will initiate. With climate change now an urgent problem, and network disruptions likely to result from that source, anything that threatens to further slow and interrupt network services is an existential threat to us all.
—Sarah Shaw Tatoun, Rockville, MD

I find that your proposed "rules" for the internet are, quite as expected unfortunately, discriminating. It is never right that those who are fortunate (for it is a truth that at times, hard work doesn't earn you enough money) enough to be able to PAY, should "enjoy" more information, enjoyment, usefulness etcetera, via the internet. And worse yet, the possibilities would open up for arbitrary discrimination against content and applications available to the users! It is not, not not, not EVER, the job of COMPANIES to decide what information an individual, a citizen, should be allowed to find. It is, quite frankly, abhorrent. "Beware of he who would deny you information, for in his mind he dreams himself your master." - Pravin Lal, "Sid Meier's Alpha Centauri" Laws and rules are an instrument to aid, not to deny, dominate or control. I'm sure you're aware of this, and currently ignore it. Please do better.
—Ellie Gydemo Östbom, ,

No two-tiered Internet. There should be no fast lanes for AT&T, Comcast and Verizon. We've had more than enough of these big corporations who exact extra fees at the drop of a hat. Reclassify ISPs as common carriers.
—Memoree VanderHeyden, West Bend, WI

As republicans and democrats increase the cost of goods and services through privatization and monopolies, the increased prices of fast internet services will be prohibitive for the poor and working class. They will be denied information and all the other benefits of a free an open internet -- Democracy.
—Joseph A. Mungai, Elgin, IL

I'm ecstatic about one thing and that is all you patsy's of the oligarchy, all you luciferic freemasons (ignorant, sic), all you polititian's who only think of themselves and their own pockets, will all one day have hell to pay and will reap the suffering they have sown. I'll look forward to this day.
—Ted Nugent, Ronkonkoma, NY

Everyone should be given equal access and speed to any website, regardless of ability to afford a faster option. This is the only democratic way to regulate internet speeds.
—Benjamin R Fox, Cambridge, MA

i dont believe this is fair as it would destroy the way of live for people, alot of them need fast internet to be able to study and talk to family
—Shannon Amber, ,

Please protect real and uncompromised net neutrality by reclassifying ISPs as common carriers. No corporation should be given the power to discriminate and award online communication.
—Tom Schwenkenberg, Darwin,

The fundamental premise of the internet is equality, whether for businessmen, ranchers, missionaries, scientists, paupers, or princes. I beg you, do not take away this venue for people without material wealth to improve their life, for hardworking citizens to contribute to their country alongside special interest groups, for upstanding people to support others all around the globe verbally, socially, financially, and spiritually. This is the only way we can realize better lives for everyone on the planet. Thank you for your time.
—Scarp, Kimberly, WI

In a democracy, we should have equality. Money is already a huge advantage in life, and most of the people are not happy with it. Nobody should have disadvantages in something, because others pay more and (in thix example) have prioritised net traffic, so yours automatically slows down. Also net neutrality is a huge thing for the internet. It allows people to state their opinions without having to fear that someone will punish them for it. It allows people to be loud, to spread it, to share opinions, to show it, without necessarily revealing who they are. In this way, it's an aspect of freedom and privacy, and should not be suppressed.
—Kevin Laube, ,

I rely on a free and open Internet to communicate with my friends and enjoy their independent creative endeavors. I rely on a free and open Internet for MY OWN creative endeavors. Keep Net Neutrality.
—J'aime Smith, Klamath Falls, OR

I said once before and i'll say it again. The internet is not designed to be slowed down or choked by LSPs for profit. I fear that allowing any company who has some sort of control over the internet (in this case, Comcast or Verizon) could lead to expensive, censored, slowed, and dwindled growth in the internet with small, upcoming companies being pushed aside if they can't pay the bandwidth for said ISP. That or the companies disallow the access to the internet or make their sites a snail-pace to traverse. Truly i'm concerned about the long-term effect this may have on the internet and what would happen if it were to be hanged and turned backwards from growing into something else....to being controlled, hard to use, censoring, and more. Some of the things I mentioned may not happen soon, (except for the slow/fast lane problem that's already happening.) but if Net Neutrality remains dead and nothing new or something that improves upon Net Neutrality happens...these things may become real. So real that it'll damage the growth of the internet in significant ways, more so that it prevents growth of the technology that happens online and begins restricting it...dwindling it...killing innovation and creativity slowly. They're many things I find wrong with these Internet Rules you're trying to propose and pass. It reminds me so much of the SOPA/CISPA bills of the past...I hope that doesn't continue to happen overtime, especially if these Internet Rules were to past which I will say i'm against and want you guys at the FCC to support Net Neutrality! It pains me to see this happening and I type these words with sincere thoughts that you guys understand how I feel about all this. It's important to me and it would not only pain me, but scare me if these rules you're passing were to well...pass. Please support Net Neutrality Tom Wheeler and the people of FCC. Just please...restore it, fix the loopholes/issues, and make it darn better without giving all the power in the hands of large companies like Comcast and Verizon.
—Shai-Dre Dillard, LYNN, MA

One of government's most important roles is to safeguard the integrity of a lawful marketplace and thereby the equality of opportunity. The Internet is just such a marketplace: of commerce and ideas. To sell it off like we have other vital, universal rights, would doom us to the false promises and real failures of privatization - that would lead to more inequality. I can promise you that if you allow this to happen, the people will rise up. So be wise and do what is just for the right reasons!
—James, Croton, NY

Because freedom of speech is one of the ideals of our country, making the Internet, an important form of communication, discriminatory runs entirely counter to out ideals. Please take that into account and decide not to do so.
—Karen E Macrae, Litchfield, ME

The Internet is extremely important for disseminating information, conflicting views, news etc. It can be an enormously empowering tool, and can be fantastic for self education. While I can understand how a person in power might want to keep these benefits away from the people they represent (maintaining the status quo), doing so would call the legitimacy of said person in power's intentions and interests.
—Mr. Roberto Aviles, Fremantle, OR

Allowing these companies to prioritize access and exposure for those who can afford to pay more destroys the Internet's level playing field. Every company with a great idea deserves the same chance. If the proposed rules are adopted, countless great ideas will never realize their potential, simply because they can't afford the extortion demands of the companies who clearly want control over what people see. For a TRULY open Internet, these companies MUST be classified as common carriers.
—John Schneider, New Milford, CT

As an advocate, for net neutrality, I believe the FCC's proposed new rule gives the biggest Internet service providers (no need to name them you know them well) too much latitude to charge higher rates and show preferential treatment to their favored content companies. The loss of net neutrality would spell disaster for small startup companies and independent content providers who can't afford to pay higher tolls. It would be a shame to lose the 21st Century's greatest entrepreneurial driver. Many of today's successful Internet companies started in someone's garage because they had the ability to compete through open access, delivering their service or app to millions of homes around the world at the same speed as everyone else. In many respects, the Internet has become a vital and global public utility, like phone or cable service. I think the FCC should exercise its option to regulate the Internet as a common carrier under Title II of the federal Telecommunications Act. It is evident that other recent legal challenges have clearly informed the FCC that it can reclassify Internet service providers as telecom carriers, thus allowing users to send and receive information without meddling by ISPs. Do the right thing for the people and regulate the Internet as a common carrier. Thank you David L. Seals
—David Seals, Fairborn, OH

Keep the Internet free and open for all.
—Luke Kim, Honolulu, HI

We the people developed the internet. It belongs to us. We pay for access, but it belongs to the people. The internet is the people's greatest tool in the pursuit of happiness.
—Keith Koelling, melbourne, FL

To whoever it may concern, As the constitutional law abides for rights equality and individual freedom it is not amenable to divide the net access to citizens on a strictly financial basis. And there is nothing more to be said or written. Thank you very much,
—Xavier Ballestin, ,

The internet is a public utility for ALL NATIONS, not a private superhighway for corporations. We must go back to NET NEUTRALITY.
—Joel Hildebrandt, Berkeley, CA

Who benefits? Shame on you, Tom Wheeler and FCC, for proposing outrageous, anti-democratic, pro-fascist internet rules. You are no public servants - you are the puppets of the corporate welfare state. The world your children will inherit gets darker, more unequal and unjust by the minute. But, your kids will be the masters of the future society, so what do you care of the serfs? If you approve the proposed rules, you further inequality in an already extremely unequal society. I've heard of the "American Dream" - but you would prefer to further the corporate-state nightmare in which we currently reside.
—Mary Bell, Seattle, WA

I already pay TOO MUCH for the fastest inet speed I can get and having to pay even more for the same speed is NOT ACCEPTABLE!
—William Lee Kohler, Eugene, OR

The internet is the one place where everyone truly has equal opportunity. Without a neutral internet, we have nothing.
—Kaya Williams-Tuschling, ,

The internet is information for all. Not for who can afford to get it. These rules do not promote an open marketplace, what they will do is kill it. Do not enact these rules and come up with something that will work for the betterment of everyone, not just big business.
—Chris Clayton, Peoria, IL

Jobs. The Internet marketplace is one of the last places Americans are working, making a decent wage, and creating something other than a hamburger. The internet is also the only low capital business startup source. Due to China, et. al. cost under-cutting via slave labor wages and monopolies, like Comcast and Time-Warner , new businesses can’t be created without millions in capital and compete.
—Patrick Reddeck, Kent, WA

another assault on our democracy, hands off!
—Matthew Gegenhuber, Hawkins, WI

Please reclassify the ISPs as common carriers. Please.
—RO O. Mitts, East Lansing, MI

I believe that net neutrality is something really precious. The whole idea of the internet relys on it. We cant just give the most open minded platform of the world the a few companies, which will start slowing down or make us normal people pay for service. This network has brought up so many creative ideas that started out as a small business, but, because of net neutrality, quickly started to grow to enormous things. Many of these are in our daily lives, like facebook. Giving away net neutrality will take away the chances of those small companies. I believe that a politician can not think it is a good idea to end net neutrality in any way. I think politicans are being paid for those actions by big companies. This is wrong and makes me angry. Politicians should serve the people, not the companies. Also i believe its a hazzard to a free mind. Dont like that site because of different political views? Just slow it down! That is no good. Please dont do that.
—Michael, ,

Now separated and living on the markedly reduced income of being underemployed for the last six years as a single mother of a teenage boy, the costs I pay to keep myself and my son healthy and steadily working toward an independent and respectable future grows more difficult with every rising cost for essentials. Make no mistake, our internet access is critical in our home every day for everything from online banking to homework and research for school, job searches, skills training videos, and extra work opportunities, and keeping in touch with family who live thousands of miles away. Please consider the everyday struggles parents and families bear as they work to create a secure future in these economic times. Please understand this is not a plea for the right to access games and entertainment or the ability to buy more junk online; it is a plea to defend the access to a decent future for my son and me for which, already a painfully costly burden, I prudently and dearly pay.
—M Alicia Manson, New York, NY

To proceed with this plan would be a mistake of historic proportions for the FCC and would be seen in retrospect as further evidence of both the Commission's submission to corporate interests and the Obama Administration's perplexing but irrefutable hostility to the First Amendment values and traditiions that had once made the United States the global champion of greater media freedom and greater opportunities to hear citizen's views and voices.
—William A Orme, Brooklyn, NY

Comcast is at this moment blocking content for net neutrality. What will it be like when the government turns over complete control to the big telecoms? Like cable and satellite is now. A person has to pay for content that they do not want. Why is the government doing just the opposite of what the American people want. Other than big corporations showering the appropriate channels in power with cash. Robert Widgery
—Robert Widgery, denver, CO

It's a basic right, or it should be named one!
—Susanna Purucker, Miami Beach, FL

Corporations have no business fixing what isn't broken. They should stop trying to get their grubby hands on the Internet.
—Alexander McElroy, Exeter, NH

The Internet has been free and open until now. Making a hierarchical system that those with money can take advantage of will take away the equalizing values the Internet has had. I am a proud American living in Japan and I want my country to protect the freedom of the Internet just like we have protected our other freedoms.
—Kelly Olsson, Modesto, CA

If you do allow your previously proposed rules then we just sold out to comcast and ruined internet
—Brett wallace, Mountville, PA

This is atrocious. Do you want a revolution? This is how you get a revolution.
—Harry, ,

Stop being so focused on helping corporations and help the people you selfish greedy dog
—Matthew Catterall, Melbourne,

We want out internet free no fast lane or slow lane
—Arnold Schwertman, Rockwall, TX

Protect citizens' privacy. Stop centralization of information and risk of its arbitrary use.
—TEManning Edward Manning, ,

Customers should pay for upload/download speed as they used to, not content providers. A two-tier internet is just a way to stifle legal internet rivals to cable companies. It will cause a boom in piracy and kill non-profit services like Wikipedia by turning them into second-class sites.
—Maja Čović, ,

It's all because of money and greed again! How can middle-class people afford to have a fast lane internet if you are going to charge an extra fee for it? Or really want those middle class people to suffer on a slow connection? If you are doing this for the sake of profit, please consider the needs of each individual not just those who can afford your extra charges.
—Neill Abayon, Varney, KY

Please don't destroy our internet, I depend on Net Neutrality and demand that the FCC protect the open Internet.
—Alan Stevens, dublin,

Anyone who truly values freedom of speech must support net neutrality.
—Eugene Bersing, St. Paul, MN

Giving internet service providers the power to slow down peoples internet on a whim, and stop people seeing content they don't like sounds like something out of a dystopian futuristic novel. It would be a slippery slope to big business gaining total control of the internet, and only allowing us to see what they want us to see. These rules will mean nothing but an even larger gap between the rich and the poor, and will give companies like Verizon and Comcast even more power than they should have. Please, for everyone's sake, reclassify ISPs as common carriers.
—Isaac Bull, Chesham,

I rely on the internet to get news and political updates from source I trust. The ability of these sources to send me these updates would be gravely threatened by a two-tiered internet. Such a result is completely unacceptable.
—Michael Ludwig, San Jose, CA

It is important for the majority of the population who do not have the money for the fast lanes. We are doing it hard enough out here without another assault on our equalitly
—Mandy F Morris, Doonan,

Discriminating against thoses who cannot afford to pay more for faster speed is not democracy and the American way of life! This would create a two-tier system: one for the wealthy who could afford to pay for faster speed and those who cannot. Your job is to protect Americans; not divide.
—Diane Brine, Groton, MA

The Internet does NOT belong o the corporations to which you are trying to hand. It belongs to the people.
—Brad Swinehart, Hartville, OH

Reclassify Internet service providers as "Common Carriers!"
—Justin Christian, Traverse City, MI

The internet is a national resource, just like the radio spectrum. It belongs the people, not corporations or individuals!
—Thomas R. Copley, Saint Petersburg, FL

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Steven Fenwick, Olympia, WA

We depend on Net Neutrality, and the FCC should protect the open Internet by reclassifying ISPs as common carriers.
—Henry Moore, latonia, KY

Your rules on internet usage need to be thrown out. The internet should be equal for all, and all ISP's should have the same access as the rest of us. There shouldn't be discrimination for whom the internet functions.
—Billy Swain, Bossier City, LA

Having access to information is of vital importance for the teaching of our youth. The US is sliding backwards in education compared to the rest of the world. Taking away another avenue for improving education by putting up a pay wall or by vendors using already existing loop holes to take more and more money from customers for decreased services is reprehensible. I speak as an IT Professional in Telecom whose company has figured out that we are the connection between people, and should start acting as such.
—Andre Croy, Jacksonville, FL

Don't do this!!! All information on the internet should be treated equally. No special treatment for wealthy corporations please. If our bill rises due to this we will have no choice but to terminate our services with Comcast. They already have a monopoly. Please listen too the citizens of the United States of America. We are the ones who lose because of this. Thank you for your understanding.
—Paul Anthony, Oil City, PA

These proposed plans will destroy any semblance of neutrality online. You seem to have forgotten who you work for Tom, you're not a lobbyist for the telecom companies anymore, could you at least pretend to act like it?
—Daniel griskewicz, Windsor, CT

It is bad enough that our phone company has a monopoly on services and can get away with charging top dollar, but this is crazy.
—Trina LC Sonnenberg, Nucla, CO

As a senior citizen on a limited income, higher fees for using the Internet would be a catastrophe for me, please do not go down this road.
—Katrina Hall, Hancock, NH

The amazing thing about the Internet is its democracy-the ability of every user to access and share information. In order for this to remain, it is vital that the Internet is properly neutral
—Mel Deo, ,

Money isn't speech. Especially on the internet.
—Len, ,

Net neutrality is a powerful weapon to combat the growing inequality of our times.
—Mrs. Susan CAmpbell, The Villages, FL

Our entire family uses the web daily. Moreover, our business depends on a free and fair web. Net neutrality is vital!
—Jake Schwartz, PETALUMA, CA

Please protect us, do not allow corporate interest and the oligarchy we live in to further dominate our lives. Government and the entities within it are designed to protect citizens and provide valuable services to them, do that for us please!
—Franklin Hyatt, Joplin, MO

Net neutrality matters to me not only because it enables my activism but because it is the only way to insure a truly just and fair internet which is the only kind worth having at all.
—Mike, Austin, TX

if only some contents got through, the internet would not be much more than a TV channel
—Franz Kriftner, Linz,

I want t have access t all humanity even the horror
—Richard, ,

Please do the right thing and keep the internet neutral. ISP's must be classified as common carriers.
—Todd Carlson, Rolling Meadows, IL

The internet is the only medium that allows freedom of the press to exist in the media of today.
—Clayton James Conway, Seattle, WA

The internet belongs to everyone equally!
—Robert W McAllister, Denver, CO

FCC proposed rules are anti-democratic and unjust. They foster the growing inequality that is becoming a major concern in the US.
—Eve Webster, Amherst, MA

I am a college student at Fullerton College and this semester, I gave a speech for my Public Speaking Class about Net Neutrality and Chairman Wheeler. This monetizing of the internet will anger 30 students and a professor if it passes. Death to Bike Thieves and Greedy Politicians.
—Joseph Kim, buena park, CA

The internet has become a utility, necessary for living in the modern world. Net neutrality is the cornerstone of access to all citizens, enabling creativity, innovation, and learning.
—Steve Brown, Dover, NH

I live on a fixed income on Social Security disability. The rules you are proposing would make a huge dent in my monthly check. Many of the services I rely on require Internet access. I'm already paying quite a bit for my access, but it would really hurt me to be stuck in a two tier system and have to pay more just to get the access I need. I think I can speak for others who are in the same position as me. Also, it may be catastrophic for schools. If an ISP doesn't like a particular online database it could block access, thus hindering research students may need to do for whatever project they are working on. Small businesses and online startups would be left behind, which, in turn, would cause unemployment at worst and slow growth of business with more accrued debt for the owner at best. Freedom of speech is freedom of speech. Freedom of expression is freedom of expression. No company should ever censor it, ever.
—Alyson Creider, Richardson, TX

Reclassifying ISPs as common carriers is the only sensible option we have. It's ridiculous that this is still being questioned.
—Holger Kelz, ,

In most areas of the country, internet providers already have what amounts to a monopoly on the sector of internet service and connectivity. They set extreme prices with little to no competition to hold them accountable, and have been buying out smaller companies that formerly offered alternatives. This is a violation of the spirit of US antitrust laws. Giving these corporations further power is a huge mistake. The internet as it stands today is a global connector; something which is important in a world where we must increasingly recognize our common, connected humanity over borders of nationality and class. Net neutrality must be upheld for the use of the people - NOT killed for the profit of the corporations.
—Amy Anderson, Newmarket, NH

Net Neutrality matters to me, because it allows me to communicate with my family, far and wide and without this i would not get to speak with relatives for years.
—Calvin Johnson, ,

You Tell America That Corporations Are People To Under Citizens United. If This Is True, Don't Let These Three People, AT&T, Verizon, Comcast, Alter The Free And Open Internet For The Multi Millions Of Other People. Net Neutrality Is Vital To The Future Liberties Of All. Thank Youm
—Van Lewis, Middleburg, FL

Without a doubt, these new rules will DESTROY the internet we've come to love so much.
—Joss Classey, ,

Please reclassify ISPs as common carriers. Protect real Net Neutrality!
—Sue Payne, Houston, TX

We need Net Neutrality because: - A free and open internet stimulates competition - A free and open internet helps prevent unfair pricing practices - A free and open internet promotes innovation - A free and open internet promotes the spread of ideas - A free and open internet drives entrepreneurship - A free and open internet protects freedom of speech
—Shehab Al Al Rahma, ,

If you pass this bill as it stands you will create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow road for the rest of us. companies would have the power to pick winners and losers online and discriminate against online content and applications. And no one would be able to do anything about it. Please think again and have another look at these proposals as they will affect not only the USA but will spread around the world.
—Mr Christopher R Manley, Kingsbridge,

Net neutrality is important because its the one playing field that is fair for competiotion. Dont start making barriers to enter the market when there doesnt need to be one.
—Adam stevens, Riverside, CA

Having an Internet with equal access is one of the great levelers in the 21st century at a time when everything else is going in the opposite direction (exclusive access to people with more money). Please keep Net Neutrality as was intended by the creators of the Internet by reclassifying ISPs as common carriers. Thank you.
—Matt Gatto, San Francisco, CA

stop Wheeler... the internet needs stronger regulations to prevent monopoly & preserve net neutrality ... rightNow
—Rw Cory, fontana, CA

An open Internet is a vital part of today's world. Don't strangle it by allowing ISPs to act as you have proposed.
—Ann Kinsinger, Columbia, SC

I support the reclassification of ISPs as common carriers as this is a key component of strong and innovative tech market contributes to maintaining an informed populace in our democracy.
—Sandor Silverman, Albany, NY

Having a separate fast lane for those who can afford it is bad news for regular consumers. I already pay for how fast of a connection I have, so why should a content provider have to pay its ISP AND mine to guarantee that I can get their content. It just doesn't make sense. Please keep the Internet open for all of us and reclassify it as a common carrier service.
—Jody Saige, Goshen, IN

The internet is a wondrous thing that should not be limited or controlled anymore than the air we breathe should be.
—Shirogane Ōkami, Palatine, IL

Without Net Neutrality I would have no free access to my current sources of free local information.
—Salome Mayo, Port Macquarie,

This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Random Man, ,

The internet is a resource everyone should have access to. These new rules will mean big companies with deep pockets will dominate. The internet will become more expensive for consumers and fewer people will be able to afford access, or only have a connection to certain ISP approved websites. This is terrible.
—John Stainton, Edinburgh,

Net Neutrality ensures everyone is on a level playing field. Your "internet fast lane" only caters to those who can afford it. Besides lobbyist money, what makes you think this is a good idea??
—Salvatore Condegni, Bloomfield, NJ

Net Neutrality = Democracy. It's that simple. Anything else effectively allows censorship of dissenting voices in the form of price discrimination.
—John S Pearson, Chicago, IL

We don't need yet another system that favors the rich, the proposed rules would lead to a system where only those who could pay would be heard. Please protect your citizens, not the corporations.
—Sky Slayton, North Fort Myers, FL

For the sake of profits is not an acceptable reason for this proposal to pass. Government should represent people, not business. Put People over profits by strengthening Net Neutrality.
—Mitchell Slatin, Lakewood, CO

You should be ashamed of yourselves for putting corporate interests above those of the American public! Allowing tiered internet will be the last nail in the coffin to internet as we know it. Please protect my right to an open internet by reclassifying ISPs as common carriers.
—Tom Froehner, Columbus, NE

I enjoy the internet. And I believe that a reasonable fee should be charged. However I do not wish any company offering internet access to be able pick and choose who should get slower speeds and others get faster. Honesty and compassion is needed in business and in every walk of life.
—Daniel m Stimson, St.Albans, VT

The fox is about to enter the coop. As one who lives (and uses the net)there,I say STOP IT!!
—Susan Stanton, Gainesville, FL

please junk your proposed rules which would allow a two-tiered internet, thus destroying net nuetrality. Instead it is absolutely vital to reclassify ISPs as common carriers. Don't let the public down, we're depending on you!
—Dan Perrone, Dulles, VA

Internet should be free from corporate greed , stop bowing before your overlords and work for Net Neurality
—Martin Dubuc, ,

We want the internet to stay neutral!
—Ruby Adams, ,

I pay my ISP for my connection to the internet, and I choose what speed service I would like. Beyond that it is no one else's business what I choose to have passing over that connection (providing of course it is legal). There is already enough inequality in the world around us today, the internet has, since its inception been above this, and it should remain so as it is a great enabler of communication and sharing.
—N Shephard, ,

As a researcher I need quick access to many varied sources. And, innovation in technology is critical to the prosperity of this country. A two-tiered internet would stifle innovation. As a citizen, I assure that your definition of "net neutrality" is nothing of the kind.
—Liz Gaspar, Shelton, WA

Net Neutrality IS important because it's for ALL of US, not for big business to run things. DO YOUR DAMN JOB FCC! Show the rest of the government agencies that YOU WILL STEP UP AND ACTUALLY DO YOUR JOB!
—Nancy Borg, Stowe, VT

NO TO WHEELER !!!!!!!!!!!!!!!!!!!!!!!
—Eeckhout, Brugge,

If you want to do something, ban all the porn sites! Quit catering to GREED! Also do your job for TV programs!
—Paul Schultz, Buffalo, NY

Without net neutrality America as we know it will change for the worse. Ending net neutrality would allow for discrimination and undermine free speech!
—Aron Davis, Hollywood, FL

The internet is my only window to the world! Please fight usage discrimination!
—Paul Harrison, Edna, TX

Please listen to the people!
—Terry Wilson, goldsboro, NC

I'm so very frustrated, as a voting citizen who participates in campaigns that I care about in order to let my congresspeople know my opinions, that we have been so ignored on this Net Neutrality issue. I'm so disheartened that cable company lobbying is winning out over the voices of many Americans who ardently desire a free and open Internet (and we each speak for many more who aren't fully aware of this issue but would support Net Neutrality if they weren't in the dark). I'm ANGRY over the conflicts of interest in the FCC, how chairperson positions can be held by former cable company executives and how politicians can cower before their donors from big business. My very faith in the political system has been harmed by the actions of the FCC and those who are not ensuring Net Neutrality. Please, please listen to those of us who are speaking up. THIS MATTERS.
—Heather Ebert, Franklin, TN

the www was devised by a Brit and given free to the World. The USA does not have the moral right to steal free access from the citizens of The Free World. This is International Piracy and would make the USA a rogue State.
—John Shale, wigan,

Enabling large for-profit corporations to rule the Internet will harm non-profit organizations (e.g., libraries, museums, archives), small businesses, and the people who rely on them. Creating a two-tiered Internet will bring an end to life as we've known it online. No longer open end to end, no longer enabling anyone and everyone with access to innovate and compete on a level playing field, the proposed rules will unnecessarily exacerbate discrimination and inequalities already rife in our so-called democracy. Shame on you.
—Denise Troll Covey, Pittsburgh, PA

The UK has net neutrality and their internet is cheaper and open to competition among internet service providers. The US needs to reclassify broadband internet service as class two telecommunications. If not, corporate interests will prevail over the rights of the people to net neutrality. Mega-monopolies like Comcast and Time Warner are not "people". Their money and lobbying may have swayed congress away from supporting the best interests of the American people. Please FCC, do what is right by the people who are relying on you to regulate this industry and keep the internet neutral for all users.
—Margaret Paul, Burlington, VT

Your proposed rule would deform information flow on the net. Reclassify isps as common carriers!
—Peter Costanza, Cambridge, MA

We should have the right to a free and unhindered internet,not one which puts sites and a fast and slow track depending upon how much is paid to them!!!!!
—Arthur H. Swers, Floyd, VA

I what way are internet providers significantly different than water, sewerage or electricity providers?
—Ron Stephen, Haines City, FL

Time to cut the bullshit. One doesn't need to be a deranged moron to understand the dangers embedded in giving someone or something with a clear economical or political interest, the rights and the tools to make more profit, gain more influence and more power, by limiting the options and rights of others based on the size of their wallets and their wish to open it. How can anyone willingly do this and call themselves supporters of democracy, democratic rights and equality? The answer is (of course) - no one can. If I ever see a more clear-cut example of corporate fascism in the making - even the most basic illussion of democracy is no more. If there is a remote chance you lot have a few correctly wired synapses still kicking - now is the time to use them. DO NOT DESTROY THE PRINCIPLES OF EQUALITY OF THE MOST POWERFUL COMMUNICATION TOOL WE HAVE! Seriously, don't do it. Please.
—Andy Carlstedt, ,

NO TWO TIER INTERNET!
—Roger Tillman, Houston, TX

The internet doesn't just belong to the US; allowing US corporations to throttle internet traffic, which will affect the rest of the world, cannot be allowed
—Stewart Cooper, ,

Save the internet
—Angela Lyner, Adams Basin, NY

Don't kill our beloved internet
—Tia, Adams Basin, NY

The web is the last vestige of free-speech, in the media !
—Randall S Blanchard, Kennett Sq, PA

The world is in an information age. In a nation such as the United States, any method of limiting people's access to the grand and glorious hub of connectivity and information that is the internet purely for monetary gain is not only wrong, its against the interests of social, cultural, and technological advancement.
—Nicolas Hammond, Corvallis, OR

Everytime that I use the interent and my speed slows to a crawl, how will I know that it's not TIme-Warner Cable slowing me down to let the big players cruise along. We need t obe treated equally on the internet and the heavy users should pay per volume but not receive special treatment.
—James Damon, Chapel Hill, NC

Any form of discrimination is wrong in my book! Economic discrimination is growing everyday and intruding into our lives at an alarming rate. Please leave the Internet alone in this regard!
—Jill Knueppel, Lawrenceville, GA

I have learned so much from the internet, for the same cost as everyone else. Without it, or without neutrality, I would never have gotten where I am today because I am a poor college student struggling to make ends meet. Ending net neutrality could very well remove all open opportunities for advancement in our world. This move is highly supportive of the top income families while it highly limits those at the bottom. I would hate to see America turn further into a land where the wealthy rule the peasantry, also known as an oligarchy. For the people of the internet, please do what is right. What you and probably most know what is right but are too distracted by power and wealth to realize it.
—Adam Stallard, Tallahassee, FL

Practically every day you read about people living in poverty whose lives and circumstances have been forever changed due to their access to the internet. The United Nations has declared internet access to be a basic human right that should be protected and ensured by governments in the same way that access to food and shelter should be. How does the notion of providing your citizens with only moderately clean water, unless they're able to afford to pay a company for fully clean water, make any kind of moral sense? In that same way, how can punishing the poorest among us and denying them full access to one of the most critical tools that exists for them to rise out of their circumstances make any kind or decent, moral sense to any decent moral human being?
—Kate Smith-Morse, Baltimore, MD

because their pricing and mergers and "fast lanes" for criminal corporations are no good
—Robert J. Roth, shaker hts., OH

The Internet is a vital resource to the entire world - why should it be down to a few large corporations to decide who gets the best service and which online content has more chance of being seen, heard or downloaded?
—Peter D Antill, ,

Please throw out your plan to reclassify and discriminate against net neutrality. This will eventually sensor our beloved open internet!
—David Jahn, Buffalo, NY

The future of the open Internet is in your hands. And yet you have proposed rules that would actually break it. Your proposed path would open the door to widespread discrimination online. It would give Internet service providers the green light to implement pay-for-priority schemes that would be a disaster for startups, nonprofits and everyday Internet users who cannot afford these unnecessary tolls. I urge you to scrap these proposed rules and instead restore the principle of online nondiscrimination by reclassifying broadband as a telecommunications service. Respectfully, Alfred Denny 238 N Tulane Ave Oak Ridge, TN 37830-6398
—Alfred Denny, Oak Ridge, TN

I have been an Internet user since Internet was born and supported its expansion - because it was essentially a grassroots operation and was a free service. So now we are faced with a "pay to have speedy access" after over 30 years of Net Neutrality and you are making that happen. I wonder how it feels and will feel to be the most "hated person" it the world as you push your plan to fruition.
—Dennis Ledden, Mt Aukum, CA

The internet is currently the only working version of a true democracy on the planet - and once again the 1% seek to restrict access to information - this is a travesty of justice.
—Anni Williams, Beverly Hills, CA

Net neutrality makes it more feasible for a college student suh as myself to start a successful blog or website. Don't try to fix something that's not broken.
—Evan Freimuth, Oshkosh, WI

The Internet is the primary way I keep in touch with my friends and family, the main mode of communication with people I work with, and it is pivital to my research as a doctoral student.
—D S, Ocala, FL

In an era when energy, food, and the basic needs of everyday life should be free; it's now on the books to make a 'poor-people-path' for those that can't afford faster speeds. For shame. Why can't we just get this country out of the gutter and start providing for it's citizens instead of bleeding them dry? I don't need the internet to survive, so I think if this passes, I'll just switch everything off - phone, internet, t.v... With all the other stressors in my life, I don't need to worry about that, either.
—John W. Johnson, Kalamazoo, MI

I avoid main stream TV. If media corporations and corporations and individuals that control the internet, I will inevitably avoid the internet as well. This would leave me no source for following current events.
—John Buller, Combined Locks, WI

The appeal for Internet is that we are all equal on it... We should all be classified the same
—Margaret Ransdell, New Albany, IN

Tom Wheeler is a tool controlled by a few really big tell a com corps.
—Curtis Crandall, Kenmore, NY

The Internet is the best thing to happen to free speech since the invention of the printing press; it is the best tool available for an informed, independent citizenry. To let it be ghettoized in the name of maximizing corporate profits is a crime against democracy.
—John Walchak, Melbourne, FL

Grassroots organizations communicate through the internet and will probably not be able to afford the "fast lane" service that the major internet service providers would set up. Leaving these organizations behind would adversely affect everything from independent political groups to the local Parent-Teacher Association. With the recurring Congressional attacks on the Postal Service, by ten years from now the internet may be the only means left for sending out messages to medium-sized numbers of people. Access to the internet should not be diminished by pricing large numbers of people out of the system. In the past, as computing speeds increased computer programs kept requiring more speed, requiring frequent upgrades of hardware and software. It's reasonable to expect that if an internet "fast lane" is created, computer programs will be designed to operate at those speeds and people who don't have access to the fast lane will be in the situation of someone who had dial-up service in 2012.
—Susan DuBois, Albany, NY

We are not a third world country ! Yet. Taking away net neutrality is the start to censorship and content control of a public utility.
—Jose Alvarado, Colorado Springs, CO

The freedom of the internet is what has allowed most of its most important content to be produced and spread. I implore you to throw out these rules and reclassify ISPs as common carriers.
—Alexandre J, ,

We support local and regional small businesses. How are we to do that if they get classified as second-class tier? These rules not only discriminate, but they are extremely damaging to those small businesses. We live in a city that thrives on small businesses. We demand Net Neutrality to support small businesses around the world!
—Yuka Honda, New Haven, CT

America's rules on internet governance set a precedent globally - and as someone who's looking at the possibility of self-employment, a level playing field online is extremely important, and I am definitely not the only one in this postion!
—TImothy Allenby, ,

The access to a speedy internet connection should be available to all not just those who can afford it
—John, Lancaster, CA

For most people, the internet is the only source if news and information. We can't be fully informed if we don't have equal access to all points if view. That's what fuels a democracy.
—Siri Steiner, Cincinnati, OH

Net is made by us, so noone should rule it
—Francisco, ,

The internet is like a public library. It should be accessible to everyone.
—Rhydon, Charleston, IL

I don't have the time to waste on a slow internet. I want access to independent news, not news sanctioned by the government.
—Anita Hunt, Honey Grove, TX

Please do not create a two-tiered Internet.
—B Romaker, Portland, OR

Without Net Neutrality the society we live in will become even more stratified than it is.
—Evan Beattie, Los Angeles, CA

Again, the wealthy would get priority over everyone else. Seniors living on social security, minimum wage earners, etc.
—C J. Maddsion, Jackson, MI

We need the internet to remain open and even for all! I pay for broad band so that everything will be fast, not just some!
—Ken Maass, Beaumont, TX

This bureaucratic nonsense needs to stop.
—Benjamin Pounds, Conroe, TX

This is a big mistake. We need the innovation that small players can provide. Comcast is literally the worst company to take cues from. If you do this, America will hasten its decline, and it will be YOUR fault, Tom Wheeler. Of course, I'm merely assuming that you're patriotic. Your actions thus far indicate that you're clearly not.
—Robert A Arnold, Reno, NV

Corporate ownership of the public airwaves has made television virtually unwatchable and the radio absolutely useless. Your allegiance to AT&T, Verizon, Comcast, and their ilk will also destroy the Internet. Although it makes me a technological dinosaur, I have chosen to remain with dial-up service because my ISP is a nonprofit that does not discriminate. I was hoping to switch to broadband so that I do not have to wait three hours for the online portal for my classes to open, but your decision will leave me no choice. I am sick and tired of the FCC cowtowing to corporate interests when it is the PEOPLE you should be serving. Protect innovation and, more importantly, free speech. Reinstate net neutrality by reclassifying broadband.
—Jessica Cresseveur, New Albany, IN

Don't let the few and big dictate the majority of people online.
—Frode Kirkeli, Bergen, VT

This is the 21st century; ISP's are common carriers. Make the regulation say that!
—Jack Whalen, Ridgewood, NJ

An open internet has allowed easy collaboration, an open exchange of creativity and ingenuity, and an even playing field for new start-ups.These are the things that make the internet great and they're all thanks to net neutrality. No matter who or where you are, if you have an internet connection you have an equal shot at the same sites and information as anyone else. Don't divide the internet into packages and plans! I don't care if that's not your intent, that's where the internet is heading if this is not redacted immediately. The proposed plan does not help the internet at large, it only lines the pockets of a few large companies. For everyone else you are encouraging limited traffic and funneling money into ever smaller sections of our economy.
—John Stover, Arundel, ME

Times are changing. Cable entertainment providers and the like have a stranglehold on view able content distribution in the traditional sense(channel packages). The open internet has allowed the public to make the best of this situation by using alternative & innovative new methods for content distribution. This is how newer better things come to be. If you don't believe that then compare the music industry in the 90's to what it's come to be now. We as the public no longer have to spend $20 to buy an entire album just because we like one or two songs. This freedom of choice has changed how things work for the better. By eliminating the open internet the FCC would effectively be choking the through way for ideas and new innovations, not to mention internet start-ups. Don't allow the service providers to grow lazy by bringing in more money from only those who can afford it. By keeping the internet open to all, the ISPs must also get creative and spawn new ideas & methods of their own. Adapting to thrive, or fall in place of something better. Taking away the Neutrality of the internet will undoubtedly stifle innovation.
—Steven M Hoffer, Harrisburg, PA

Keep the internet free, like 'marica
—Charles, Palm Beach Gardens, FL

The internet is one of he few realms where all can be considered truly equal; a payroad will only serve to further divide the rich and the poor with a service already provided to everyone, but excluded to the rich.
—Stephen Silman, Kissimmee, FL

Many of us still do not have reliable (or any at all) access to the internet or broadband. Before the service providers start carving up the existing domain into the privileged and less privileged, make sure that everyone is on the inside! I don't know the technicalities, but common carrier like telephone or electricity seems like a good option.
—Alden Small, New Oxford, PA

why provide a company a certain amount of bandwidth but then make them pay an additional fee to make sure they can use that full bandwidth? if T1 pipe is being paid for and then dont throttle that T1 speed!
—Jonathan Setliff, Alexandria, VA

I use a VoIP telephone. If my Internet access is limited, then I can be denied access to essential emergency service like when I call 911 for medical help. Internet access must not be left to ISPs to decide how they can be used. They are essential public utilities that are required for daily living. The FCC exists to ensure everyone plays fair. If you let ISPs take whatever actions they decide, then the FCC is nothing more than a parasite on the world.
—Bradley Hicks, Fort Worth, TX

Having a few giant corps and companies running and owning everything will squash innovation and good 'ol American ingenuity... eventually our freedom. p.s. If corporations are people, then show me the birth certificates!!
—Joe J Ralicki, Hamburg, NY

The internet is inarguably a public utility. Treat it as one!
—Thomas Jjohnson, Memphis, TN

Having experienced a slower and sometimes "too busy" internet connection In Maine while there, I understand the need for open net and speed for all. To sell out the majority of users for the profits and control of the few would be detrimental to the whole.
—Nancy Erickson, Elkton, MD

An open internet is really to the benefit for all human beings. A small 'elite' will not benefit by shutting out the rest; as little as it would benefit the hands of a human body to cut off her own legs.
—Paula Honkanen, ,

I thought you said in your email that you were a great supporter of Net Neutrality!!! What happened?
—Constance Mancuso, Waltham, MA

If you don't do this someone somewhere will start a new web It's human nature!!
—John Coombes, Sevenoaks,

You cannot serve two masters. Act for the people, not for corporations.
—Gareth Hills, ,

Whenever I feel down I go to the Internet. What do I do on the Internet? Well, I discuss politics, life, games, technolog and more with people on forums. I watch videos on YouTube, talk with my friends on Facebook. I want to be able to continue doing this. I don't want my cable provider to charge me extra money for it either. I can't afford paying more for fast Internet than I already do. So please, I beg you, don't do this. The Internet is my only safe haven, and I want it to be free.
—Jonathan B., ,

We want a safe internet without discrimination, and all together we will prevent that from happening.
—OniBee, Athens,

Net Neutrality is important for a free society.
—Mark Laity-Snyder, Ferrum, VA

Please preserve Net Neutrality and protect the open Internet by reclassifying ISPs as common carriers! The rules you proposed make us worry, please abandon them! The Internet is a huge part of my and so many others' lives! All my entertainment , work and socializing is possible because of the Internet and it should remain an open and equal space to everyone!
—Titta Tolvanen, ,

This is important to every freedom loving citizen.
—Gerald R Lanning, Jeffersonville, IN

I absolutely require reasonably priced, fast Internet access to function with my small, struggling one-man business.
—Denim Bridges, Largo, FL

This is the United States...we stand for free speech We should be setting the standard, not taking it down.
—Susan Dailey, Pleasanton, CA

A free Internet is the best guarantee of democracy!
—Margot W Krystian PhD, santaLaneSanta Barbara, CA

Keep the Internet as it is now, so far it has proven to be the right way to assure Net Neutrality.
—Juan Pablo Arjona Trujillo, ,

Keep Net Neutrality! It's time to STOP enabling the GREEDY. Reclassify ISPs as common carriers.
—Judith Oiler, Columbus, NJ

For better or worse, the "Worldwide Web" has become as much a part of the way our society functions as has our highways and our use of electricity. To keep small-scale entrepreneurialism strong, we need to keep access equal, flowing to all like the electricity that powers it.
—karen Shell, Toronto, OH

An open internet is freedom for the people. You can not take that away, it is out freedom of speech and our lives! The FCC has no right to take this. The people don't want your laws and it's unconstitutional.
—Eric Takacs, Salt Lake City, UT

Chairman Wheeler should recuse himself since he is an industry insider posing as a protector of the public interest.
—Lee Baker, Greensboro, NC

Why do the companies and people with money get everything? This will be another nail in the coffin of equality for all.
—Ann Sammons, St. Louis, MO

The Internet is the only non bias place left in the world. No one person, country, corporation, or individual owns the Internet. By letting these rules pass you're allowing a corporation to own the Internet. It's letting the big guys pay to have access to customers and telling the little guy to take a hike. Just remember that lettings these rules pass also effects how you, the fcc board surf and use the Internet too because after all the Internet is a free place for us all unless you let it not be anymore.
—Rakibul Hoque, Ozone Park, NY

The United States already has the highest internet and cellular service prices in the world (and the lowest average data transfer speeds). Allowing ISPs to charge more for a 'high-speed' lane would only increase consumer prices with no increase in customer service.
—Edward Mone, Sebastian, FL

NET NEUTRALITY NOW.
—Bradley Krupsaw, CABA,

Your proposed rules allowing a two tiered internet is unacceptable. ISPs are common carriers and should be classified as such.
—Thomas Adamski, Oxford, CT

The free and open exchange of ideas is basic to a functional democracy. Many people now use the internet for this purpose. Please do not make this exchange more difficult or expensive for the vast majority of users.
—Ira Levine, Rockport, MA

The internet should be the same for everyone. It now is a means of not only information but education. Big business should not receive special privileges that ordinary people cannot have.
—Lilly Knuth, Garden City, NY

Net neutrality is important to every citizen of the United States. ISPs should be reclassified as common carriers.
—Lawrence Johnson, Raleigh, NC

it is important to get the facts from as many sources as possible.
—Sanford Raiss, Monroe Township, NJ

I sincerely hope the FCC commissioners recognize that the further monetization of the internet by creating preferential treatment of some internet traffic will only stifle creativity and slow process in development of new internet options. keep the internet open with net neutrality.
—Patrick Miller, Fleetwood, NC

The proposed rules allowing fast lanes for those that can afford them are not only undemocratic, but will provide AT&T, Comcast, and Verizon economic incentive to make the slow lanes slower. No sane person could possibly think they would not do so.
—Carne Lowgren, Bishop, CA

Dear FCC, i am human being same as everyone who lives on this beautiful planet. Togethether we share everything and we have to cooperate not fight. You wont take the money to your grave, the best things you cant buy for money!!!! Remember please this: Imagine what would you as child say if you would see yourself now? Are you proud of yourself? Im afraid this is really bad situtation and the world will raise up against YOU! We are waking up, you cant stop it. But you can still make a good decision. So good luck. We are all one. We are all one concesness. Keep my fingers for your decision. Have a nice day
—Oliver Novotný, ,

In order for many of us senior citizens to fully participate as citizens of this great country, we need a useable internet.
—Yolanda Mitts, Scotts, MI

Wow-talk about a REALLY bad move to make.....you really want thousands of Americans extremely upset with you? They won't real happy with AT&T, Comcast or Verizon but YOU will be the poster child of their discontent. Please reclassify ISPs as common carriers. It is the only way to protect real Net Neutrality. It is also the right thing to do. Please do the right thing.
—Debra Van Way, Mineral Wells, WV

Please, reconsider your actions. Why help those who have more, when you could be helping the people. The masses are indefinitely larger than the corporations. ISPs should be reclassified, and throw out the rules you have recently made for this. If you want to serve the people, then do what is the golden rule of the United States. Leave what is not broken be. Thank you for you time.
—Marisa Hauser, Lakeville, MN

The Internet is for everyone. In doing this, you are essentially damning the many who use the internet in order to line the pockets of the few. I assure you that in doing this, you won't be making a whole lot of money.
—Alex Casner, Mc Clure, PA

The free flow if information is a right. This is a 1st amendment and 2nd amendment right! Don't kill small online businesses!!!!
—Andrew East, Independence, KY

It's not fair to let the big businesses run the internet- they only look out for themselves and will do little to nothing to support us unless they can make a profit.
—Charles Barr, ,

It appears as if many important aspects of life today are dominated by the those who have money and those who do not; the Internet appears to be one of the last frontiers where the amount of money you have does not matter as much as the amount of creativity and persistence that you have. I humbly ask you to consider the weight of your decision and the effect it could have on those that do not have a large amount of money. Thank you for all you do and for always watching out for those who cannot watch out for themselves!
—Byron Gully, Indianapolis, IN

I value and depend on the Internet as a rich source of ideas and information received on a timely basis.
—Joel Adler, Vernon, CT

My entire business -- and all my clients -- are online. Slowing us down slows down ALL small businesses!
—Donald Campbell, Littleton, CO

Please do what is right for the American consumer and reclassify ISP's as common carriers. A free and open Internet is crucial to our democratic society in the 21st century. The Internet is the most significant infrastructure we've seen in generations and it is transforming nearly every aspect of our lives in a fundamental way. In the same way that the government took steps to ensure non-discrimination in the telephone and power infrastructures, so too must it act to ensure a level playing field in the Internet space ISP's MUST be reclassified as common carries to keep a level playing field and ensure fertile soil for future innovation. Letting huge ISP's extract money from service providers for "speedy access" to their customer base doesn't help consumers, doesn't promote innovation, and only lines the pockets of an industry that is universally reviled by consumers (Comcast and Time Warner have the lowest customer ratings of any company in America).
—Cliff Meyers, Mechanicsville, VA

My daughter is trying to get her website business out there so people can find her. It is already a struggle with the large corporations fast lane it will make it harder for her to get a chance.
—Susan Maletksy, Sonora, CA

Such corporate control of the Internet undermines true democracy at a very basic level. Please do the right thing by strengthening our democracy, for which so many have sacrificed so much.
—M Yukimura, Lihue, HI

America is already lagging behind many other nations in having done this. This is what the American people want, and you have a choice to make, serve the american public, as you are sworn to do, or cater to the few who serve only themselves. Your claims that you could police the ISPs to prevent fast laneing are ludicrous, given past track records in regards to such policing. Make the net a utility. Tell the ISPs they have to actually work for the public good instead of being parasites. Because the public is watching, and they are getting tired of seeing our public officials being bought off by corporations. Take any course of action other than classifying internet as a utility, and they will know who's pocket you're in.
—Lance McGill, Monteagle, TN

As a teacher in Medford, Ma I see how access to educational resources is essential to students and their ability to learn. The internet has become our greatest educational resource. If we allow some to have privileged access over others, future generations will be divided and our country will be weaker. Pease FCC, do not allow this to happen.
—Curtis Tuden, Medford, MA

The internet must be reclassified as a common carrier. Do not allow the corporatization of this entity that should become part of the Public Library Systems in America.
—Franklin Marshall, Plainfield, IL

Let stop being the country for the 1% only
—Samuel Irizarry, Vineland, NJ

I am a writer and depend on the internet for information, not from main stream media but alternate sources. The FCC's proposed plan discriminates against those who are not the big players and paves the way for yet another monopoly. If your plan is to stifle the free exchange of information and facilitate thought control and the invasion of privacy, you have succeeded.
—Margery Kivel, Rockport, ME

WHY? "... with liberty and justice for all." That's why. ALL ... for ALL ... Who in the U.S. today think they have been given the power and the right to exclude others from this ALL? They would be wrong!
—Jeanna ojeda, Palm Harbor, FL

Unfettered access to information is the sine qua non of democracy, which rests on the informed consent of the governed.
—Karl vonWerther, San Francisco, CA

In today's technology, Net Neutrality has become vital to free speech. Allowing large corporations to create a tiered Internet is another step away from freedom and another step toward oligarchy.
—Donna Wooten, Deltona, FL

I've communicated with the FCC over the last several months, my concern that the mainstream media news reports are driven not by current events, but by the advertisers each outlet services. This isn't healthy for democracy. Net Neutrality is important to support free speech. The FCC seems to have been tone-deaf to my concerns, by the way. This leads me to believe they are beholden to uS oligarchs instead of democracy. I hope their decisions about Net Neutrality will prove me wrong.
—Jean Hricik, McDonough, NY

I am truly awestruck by the potential that continued use of the internet over the centuries could have for the human race. If you consider the advances in technology that have been made thanks to the internet just in the last 14 years, imagine the potential for growth over the next millennium. Net neutrality is one of the core aspects of the internet. It is what allows anyone in the world to share their thoughts, ideas and talents with anyone in the world, and be given the same opportunity for attention as anyone else. It allows for truly great ideas that may otherwise have never been seen, to be shared with anyone and everyone. If net neutrality is not preserved, then those great ideas from individuals become buried by groups with deeper pockets, and the free and open nature of the internet is severely diminished. Individuals no longer have equal opportunity for attention, which has always been one of the great things about the internet. This is different than large corporations like Wal-Mart and Microsoft crushing smaller businesses because they are able to provide better quality goods at a cheaper price. In that situation, there are two sides to the equation. Sure, it is unfair that smaller businesses have a harder time getting a share of the market and making a profit, but at the same time, there is benefit in the consumer having access to affordable quality merchandise. While that issue may seem similar in nature to the issue of net neutrality, they have little in common. If the larger companies are allowed to dominate the internet, the consumer is not given a cheaper or higher quality product. They are given access to the same products as before, but less of a selection, and with more barricades in place preventing access to the things that would otherwise have equal standing. These restrictions are in opposition to the spirit of the internet and would likely cause countless great ideas to be overlooked. The next great work changing technology or master artist could be out there eager to share their creations, and be completely overshadowed by entities with lots of money to offer, but little else. I feel this is an issue that without hyperbole, may be among the most important of this century. This is different than large corporations like Wal-Mart and Microsoft crushing smaller businesses because they are able to provide better quality goods at a cheaper price. In that situation, there are two sides to the equation. Sure, it is unfair that smaller businesses have a harder time getting a share of the market and making a profit, but at the same time, there is benefit in the consumer having access to affordable quality merchandise. While that issue may seem similar in nature to the issue of net neutrality, they have little in common. If the larger companies are allowed to dominate the internet, the consumer is not given a cheaper or higher quality product. They are given access to the same products as before, but less of a selection, and with more barricades in place preventing access to the things that would otherwise have equal standing. These restrictions are in opposition to the spirit of the internet and would likely cause countless great ideas to be overlooked. The next great work changing technology or master artist could be out there eager to share their creations, and be completely overshadowed by entities with lots of money to offer, but little else. I feel this is an issue that without hyperbole, may be among the most important of this century. Personally, I feel like the open nature of the internet and the ability of any one person to present an idea and be able to have it seen by anyone in the world to collaborate and support it has been a huge driving force in technological advancement over the last several years, with much more to come. I think restricting that access limits humanity’s potential for growth. Given the amazing things that people have been able to create by working together on the internet, much of it for no benefit to themselves, I think that with enough time, and capability for instant collaboration and empathy could potentially lead to a technological utopia and possibly even world peace. Maybe that is a bit optimistic, but it is hard to argue that communicating regularly with various people from around the world on a regular basis and sharing their ideas, even something as simple as a home video, doesn’t give you a better understanding of their cultures and viewpoints, even subconsciously. It would stand to reason that with enough of that communication over time, cultures would begin to merge. But even if none of that is true, doesn’t the possibility that it is, make it worth not allowing a restriction on something that by its very nature is meant to be an equal and neutral medium? I don’t want to let the ISPs retard our potential for growth for the sake of their bottom line. If you agree, here are a few ways to help oppose them.
—Ryan Fey, Baton Rouge, LA

The internet is a free space where information should be easily and readily accessible to anyone! Not just those who can afford it. This destruction of Net Neutrality is active discrimination against those who can't afford extra fees, and big companies just trying to control the internet and squeeze extra money out of consumers. I refuse to let big companies restrict the most free and open environment I have. Without the internet, I couldn't access important mental health services and information. Stand up for Net Neutrality, FCC!
—Rae Drake, Noblesville, IN

These rules clearly favor monopolistic corporations over people and our needs. I can't tell you how disgusted and frustrated I am that this travesty continues.
—Rikardo Jahnke, Gays Mills, WI

The internet has become the most important way people communicate with each other and access information. It is integral our society in everything from education, entertainment, scientific research and the arts. The importance of internet access in the modern world cannot be overstated, which is why it is essential that access to it remain neutral, and equally open to all. I urge you on behalf of myself and of future generations to keep the internet neutral, reclassify ISPs as common carriers. Thank you.
—Misha Jemsek, Boulder, CO

Giving up net neutrality in favor for big money would make the world even more injust. ISPS should be reclassified as what it actually is - common carriers.
—Sabine Buergermeister, Freiburg,

I VOTE! I will vote out politcians who don't assure net neutrality!
—Rob Sauer, Arcadia, FL

Education, research, knowledge sharing and much more. I'm a full time student and a full time employee and require the FULL use of the internet for both. Internet providers should remain common carriers.
—Boris Agababian, Round Lake, IL

Money buys a faster Internet 'lane' so those of us NOT buying are automatically regulated to SLOWER Internet lanes of communications. Equal Internet protection should be for all users,
—Gene Berry, Fredericksburg, TX

Net Neutrality is important to me because I need free internet.
—Paul Frunza, ,

Net Neutrality encourages innovation.
—Aaron F Bourque, Aurora, CO

Net means we all benefit, not just those with deep pockets. Show your integrity still exists and fight for the people, not the wallet.
—Ryan Nutwell, Milton, FL

Free speech
—Harper Hamstra, ,

Tom Wheeler's plan for the internet is wrong. It would give service providers too much control, leaving opportunity for these companies to discriminate against online content, applications and groups of consumers. I demand that the FCC protect the open Internet by reclassifying Internet service providers as common carriers, the public utilities that they are.
—Lynn Graves Gulyash, Potter Valley, CA

Because of the economic crisis, the lack of access to medical care, the corruption of our government, financial and judicial systems, because of the need for a transparent and a free media, and the need for new collaborations and exchanges of ideas to take place, as well as a platform for social change be available to all people, I insist that the internet be protected! Title II NOW!
—Duane Pool, Austin, TX

The FCC is not taking the best action for the whole. The FCC is bought and paid for, you are not fooling anyone.
—LJ Orszulak, Chicopee, MA

I am a homeless veteran, and have been for over a year. I have been unemployed for over 5 years now, through no fault of my own. If not for my internet access "on-demand", I would be dead. I have been able to summon aid for myself and others via my phone, and when I've had access to my computer, been able to locate and obtain necessary services, locally and federally. There is no doubt in my mind that if not for an open and free internet, the quality of my life would have plummetted. PLEASE listen to WE THE PEOPLE and not the corporations which of late seem to spread corruption wherever they may look. SUPPORT NET NEUTRALITY. SUPPORT THE PEOPLE WHO HAVE REALLY HIRED YOU TO DO THIS JOB AND NOT THE MINDLESS CORPORATE GREED STRIVING TO USURP THESE UNITED STATES. Thank you.
—George Grasmann, Saint Petersburg, FL

The Internet is important to me because it fundamentally shaped the way I grew up and learned. It was an open, fertile ground for exploration and innovation that thought me how to think & solve problems. I'm worried that my children (11 & 7) won't see this resource in the same way if they aren't afforded the same perspective. Call it filtering, call it prioritizing, whatever...I want my children to know the Internet as a great democratizing factor in the world. Voices, opinions, and work on the internet are all equal...and they have the same chance to succeed using this vehicle as I did. With the new FCC proposals, I'm worried that the nature of the Internet will fundamentally change to lessen those opportunities and access for growth.
—Brian Lawson, Lebanon, IN

Net Neutrality is vital to a democratic society and allowing dissenting voices to be heard amidst the roar of corporate media. Don't shut those voices out by creating two tiers of speed. Ensure the internet stays open by declaring it the public utility that it is.
—Jeremy Johnson, Pittsburg, KS

The internet is a public utility and should be regulated as such. Access to the internet needs to be a level field for the public good and not tiered for the good of the few.
—Paul Costello, Wendell, MA

Dear Federal Communications Commission: FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Kaloian Manassiev, New York, NY

The proposed FCC rule change will end net neutrality and create a monopolistic system. Does America stand for oligopoly? Or does it stand for freedom for all?
—Naomi Barnes, Roosevelt, NJ

As one whose entire career has been building web sites and apps for small businesses, non-profits and startups, the prospects for the people I work for and myself would be crushed by the extra costs to stay in the fast lane. So much in today's world depends on an open internet that common carrier status for all forms of ISP and mobile data is now as obviously the right choice as it is for electricity and telephones.
—Isaac Csandl, Chicago, IL

Being able to check the news anytime is important to me.
—Gary Albright, s, WA

The Net is the most important thing since printing. It must be kept free to support all people everywhere.
—Philip Davis, Marfa, TX

Because the internet is the only space where I can express myself the way I want to without being afraid of being judged by my family or my peers. Without the internet, I would not know myself the way I do at this point in my life. Anonymity can be a source of comfort in that way. If you could ask any question without shame, where would you go? For me, the internet is the only space I can dare to be myself, fully.
—Maja Gahr, Berlin,

Reclassify the Internet as a common carrier to preserve Net Neutrality. The Internet is to commerce and democracy today as the telephone network has been in the past. No party should get preferential treatment. Over the long term, no good can come to the people by allowing large corporations cut deals for preferential treatment on the Internet.
—Dan Leggett, Chevy Chase, MD

This shut is ridiculous! It will cause the rise in cost of many online services, such as Netflix. The Internet should be a free place. This would change that. Let us have our net neutrality!
—Xandar Miller, Bradley, IL

THE INTERNET SHOULD REMAIN COMPLEATLY FREE TO ACCESS AT ANYTIME. OKAY YOU STILL PAY FOR YOUR WIFI NETWORK PROVIDERS THAT'S ACCEPTABLE BUT TO THEN BE CHARGED ADDITIONAL FEES FOR ACCESSING WEBSITES IS TOTALLY UNACCEPTABLE AND DISCRIMINATES AGAINST PEOPLE WHO HAVE NOT VERY MUCH MONEY HO STILL RELY ON THE INTERNET TO COMMUNICATE WITH FAMILY AND FRIENDS HO STAY FARAWAY IN REALTIME. AS TO CALL THEM WOULD BE VERY EXPENSIVE AND TO WRITE BY LETTER WOULD TAKE A LONG TIME TO RECEIVE A ANSWER TO YOUR LETTER. AND WE PEOPLE NOW NEED CONSTANT ACCESS TO THE INTERNET FOR JOB SERCHING OR WE LOSE OUR BENEFITS.
—Jim Clark, ,

This action is just one more loss to our freedom and one more form of discrimination. Instead of allowing this type of thing to happen the government should be working on breaking up these large corporations that currently dominate our culture and control what we see and hear.
—Lucy Kemp, Bradenton, FL

A free and open internet is a powerful counterbalance against abuses of the public airwaves. The ability to communicate instantly and promptly between peoples of all nations and classes is a way to reduce international friction and misunderstanding.
—David Maron, new york, NY

it is definitely we need neutrality in the net because it has become second nature
—Rsnathan, ,

I don't want my Internet use CENOSORED by greedy corporate psychopaths who WILL basically censor less profitable traffic by slowing it down in the name of fellow greedy psychos who can spend all the money in the world to have the higest Internet speeds possible. It's as absurd as saying that because you can buy a Mercedes you have the right to go 130 mph but if you can only afford a used Chevy you can only go 30 mph because you didn't spend as much.
—Daniel J. Fontes, Lafayette, IN

The internet has changed our world so much in it's short lifetime. Hindering like this in it's infancy for profit is one of the most narrow minded and idiotic short sighted actions we could take.
—Nathan Sullivan, Bloomington, IL

Net Neutrality is an important component of democracy. We already have a greatly diminished democracy due to income inequality and the legal form of what looks like corruption we refer to as "lobbying".
—Jennifer Burr, Walpole, NH

The majority of Americans want Net Neutrality! Are you going to show us that you represent us, or that you bow down to the corporations? My gut tells me the latter, but I hope I'm wrong.
—Lori, Eudora, KS

At $40 a month, internet service is high enough the carriers that I pay to provide my access should not be allowed to restrict my access to the internet by setting speed limitations on certain sites. The rules you have proposed are not enough to prevent that from happening, ISP's should be classified as common carriers.
—Natosha Alexander, Washington, DC

I need Net Neutrality because in every instance where money has been used to separate people into different groups has utterly failed. People working minimum wage may already be struggling to afford Internet, and how will this help them? Being shit on for making less than others? Nothing about this is a good idea. Nothing about this is a calculated, well thought-out decision, and it shows. Get your heads out of your asses and realize what you're doing to the freedom and rights of people you supposedly cater to.
—Robin Gaudette, San Antonio, TX

It's a simple solution. It solves the problem. It needs to be done.
—Rob Barnes, Junction City, CA

This move will destroy the internet's impartial service and put monopolies in control to discriminate against internet users' content--this flies in the face of your job to protect the consumer against these powerful monopolies!!
—Lynn Manzione, athens, GA

No fast lanes. Remove the FCC chairman if he pushes this through!
—Nor Brunschwyler, Charleston, WV

If the government truly wants to help small business, Net neutrality is absolutely the way to do it. Although the current considerations are between huge companies, restricting bandwidth to the small guy stifles innovation and hurts consumers.
—Keith Owens, Springfield, MO

The only way we (the poor people of the country) have to be heard by "our" government is the internet since we cannot buy our representatives with billions of dollars thanks to the Supreme Court decisions.
—Nancy Roessel, Fort White, FL

Please do not allow the large corporations to pick winners and losers via who can afford to pay for their message to have priority. ISPs need to be classified Title II Common Carriers
—Ray Nelson, La Salle, CO

Is money the ONLY thing that matters in this country? Yes, Verizon, Comcast, AT&T, etc., all have more money than me. The Internet is the last bastion of income equality. If your proposed rules go through, then all semblance of equality in this country has gone down the tubes. Please do your job and do not let this happen.
—Jack Harmell, North Grafton, MA

Net Neutrality is a form of freedom, and freedom should always be the way forward.
—Kaspar Nybo Andersen, Struer,

I cant afford it now.help us
—Raynaldo Rodriguez, grand prairie, TX

WE THE AMERICAN CITIZEN TAX PAYERS ALREADY PAID FOR THE DEVELOPEMENT OF AND REALLY OWN THE INTERNET UNDER THE CONSTITUTION. KEEP THE NET NEUTRAL. NO to Chairman Wheeler's plan would let ISPs like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees — and a slow dirt road for the rest of us. These companies would have the power to pick winners and losers online and discriminate against online content and applications. NO. beyond un-American. Not smart either. N O; keep the net neutral period. Protect the open Internet by reclassifying ISPs as common carriers.
—Elisha A Jones, Melbourne, FL

Carriers are already pricing people out of the market by limiting or tying data/downloads to packages that limit the quantity of use. Now the quality of the system is threatened.
—Richard Lee, Zephyrhills, FL

I do not use many of the common websites. If these rules were to be pushed through, I am afraid of the inferior speed I would be assigned.
—Keith Bennett, Humble, TX

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers. Providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. These companies would have the power to pick winners and losers online and discriminate against online content and applications. And no one would be able to do anything about it.
—Judy Rhee, Brooklyn, NY

High speed Internet access is a necessity not a luxury for the continued growth of the 21st century economy. It is as critical as roads, electricity, water, and telephone service were to the 19th and 20th century economies. It is also a good/service that is inherently monopolistic. Most municipalities have only one high speed landline Internet vendor (usually a cable company), the highly touted FIOS and uVerse deployments have essentially stopped except for regions where Google fiber looks likely to challenge the monopoly. Most consumers face a market with only one vendor for high speed Internet access (DSL and satellite Internet don't count) a situation reminiscent of the days of the Bell telephone monopolies. It's probably too late to introduce real competition to the market since the telcos and cable companies have shown they have ZERO desire to compete. Therefore, it is incumbent on the FCC to regulate Internet access as a common carrier to force the cable and telco companies to treat all traffic equally and not force the consumer (voter) into a ghetto where the only information accessible at reasonable speed is what they and there content partners offer.
—Kevin Reis, Alexandria, VA

Net neutrality is so important for the speed of which we rely upon. Also there are a long line of people who can't afford to pay extra money for access to certain content. Please do the right thing. Save net neutrality on behalf of the people. God speed, T. Freeman
—Todd Freeman, Kings Mountain, NC

I am house-bound and the internet is my only connection to the world. Without a free and open internet, I would be totally alone. please reclassify ISPs and require them to improve their services.
—JM Lavassaur, Norristown, PA

I believe everyone and every company should have equal access rights to the internet. No discrimination.
—Radu Muntean, Hazel Park, MI

Net Neutrality is essential for the growth of democracy at home and abroad.
—Greg Hohn, Chapel Hill, NC

Not only would this bring extra expenses to everyone, but it would be capable to block an entire part of the media from the some of the poor.
—Afonso Oliveira, ,

Giving the Big Three special privileges will cost everyone SO MUCH MORE in fees. Keep them COMMON !
—Raleigh Atkinson, Pasadena, TX

Other countries have classified the ISPs as common carriers (Great Britian, South Korea) and have extensive broadband coverage and open competition for the consumer. The US lags in access for the sake of profits. The voice of the people should be allowed to be heard.
—Richard Pope, Amherst, NY

The rules create another monopoly that will destroy the neutral internet. It will increase my costs because a two tier system will increase the costs of information providers. My first thought is how much did they pay you to come up with these rules; how else can you explain the exclusivity of those rules? ISPs should be common carriers not exclusive carriers and then the 98%. Please reconsider your poor decision.
—Bonnie J Olivier, Grand Rapids, MI

I'm a souveraen, not your slave!
—man of house Hayn Udo, ,

The internet is the most unique and most valuable tool we have ever had. So much so, that the people have slept in the streets to get your attention and demand that you protect this valuable resource. Stand up for whats right for humanity and stop trying to line you deep pockets with corporate funds. Do something for the good of the people of the world and protect the internet. We have men women and kids all over the world dying because they thing they're protecting our "freedom" and here you are destroying every hope and every chance of trying to bring real freedom back into the world. What a terrible waste of life. No, a waste of life would be better than what you are. You're serving the opposite interests of what life is about. Think about this and FIX YOUR MISTAKE. WE ALL NEED REAL NET NEUTRALITY!! CLASSIFY ISP'S AS THE COMMON CARRIERS THAT THEY ARE PLEASE!!!! Thank you. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—X, Wilmington, NC

Just watch this video, please; and see how ridiculous the the 2 tiered plan is. http://www.youtube.com/watch?v =NAxMyTwmu_M Thanks
—J M Bayne, Tucker, GA

Please do not enable a system in which vital information is made more available to some than to to others. The rules proposed amount to allowing some citizens into the library and leaving others at the door.
—Jane Beckmann, San Antonio, TX

The internet means freedom to say what you want, or should do, for the internet to remain a unbiased in the future please reclassify ISPs as common carriers.
—Laurence, ,

Hello and thank you for reading my comment. I don’t feel that carriers charging for access to me as a customer is fair in any way. First problem I have with this, is that I already pay my dues for internet. I am told that I will get a specified internet speed by paying a bill of a specific amount every month. It should not matter where I connect to, I have already paid my toll!! The next problem that I have, is that I am being treated as a product of the carrier, being sold to the company who would like high speed access to their customers. If I am an asset, I should be compensated as well in the form of a kick back on my internet bill, after all they are paying for access to me the customer, and not access to the network, as I am already paying that part. The third problem that I have, is that when I start a company, I will rely heavily on access to customers on the internet, and to have to pay for the speed to connect to the customers who are already paying their dues, will damage my company. I would consider hosting outside of the United States, and target customers in other countries. This would further damage the US economy if a large number of people also follow this trend. Personally I feel that the FCC has stabbed me in the back and is allowing carriers to rape and deface the backbone (communications) of this country.
—Robert Lisiecki, Jacksonville, FL

Net Neutrality is important to me because the Internet is just fine the way it is! This two-tiered plan is basically FCC Chairman Tom Wheeler's agenda to continue to lobby for the cable and wireless industries and against the people and can be interpreted as an abuse of power if known by enough people.
—Stephen Krokowski, West Memphis, AR

the FCC ruling could possibly create an internet GIANTS cartel much like the OPEC cartel of the middle east and this would allow wholesale price setting for Inet usage---A MONOPOLY!!...
—Larry T Winship, zephyrhills, FL

Net neutrality is a vital aspect of the use of the internet as we know it. Egalitarian access to net traffic is a cornerstone of small businesses, startups, and independent media; financially barring them from access to a "fast lane" that prioritizes corporate traffic results in penalties for startups, small businesses, and individuals, and hurts the end consumer by denying them free access to information from a variety of sources. ISPs have what's already an effective monopoly in most areas of the country; because of their non-common carrier status, they've been able to benefit from legislation affecting both private businesses and public utilities and have been immune to antitrust measures. It's time for that to stop. It's time to reclassify ISPs officially as common carriers to protect small businesses and consumers, and put an end to ISPs' double-dipping legislative benefits.
—Molly Brewer, Portland, ME

Why should the internet be any different than the phone, electricity or gas?
—D Felix, Allen Park, MI

These new rules would greatly accelerate the process by which corporations are being put in control of our country. Opportunities for "free” speech will rapidly fade in face of an onslaught of "bought” speech. Furthermore, sparks of creativity, which by their very nature are small (being born in individual brains), would be squelched. Our country’s well-being relies upon a regular influx of new ideas, just as the human body relies upon the generation of new cells, for its very survival.
—Candace Brower, Albuquerque, NM

I need net neutrality to keep my loved ones in the loop of my life and theirs. Transmitting photos and videos of our children as they grow is the only way we can "stay together" when we live all over the country and can't afford to visit.
—Greta Buckman, Knoxville, TN

The FCC needs to keep the internet open and equal for all!!
—Marla Serrine, Mount Pulaski, IL

Please don't screw up the internet.
—Ethan Bruce, Lafayette, LA

I want you to classify broadband as a Title II telecommunications service. You need to tell companies this is like a telephone call, between the people involved, not something you get involved in -you are hired to move the information, not mess with it. The only way to do that is to classify broadband Access as a Title II telecommunications service under the Communications Act. So far this is NOT what you have done. You are catering to a few big companies who have monopolies in many areas. This is not acceptable and you should be ashamed of your actions. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Geoffrey Hach, Chagrin Falls, OH

No one has the right to limit knowledge or slow it down.
—Julie S Viergutz, Parma, OH

Don't fix it when it isn't broken. the vast majority of the American people favor true Net Neutrality, not the terrible set of rules which you have recently adopted to undermine Net Neutrality! For once, could you just be responsive to the wishes of the people instead of the monied elites who wish to control the Internet, like they do everything else!
—Thomas McElroy, Charlotte, NC

Net Neutrality is what I love about the internet. I like reading my friends' blogs and finding out about local events. If the FCC slows down, charges smaller companies or individuals to compete, or otherwise exploits and adulterates the internet I personally in addition will stop using the internet and boycott AT&T, Comcast, & Verizon.
—Kayleigh Roberts, Sumter, SC

How much money did they blackmail you with.
—Russell Se, Wrj, VT

If the amount of money a corporation/company has determines what I see, read, and watch, then all freedom is lost.
—Erica Goldson, Oneida, NY

I will be hurt if the proposal for fast tracing huge corporations and driving small businesses off the internet is approved. I like to buy from small niche businesses that sell things the megaq corporations don't find profitable, and stay away from the mass produced items as much as possible. These small businesses help our economy and increase jobs more than the many layered conglomerates that cut jobs or ship them overseas. The U.S. economy will lose, as well as all the citizens who lose jobs or can no longer buy niche products and services.
—Patricia Grames, Tucson, AZ

Wheeler and the FCC think that by confusing the language of the proposal they're going to get away with eliminating net neutrality. But we're aware of what Wheeler and his ISP masters are trying to accomplish. Shame on Obama for nominating this scumbag and caving in to the monies they contributed to his 2 campaigns. Disgraceful.
—Richard Unanue, Asheville, NC

I feel so strongly I have, for now, dropped cable service and installed an aerial. We need fairness spread all over, not to a few grandiflora companies. Melora Davis Newark, Delaware
—Melora Davis, Newark, DE

The internet is the only real vehicle for accessing a wide range of opinion on cultural and political matters, since the other "news" outlets are uniformly monolithic in their political message. A system benefiting the richest only compounds the problems facing our democracy because of the media disaster. Keep the internet neutral so everybody, no matter how poor or rich can be there - equal opportunity. Don't fall for the "netflix uses up too much space" thing - the ISPs are not losing any money to netflix. Europe has better speeds at lower prices - and they don"t need tiers. Just good old leveling the playing field with necessary regulations to encourage TRUE competition!
—Nora Engel, Philadelphia, PA

Big cable companies & Verizon are charging fees for transport and additional fees for content. Transport fees should be equal for all. By allowing these companies to prioritize their content over their competitors is a violation of anti-trust laws.
—Jim Jane Barry, North Wales, PA

I am an aspiring graphic artist and a crucial component of my portfolio consists of a graphic novel will publish online for free. I rely on this readership to showcase my skills and secure paying contacts. The FCC's proposed rules will open the door for internet service providers to charge higher rates for the same level of service- calling it "premium." This will dramatically reduce traffic to my site- especially if I charge a subscription fee to offset the increased cost of hosting it (in the online graphic novel world, users simply are not interested in paying for content created by an artist they've never heard of). In my lifetime I have seen the creative world flourish in the high-speed unfetted communication environment that is the web today. I fear that the FCC's new rules will all ISPs to stifle, or at worst, end this community.
—Matthew W Gebarski, Madison, WI

Several cities and Foreign Countries recognize the importance of the internet for all their citizens. The Free internet allows equality for all people to learn, share, research and improve the quality of life for all living things. Children are among the most important users of a free internet. The knowledge they gain will be our countries path to inovation, and safe guarding our country. We, as a country, need Net Neutrality.
—Diana L. Owens, Sublette, IL

The internet has created a level playing field for all people. This has allowed people to learn and grow to advance their own knowledge or job skills. It is a place of discovery, where we can learn about each other. It is a unifying force knitting together people of disparate backgrounds, interests, and social class among other things. Ending Net Neutrality will remove the democratic nature of the internet and bind it to greedy companies. The internet has changed much of how we do things in the world, much of it undoubtedly for the better. Please don't bend to companies who want to gain profit because they see an opportunity.
—Nathaniel Hein, Memphis, TN

It means freedom, equality and economic opportunity
—Rosalind Milliken, Indio, CA

By dividing internet service into tiers you effectively hand over control to the giant media conglomerates... but you know this... you're obviously in their pocket and are an anti-american fascist. All of this will come back on you and your children. Thanks a lot for selling out freedom.
—Stephen Langley, Baton Rouge, LA

Most the major players online would have never thrived without the freedom to do so. Take away that freedom and the net will stagnate it or collapse in terms if progress. Other nations are busy protecting the bet while the FCC is trying to stifle it. Be smarter than that
—Jason haberman, Witchita, KS

Access to human knowledge is a right not a privelege.
—Christian McFarland, Buena Vista, CO

for a network freedom !!!
—Randy Kirsten, Brooklyn, NY

Small businesses like my husbands depend on the internet to do business. They can't afford to pay to be in the fast lane. You need to reclassify ISP's as common carriers and not allow these rules to move forward. Thank You!
—Betsy Costanza, Cincinnati, OH

Chairman Wheeler, You must revise the current FCC plan that basically allows Internet Service Providers to charge for preferential bandwidth access. If enacted, these rules would effectively destroy Net Neutrality and create a caste system for internet access defined by how much money an ISP can charge. Under your current plan, the Internet Service Providers can make deals to provide faster service to those willing to/can pay, slow down sites that refuse to pay, and leave whatever bandwidth is left over for the rest of the internet. Do you actually believe that are going to build out the high-end infrastructure necessary to support these priority access offerings or do you understand that they will just siphon off the needed bandwidth from their current resources. I strongly urge you to reclassify broadband as a Telecommunications Service. We are way past the days of considering internet access to be a luxury, it's a modern day necessity. Only by keeping the online access playing field level, much like the government has done in the past with both Telephone and Federal Highway access, can innovation and growth thrive. The United States has already fallen far behind many other countries in both internet access speeds and availability of services, yet we lead all others in paying the most for these mediocre standings. How can the U.S. maintain it's world technological leadership with access gatekeepers like these? Lastly, almost all of the major players in the ISP industry, in lockstep, are flexing all of their influence/capital with congress, the FCC, and it's chairman to allow them to maintain their stranglehold on this industry despite the public outcry for just the opposite. They want to be able to keep charging inexplicably large fees for the dearth of services they currently offer their U.S. customers. In regards to this much needed utility, the ISP's have a proven track record in the U.S. of being self-serving custodians of this most important public commodity. These Internet Service Providers are clearly Telecommunication Service Providers, and in the public's interest should be rightly classified and treated as such. Best Regards, - Adam Fields
—Adam Fields, Greer, SC

I totally depend upon internet neutrality... posting applications (android) will become troublesome for me(us-The Developers),sharing contents will become a herculean task when permission of certain people/organisation is required...moreover...we love OPEN INTERNET
—Abhinav Athankar, ,

The internet has been a tremendous benefit not only to the US and world economy, but for research, quality of life improvement, and the spread of ideas and democracy throughout the world. This benefit is directly related to the openness of the basic network infrastructure, and the fact that internet traffic is not treated differently depending on the interests of powerful companies, organizations, or governments. The current FCC proposal would sacrifice this openness for the benefit of particular companies that have powerful a powerful lobbying force in Washington DC, but who have not done a particularly great job at building infrastructure (or satisfying customers) when compared to what has happened in other industrialized nations. For this reason I am very opposed to the current proposal. Chris Lee (PhD, Robotics, Carnegie Mellon University 1999. Senior Robotics Engineer for Boston Dynamics / Senior Software Engineer for Google)
—Chris Lee, Arlington, MA

do not allow companies who have not paid for the system to pirate it and divvy up the spoils.
—Douglas Bienko, Buffalo, NY

Net Neutrality is vitally important to a free and open internet, not based upon corporate interests, but useful to the expansion of self expression and the sharing of communal ideas. please do not sell out the internet, which has only become great because of sharing, to corporations who are only interested in themselves and their bottom line.
—Timothy Jutsum, Lucernemines, PA

We the people own the internet, not the big companies, who would put profits above the democracy that an open internet provides. It is YOUR job as FCC chairman, Mr Wheeler, to preserve the open internet. Do not fail the people of the Unites States; protect an open internet by reclassifying ISPs as common carriers. Thank you.
—Kathleen MacKay, Thornton, NH

Bust up these monopolies.
—Frank Beran, Worth, IL

Preserve Net Neutrality! Reclassify the internet as a common carrier!
—Justin Paquette, Millbury, MA

I want Net Neutrality. Google and others have already decided which ads we will see first and it is very limiting. We need them to be restrained and subject to anti-trust legislation, not more power.
—Nancy J. Sierra, Gainesville, FL

I"m not sure why I have to say that this is wrong. I"m not sure why it got this far, when you all know it's wrong. But the proposed rules set forth by Tom Wheeler are WRONG. Do the right thing for yourself, your family and friends, America and the rest of the world. Preserve Net Neutrality and end the fast lane farce. Reclassify ISPs as common carriers.
—Leslie Cox, Medford, OR

While the proponents of the rule are simply asking for a "fast lane" to be opened up to content providers if they pay more to the ISPs, it seems obvious that the end result will be that quality and speed will not be enhanced unless a specific "fast lane" fee is paid. The proposed rules will really authorize a "slow lane" that will diminish the ability for newcomers to enter and disrupt the existing market, or the status quo. Obvious conflicts of interest exist - for example, Comcast (being an ISP and cable tv provider) would be incentivized to charge Netflix, Hulu and YouTube more to provide their content at usable speeds so as to protect Comcast's precious cable revenues. This would drive up the costs to the internet content providers who will have to pass those costs on to consumers. ISP/Cable providers will feel less pressure to keep prices down since they can then directly inflate internet video content prices. In the end, these rules would serve to cost both internet AND cable tv consumers more money and artificially enrich the ISPs and cable providers. There is no way this can be considered good for America. Perhaps I'm missing something, though. Are ISPs suffering and in danger of going out of business? Is there a reason we need this specific breed of corporate welfare? I am ignorant, but I would be surprised to hear that large ISPs like Comcast, Time Warner, Verizon, AT&T, etc., are not making huge profits. Because of the local cable monopolies already in place, such as Antietam Cable in my town, innovation is stifled and quality of service has not kept pace with technological advances precisely because of the lack of need to compete. These anti-net neutrality rules will only make it worse and cause America to fall further behind.
—Adam D. Greivell Esq., Hagerstown, MD

Fire Everyone who works at the FCC. The FCC should be picketing itself, right now. We, the public, should not need to blaspheme your idiocacy. There are 5 commissioners who are all going to run the FCC into the ground. If telephone lines with limited communication has title II, why the #$%# does the internet that has 10000 times the information power not have it? How long does the American public have to bow down to corporate wahoos who are trying to nickel and dime the American public to death. The government SERVES the people. It's time that the FCC boycotted itself until the commissioners wake up. Boycott! Boycott! Picket Picket!!! If the FCC won't, I will shortly, starting in Tampa Florida.
—Chris Perkins, Lakeland, FL

Our economy has already taken some huge blows...why kill small start-ups and new fresh ideas?
—Kay Kramme, Brooklyn, NY

Please keep the internet open.
—Nishant Rao, Austin, TX

I depend on Net Neutrality and demand that the FCC protect the open internet by reclassifying ISPs as common carriers. thank you
—Louann Harmon, Haslett, MI

I think the internet should be reclassified as common. Please listen to the people who pay for these services not just the deep pockets!!
—Berry Burchett, Ulysses, KY

The way things are headed now will benefit no one except the higher ups in the cable industry. Net neutrality benefits us all.
—Jonathan McWhorter, Miami, FL

PLEASE throw out the rules and reclassify Internet service providers as common carriers. This is the ONLY way to protect real Net Neutrality.
—Peggy Herlihy, Newburyport, MA

The internet should be a place where I can relax.
—Abigail, ,

The power of money must be stopped from corrupting our society.
—Joanne Snyder, San Diego, CA

Plutocracy!!!!!
—Alan Hutchinson, Carson City, NV

Please Reclassify ISPs as Common Carriers. The proposed plan is going to allow Fast Lanes for those who an afford it, and allow it to be outrageously slow for the rest of us.
—Alexander Weeks, Yukon, OK

Open access, net neutrality, non-discriminatory content availability - call it what you will but this is VITAL to preserving the freedom of expression and sharing or ideas needed to keep our democracy strong. We cannot let corporate interests get in the way of that!!!
—Mr. Dale Gilman, Beverly Hills, MI

Freedom. And, to have the opportunity to compete in business without being manipulated by some with power.
—Gail, Ocean View, DE

Discrimination of any kind is not right. These companies should not be able to push this on us.
—Vicky Keller, Florence, MS

It's not just the protection of Net Neutrality - it's the protection of Democracy!
—Harold Pontiff, Minneapolis, MN

The open internet has bettered humanity more than any technology in human history. Any means of restricting the completely open internet is, therefore, against the betterment of humanity. Consider carefully that you are selling the betterment of humanity to the controlling interests of money. You and all of your loved ones are humans. You are literally selling the betterment of the world you and your loved ones live in.
—Mr. Eric Quigley, Grand Rapids, MI

Don't try to fix something that is not broken!
—Darrell House, Wilkinson, IN

The internet is the last frontier for consumer freedom, unlimited knowledge, and open communication for all. Please stop and think about what you are really accomplishing by putting limits to the internet. We the people are the ones who are harmed by moving into the benefits of Internet service providers.
—Graydon Allerton, Cincinnati, OH

Net Neutrality is a crucial issue for both the democratic process and the sustaining of small business.
—Martha Marcom, Columbus, OH

The proposed rules will utterly destroy the fundamental structure of the internet. There is no valid excuse for this action, and the only possible drive is pure profit motive. Please stop this.
—Tom Trotter, Jamestown, NC

As an American living outside of the US Neutrality is the only way to go no more monopolies !!!!
—James Wyatt, Rodgau,

The internet is a meeting place for all. Do not allow this common ground to be captured by commercial interests.
—A Zwart, Tilburg,

While the internet can never return to the halcyon days when all content was equal, the foundation of the shared information system was equal access to all. Blocking access within the system is considered a form of censorship, whether preventing materials from being searched or keeping it from being published. Any block on the physical level would also be censorship, but of a more insidious kind. This would harm the physical foundation of the internet itself. When you alter physical access to online content at the whim of the free market, you sell out the ideal of equality and whether it was the original intent, create a class structure in what was intended to be a level playing field. Please do not do this. Please uphold the ideal of a common ground for all.
—D Burgos, Brooklyn, NY

This deal for the mega rich and elite is totally WRONG!!!!!
—Patrick Wooten, nashville, TN

i want the fcc to reclassify Internet service providers as common carriers and so that giant corporations like att, comcast and verizon are not allowed to take over the internet. the internet should be open for anyone to use big or small. they should not be allowed to bully business into paying more money for faster lanes when they already have people paying tons of money for every other small service they provide.
—Tyler, Stillwater, OK

Please ...protect the open internet!
—Marge Kremer, Woodruff, WI

All website should have a fair shot to be discoverable and visible on the Internet without have to somehow pay another company for that spot. Net neutrality is extremely important to the economy of the small and midsized business.
—Isa Cann, Salisbury, MA

If it wals like a duck and quacks like a duck! It probably is a ducck. ISPs are common carriers.
—Zeeshan Shera, chico, CA

The United States invented the Internet but lack of competition and proper regulation (there is no free market without a fair playing field created by good regulation) has caused us to have terribly slow and expensive Internet service. We need better regulation.
—Raul Diaz, Palo Alto, CA

MY FRIENDS FOUGHT FOR FREEDOM!!!!!!!!!!!
—John Pinezich, Longmont, CO

Democracy depends on free and open communication.
—Wray Wray Stanley, MALVERN, PA

We need laws like this to protect consumers, not companies. They will just pass the cost to us (which we already pay for in our monthly utility bills).
—Walter Weidner, Springville, UT

Dear Sirs: I want to make an apology to you. In my initial note to you "Re: CIMS00004063073 - NetNeutrality Needs to be preserved!" I complained that the initial plan proposed without details wasn't appropriate. I still believe that, but I didn't need to be so harsh in my words and you all didn't deserve that! I still feel that the big ISPs have a "stacked deck" in their relationship with the non-commercial consumers who have no real choice in their ISP or the rates. But again, I apologize for the harsh words which were not necessary. Thank you for your time in reading this. Respectfully, Joe Williams.
—Joe Williams, Quincy, MA

I live in a rural state and small business owners depend on Net Neutrality to bring their innovations to the global economy. Similarly, students depend on Net Neutrality to access information from the world and further their educations.
—Sara "testing" Longsmith, Brattleboro, VT

Easy access to knowledge I need and a better alternative to TV.
—Zachary Howell, Abingdon, VA

The internet is now as important to economic growth as having access to reliable electrical energy. The internet is almost as important for economic growth as public roadways and navigable waters. The internet is as important to the educational system as readily-accessible libraries. The internet is so crucial to the educational system because of the availability of research materials and resources, and the internet is increasingly used for daily commerce for product creations. Net Neutrality is of utmost importance. If America is to remain a land of opportunity, if America is to remain a powerhouse in the development of new products, if America is to remain an economic engine for the world, then it is overwhelmingly best served by strict net neutrality. If America is to prevent and eliminate corruption, net neutrality is an important factor in the efforts.
—Steve Deibele, Kiel, WI

I think these videos AlphaOmegaSin tell all. https://www.youtube.com/watch? v=V_ZnxlhdSz0 https://www.youtube.com/watch? v=xrpGV_Lwmw4
—Jerred Zoll, Omaha, NE

This is what you get when you allow industry insiders to police their own. No matter how much Mr. Wheeler tries to dress this up, it's still a pig in a wig and a victory for the big telecom's that think they should own the internet. To coin a phrase from former president Bush in the aftermath of Katrina, "You're doin` a heck of a job Brownie!" When in fact Brownie was doing a terrible job, ditto Mr. Wheeler. Reclassification would likely put this matter to bed once and for all and be the keeping of a promise that then Senator Obama made in his run for the White House in 2007.
—Gary Jeffers, Liberty Twp., OH

Just leave our internet alone and stop working for the big corporations, take care of everyday people.
—Paula Decker, Newton, NJ

Because information should be accessible to everyone.
—Diana R. Gray, Torrance, CA

I work from home. I transmit and receive large amounts of data as part of my job. My traffic should not be shunted to some lower tier of service simply because I don't pay extra for "premium speed". All internet packets are equal and not the business of providers to judge which are important and which are not.
—Ronald H Skees, Jeffersonville, KY

Net Neutrailty is akin to making public libraries charge an entrance fee and a check out fee, with only the rich allowed to access the PUBLIC resources. Please don't do this.
—Shannon Brisson, Chelsea, MA

Dear FCC, In todays world, the internet is a mandatory need and this is the way how the people of this world communicate to each other. If you put this law into effect then the World Wide Web (internet) will crash down and only a couple 1,000 people could afford the billing for the internet providers. This world needs the internet and can not live without it and if you kill it then this world would come to a end. The internet is free to everyone who wants to use it. So, its up to up FCC. If you want this world to be nothing but greed and money hungry then put this uncivilized and oblivious law into effect. But don't get mad when this world comes to a end because of you, the almighty FCC.
—Yuri Hollinger, New Cumberland, PA

I work with some smaller companies that can't survive in an internet slow lane and can't afford to pay for the fast lane. This is bad for small business and American innovation.
—Zach Kuzmic, Austin, TX

The internet is perhaps the first open forum that allows members of marginalized groups in isolated places to connect and form a sense of community and identity. It democratizes the exchange of information. I thought we were supposed to support greater democracy. Making this another playground for the rich will most hurt those who need this resource for things like suicide prevention and community. AT&T, Comcast, and Verizon can afford to not do this, but we can't afford for them to. The rich in this country don't need yet another way to distinguish themselves from everyone else.
—Lenny Somervell, Waltham, MA

Why should I be reduced to a poor browsing experience because I can't afford higher prices? I'm a student and depend on the internet to complete my schoolwork.... I'm already paying for tuition.
—Emily Reinertson, Reading, PA

It protects free speech and free enterprise.
—Ms. Adrienne Kuerzi, Dumont, NJ

Online censorship is a step toward totalitarianism and tyranny.
—Ulrike Clarke, ,

I have been developing an Internet-based business designed for training high school students in basic skills, using video and media delivered by the Internet. You have effectively killed my business in its infancy and ended my hopes for a comfortable retirement. First you make communication a commodity. What will be next? Water? The air we breathe?
—Randy Langley, Ridgeland, MS

To allow a few existing powerful companies to monopolize the internet so they can maximize profits will slow innovation and new technologies. It's bad for the country and our future potential as a leader in technology.
—Lorraine Shirkus Moore, San Antonio, TX

Free flow of information is essential to a democratic state. Tiered transmission of information impedes its free flow. I'm sure you see the inference. So do what's right for democracy.
—Jeff Roland, Baton Rouge, LA

PUBLIC UTITILITY!
—Amy Bush, Spring Hill, KS

Net Neutrality is important to me because I strongly believe that all people deserve the freedom internet can give us and we should not be denied it.
—Veronika Barna, Budapest,

Seriously, free speech is not something to sell. Treat internet providers like a postal service or road builders. They're not supposed control access to certain places or over certain people based purely on their own whims.
—Yusuf Rehman, Leicester,

An Internet that remains open and protected from self serving corporate interests is key to mine and millions of other small businesses ability to compete online.
—Lionel Cartwright, Nashville, TN

This country is supposed to operate with capitalism, equal access for all into the marketplace. More & more this country' economy s is turning into mercantilism, the form of economy in Great Briton which our forefathers fought to be free of. Lets not give big businesses like AT&T etc priority over the common man.
—Nancy Simmons, Waxahachie, TX

Internet service providers should be called common carriers.
—Jennifer Macy, Emigrant, MT

As a small business owner for the last 20 years, an open internet has been vital to my ability to employ small groups of people. Without a level playing field, small content providers, innovations, inventors, and developers will not be able to compete with the establishment. True innovation can come from anywhere, and protecting that level playing field, is far more important that adding a percentage or two to the profits of companies that are charging a toll for access!
—WJ Vincent II, Eau Claire, WI

Can't we have at least ONE thing that is everyones, equally?
—Wayne Purdy, Albertson, NY

Please stop these new rules and instead reclassify ISPs as common carriers
—David Lorell Hoskins, Rochester, NY

Look. This is a access issue. when you end net neutrality - which these new proposals would - it will make sites that dont pay slower to access relative to sites that do. we (end users) should have the same speed of access to all sites on the internet. period.
—Md053, Lewisburg, PA

Are you getting paid by these companies to force this change? How long has the internet been here? Why change it now? Does it cost too much to provide internet? NO, it is actually very profitable already. So why do you want to turn millionaires into BILLIONAIRES without them having to bring a new product to the market? If they can INVENT something that will boost internet speed, something only their company has and not the rest.. THEN and ONLY then should they be allowed to charge more. You can't suddenly charge more for what we've been using for decades. People won't allow it. Activists will sabotage it and turn everyone into losers in this battle. You are destroying capitalism by taking advantage of it. There is absolutely no reason to implement this other than filling your own pockets. Those companies should provide an extra service if they want to charge more.. Not just pretend they're suddenly providing an extra service and charging more for something you've been gettig for an already steep price (for what it is) for YEARS. Too much gold digging will destroy the system, it will only cause harm. Have you learned nothing from 2008? Different sector, different risks. But I'm going to be pissed off when the internet gets sabotaged because you pissed of a group of hackers with this... And then the whole world will turn against you and make YOU pay for all the time and money they lost from the internet down time. Stop being so greedy. You are wealthy already. You and your legacy even have nothing to worry about financially for the rest of your lives. Why dig so deep in the pockets of your people? Land of the free indeed..
—Frederik Smets, ,

The internet is an amzing source of creativity and commerce. It should be equally accessible to everyone. Please classify ISP's and broadband as common carriers.
—Hannah L Banks, Newton, MA

The internet as we know it today was created by the users because everyone had open access to it. Don't take that away
—Stephen Dee, Somerville, MA

The internet should not be controlled or owned by greedy corporations.
—Frank Armato, Franklin, NC

The internet should not be controlled or owned by greedy corporations.
—Philip Walker, Franklin, NC

My husband and I are living on Social Security and can not afford to pay for a "fast lane". We also do not want any company to decide what we can see on the internet.
—Luci Hale, Fort Mc Coy, FL

Throw out these rules of yours and instead reclassify the ISPs as common carriers, this is the ONLY way to create real Net Neutrality. Please, let us not have a "1984"-esque future!
—Chr Hz Wn, Sthlm,

The media politics in the US, of course have an influence on the rest of the world. The Internet is a medium for the people, not for *some* people. Everyone should be entitled to have access and band equally. If not, many will be angry. Very angry.
—Paolo Davolio, ,

The net should be a common carrier.
—George strecker, Manhattan, KS

Net Neutrality is needed in order for an open internet to exist. Extortion of content creators and distributors for corporate and personal gains are both immoral and against the free market principle. Furthermore the whole idea of an internet fast lane destroys the fundamental service the ISP has with its customers. A certain amount of data and speed is sold to the customer. The isp's must deliver the promised goods regardless of whether or not the data being used is saturated or not.
—Junbin, ,

net neutrality is essential to permit the free exchange of all points of view and all perspectives. Without it, we become an oligarchy where the rich get whatever they want and the poor get reduced and slower access to news and information
—Joel L. Epstein, Greenwich, CT

Previous “Open Internet” or “N et Neutrality” rules were vaca ted earlier this year, the out come of a lawsuit brought, and won by, Verizon. The D.C. Co urt of Appeals ruled against t he FCC because the language us ed characterized Internet Serv ice Providers as content provi ders, over whom the FCC has l imited authority. The ruling court, seeing the necessity of maintaining the Internet as i t is, even spelled out how the FCC could easily rectify the situation. If the FCC designa ted the ISP as common carriers , basically pipelines for data , it could regulate them under its Title II authority. The biggest opportunity this ruling presents for ISP’s is a new source of income as they seek to control access to cont ent and institute charges for entities who wish to put their content in the forefront. Ve rizon, for example, looks “for ward to working with the FCC a nd Congress...without the need for unnecessary new regulatio ns that seek to manage the exp losive dynamism of the Interne t.” (Quote from Verizon’s poli cy blog). In this instance, d ynamism=profit. No one will benefit from a tiered Internet, except those seeking to make money through preferential treatments and " subscription" packages. That is unthinkable. The consumer pays his or her ISP to provide an Internet connection, nothi ng more. Carriers must be cla ssified as service providers o r utilities. Anything less th reatens the existence of the I nternet as we know it. The Internet has become a very necessary part of everyday li fe, from email, social net-wor king, banking and shopping to videos, music, and movies. We have integrated the Net into our daily lives to the point t hat it is hard to imagine doin g without it, just like electr icity or running water. It's high time to recognize the fa ct that the Internet is indeed a utility, and must be treate d as such.
—Adam H Higgins, Columbia, SC

I am retired & disabled and depend on the internet for communication and merchandise
—Bill Deutschlander, New Providence, PA

This marks the eventual decline of the internet as we know it. Access will become limited and creativity will be stifled. All the great successful websites started as small ideas, a little piece of the long tail, that happened to catch on and build. This proposed two tiered system is going to stifle this and insure that the only people who success through the internet are large corporations. The "small guys" are not all hobbyists playing on the internet and posting pictures of cats. They are creative thinkers and developers and entrepreneurs. It is hard to think of anything that offered such access and such a level playing field the way the internet did prior to this ruling. Please keep the internet level and don't let the big corporations hold the keys to access.
—Dean McCaughan, Columbia, SC

It's important because Net Neutrality is democratic and after all, the USA is supposed to be all about 'democracy'. Prove it for once.
—Dave, ,

Please do not let the ISP's hijack the internet to line their pockets. The internet must remain equal for all.
—Robert Davis, ,

The internet should be classified as a public utility and regulated as one. It was begun with public funds and is a public good. The law is in error.
—Michael Feinberg MD, PhD, Philadelphia, PA

As a disabled American I can barely afford the outrageous fees that Comcast now charges. Allowing the to tier coverage would make the Internet unfordable to myself, and many like me. Please classify ISP's as common carriers, as that is what they really are. For example Comcast does not use the phone lines to deliver phone service, they use the Internet to provide their phone service. This alone should make a case for them being common carriers.
—Jim Sweatt, Somersworth, NH

Like tens of thousands of other Americans, I make my living on the net. Open and equal access to the Internet is the basis for my business and foundation of innovation and commerce nationally. The telecommunications companies – AT&T, Comcast, Cox, Verizon – that are currently lobbying the FCC were granted local monopoly status to facilitate the growth of the network and to support commerce. Now they want to throw out the common carriage rules to create a national monopoly? That's bad for business. But this is not just an economic issue. It is a question of free speech. If Comcast can deny or delay information traveling over its network, what's to prevent it from throttling content it disagrees with? Does a network provider like AT&T or Verizon have the right to block content from a source it deems distasteful? What happens to the public debate if a few corporations control the transmission of information? The FCC was established by an act of Congress in 1934 to regulate the radio spectrum. It has since come to oversee television and telecommunications because these are public utilities that serve the common good. The Internet -- which has incorporated telephone transmission and most broadcast content -- has become the greatest public utility in the world. Why would the FCC vote to make a few companies a lot richer at the expense of the many? Why would the FCC deny its mandate to maintain the common carriage rules? And why would an agency devoted to the highest and best use of communications support cash-based censorship? Do your jobs; do what's right: enforce network neutrality.
—Rob Cummings, Brooklyn, NY

The supreme court has tried to enforce plutocracy in rulings including Citizens United and McCutcheon. Tom Wheeler's plan follows this anti-democratic line of thinking. It is wrong. It must be reversed.
—Mark Demory, Milton Freewater, OR

The internet has allowed massive amounts of innovation and increased everyone's ability to communicate dramatically. Don't destroy it.
—Matthew Bryan Crawford, Ellenwood, GA

The Internet should be treated as a common carrier, just as phone lines (it's communication predecessor) are/were.
—Ian L. Axilrod, Parkville, MD

This case is proof positive that the "revolving door" needs to be nailed shut.
—Doug Gledhill, Billings, MT

Startups that I have been involved in would never have gotten off the ground if our larger established competitors were allowed to pay for prioritized bandwidth.
—Robert Wright, Blackstone, VA

The internet belongs to the people, not the corporations.
—Jesse Egan, Colorado Springs, CO

Do not push those us of who are not billionaires farther down into oblivion by restricting fast access to the internet. We do not live in CHINA!!!
—Grace Hawkins, STn mtn, GA

The FCC's goal has always been free airways! Don't ever change that!
—William Tillman, Vacaville, CA

Net Neutrality is important for me because the Internet, with its free-reign nature and equal access, is one of the greatest forms of expression and communication we have. We should have the right to share our own creativity, views, and creations online without any worries. If Net Neutrality is killed, then companies will be given the power to control people's access and freedom on the Internet. Our rights will be downsized. And who's to say it ends there? If this proposal is accepted, then more policies will follow suit until the people's unique minds have been completely alienated and oppressed . This is something that no believer of democracy and individuality should ever allow. I and many others implore you to reconsider your proposal and to reclassify ISPs as common carriers.
—Kristen Pose, East Stroudsburg, PA

Net neutrality is important because it allows for any small online startup to grow and become a large successful company. The new FCC rules could kill this portion of the American Dream. The Internet is for everyone. Keep Net Neutrality and keep hope for many who depend on the Internet to make a living.
—Nate Christensen, Lehi, UT

ISPs should be reclassified as common carriers. Because that's exactly what they are. A large majority of people use the Internet and have come to rely on it. A two-tiered Internet would be a terrible idea, unfair and undemocratic.
—Mr. John D. Scholten, Edmonds, WA

Most of the time I'm not using Netflix.
—Ian Stoeppelwerth, Marietta, GA

If the Internet is not kept completely free, the American public will lose the key benefits of the internet. Only someone who loves tyranny would do away with net neutrality!
—Paul Pokorny, Lombard, IL

I stand up for net neutrality! Tom Wheeler and the FCC need to do the people's work, not the corporation's work!
—Stacy Peterson, Avondale, AZ

The FCC should not put corporations ahead of the people.
—Jane McCloskey, Deer Isle, ME

Having been a part of two startup companies over the last decade, we would not have been able to get off the ground if we would have had to pay ISPs a transit fee for our content and programs. If you allow fast lane - slow lane to become a reality you will kill off jobs and set back innovation decades.
—Michael Wood, Broadway, NC

Our "Free Speech" isn't free under the new FCC rules.
—James P Parzino, Surf City, NC

The Internet is a utility. It must be regulated and classless- no pay to play.
—Stacy Rauch, New York, NY

Leave the internet alone. You are moving way beyond your original guidelines. ISPs should be only, only common carriers period!!!!!!
—Mason Day, The Villages, FL

Please do not let capitalism ruin the internet! This action will only increase corporate control of news and ideas.
—Jeffery Hicks, Milton, IN

The ISP's like Comcast, AT&T, Charter, and previously AOL act like monopolies. There seems to be no competitive effect that benefits consumers. These ISP's DID NOT develop this technology, American taxpayers paid for the development of the internet. There is NO justification to increase the ISP monopoly over this Public Utility, the world wide web. As a retired senior active in a number of organizations and constantly seeking ways to live economically on a fixed income, dealing with AT&T and/or Comcast is a continuing battle to insure that their bills are accurate and the service has not been degraded. Now, they expect to make more money by choosing who gets fast access? WHY? The Internet is a Public Utility. Why do taxpayers have to subsidize the profits of the carriers while they accrue more power? Do your job! Represent the public interest and stop handing over the taxpayers' utility, a lifeline of information and commerce, to a few monopolistic corporations. If the issue is long term improvement of speed and capacity, look at increased fees tied directly to development costs, not inflated by corporate profits while yielding more power over communication and commerce to a few ignoring the interests of most people and businesses. Your consideration is appreciated.
—Al O. Stacer, Lilburn, GA

Net Neutrality is crucial to allowing smaller website that don't wield as much economic power to continue to be available to those who are passionate about them.
—Blair, Tucker, GA

Dear Chairman Wheeler: Net Neutrality is extremely important to all Americans who use the internet. Your idea that somehow "anything that is anti-competitive or anti-consumer is competitively unreasonable, and therefore can and should be blocked," is laughable. When I am at home and feel I am being blocked unreasonably, what is my recourse? Do I contact the FCC and they solve my problem? Have you ever tried to call Verizon "customer support?" Good luck with that. Simply, why fix what isn't broken. The internet is possibly the only thing Americans have equal access to and your plan is going to destroy that. I am in no way surprised to learn of your previous dealings lobbying for the industry. Step up and do your job for the American people and not corporate America.
—Evan Caliento, Chicago, IL

Reclassify ISP's as common carriers and protect REAL Net Neutrality. Creativity, innovation and freedom come from equal access to the internet.
—Nicole d'Avis, Roslindale, MA

Why does Net Neutrality matter to me? I work for a hosting company in Delaware. A lack of Net Neutrality would not only impact my customers, but cripple my company and our ability to provide affordable internet service to them, as our ISPs would inevitably charge more for our access. Not to mention, if companies such as Comcast are treated as Common Carriers, I wouldn't need to worry about certain types of traffic (Skype; Watching videos DIRECTLY from NBC, CBS, FOX, etc) being slowed down due to regulations on the type of data sent. We should encourage ISPs to spend their time improving the infrastructure they have. Encourage progress - don't halt it!
—Samantha Mcdaniel, Dover, DE

No matter how much they gave you to destroy the fairness of net neutrality, your honor is not worth it. Please don't make us the laughing stock of the world.
—David Braun, San Antonio, TX

Respectfully, the American people paid for the R&D that created the Internet and we deserve to have it treated accordingly.
—Rebecca Pando, Maitland, FL

We cannot allow any corporations to control the Internet at any cost. This will be an epic mistake. Especially AT&T. They can hardly run their business leave alone something of this importance. Thank you
—Dave Bishop, Mequon, WI

This is critical
—Giselle H Piburn, Santa Fe, NM

As a blogger and technologist I am terrified that this will stifle innovation and foster censorship. By which I mean to say, what happens to smaller companies and voices who can't afford to pay the ISPs for priority QoS? ISPs need to be reclassified as common carriers and regulated as such.
—Rob Goelz, Herndon, VA

I have been a forced customer of Comcast for broadband cable for over a decade. They excel at nothing comparable to their skill and persistence at raising rates. This is a company that cares about nothing but how much money it can parasitize out of its monopoly as a broadband service provider and if they are allowed to provide different levels of service to different content, they will destroy the market.
—Scott Brown, Seattle, WA

Dear FCC, it would seem that you have a questionable agenda to end Internet Neutrality. The internet must remain neutral and ISP's should be classified as common carriers. No discrimination against online content should be allowed. Thank you, A concerned citizen.
—Tudorie Michael Alexandru, ,

The new rules allow the ISP's to effectively censor my right to information. An informed citizenship is the heart of democracy. This plan not only means the death of the internet, but taken along with other actions of government, means the death of democracy.
—Phillip L. Crown, IOLA, KS

A free and open Internet, equally available to all, is one of the few countervailing forces to the increasing influence of big money and concentrated wealth in the United States. I believe our democracy is currently at risk both from those who would abuse the power of their wealth and because of the increasing helplessness and powerlessness which is alienating the general public and driving them away from participation in governance. If the vast majority of US citizens stop believing in the dream this country will fall. Allowing big money to control the Internet would be one more nail in this coffin
—keith hutchison MD, Belfast, ME

Without a free Internet there will be no more free porn. No, really, this is important. Save the porn!
—Ludwig Lundström Rova, Umeå,

Without Net Neutrality in place, larger conglomerates will easily prevent growth of new startups, stifling both creativity as well as economic growth. We need to HELP the economy now; not worsen it.
—Travis Harper, Seattle, WA

As a small business owner, I rely on a fast internet speed for all of my communications. If this new system doesn't allow me to communicate as fast as others, on a limited budget, then you will effectively be telling me that my business doesn't matter as much as those who have deep pockets. And you'll never get my vote again - whether I have to close shop or not!
—Richard A. Herron, Marquette, MI

We need Net Neutrality to ensure fair and equal treatment and a level playing field for all citizens. This is imperative to having a democracy. The internet should be re-classified as a common carriers so that everyone's content is treated as equal and no favoritism is shown. Corporations should not have the power to choose the winners and losers in our economy or our ability to communicate.
—Mrs. Nakia Lilly, Fort Collins, CO

Adding 'fast lanes' to the internet is just a way of charging more money to consumers for the same internet speed.
—Kyson Chow, Randolph, MA

The internet is the equivalent of information roadways. Like Roadways, everyone should be allowed to travel equally. Thank you
—Michelle Darbro, Ft. Lauderdale, FL

Throw Out Your Rules & Instead Reclassify ISPs As Common Carriers! *And to FCC Chairman Tom Wheeler - "DON'T BOTHER TO SEND ME ANOTHER EMAIL THAT'S NOTHING BUT LIES!!!
—Jody Webb, Asheville, NC

ISP monopolies (Comcast is the only broadband option I have) are already able to charge too much for the services they provide. Without Net Neutrality and government oversight, ISPs will simply pass "fast lane" costs along to consumers. Classify ISPs as common carriers in order to protect consumers.
—Eric J. Baker, Landenberg, PA

Net Neutrality is important to me because I don't feel it is right for internet providers to dictate to me what websites I'm allowed to use. If I like to watch Netflix, or any other video streaming service, I have the right to watch them without being artificially capped. I'm already paying to use the service, having me pay extra money because I like to stream is double dipping. Not to mention I have friends who have to use a lot of data to run their business, it's vital to them in some cases to be able do what they do at lower prices just to get clients. They may not be able to offer those low prices if they have to spend extra money to pay for a "faster internet" just to do their jobs! Don't let these companies take away our free internet!
—Collin Brown, Maineville, OH

Our news input is already so heavily filtered in favor of wealthy companies that the stranglehold on input is severe. Don't make it worse!
—Lynn Friedman, Columbus, OH

To be able to use the net at the same speed for all of us without big corporations having control over the content and the speed it uses because they have money. Make the net a utility and you would not have to waste tax payers money implementing these new policies and rules just for the rich big companies that want it.
—Susan & Leonard Brouse, Spring Creek, NV

your turning this country in to the UNITED CORPORATIONS OF AMERICA. Stop stealing from the middle class and handing our money over to the greedy Fat cats
—Larry Parada, Bayonne, NJ

Freedom...is this china?
—Nancy matthews, Sedona, AZ

This is a rubbish idea, commerciality already dominates overly, time to draw a line.
—John Baker, ,

If only companies with money can send their ideas quickly around the world, then only their ideas will be heard.
—Matthew Downs, Saint Louis, MO

Without a free and open internet, I don't know where I would be in my life right now. I could not afford a traditional education. I had to learn my trade on my own. Without access to the free and open education I was able to find online, I would not be able to provide for my family and I certainly would not be able to enjoy my current standard of living. It is disgusting what you are proposing to take away from the American people. You disgust me.
—Nathaniel Weston, Salt Lake City, UT

In this day and age, the internet has become indispensable. The US seems to lag behind other countries in terms of access and speed. The FCC needs to do its job and represent the people by reclassifying ISPs.
—Ryan Lorge, cary, NC

The internet belongs to all of us, NOT the ISP's.
—Matt Mastro, Bound Brook, NJ

To keep the internet a fair and lever playing field unlike the real world.
—Jed Soleiman, New York, NY

do not sell the internet. ISP's should only be classified as common carriers.
—A Reed, San Anselmo, CA

A free market and net are essential for free citizens.
—Jon, Whiteside, TN

Restriction of public conversation and debate, through corporate domination of web access, is anti-American. History will remember the names of those who promoted liberty, and those who promoted greed.
—Paul Glover, Philadelphia, PA

The internet is the great equalizer for society, giving an equal voice to everyone in an unprecedented way. Net Neutrality preserves that and we should never allow greed to impede the progress that has been made.
—Wesley Prater, Houston, TX

FCC i really dislike what youre trying to do, its extremely unecessary in fact if its one thing that your acts(Trying to get rid of Net Neutrality) would do is only for the worse. Please reconsider your thoughts that this would ruin many things for a lot of people, and wont help anyone except internet providers.
—Indrit Selmani, ,

Don't let the ISPs further take advantage of the public by further segregating it into the haves and have nots. With fees for internet acces already rapidly increasing, this new policy would not only limit access to fast internet, but it will also hamper inovation. I urge you keep the internet neutral and give completion a chance. Thank you for your time.
—Javier Soria, Woodland, CA

There is a near-monopoly on regional internet service providers in the US, and eliminating Net Neutrality is just one more decrease on service quality and consumer choice.
—Evan Turner, Manassas, VA

Net Neutrality is critical for maintaining a decent quality of life -- for anyone -- rich, poor, powerful, weak, human, non-human. To surrender it is to advance against democracy a corporate oligarchy whose legacy must be mainly bloated dissatisfaction for the rulers and wretched devastation all else.
—Parker Flowers, Austin, TX

There will be far too much power over internet use granted to major providers. Just look at the power Comcast has exercised in some parts of the union regarding cable TV. For equitable access ISPs must be classified as common carriers.
—Peter B Bayley, Corvallis, OR

As a consumer, Net Neutrality guarantees that I can use the internet as I please. I already pay for faster speeds to access the content I choose to consume. The idea of limiting my access to the internet for the profit of corporations is 100% ludicrous and would destroy the internet as we know it. The beautiful thing about the internet is that it is widely accessible to the world and enables them to share and say and consume what they want, Net Neutrality would end the freedom myself, and every other internet user enjoys. It would diminish the voice of people, especially en masse. We have rejoiced in the ability of people to speak and be heard, that ability is being exercised right now. An end to net neutrality would diminish that voice and diminish the freedom people find in the internet. Don't let it happen. The few should not out-weigh the many. The coffers of corporations should not out-weigh the access of millions of U.S. citizens. Net Neutrality is necessary.
—Nick Walton, Fayetteville, AR

When websites can buy speed access on the Internet it destroys the need for those sites to improve because of innovative, but poorer or newer websites. Websites are the faces of products and companies and thus, this policy destroys our potential got progress and innovation. Please don't be on board with making the world add a while a worse place for a few extra dollars!
—Thea Oatman, Grand Ledge, MI

I think it is important for the internet to be anonymous so that people cannot discriminate against you
—Airenna Greenleaf, Garland, TX

FCC, The new rules are a dangerous path. Please reject them and allow true Net Neutrality. We cannot continue to all the giants like ATT, Comcast and Verizon to gain more power. They are already gauging consumers Please reconsider the current proposals for a two tiered Internet and REJECT them. Thank you,
—Mary Burke, Melrose, MA

The basic though behind internet is freedom out of anything else. If this changes, the internet will change more than it changed in the past 10 years. Please do NOT implement new rules and safe free internet!
—Filip Racko, zvolen,

I own a small business that helps other small businesses launch internet based products. We have been in business for almost 4 years and have helped launch more than 40 new products on the internet. Some of the businesses that we've worked with have gone from single founder companies to dozens of employees. In the beginning they would've been at a severe disadvantage if they were forced to pay extra fees to get a quality connection to consumers. It would make my clients and as a result my business more difficult to do business in an environment of haves and have nots.
—Anthony Smith, Indianapolis, IN

It is wholly appalling that ISP's want the leeway to gouge customers more than they already do, detract value and obstruct the use of the internet. Net Neutrality needs to be maintained and upheld.
—Ian Wakely, Oshawa,

Please protect net neutrality. The internet is a public utility and ISP's need to be reclassified as common carriers. More and more citizens need the internet just to do common business and your proposals would create second class citizens who are not able to carry out their business in an efficient equal manner. I also want my children to be able to go to the library and to school and to have high speed internet without costing money these public institutions do no have.
—Nikki Sachs, Berkeley, CA

Smaller, independent Web-based businesses and content sites will especially be handicapped if the big ISPs are allowed to serve as gatekeepers and toll-takers. Diversity is the Internet's #1 strength. Please don't let it be stifled.
—Charles Fry, Sunnyvale, CA

I use the computer and the Internet in my work, and if these new laws come into being, my income will go down drastically.
—Vic Warren, Kailua Kona, HI

The open Internet is something I've used for my education and research. To allow extra fees for various sites and sources would slow down scientific progress. In academia, we have to upload and download large data sets and time is important for students and researchers with deadlines. We cannot spend twice the time downloading data because a large corporation wants to line their pockets.
—Ahmed Hussien, Los Lunas, NM

Count me among millions who view the free flow of information as fundamental to the possibility of a democratic society. The Net has supplanted print media as the conduit for information. And, the Net is a Commons. No one should be allowed to purchase preferential access. Treat the Net as a utility shared by all in an equal way. Douglas P Dolstad Vashon Island, WA
—Douglas P Dolstad, Vashon, WA

Stop taking away our commons.
—Richard Vale, Cambridge, NY

I am a computer instructor. It is critical that my students can access all materials at the same speed in order to advance their learning and job opportunities.
—Scott Pinkelman, Philadelphia, PA

Please keep the internet neutral. Please classify the internet as common carrier. I am on a fixed income I get an increase on my bill every year. Td two tier system will force people to pay higher cost. This is not right. The internet was built on tax payer dollars. The internet belongs to the People!
—Michael Bourke, Butler, KS

I rely on the internet for paying bills, completing homework, and for many other uses; rising fees from the end of net neutrality will greatly limit what I can accomplish.
—Jennifer Gitschier, Plainville, MA

To maintain a democracy, all people must have equal access to the marketplace of ideas, which in today is largely online, not just to be exposed to others' ideas but also to have the equal ability to contribute to public discourse.
—Megan Stoneberger, Pittsburg, KS

I work from home. I need my VPN connection to the office to be up and running when I need it. The lack of choice for service providers, along with their unlimited power to choose the speed at which I can send and receive content is beyond unreasonable. We are already being gouged for every last cent for the "services" we get from these behemoths. Please stop this!
—Judy MacDougall Davison, Barrington, NH

We need everyone to be treated the same - we don't need one rule for the rich and one for the poor. Charities need to be treated the same way as powerful companies - and we all need the same courtesy. We all need equal access to the internet.
—P Armstrong, Bangor,

This is important to me, because internet is a tool that should not be in control by one group
—Brandon yearout, Colorado Springs, CO

We don't need second class citizens on the web.
—Shirley Joseph, Kew Gardens, NY

Because when companies are allowed to slow or block traffic they find objectionable, they will find every possible opportunity to use this ability to their own benefit. Once it becomes legal to deny or obstruct content because a controlling entity deems it objectionable, their definition of what is objectionable will creep outwards.
—Casey Robinson, Minneapolis, MN

Tiered second class citizenship in the net is not my idea of democracy or fairness. This move will price millions of citizens,small nonprofits,advocacy organizations and businesses off the net. The truly bitter irony is my tax dollars helped to develop the internet and now the FCC is giving theMonopoly what it wants which is the right to screw over all of us and provide worse service and worse infrastructure. ISPs should be reclassified as common carriers and the net should be treated like a utility and a public good not a cash machine for a few greedy companies. Hong Kong has better service than we do. Europe has better service than we do. these companies will do nothing about that at all.
—Carole Plourde, Amesbury, MA

Net neutrality is important to keep the net open to entrepeneurs and to discourage monopolies and corruption. We need it to be regulated like the utility it is.
—Atty Wendy Gantos, Mount Morris, MI

It is important for the internet to remain free and equal for everyone. Faster service for paying customers would greatly undermine the creativity and resourcefulness that makes the internet so powerful. Please do not be swayed for powerful special interests. Do what is best for the general public. Sincerely, Jackie Schmid
—Jackie Schmid, Oklahoma City, OK

An informed public is essential to democracy.
—Thomas S. Meacham, Bowling Green, KY

What does it really matter?! The internet is good as it is, and then you guys come along planning to make it bad! Sure there is dark things on the net but look at where the world is because of it... you don't get the right to decide weather it needs rules or not, you're basically trying to rule every one in the world by your decision. We are free people and as I said you don't get the right to decide something without us getting a chance to get our voices heard. The world wouldn't be the same if it wasn't for all of us
—axel Jongarden, ,

Freedom of expresion is vital in a free world
—Anders Hof, Årjäng,

Net Neutrality is THE underpinning of democracy!! Reclassify the Internet as a "common carrier" now to protect net neutrality (and our democracy) for the foreseeable future.
—Valerie Parmley, Granite City, IL

Utilizing common carriers is the only way that the Net will truly be neutral.
—Bernard F. Cleveland, White Lake, MI

You need to solve this problem once and for all. Reclassify the ISPs as common carriers. Support the public rather than the corporations. The public strongly supports "net neutrality" and sees through your attempt to disguise its demise with complex plans to save it. Keep it simple. Use your authority to reclassify and then use your authority to keep the internet absolutely open and neutral.
—Alan Marwine, housatonic, MA

I consider that open and free world-wide communication essential for us to become one world. Do not make the Internet become yet another way for the rich to control the people of the world!
—Carol J Suutherland, DENVER, CO

I run a small Internet-based business and do not want to be shunted to the "slow lane" by the lecherous cable companies.
—Mr. Theodore Wirth, Denville, NJ

We need to maintain equality for the American people. Plain and simple.
—Joan Kozlowski, Lockport, NY

Keep the internet the way it is. Reclassify ISP's as Title II common carriers.
—Joseph Vornbrock, Edmonds, WA

As an entrepeneur passionate about online education and ensuring that the digital divide does not increase, I see with great concern that changes that will favor certain powerful groups will set us back in terms of equity. Please reconsider the interests of small business owners, entrepeneurs and the segment of the public that through an open internet can have access to content and services that were not available before.
—Itzel McClaren, Austin, TX

A tiered structure would not only affect movies and surfing, but all of the vital business activity that happens online. It could ruin some companies, and you have the chance to prevent that.
—Victor Polites, Holland, MI

Please keep the internet fair, don't sell out.
—Matthew Liccione, Columbia, MO

Without Net Neutrality we are on our way to becoming an economic dictatorship.
—Catzby Pitzvada, Front Royal, VA

The current proposal works only for the corporate players and those that can afford to pay to get their content through the fastest channels. Those that can't pay and consumers have no recourse and no choice but to accept the slower transmission rate. This is not neutral. It's a pay-to-play system.
—Michael Wheeler, Marietta, GA

Mr. Wheeler: This country is, on an ever-increasing scale, being taken over and run by big corporations. This is leaving John and Jane Doe feeling more and more helpless, almost on a daily basis. This is wrong, and being pushed too gar in the wrong direction will ultimately lead to some form of revolt on the side of the individual. Whether violent, financial, or otherwise, I don't know, but it is coming, and unless the type of action you are considering with regards to Net Neutrality is halted, we are all in for a mess none of us wants. Please leave the Internet access we have as is, for all our sake.
—Gregg Towne, Gansevoort, NY

This is yet another case where the Federal Government needs to GET OUT OF OUR LIVES. The rules proposed is NOT what any educated consumer (the FCC's boss) wants. This is the OPPOSITE of net neutrality and it WILL cost everyone more. No NO NO! What we need is for the FCC to instead reclassify ISP's as common carriers, and prohibit creating any "fast lane" or "priority routing" of any and all network traffic.
—Mathew Nieberger, Erie, CO

Neutrality is important, because that's why internet was invented. It is best method to connect people all over the world without any worthless fees. I think big corporations are taking huge amount of money so why would we pay them even more for something that we are creating? What would the internet be without us, people.
—Jiří Svoboda, ,

The Internet is now the common carrier for human communication. Time to treat it as such.
—Anthony Pedretti, Downers Grove, IL

Let me start by claiming corruption. Corruption of the highest order is being perpetrated on the American public. Our so called leaders are elected by us. They aren't placed by divine right or authoritative power, but by the people. Their job is to listen to and execute the orders of the people. Now, through the guise of law and loopholes, corporations ate recognized as "people" which is callous and wrong. I don't care if it is a tiny corporation or a nassive conglomerate, it is a business entity, not a person. All of those down on K street are not people, they are entities serving entities, because executing orders under business is seen as such. Congress is supposed to listen to the people, instead their morally disambiguos minds are easily swayed by cronyism and money. Their job is to protect the people's rights, instead they ignore us, which should nullify any decisions made by them. As an arm of the government, you, the FCC should listen to the people, and we are against your corrupt decision. Freedom of choice is expounded upon in the constitution, and you are denying the choice of the people. In doing so you have proved to be untrustworthy. In he name of saving massive business from competition, you will take away from the people their tool to fight for liberty and freedom. If this passes, don't be surprised if the people riot, drag you into the streets and hold their own courts to find you guilty, because that is what you are, guilty. I pray you heed this warning, and stand with the people. Keep the internet free.
—Mason Hunsicker, San Antonio, TX

Pay to play is not equal access for a network that we taxpayers paid to develop. Do not sell our internet to free-loader big business like ATT and Comcast.
—Jonathon C McLendon, Raleigh, NC

Basic freedom
—Doug Williams, Wheeling, IL

Neutrality is key to open data, and a fair and open internet for everyone.
—Eli Ollila, Minneapolis, MN

net neutrality is the only way anyone new can get ahead on the internet- yes there are the sites that are already big, but ending net neutrality would prevent future big sites from ever even starting. so i say throw out those rules and reclassify isps as common carriers.
—Alex Belcher, ,

We can't have a class system in the internet!
—Victoria Neff, Ann Arbor, MI

Net neutrality is absolutely essential for driving innovation on the internet. The proposed "fast lane" will cripple upcoming tech firms and start ups and leave us with a stagnant and unchanging internet. Furthermore, this establishes the idea that ISP's can choose the content they provide, a painfully slow connection is essentially no connection. This gives these huge corporations the right take another level of control over our lives.
—Charles Carbiener, Tallahassee, FL

I need a free internet to go about my daily business, investing in stocks, monitoring my bank acct. etc.
—Daniel Van Roosenbeek, Casa Grande, AZ

Internet service providersare the conduit of transfer of information. Do not make them the controllers of content for profit. This control will surely bankrupt free thought and expression in our society and the world.
—Allan Young, Novato, CA

To the FCC I am really worried for the future of the internet and freedom. The tide of public opposition against corporate power and control is finally being challenged. You know that it is wrong. Please have the fortitude to govern for the people and NOT the lobby interests of big money and profits. If you do not then the people will finally realize that you are part of the system of more and more control until the world ends up in the hands of the wicked elite. People will challenge this in the streets. They will get angry. I don't live in the USA but I can see and read through the FREE INTERNET that people are waking up to this rising dictatorship of corporate control over the proper power of the government and peoples voices. If I had this power I wouldn't be afraid to use it in favour of the people. I CANNOT EVER be bought I know what is right and I sleep easily. I am very strong and so are the people, don't underestimate them. PLEASE do the correct and proper action for the people. What will they have left if you do not? This is so important for our freedom. Yours trustingly Ian Hodsdon Australia
—Ian Hodsdon, Perth,

I live in South America but pay taxes as a US citizen. Net neutrality is simple common sense. The FCC proposal is another power grab by the big carriers AT&T, Verizon (wasn't Tom Wheeler once their lawyer). and Comcast so they can tighten their strangle hold on the Internet. It is a VERY BAD PROPOSAL. -Dr. Bill Bushnell
—Dr. Bill Bushnell, Amelia Island, FL

It's it obvious why Net Neutrality matters? Of course it is, and the only rationality to the changing of the rules after all these years is to benefit the corporations who started all this nonsense, not the general internet population. I will never support any politician or government member who supports ending net neutrality.
—Michael Bilotti, Erie, PA

The internet is a vital public utility and allowing ISPs to further limit access by creating tolls on the internet superhighway would mark a step backward not forward. The ISPs already take enough as it is from me and others who depend on the internet for important services and information. Do not let them relegate us to the status of second-class internet citizens and gouge us further.
—John Ocampo, Miami, FL

Internet should be available for all people (corporations are not people) for a reasonable affordable price.
—David Niu, Livingston, CA

These new rules you've designed will hurt the economy, businesses, and the general public because of the new and inefficient path you are allowing the internet providers to make. Reclassify internet service providers as common carriers, maintain and protect a free and open internet.
—Travis Hunter, Madison, WI

Fast lanes would only serve to give ISPs dangerous discriminatory power where business will suffer aside from those who can afford it. This kind of discriminatory power would be toxic to a free and open Internet. Please make broadband a public utility to give net neutrality a fighting chance.
—Miguel Canales, Topeka, KS

As a webmaster of two large websites which have a large number of topics covered with items of national and international interest, visited by people and organisations from around the world, I will not be able to operate if I do not have net neutrality here in Australia. What the FCC does in the USA has international repercussions and it is therefore necessary for Tom Wheeler to reconsider the plan which would allow rampant discrimination online. The FCC needs to throw out its rules and instead reclassify ISPs as common carriers.
—Mannie De Saxe, Preston South,

The Internet is our most powerful global resource for information and human connectedness in history and must be kept free of obstructions!
—Bruce O'Brien, Altoona, WI

This is an absolutely terrible idea which will only benefit big business and will be massively detrimental to everyone else.
—Jasper Sharpe, ,

The Internet is the basis for all our modern day communication, whether it be for news, movies, music, personal, education, research, and the list goes on. It is the highway to all our future new technology. Why would you restrict its use and stifle innovation? The real issue here is a monopoly owned by the few cable companies that want to continue to provide high-priced bundle services whose content most of us do not want. They don't want to give up their cash cow. The argument that some how streaming technology clogs up the internet is just not true with local ISP caching and distributed cloud technologies. Don't be confused by Comcast, Time Warner, and others. Do what is right for the American people, our economy and innovation.
—Gary L Wells, Freeland, WA

The internet is a utility, And our laws should reflect that. We wouldn't let businesses regulate the quality of landline phone connections or give preferential heating prices to favored businesses. Net neutrality is needed for innovation and a fair internet for everyone.
—Glenn Liddy, State College, PA

The internet belongs to the users. The providers have no right to say what we can and can't view. We pay to view EVERYTHING equally. If you're really for net neutrality, then explain how the contradictory rules that you're supporting actually preserve it.
—David Roy, Atlanta, IL

Discrimination is bad.
—Stephen C. Gonot, Deerfield Beach, FL

Please keep Net Neutrality! This country was founded on the belief that all are created equal and all have a freedom of speech. Please do not impinge on our freedoms by dividing our ability to communicate via the internet into the "haves" and the "have nots"! Open and free communication, without the discrimination dictated by large ISPs, will allow this country to continue to be the great country we have become!
—Collette Cesar, Milwaukee, WI

As a small business owner, I've really appreciated how the internet has been a level playing field, where my business can compete on equal footing with large corporations. If the FCC's current proposal goes through that will be lost. Please maintain Net Neutrality and reclassify ISPs as common carriers
—Matt Paul, Guysville, OH

This is a public utility issue and is very simple to fix. The fact is the internet was invented on the support of the American taxpayer, not the rent-seeking corporations. Define the internet as a public utility and the companies as common carriers. Problem solved!
—PI Norton, Lewes, DE

Net neutrality is critically important to the health of our entire nation. Without it just a few folks with offshore accounts will benefit.
—Mark Swanson, ann arbor, MI

the internet was set up to be free and open, but the big cable and broadband suppliers have all but priced a lot of us out of the market. If pay for play goes into effect it will cause these charges to be passed on to the people. we can't afford to pay even more to these greedy companies. please keep the internet neutral.
—Jerry Mawhorter, Royal Oak, MI

Please let us have a free internet! This is the place where we can escape from our every-day life and relax, let us free of social construct and responsibilities. Don't take it from us!
—Madalina Tomulescu, ,

The internet is for this generation of humanity, the same as the discovery of fire in our generations past. Please don't stifle the flames. Let our evolutionary track continue to grow and progress forward like that of our ancestors. Thank you and take good care.
—Jeffrey Ternes, Wichita, KS

Without this change, corporate interests will be a constant threat against which users must repeatedly mobilize.
—Michael Murphy, Accord, NY

The net has been a huge force for equality. To let it become tiered in such a way is to strike a blow against equality everywhere.
—Bob Shockey, La Verne, CA

Equal opportunity on all levels.
—Michael Salerno, Boca Raton, FL

Net Neutrality allows me to use the internet as something other than a TV replacement. I'm not a mindless consumer of content. I primarily use the internet to work, to learn, to stay informed. My work requires fast connections because of the large files that I work with. Prioritization of episodes of some show over my work is ridiculous. I don't think that I should have priority; the priority should be the same. On top of this small personal reason for Net Neutrality, it promotes and protects free speech and innovation. It prevents the ISPs from effectively extorting companies and customers. Anything with fast lanes is NOT Net Neutrality. Common carrier status seems like the best way to enforce Net Neutrality.
—Justin Walker, Madison, WI

This action will create a unbalanced, money based dual system where ISPs can blackmail websites and deny or allow faster service at their discretion. Considering how lazy and unethical most ISPs are already, is this something we should be okay with? Also, frankly, it's embarrassing to America that this is even an issue up for debate. The rest of the world is far ahead of us in terms of understanding and governing the internet and electronics... where our senators and heads of certian government branches barely seem to understand how "the intertubes" work. If you don't understand it... you aren't qualified to legislate it.
—Brian worthington, Danvers, MA

I want the sites I go to online to be on even playing fields. I need to know that the only sites I can load with speed are not the sites that paid the most. That would not be a fair press in terms of news, which the internet is THE source for news for most people today and all people of the future.
—Carolina King, Ridgway, CO

I can barely afford the internet as it is. If they start putting in pay gates I'll have to go without. I use the internet everyday for all sorts of things, entertainment and business. Net neutrality is important to me because without it I will have to change my whole way of life. Personally I don't think a few corporations should have such power and control over an individuals life.
—Geoffrey Horn, Ardmore, OK

Internet providers should provide equal access to all internet traffic regardless of whom is coming from
—Juan Martinez, Miami, FL

Corporations must not be allowed to control the Internet!
—Jeffrey M. Rego, New Bedford, MA

Keep Internet Free
—Jose Aponte, Orlando, FL

Net Neutrality should prevail because allowing corporate interests to dictate who gets access is unfair and infringes on the ability to choose what online content and applications one can utilize.
—Norma Moura, Lake Worth, FL

A neutral Net is vital to the success and growth of small businesses (and, as a solo performer/eco-arts educator and crafter, I am one of the smallest). Further, the loss of freely available, findable content - the type of amazingly varied offerings, products and services and widely divergent viewpoints that characterize the current Net - represents an impoverishing of the human spirit as well as a theft of intellectual capital.
—Amelia Sefton, Grand Rapids, MI

Please don't allow the politics of money to control Internet access
—John Allen, Olney, IL

This move away from net neutrality is wrong, plain and simple. The road a decision like this leads humanity down is too terrifying to imagine. Please do not allow this to happen.
—Jennifer Lewis, Mount Clemens, MI

it is an open way to garner information without anyone trying to make it their agenda
—Barry Oaks, Eugene, OR

This brainless government has already ruined everything for the American people! Now this!!!! Why not focus on helping the people instead of making things so hard!!! I really feel like i am living in NAZI GERMANY!!!!!!!! THIS IS BULLSHIT! ALWAYS ABOUT THE FUCKING MONEY!!!!!!!!
—Pamela Stevens, Kearns, UT

do you idiots not understand why this is so important to us. Stop selling our country, our lives and our internet to big business.
—Mike Barbeau, Alameda, CA

This will only lead to monopolies on who can stream media to you. On a small scale this will damage businesses like Netflix and Hulu which is what the cable companies want. They hope it will bring people back to their expensive service.
—Christopher Krasniuk, Bloomington, IL

Do not kill our internet. We need to have equal access to information.
—Rebecca Hackerman, Baltimore, MD

The FCC's proposed internet rules reduce the quality of the overall internet experience for the common taxpaying citizen. These rules are discriminatory and infringe upon the freedom of speech which is a right that is foundational to the constitution of the United States Of America.
—Rick Cochran, McKinney, TX

A free internet if critical to preserving free speech in the USA. The FCC has an obligation to treat the internet as a utility and regulate it in a way that provides equal access to all users in order to ensure that all American's voices and views are heard. This is critical to a functioning democracy.
—Luis Trueba Jr., Odessa, TX

As I've said before, net neutrality is the last vestige of our democracy where we can remain informed.
—Ben Sokoloff, Farmington Hills, MI

Please please for the future sake of the American people and the future sake of an open internet, I implore you to reclassify our ISPs as common carriers so we can have Net Neutrality.
—Dudley Chase, San Marcos, CA

My internet service is slow enough as it is (and yes, I'm paying for more than basic service).
—David M. Cannell, Manchester, CT

Fire the chairman NOW!
—Steve Bear, Port Townsend, WA

Internet is a strategic asset and it is vital to the national interest similar to national highways and electricity grid. Any profit driven company should not be controlling what happens to the internet. So, please reclassify the internet service providers as utility companies.
—John Pal, Franklin, MA

The internet allows us to knock down borders and connect with people worldwide. Please don't take that away from us.
—Marlena Maria, Norwood, MA

Under the proposed rules, private companies will be rationing scarcity for increasingly large amounts of money. Too bad we can't have the kind of bandwidth South Korea enjoys. It will result in an accelerated race for the bottom http://www.seconnecticut.com/f cc.htm
—Robert L Vogel, East Lyme, CT

Internet is a utility of the commons like water or electricity...also comparable to the public library...you must classify the internet as a common carrier.
—Devorah Levy, Kirkland, WA

Keep the internet open and neutral, anything else will be a huge mistake!
—Eric Van Eimeren, Helena, MT

We need Net Neutrality, not a "Class System" for those who are poor and those who are rich.
—Patricia Adams, Celina, TN

I need my cat videos. Also, the internet is the last free place on earth. Don't let some greedy people control it.
—Allen Gavyuk, Eden Prairie, MN

The best thing about the internet is with a device and a connection everyone has the freedom to create content or look at content regardless of sponsorship or their connections to powerful media corporations. Please reclassify internet providers as common carriers. Most people like this freedom. SERVE the PEOPLE not the corporations. We appreciate ways to communicate together that are not controlled by who has more money.
—Sarah erickson, Pekin, IL

A neutral internet spurs more economic and technological innovation than a pay-to-play or tiered one. Keep the net neutral, or the US will sink further as a technical powerhouse.
—Prashanth Mundkur, Menlo Park, CA

I look at the internet as a utility, vital to my ability to keep in touch with what's happening in our world. All internet service providers need to be on the same plane, with no tiers at all.
—Cina Barker, Nashua, NH

Because porn.
—Mike L., Washington, DC

Hi, I'm writing you today to express my serious concern with the recent actions of the Federal Communications Commission regarding changes in policies that could cause serious monopolistic issues with our current open internet. The internet is one of mankind's greatest accomplishments, and something that should be carefully nurtured and protected. It is one of our most effective platforms of free speech, and that freedom is in danger. Allowing any policies that could cause discrimination, promote monopolies, or hinder innovation would be a grave mistake with the potential of snowballing into monopolistic control of the internet. I, like many, run multiple web based services and rely on an open and fair internet for my livelihood. Please, use your power to protect mankind's freedom.
—Travis P Walter, San Diego, CA

Working for a small internet business is only possible with an open and fair internet. Please help me keep my job and use your powers under Title II. Thank you for your time.
—Jesse Manning, Louisville, KY

Do not do this.
—Nelson Campbell, Brooks, GA

An open internet is critical to innovation and progress in today's world. By killing Net Neutrality, you place an enormous amount of power in the hands of the big service providers, and this power WILL be abused. Please reclassify the ISPs as common carriers. This is what the people want.
—Aaron B Rusch, san diego, CA

We need equal access to information and ability to have our voice heard; no more than ever since the Citizen's United Supreme Courts ruling. Or is this the reason you choice to limit the speech by businesses and individuals to prevent fairness in this arena, too.
—Christina Krauz, Grand Marais, MN

This type of technology provides vast information to many people in many ways. It should be available to all without adding on any further fees than what users are paying for providers.
—Alison Gray, Stroudsburg, PA

Why is everything up for sale? It is so obvious why net neutrality is healthy for democracy, for small business, for everyone. It is like preserving land for national parks for everyone to have equal access to and to enjoy. PRESERVE THIS SPACE FOR EVERYONE!
—Mr. Larry Wilson, San Carlos, CA

We need to keep net neutrality as best as possible. HAVE YOU NOT NOTICED HOW GREEDY TELECOM BUSINESSES ARE? They're consuming all competition creating illegal monopolies with the US government giving them pats on the back, nobody cares that they always want more money THAT THEY DO NOT NEED, and they have been nickel and diming us to death for years. I require the net for at least 90 percent of my computer and mobile activity. Should telecoms get their way, not only will I not be able to afford a huge chunk of activity but can face discrimination of my and other's business just because these greedy chumps want more and more until they have complete unwarranted control of what should be a open medium. MONOPOLY IS A CHILDREN'S GAME, NOT SOMETHING YOU ATTEMPT AS AN ACTUAL BUSINESS.
—Robert S. Martin, Plant City, FL

I won't get into my thoughts on bribery and corruption, rather I'll simply say, as an IT professional, ISPs are common carriers and should be classified as such.
—Michael Hasse, Lynnwood, WA

Both corporations and individuals need an internet that is equal/neutral for all. This can only be accomplished by regulation as a public utility/common carrier. Anything else will fail by circumvention of regulation and lack of enforcement. The FCC can't enforce and successfully accomplish something as simple as the Do Not Call program. Yet the FCC thinks it achieve net neutrality by cooperating with big telecom and cable? Regulating them as strictly as possible is the answer.
—Mark H Russell, Wampum, PA

Internet "Providers" did not invent the net, but they enjoy its monetary benefits. Tell them they can't buy their way to charging more for a two lane highway.
—Joseph M Furst, rocky hill, CT

Please do NOT go forward with this plan. Be the people who will be remembered for generations to come as the group that SAVED the neutrality of the internet, not the group that destroyed it!
—Kevin Neville, Garden City, NY

I pay lots of money for the internet. Please don't shut me out.
—Mary Hunter, Chattanooga, TN

Mister Wheeler, Please do the right thing. Internet needs to remain common carriers. You will be giving too much power to people who already have too much power, and they will endeavor to dubious ends. Imagine an internet where you don't get what you pay for, and it is legal. Imagine a place where your son or grandson has a fantastic idea for a startup company or product, but it competes with their interests so they shut him down to a trickle. The internet needs to remain neutral or you take our voice. Mister Wheeler, America will not forget and not forgive if you fail us on this. Rest assured.
—Russel Hampton, tomball, TX

The internet needs to be left status quo. Many of us work from home and cannot afford extra fees to receive the same service we already get for the fee we now pay.
—Shawn King, Ridgway, CO

Do not implement the 2- tier Internet scheme proposed by Wheeler!
—Carol Wayne Brooks and Bigelow, Madison, WI

Throw out the proposed rules and enact real net neutrality--common carrier. This proposed rule is for "the aristocracy of corporate wealth", to use Jefferson's words.
—John D. Powell, Madison, WI

Regulate it like a utility. You're suppose to be on our side.
—Bob Johns, Saint Johns, MI

Fast Lanes will degrade the consumer Internet experience and quality. Every ISP has finite bandwidth in/out, unless they increase/expand the number or speed of the fibre links/ports. To believe that these ISP will build new fast lanes for their new paying partners before giving them dedicated fast lane bandwidth is a joke. They will take from existing bandwidth and carve it out at the expense of those now in the more congested lane, if you will. If customer demand grows for generic IP traffic (not VoIP or other proprietary solution) because Netflix streaming requests increase, let the providers bandwidth grow organically with their customer base to support their QoS goals and not at the expense of less privileged, non-special-agreement partners/sites. If you must change the the rules/law, do so to treat the Internet Service Providers like any public regulated utility and ensure fair and equal access and delivery for all consumers.
—Jeffrey Dorman, Satellite Beach, FL

I do not agree that a privately controlled, biased internet is something that should be allowed. In fact, I'm not sure how this is legal and it should be considered a monopoly.
—Lauren Schermerhorn, Bethesda, MD

Open and readily available access to information is the lifeblood of democracy. By making it even more expensive to access websites on the internet and by slowing down their transmission speed is an attack on democracy. Large corporations should not be allowed to determine which websites people can readily access and which ones they cannot. That leads to even more control by corporations over our society and is bad for democracy.
—Geoffrey Marsh, Santa Rosa, CA

I believe that the internet is today's independence. It allows people from all around the world regardless of their situation to have a voice and be heard. By putting restrictions and bans in place it would be very much like limiting a right such as freedom of speech. To add to that a company's main goal is to make money. By giving them even more power you're allowing them to find new ways to make even more profit than they were before regardless of wether it affects other people or not. The internet should be kept a free space with no restrictions.
—Mario, ,

Letting a corporation control universal sources of information is fundamentally wrong and another sign that our country is heading toward corporate controlled communism.
—Carson Korman, Owings Mills, MD

As someone who has grown up and watched the internet grow into what is is today, I truly appreciate what it is. Customers are already paying huge amounts of money considering the inflation of cable bills is much higher than gas. I think we pay enough to get our fair shair of the bandwidth and to let companies pay to take our speed for their own use would be criminal. Thank you for your consideration in reading this.
—Arik J Shockley, Fresno, CA

In 2011, the UN passed a resolution declaring that Web access is a basic human right, and I firmly support that decision. Therefore any corporate body or government is committing a human rights violation by attempting to end Net neutrality. Keep the Internet free!!
—Rev Paul J. Bern, Atlanta, GA

More and more our country is ruled by those who have money. We are supposed to live in a democracy, not an oligarchy. This is why the Net needs to remain neutral.
—Olga Abella, Robinson, IL

I am living on a small Social Security and am house bound most of the time. The internet is my window to the world. If you do not make the internet a common carrier I will lose my ability to use it. Comcast will raise the prices and I will be out of the internet for good. There are so many reasons we all depend on the net, please do the right thing for the people and keep the net neutral. No watered down rules, reclassify it now.
—Jeanne Shaw, Denver, CO

I strongly support reclassifying the Internet as the utility it is, and I urge you to do just that.
—Carrie Kaput, Phoenix, AZ

Health issues often keep me home bound. My access to information is not only crucial, it is what has often kept me alive. Researching from home is vital to my continued reasonably good health and well being. Thank you in advance for listening to my concerns.
—Emma Squires, Irving, TX

I have 2 websites that advertise my Christmas caroling group and my voice teaching. This proposal would make them too difficult to maintain, IF they could even be found by anyone. PLEASE reclassify ISPs as common carriers.
—Mrs. Jeanie Pitchford, Chicago, IL

I depend on net neutrality for the hope of one day starting an online business. Without net neutrality most small businesses will fail, and it would be tough for new ones to begin. Don't kill net neutrality!
—Yukimi, Greensburg, IN

I'm a 59 year old computer programmer that lost a 20 year job during the recession. For the last few years I have been designing and marketing a web portal service for restaurants called TipsSender.net. Having more costs to manage to get my service to customers is not useful and not part of the original plan. It could put me in a position where I have no income again. The internet should be a common carrier so us little entrepreneurs can make a living.
—Dale Southard, Salt Lake City, UT

I am deeply disturbed that you would even consider allowing this proposal to go through. We all should have open access to the Internet not just those who can afford to pay for faster service. It seems that daily we see every aspect of our lives being handed over to private industries to make a buck at our expense. When is this going to stop? When are you going to start looking out for the American people?
—Janet Hoover, Garden Grove, CA

Any proposals made by a private company can only result in disaster so net neutrality must remain.
—Sean Kelleher, Limerick,

It means freedom, just that... ALL OF THAT !!! Don't let corporations rule our communications and freedom of speech and access content.
—Luiz Paulo, Miami, FL

Please protect real net neutrality! Please do not approve Mr. Wheeler's plan. Please reclassify ISPs as common carriers. The internet does not need any useless regulations on it.
—Andy Saville, Petersburg, WV

Please maintain Net Neutrality through a single tiered system open and available to all with no preference for large corporations or corporate interests. The internet music be treated as a common carrier for the public good. Protecting the public good is the job of the government and its agencies. Please do your job and make sure this happens - for the sake of all of us. Thank you.
—Lucia Miller, Northampton, MA

Dear Federal Communications Commission: FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Andrew, Temecula, CA

Net Nuetrality is key to an open and sustainable democracy!!!!!!!!!!!!!!!!!!
—Jason Triefenbach, Long Beach, CA

The internet is about freedom. Stifling the ability for companies to create new things by inherently deprioritizing their traffic means there is no freedom. We *MUST* set a tone for the rest of the world by ensuring ISPs are common carriers; this is NO DIFFERENT from the phone system. It MUST be fully connected.
—Jack Kastorff, San Francisco, CA

I only see the further devastation of small town USA if this proposal goes through. I can only imagine the number of small businesses this will kill off.
—Julian King, Metamora, IL

Keep the internet open for everyone.
—Mrs Nancy W Martin, Enid, OK

Net Neutrality is critical because so much information is on the internet. From alternative news to magazines to research, it's important that the net remain neutral and uncensored.
—Elizabeth M. Harmon, Greenville, SC

The internet is important to us all in the way the Public library was in the past. It should be equally accessible to us all!
—MIchael Guyette, Key West, FL

I don't want companies to have the power to pick winners and losers online and discriminate against online content and applications. Reclassify ISP's as common carriers, NOT Lord's of the internet!
—Billy B., ,

The internet should be classified as a UTILITY. The internet is too important to be hijacked by greedy companies thinking of only their bottom lines and shareholders, and NOT their customers or the consumers you are charged to protect. DO WHAT IS RIGHT AND NOT WHAT IS EASY!!!!
—George Bourous, Astoria, NY

I always use the Net to do research on various issues..I believe I am intelligent enough to discern which sites provide reliable, accurate informatin and which do not...
—Naomi Fatouros, Bloomington, IN

How will a two-tiered internet benefit the 99 % that are not wealthy? Please do not act to widen the gap between the haves and the have nots.
—Lorri Weir, Yale, MI

Allowing the internet to become little more than something only the rich and powerful can use effectively would have worldwide implications too horrid to contemplate. Maintaining a open and accessible internet system is an essential element to the future of the human race. Preserve it!
—Ben Stone - ACLU of Iowa, Des Moines, IA

There is NO logical reason why ISPs should not be classified as common carriers. The FCC needs to ensure that Net Neutrality will be the foundation that our country's entrepeneurial success will be based on. Chairman Tom Wheeler's proposed plan MUST be thrown out!
—Daniel R. Pratt, Saint Paul, MN

Net Neutrality is important to me because, as an 80 year old retiree, I rely on the internet to assist in making purchases, obtaining drug prescriptions, getting information about candidates during the voting season, helping me to find recipes that will allow me to use up what is in my refrigerator, and in general easily accessing information about the world and its history. Making my access slower seems to me to be a way to allow huge and powerful companies a way to earn still more profits at the expense of the middle class. uperhigh I urge you to support Net Neutrality and reclassify ISPs as common carriers. .
—Hazel S. Spiegel, La Grande, OR

The world wide web was built by US with taxes. It is public and the FCC is to protect the PUBLIC from undo influence. The ISP IS a common carrier and has to be regulated as any other common carrier. JUST DO IT!!!!!!!!
—Jeff Treanor-Brown, Eugene, OR

Fairness to small businesses and consumers.
—Barry Newmark, Brooklyn, NY

ISPs ARE common carriers; to allow corporations to buy their privileges away from the majority will rapidly erode the security of our country, our ability to communicate, our participation in government, our ability to acquire reliable information. Please do not sell our country to corporate interests!
—Richard Young, Albuquerque, NM

As a software developer and computer nerd, the internet isn't a nice to have, it's a must. I'd rather they turned off my water than my internet. Please enforce net neutrality and don't let the future of the internet be decided by a few incompetent corporations!
—Mr. John Burke, Sunnyside, NY

The Internet itself like a space in universe you cannot just say now you cannot go the just because it is not in your advantage. Internet from the beginning was a way of sharing ideas and information. It must be free for everybody or not exist from the beginning and no one own the internet because you will have to buy all people who sharing and provide service. Because if you put boundaries it will create advantage only for high society people but for rest you will cut out just because it easy way to eliminate the competiotion
—Mark yanovskiy, ,

The internet is for all; it was not created by the rich. Why give it to them now.
—Fritz Bachman, Moab, UT

I dropped AOL and never looked back because Yahoo presented search results I asked for rather than substituting paid ads. I set up a Yahoo email account because it was portable instead of tied to a particular internet provider. I discovered Google provided better searches and amazing new tech services. These things were possible because of I had real choices of developing technologies AND MULTIPLE BUSINESS MODELS the "flat playing field" of the OPEN INTERNET. Your responsibility to the American people, should you choose to accept it, is to protect real Net Neutrality in America, providing an environment in which new technologies, new businesses and new business models can grow and prosper. Freedom of choice and optimal technical growth in America can only be maintained if you reclassify and regulate ISPs as common carriers.
—Robert C Quick, Medford, NJ

ISPs should be regulated as utilities like phone companies!
—Brendan Michael Hayes, Boulder, CO

The internet started with being a free network & should stay free & unencumbered. This move to control the network only establishes a monopoly & takes away free speech. This no different than book burning of old. You want to become a country like Iran & China which severely limits the people access. Free internet comes with good & bad but mostly good. Say NO to control.
—Kenneth John Rowe, Loveland, CO

The internet was made for information sharing for free, why the hell should some get slower speeds and others faster? Especially now that video games for instance are a big beef in the internet.
—Vladimir Kostriukov, ,

Discrimination is wrong. This country fought for decades to make equal rights for humans and now you want to destroy equal rights for people on the Internet? What are you guys thinking? Are you trying to move this country backwards? Rather you guys need to take a good look at what your doing and realize you're doing your Job wrong or you need to leave office and re-read the constitution a few times until you become a better human. I'm sick of writing nice sincere letters to you "apparent bigwigs"all you do is fling it off your shoulder. Stop being fuckwits and do the right thing for once.
—Someone who doesn't want discrimination., ,

Now that mainstream media have turned into right wing controlled propaganda machines, with the consolidation of ownership of all media into the hands of 5 corporations ruled by right wing CEOs, Americans have only the Internet as a free medium of communication. Now thanks to greed, even that is being taken away. When did we turn into the enemy? Cash cows at the mercy of unbridled avarice?
—j Dinkmeyer, Grand Lake, CO

These huge corporations already have too much power in our economy and charging fees to increase internet speed is just another way to price gouge the average person.
—Rachel Onstott, Louisville, KY

Its a shame to see such a quality service as Netflix falter in delivery of fantastic video content due to the greed of cable providers such as Comcast. By not backing network neutrality and a federated internet we would bare witness to the most innovative and transformative technology of a generation turned into a space where only major players with big financial backing are able to bring new services to light. And if there's anything the internet generation has taught it's this: big corporations do not innovate as quickly nor as successfully as do their smaller counterparts.
—Ali Shah, Burlington, MA

Our neutral internet is the only real voice, communication and organizing tool we have left to fight the current onslaught of corruption. Don't you dare sell it out!
—Kyle Petlock, Los Angeles, CA

I am a mechanical engineering Ph.D.student in renewable energy. I need the internet to access related research papers and communicate with other scientists and engineers. I can't afford for it to slow down nor can I afford to pay a fee to get fast access.
—Tulsi Vembu, Sunderland, MA

I am a freelancing artist and depend on the traffic through my own website as well as many free forums to pick up work and sell my art. I am struggling as it is, though in the past year business has improved. However, I cannot afford to pay for my traffic and the free forums I frequent would be devastated by the end of Net Neutrality. Where once there was a chance for hard work and ability to pay off, there is now only the promise of impending loss. And I am not alone. Please, for the sake of all small businesses and free forums, uphold Net Neutrality.
—Samantha, Hazel Hurst, PA

Having equal access to the internet is an important tool for survival in a meaningful way. The need for information is now important on many different levels which would take a book to iterate. As a senior, I cannot afford extra fees and I have as much right to a speedy connection and navigation as anyone else. Poor people who are just getting hooked up thanks to this administration would start out at a disadvantage. There is no reason to layer the opportunity which would further serve to layer the cultural strata of our country. This serves only a select few and does not serve the entire nation. This needs to be stopped and the same availability should be there for everyone at the same cost.
—Nancy, Mount Prospect, IL

if you allow a change to a priority internet it will affect the whole world (as everyone will follow) and a large majority of the world now relies on the internet daily. I cannot believe how a panel of 5 at the behest of a few large companies can decide the fate of so many in the world - our voices should count and we say NO to your proposed interent rules.
—Tim Cockhill, st leonards,

Because Big Business should NOT be running the Earth!
—Gary Schmitt, Winter Park, FL

Stop this madness. Protect the internet for ALL users. Net neutrality is vital to our democracy.
—Jennifer Wells, Cartersville, GA

thanks for catering to the big conglomerates who stuff money in your selfish pockets so you dont care about the millions of everyday people who need the internet you are inconpetent and dispicable flackies of the jerk yomamma we have for president unfortunately
—David Jernberg, Elgin, IL

Net neutrality is immensely important for every person on the planet. An unaltered, unbiased search experience is important for all, including small businesses, online services, group organizations as well as large corporations. No website deserves to be imposed slower load times simply because they have not paid into the "fast lane". It is a level playing field ALREADY and should not be tampered with simply for profit. Save the internet, keep it neutral. Taking away this neutrality, I consider to be an attack on freedom of speech around the globe.
—Sarah Nicole Graham, ,

By allowing people who can afford higher rates dominate the internet I believe it will set up a form of censorship by not allowing regular joes the same access as corporations and rich people.
—Candice Towey, Omaha, NE

The Internet is the single most important invention that humanity has ever had, because it allows every single human to communicate freely. Ending net neutrality would set the Internet back 20 years, which would be today's equivalent of razing the Library of Alexandria.
—Erik TarWe, Spartanburg, SC

The only way to guarantee free speech is to guarantee equal access by all speakers. The reality is that Internet access has become as much a utility as electricity or the telephone—so it should be regulated as such.
—Michael Byrne, Manvel, TX

I don't want fast- & slow-lanes on the internet, i don't want pay-to-play transfer speed coercion & charges, and i don't want capitalism to determine who can and can't use available carrier capabilities (which will crown the big guys and screw the start-up innovators, not-for-profit coop & open source developers) and i don't want any stupid half-assed plans (presently being proposed) to generally f#$k up network neutrality-based practices & policies to the detriment of the citizens who rely on a fair & open network (speeds & network access). NO TO PAY-TO-PLAY... YES TO TRUE NET NEUTRALITY!!
—Wayne Montoya, Redwood City, CA

Because my trust in our government is already low enough. Please give us some hope -- even a little bit -- that our country isn't operated primarily on corporate interests.
—Aaron W Herd, South Jordan, UT

Please classify ISPs as common carriers. I own a small business and the rules under consideration will favor big corporate business.
—Josh Spencer, Los Angeles, CA

The internet is a level playing field and should be treated as such. You can't control what usage goes where, that's not fair, and it's greedy. Leave Net Neutrality alone, the internet is not your business!
—Lauren Bond, Beverly Hills, CA

ISPs must be classified as common carriers. We must protect the internet availability for all. The internet should never be owned.
—Tish Yarborough, Wilmington, NC

Net neutrality is extremely important for Democracy in the U. S.
—Beverly Ann Conroy, Oak Park, IL

The world's populace is buckling under inequality, 99% versus 1% - please let us keep the internet as a level playing field.
—Tony Murray, ,

Net Neutrality is to Internet use as uniform, instantaneous line connection is to Telephone use! The Internet must be ONE SIZE FITS ALL--no arbitrary weighted streamlining for selected elite users and their content!
—James Hansen, Wilmette, IL

We need to protect REAL NET NEUTRALITY!
—Jennifer Hedrick, Harvard, IL

The internet is how business is done now and will only be more important as time goes on. We often hear about a "free market" and hear that "the market will determine winners and losers." If you believe in the free market then you also need to believe in Net Neutrality and creating a two tiered system like the FCC is proposing runs counter to everything about a Free Market.
—Kenny Fields, Santa Monica, CA

The internet should not play favorites based on money. I support net neutrality.
—David Favello, Walnut Creek, CA

You do NOT have the right eliminate Net Neutrality! Stop giving in to big corporate lobbyists and STAND UP for the people who are meant to be representing. KEEP NET NEUTRALITY!
—Justin Aubrey, El Cajon, CA

We gotta have open internet!
—James Stearns, Clermont, FL

I fear the average person, already burdened by high costs to connect to the web, will end up with mediocre, dial up speeds. The carriers have never shown themselves anxious to do anything that doesn't enrich them so there is no reason to think this would be anything but a windfall for them. Verizon has already shown its lack of concern for their customers and their willingness to exploit a disaster by refusing to restore copper wire service to areas devastated by Sandy and switching to the less reliable fiber optic FIOS, at a higher price. Reclassify the Net a public utility, which it really is. Remove greed from the equation.
—Chris Peck, Long Beach, NY

Please vote for a real internet, not a pretend one.
—Judy Nakadegawa, Berkeley, CA

Wheeler’s plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. These companies would have the power to pick winners and losers online and discriminate against online content and applications. And no one would be able to do anything about it.
—Bunker Davis, Harvard, MA

Listen to what Americans want not greedy ISPs corporations. We want net neutrality and increased regulation of ISPs so we can obtain competitive internet and innovation.
—Jude Nguyen, San Francisco, CA

Without net neutrality, small startups will be squeezed out if they are unable to pay for a "fast tier".
—Dominic Brown, Baton Rouge, LA

An open internet promotes education and international ties. To allow corporations to be able to discriminate against online content is immoral. Please allow the American people to remain free.
—B Elm, Dayton, OH

Innovation creativity and the desire to do so for the benefit of mankind whilst unfortunately rare it is because of that when we see it we recognize it as what this world desperately needs so mankind can be better than the greedy self interested dictators that plague us today.
—Ron Horgan, ,

Reclassify ISP's as common carries don't destroy the greatest communication tool the world has by letting the ISP's force us to pay more. We don't need a net nanny.
—Gary J, ,

If you are interested in a free and open internet, you will can this proposal. If you are for big business and fascism, you will support it. Which will it be? If you support fascism, we will work to get YOU CANANED!
—Greta Tracinski, Athol, ID

This step has to be taken if the Internet is to survive as we know it. Otherwise, big business will dominate yet another aspect of American lives.
—Brett Docksteader, Bakersfield, CA

this would be like only letting the rich use roads. this will destroy the economy and the future of Canada. stop caring about short term persional gain, for long term loss to the people
—Dave Maisey, ,

I don't want Net Neutrality to end because the Internet is very useful for me. Thank you
—Cale Cochran, Williamson, GA

"Super fast speed" is already available in countries that *WE* developed, and now pass us by. Letting the duopolies throughout our lands break the backs of small businesses and filter the content available to the masses will destroy our competition and wreck the marketplace of ideas we enjoy today. This will be bad for all the businesses except the few that have YOU in their pockets. PLEASE define the internet links as a Common Carrier.
—Benjamin Preston, Menlo Park, CA

Attacks on net neutrality are just attacks on our ability, as a populace, to educate ourselves. The internet should always exist as entrepreneur friendly space, where all content has an equal chance of being seen. Reclassify ISPs as common carriers, protect the rights of people, not the profit interests of major telecoms.
—Justin Sanders, Randallstown, MD

Nearly everything in our American society is owned. Once a corporation takes over something, the inevitable next step for that corporation is how to make an even larger profit. The internet has been a beautiful thing for many years. While not free, it is open and accessible. Please do not let the ball keep rolling towards a situation where even the internet is tiered by economic class- where we have to pay extra for the same services we have already been receiving. Someone has to put their foot down and speak for the majority of the country. That someone can be you.
—Emily Royce, Cambridge, MA

If it ain't broke, don't fix it!
—John P Mercer, Port Reading, NJ

My father worked proudly for an earlier FCC chairman, helping keep communications open for ALL Americans. We taxpayers paid to create the Internet, and now for-profit companies want to take it away and rent it to the highest bidders. Don't betray Americans. DO YOUR JOB THE WAY MY DAD DID HIS!
—Pat Carlson, Ithaca, NY

Do the right thing - STOP FAVORING BIG BUSINESS over the common folk - ITS NOT FAIR!!!!!
—Ryan Watson, Bellvue, CO

Net neutrality is important to me because I believe in justice and democracy.
—Dana Rosenberg, San Francisco, CA

Because I want to preserve the internet I know and love not just for myself, but for future generations! Long live the internet!
—Kimberly Cutting, Valdosta, GA

Get off the big buisness payroll and preserve Net Neutrality! ISP's must be reclassified as common carriers!
—Elyse Stewart, Salem, OR

This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Andrew Goldman, Freeville, NY

Classify ISPs as common carriers for the good of the common people of America, do not make it a cash cow for the rich and powerful!
—Don Dial, Mansfield, TX

My equal ability to find and access information and content through my provider might be affected eventually by the decision to affect Net Neutrality in the US.
—Emilio Gallardo, ,

I'm a poor boy. I'm a writer. I am well respected. The internet IS a common carrier, a global common carrier. The two-tier plan would only aid and abet the plutocracy that is destroying the world.
—George Payerle, ,

As the owner of a small family Farm in wexstern NY.we sell our farm products (fiber from our Llamas) on etsy.com. I feel the passing of this
—Kyle Marchal, Castile, NY

Let me ask you a question. Do you think these companies need MORE money. I mean aside from what they must all ready be paying you in order for you to pass this ridiculous plan? The internet should be for everyone. The same across the board, as fast as it can be for everyone. Regardless of how much money a family makes. Thank You
—Jason Moran, Ogdensburg, NY

A two-tiered net would be a disaster for the majority of internet users and would enable big business to control another facet of our lives.
—Mark Sampson, ,

I use the Internet in countless ways at work and at home. I'm delighted that my kids have access to this amazing resource. Part of what is so great about the Internet is how open and democratic and grassroots it is. Don't take those critical features away!!!
—Wendy Burgess, Park Ridge, IL

The internet is the one means of communication where everyone operates on an even playing field. If the FCC allows ISPs to charge to have faster service, then the ISPs are controlling how we access the net and letting only those who can afford the enhanced speed enjoy the net as all of us always have. This is wrong and must not be allowed to happen.
—Emily McDonald, APO, NY

You don't have the right to make the internet another profit mechanism.
—Christopher J. Gerber, Saint Petersburg, FL

I do not understand why the big ISPs should have lower rates and I do not trust that they will not take advantage of their position to raise prices for internet users like me. Please reclassify ISP´s as common carriers.
—Bob Skinner, Novato, CA

Research. Possibility for new small business. Stopping oligarchy and plutocracy.
—Robert Irwin, Lorton, VA

I can't afford to pay more for my internet connection like corporate america can! It's simply not American to entitle one class over another.
—Vincent M. Nicoletti, Littleton, CO

Internet access is a basic human right. Just like you cannot give one person MORE of a right to free speech, you CAN NOT give the right to "fast" internet to only those who can afford it. The unbridled capitalism with which we are now making policies...where the goal is to make the rich richer and the corporations happy above what is best for the planet and the people MUST END. The internet is for everyone and should be the same for everyone. REAL net neutrality must be upheld. We cannot allow the corporations to dictate how we receive internet. Please do not take away my ability to access the internet freely. I depend on net neutrality and DEMAND that the FCC protect the open Internet by reclassifying ISPs as common carriers!
—Alexandra C Snyder, Atlanta, GA

Net Neutrality has allowed me to engage in political and other types of issues that are important to me in a way that I never would without equal access to all the potential of the internet.
—Theresa Lange, Norfolk, NE

Stop being greedy and doing deals with big corporations and keep the people's best interests and freedoms at heart! (Which is why you were elected in the first place)
—Meagan Petri, Baltimore, MD

the internet is the last bastion of political freedom (sort of. let's not talk about gov't. snoops...). let's keep it available for everyone.
—Jen richmond, Hilo, HI

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Rickey Joyce, Elizabeth, NJ

Net Neutrality is what keeps the Internet a democratic place, which is one of its most important and character-defining features!
—Thomas Wilmot, ,

The prevailing question should be whether or not the decision will move the United States toward a more, not a less, open society. With so many anti-democratic forces working successfully to drive us toward an oligarchy of concentrated economic power, an open internet is vital to free information exchange among concerned citizens working to assure that our grandchildren's birthright to a functioning democracy is not lost.
—Lyle H Hyde Jr., Chicago, IL

Net neutrality is essential to the free market and small businesses.
—Nathan Kuruna, Thanks, PA

As the owner of a small family Farm in wexstern NY.we sell our farm products (fiber from our Llamas) on etsy.com. I feel contrrroling the internet traffic will kill small family busnesses like ours..and creat an economic depression, the economy for middle clzass is suffering enough without limiting only by how much we can pay our access to free internet travel and thus free enterprise Sincerely Susan Phillips Owner/operator The Critter Ranch Fiber and Llama Farm
—Susan K Phillips, Lewiston, NY

With the avenues of obtaining anything even remotely resembling "factual" information steadily closing, an OPEN & NEUTRAL Internet is vitally important to the functioning of any democratic society.
—Lisbeth Caccese, Van Nuys, CA

I use the Internet on a daily basis. I do not want to be classified as a second rate citizen by wireless providers. The great thing about the Internet is the free flow of information. The Internet is one of America's greatest achievements. As such it must be protected. To restrict the free flow of access to the Internet to average Americans means to cripple American innovation. What textbooks don't teach you the Internet does. What people don't tell you the Internet does. For this reason we cannot reserve the best the Internet has to offer to the wealthiest 1% of Americans. The total accumulation of knowledge from all across the globe is what's really at stake here. If America truly wants to remain a land of opportunity, innovations such as the Internet must be left alone. it cannot be tampered with and must not be tampered with. Please don't restrict access to the internet. KEEP AMERICAN INNOVATION ALIVE!
—Walter Herrera, Richardson, TX

It is imperative that all internet traffic be treated the same. This is crucial to economic development in the United States and is fair to consumers. A tiered internet would disastrous.
—Christopher Snyder, Brooklyn, NY

The internet was developed for the "people" of the world, not for companies to control it's content, free means free to roam, investigate and learn, and enjoy. Not to be told what I can or can not do!.
—Melvin Taylor, Sacramento, CA

the giants are already too big. Keep the net free and open
—william glatfelter, Westborough, MA

A free and open internet is the single greatest technology of our time, and control should not be at the mercy of corporations. A free and open internet stimulates ISP competition. A free and open internet helps prevent unfair pricing practices. A free and open internet promotes innovation. A free and open internet promotes the spread of ideas. A free and open internet drives entrepreneurship. A free and open internet protects freedom of speech
—Jeremy Colacchio, Moreno Valley, CA

I want to be the one to decide who I purchase things from, not my internet service provider. America has always taken action to PREVENT monopolies, not enable them.
—Marianne Bodine, Monroe City, MO

It is essential to maintain equality of access to the Internet. The cost of fast lanes will be passed to consumers. Not only will those trying to use the Internet competitively be affected, but consumers will pay the price in added subscription fees. Consumers on both sides of the equation will be left behind and competition will be decreased. The FCC should be focused on making sure that communications remain accessible to all US citizens and that those services reach the maximum numbers of consumers. Ending net neutrality in no way supports consumers, those utilizing the Internet to meet business goals and those end user/consumers. If other countries can/and they do have better access to faster communications than we in America do the FCC should be focused on that fact not on maintaining and rewarding the inefficiency of our current system by decreasing competition. It makes no sense.
—Stephanie Tabone, Austin, TX

Many of us have been mistakenly operating under the belief that the FCC's purpose is to safeguard the public interest in its regulation of the telecommunications industry and the public airwaves. However, it seems increasingly apparent that corporate telecom providers have far better representation on the commission than the public itself. Chairman Wheeler, himself a beneficiary of the very profitable revolving door between the industry and the FCC, appears intent to serve the interests of his previous employers, not the public. The rules Wheeler has proposed would end the Net Neutrality principles which President Obama has endorsed and which the American public overwhelmingly support, Wheeler's disingenuous comments to the contrary aside. Creating a fast lane for those who can afford it would unjustly and immorally mirror the growing income and wealth inequality that is rapidly tearing our country apart. The solution is simple - reclassify ISPs as common carriers, as the FCC should have done to begin with. The American public will not stand for this.
—Christopher Fisher, Petaluma, CA

Killing Net Neutrality is another step toward a corporate dictatorship.
—Ronald Marshall, Sunnyvale, TX

Dear Federal Communications Commission: FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Andrew Carey, Madison, WI

The classification of ISP's as common carriers allows for universal, unbiased access to not only the Internet, but to the services it provides for businesses. In doing so, the continued fostering of the technology sector will be unbiased. As we speak, Verizon has already reduced bandwidth for customers accessing competitors to it's acquired RedBox Streaming service. This means that customers (myself included) are paying a FULL RATE for their Internet access are receiving diminished services. This is a back-handed tactic to promote Verizon companies, but Verizon is lying to it's customers -not admitting that they're manipulating services. We're being lied to and cheated out of our money. As a tax-paying citizen of this country, a specialist and professional in my field, and someone who has already experienced the failure of these proposed rules, I demand that the FCC protect my interests and the interests of all paying customers of Internet Service Providers.
—Patryk Januszewski, Swampscott, MA

I need the internet. AT&T cable will not carry Free Speech TV nor Link TV. What will they do to the internet?
—Marianne Olguin, Hayward, CA

Knowledge is power. Don't limit individuals access to a resource that is vital in our modern society because they will not be able to afford the "good internet."
—Steven Martin, Eagle River, AK

Can't accept that providers who may have an agenda will decide what i should see quickly and easily, and what I may never see at all unless I wait a LONG time.
—Greg Caravelli, New Lenox, IL

As a formerly homeless person, I take great pride in the fact that now, I can enjoy all the internet has to offer with the same capability and speed as even upper-class Americans. Taking this away from me- letting ISP's discriminate against me and obfuscate my ability to view certain websites, images, etc... To do so would be to tell me that I have less rights than my fellow Americans, merely because I cannot afford a higher bill from my Internet Service Provider. This is not only a shameful possibility, but clearly unconstitutional in spirit. The internet has become such a necessary fragment of life in modern civilization that to have one's liberty to access it restricted is restricting them from their full capabilities in life and the pursuit of happiness.
—Micah Ross, Waterford, MI

If Net Neutrality is destroyed it will just be another loss to the individual citizen in favor of Big Money. The time will come when the 99% revolts!
—William Nerin, Gig Harbor, WA

Why are you doing this?
—Gregory Stevens, Princeton, NJ

I want Net Neutrality. Do not allow two tiered internet. The same for all.
—Geri Hyatt, Boise, ID

Do not give the big corporations better access to the internet. If you do, you will stop entrepreneurs from inventing the next big. We will become a third world country.
—Virginia King, Kenosha, WI

Hi Net neutrality on the web should stay as it is. It would be discriminatory to segregate different velocities. The FCC should not intervene on this. The web is ok at it is right now. The FCC should regulate why the major carriers can perfome internet data cap when other countries (korea) provide unlimited internet wired or wireless with no cap. That the FCC should investigate and request the isp to provide. Remember people are first.
—Adan Alejandro, Luquillo, PR

Dear Federal Communications Commission: FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Jullian Kline, Harrisonburg, VA

The beauty of the internet is that everyone has equal access to the resources available on the web. Creating a system where certain companies can pay for faster service is disturbing. I believe that this would cause a dramatic increase in the cost of service for companies like Netflix who most undoubtedly would purchase service on a faster tier. The way that our system is currently makes things affordable, because it creates more competition for between companies which provides more options to the consumers. Creating a system where a handful of companies have services that are on a completely different level than their peers is unfathomable. You would have a few companies who would monopolize the internet and leave the consumer and smaller companies with little to no quality web resources.
—Ed Olivarez, Visalia, CA

I am a consumer of independent news media, like Democracy Now!, and I want to be able to access it at the same speeds as I have in the past. If corporate media gets its way because it can afford to pay for faster speeds, independent journalism will suffer, and democracy will suffer along with it.
—William Snavely, Lawrence, KS

I am not willing to stand by and allow these corporations to control the internet for their own profit at the expense of the rest of us.
—Nathanael Meyer, Fairbanks, AK

A free and open internet is the single greatest technology of our time, and control should not be at the mercy of corporations. A free and open internet protects freedom of speech. A free and open internet stimulates ISP competition. A free and open internet promotes the spread of ideas. A free and open internet helps prevent unfair pricing practices.
—Tracey Rosenlund, LARAMIE, WY

Protect and defend Net Neutrality
—Heather Macpherson, Salem, MA

If ISP's are allowed to charge companies like Netflix (which has already happened, by the way) more in order to use the bandwidth that we already pay for and not get throttled, that means companies like Netflix will have to charge more for their service. So the consumer has to pay the ISP for heavily-crippled speeds/bandwidth, then has to pay even more for a service which is delivered via the ISP, to whom we already pay way too much for what we receive. Look, I know it's "politics" but can't America pull its head out of the sand and actually do what's right for ALL of us for a change? Instead of bowing to corporate interests over and over and over again? What's it going to take to get some real change in this country? Are we "too far gone" as a nation?
—Louis Batson, Brandon, MS

Will the ordinary citizen ever get a "level playing field," especially now that Citizens United has virtually taken that away??!! Whatever happened to "one person, one vote"?!
—Dr. John Modschiedler, Chicago,, IL

As a small internet business owner, Net Neutrality is vital. Letting ISP providers determine how fast my web pages will load, or if they will be loaded at all, is an extremely horrible idea. Its bad enough to be limited to only one option for my ISP, but allowing them, and the others used by my customers, to control the life-blood of my business could easily mean the death of my business. My business should be able to succeed or fail based upon how I run it, not on the whim of an ISP and their desire to extort money from me or my competitors.
—Tom A. Wright, Hardy, AR

I want access to a wide range of information without some of it being privileged through higher speeds. Other countries have developed their infrastructure so that all content moves at a higher speed than we have here. That's what our focus should be on.
—Laurie Todd, Portland, OR

The internet is the biggest forum for freedom of speech in today's world. It is crucial that our internet provide a level playing field for all content to allow the spread of ideas, creativity, and information, regardless of whether the source has the requisite wealth to afford the internet "fast-lane." I also don't want to create an easy way for large companies to discriminate against certain content by slowing it down if it doesn't support their interests. Please act now to protect net neutrality by reclassifying ISPs as common carriers. Thank you!
—Michelle Lieberman, Morgan Hill, CA

Our society is increasingly becoming two-tiered with most of being relegated to a "less than" group. I strongly oppose any effort to interfere with my internet capabilities. Leave it alone!
—Dr. Jeff Condit Ph.D., Murfreesboro, TN

My business, indeed, my career, relies on a free and open internet. For those of us in the computer industry, especially those who prefer to work for small companies, net neutrality is very important. The alternative will hurt small businesses like the ones I work for and allow the few most powerful to grow even more powerful. These companies already charge us for internet access at either end of the communication based on bandwidth usage as it should be.
—Anthony Caravello, Norwood, MA

The new rules are designed to support the current telecom monopoly and hurt the American people. Continuing down this path will stifle creativity and hurt the US economy by letting incumbent corporations to block competitors from entering the marketplace. Notice that the companies that favor real Net Neutrality (Google, Amazon, Microsoft, etc) actually produce innovation to benefit the economy. The companies that lobbied for the new rules are trying to get paid on both sides for doing the same job they've been doing (poorly) for decades. Please discard the new rules and bring back proper Net Neutrality, for the sake of the US economy and the American people.
—Barry Schatz, Bloomington, IN

After all the politically motivated pseudo-economic reasons for not classifying the internet a broadband service, it still remains instrinsically a broadband service, therefore per se provided by common carriers. However, I'm afraid the amount of energy (read money) being spent on those pseudo economic reasons will still prove "The Truth Don't Matter", utopia hasn't arrived yet.
—James Beckstrom, Ann Arbor, MI

I expect the FCC to throw out its rules and reclassify ISP's as common carriers.
—Michael McGee, Fort Worth, TX

In a democracy you need ways to equalize people.
—Fran Hickey, Bethesda, MD

Reclassify ISPs as common carriers. Great Britain took this path, and they have much more competition, higher quality service and lower prices.
—Shailar Brown, Fort Worth, TX

Any kind of discrimination is unconstitutional!
—William Warnock, Benson, MN

My small company is considering the deployment of a cloud based solution for the data intensive software application we currently sell in a client/server environment. The additional cost your proposal may/would force us to incur jeopardizes our business plan and makes it impossible for us to predict our future cost for providing the service. Our only option at this point is to shelve the project.
—Tim Carcione, Twinsburg, OH

Chairman Wheeler should have recused himself from this discussion/decision from the onset. Because of his close ties and relationships from his previous employment he simply is unable to make a fair and inpartial decision. Furthermore, to allow these communication giants to merge creates an imbalance which will likely affect those at or near the bottom of our socio-economic strata. It is imperative the FCC not allow these proposed mergers to occur.
—Dan Barkley, Albuquerque, NM

The Franks were not an inherently better people then the Celts. But a small number successfully invading Briton ended up (by genetic testing) becoming the bulk of the population. They did this with discriminatory taxes and privileges. All economic privileges and "it takes money to make money" and government granted monopolies will feed the plutocracy, will feed the "rich getting richer". This is antithetical to being judged by your merits and a sore in the side of Democracy. Give us Internet as part of our infrastructure, and we will build a better America.
—Clay Hansen, Lafayette, CO

As a student I rely on the Internet for most of my research and organization for classes. The Internet is so much more than a place to watch videos and book vacations. It's a vital tool in education and communication. Taking that access away or making it more difficult for people just so big name companies can find another way to suck money out of their clients is just wrong. We have evolved as humans over the past decade to a point where the Internet is always at our fingertips. It is an extension of ourselves now, and to disrupt that, in my opinion, is dangerous. This would be taking steps backwards in society and human development.
—Alanah Tintle, New York, NY

I love freedom, this nation was built under progressive views on freedom. I stand for a free Internet for a better future with no oppression form the government.
—Osvald, Hollis, NY

We need to do everything we can to protect the internet from corporate control of not only information provided but ease of access.
—Kelly McConnell, Portland, OR

This will stifle small business growth as well as the sharing of information that the world needs to grow in intelligence. The loss of Net Neutrality will kill the basis that the Internet was built upon. The unrestricted access and sharing of information.
—Merlin Hold, Bozeman, MT

Do what is right for the country, not what the corporate shills want. An open and equal internet is critical for the success of this nation.
—Joshua Feiner, Sea Cliff, NY

Are AT&T, Comcast and Verizon trying to buy out the FCC? Is the FCC just another pawn/puppet for greedy corporations? We would love for the FCC to prove otherwise!
—Loretta Martin, Nashville, TN

I can't stand the fact that the FCC received millions of requests to declare the internet a public utility, but the FCC, a public government protection agency, received letters from only 28 CEOs of U.S. broadband providers and trade groups to the FCC asking it not to classify broadband as a utility. So...28 CEO's against millions of broadband users and they win. Where's Tom Wheelers pockets?
—Kenneth Farrell, Mountainville, NY

Net Neutrality offers me the opportunity to pull information from a diverse network with opposing opinions, arguments, etc. Not only that, but the Internet is a nexus which offers me entertainment, education, creative outlets and more.
—Blaise Collins, Midlothian, VA

This is the ONLY way to protect real Net Neutrality, for us and future generations.
—Mary Coleman, Tacoma, WA

The FCC proposals would create a two-tier system that would go against the very principles on which the Internet is founded. The principle of a neutral Internet should be upheld, and ISPs reclassified as common carriers.
—Mike Wheeler, Derby,

Our nation relies on an open internet, which can only be maintained by reclassifying ISPs as common carriers. Please do the right thing.
—Nathan Plamondon, Tempe, AZ

The people will lose - information, power, elections - and much more that we don't have space for me to go into here - if you don't do the right thing and reclassify ISPs as common carriers. Do the right thing then.
—Graham Ross Barnes, Topeka, KS

Greed kills. Get your faces out of the trough and act like responsible human beings.
—Brian Schneden, Naperville, IL

Net Neutrality matters because all data should be seen as equal as the internet should not be subverted by business interests like so much else. It's just too important.
—Matthew Wallace, ,

Do not change anything. You and your damn Greedy lobbyist always trying to find ways to screw the people.
—Adrian, Bakersfield, CA

Net neutrality, the principle that Internet service providers (ISPs) should treat all data that travels over their networks equally, is important to me because without it ISPs could have too much power to determine my Internet experience by providing better access to some services but not others. A pay-¬to-play Internet worries me because new, innovative services that can’t afford expensive fees for better service will be less likely to succeed. The Internet is important to me because, as an employee of a large technology company and an avid consumer of products sold on the internet, I need to know that there will not be barriers to entry for the new ideas and services that my customers and I hope to bring to the marketplace. If ISP subscribers have an easier time loading websites of existing companies than my new innovative product, there’s no way that I will be able to compete or succeed.
—Jeff Cassianna, San Ramon, CA

This is clearly a Freedom of Speech issue. Do not take away our voices.
—Vickie McAlister, Eugene, OR

In order to have the depth and breadth of information available we must do everything in our power to support true Net Neutrality which means that AT&T, Comcast, Verizon and others who seek to create a multi-tiered internet must be denied. To do otherwise, I believe, diminishes the freedom of information a democracy requires to maintain itself. This is far more important than increasing their bottom line and increasing the expense that will clearly be passed on to consumers.
—Mary Anne Lushe, St. Clair Shores, MI

DO NOT LET PRIVATE COMPANIES JUDGE THE WORTHINESS OF ANY INTERNET CONTENT - THAT IS NOT THEIR JOB !!!!
—Chris S., Danville, CA

Because then our ISP's will take advantage of us like a black man in prison.
—Jorge Alberto Mendoza II, Dallas, TX

The Internet is the most important thing the human race has made, it has literally launched is into a new era! Please, I beg of you, keep the net neutral!
—Matt Sloper, Burlington,

too big too care about others
—Philip Chandler, Costa Mesa, CA

The internet needs to be a free and open place where people can exchange ideas without being worried about being censored because the ISPs don't like the ideas they are spouting. The only way this can happen is if ISPs are reclassified as common carriers.
—Joshua Stephens, Joplin, MO

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Piri McMullan, Vista, CA

With internet "fast lanes", not every company will have equal access to the market. The established big players will only get bigger and more powerful. Most ISPs in the country already operate with de facto monopolies, without net neutrality they will have even less incentive to improve their infrastructure and services. Please reclassify them as common carriers.
—Korey Aaronson, Norwalk, CT

Please act in the only way possible to reach the goals of the FCC proposal that we preserve net neutrality-- by restoring common carriage.
—Patricia Vadasy, Seattle, WA

the internet should be a regulated utility and be available at a reasonable cost to all - this promotes better commerce and better education. why should poor children have to go to McDonald's to do their homework?
—Bob Cannistraro, Longmont, CO

we live in a democracy (hopefully), and we want the internet to be equally accessible to all!!! (no matter how much money and power they have)
—patsy Smithj, Norwich, NY

Some things are better the way they are. The basis of Internet should not be discriminating. The businesses have tons of ways to use Internet for the profit as it is now. Keep the net free. For all of us.
—Teemu Kiiski, ,

I am an artist. My micro art business relies on the internet to bring my artwork or announcements of my shows to the public awareness. It's already difficult enough to get peoples' attention in a very crowded and competitive field without my having to compete with the deep pockets of large corporate providers to get my content seen. Please reclassify ISPs as common carriers so that the playing field is at least somewhat level for those of us running small and micro businesses.
—Neno Villamor, Soquel, CA

The Internet is infrastructure and like all infrastructure it must be neutral to the users. I shouldn't be penalized for using one content provider over another.
—Bruce Williamson, Elkins Park, PA

Internet will be open and free.
—Dmitri Bondarchuk, ,

The American people, through our tax dollars, have funded much of the internet. It relies on shared infrastructure we have funded. In the two plus decades the internet has been available to the public, there has been an explosion in innovation never seen before in human history. It has been a good investment for the people of our country. The free, equal, and unhindered exchange of information of the internet has made that possible. I urge you to please reclassify internet service providers as common carriers. Ensure that our investment continues to benefit all Americans. Innovation, growth, and even our democracy and freedom have become dependent on an open, unhindered internet. Be the FCC that protects American freedom and our futures.
—Greg Bobak, Reynoldsburg, OH

As a blogger, I benefit from the open internet. As someone who is constantly seeking information and doesn't have the money to pay extra for a tiered internet, net neutrality is a big deal to me.
—Michael Grier Jr., Orlando, FL

Without Net Neutrality I will never be able to afford computer access at home. Plus my local library will probably have to discontinue their free public computers (3) if you throw out your current rules. They cannot afford to pay more fees and increased basic cost and get a slow connection. ISPs are and should be classified as common carriers.
—Lori Oostendorp, rockton, IL

Hands off my internet, pig!!
—Moe, ,

Net Neutrality is important because it allows a level playing field for freedom of expression.
—Jason Lindemann, ,

people go crazy when they have slow internet..... we want internet we payed for the speed we payed for. NOTHING LESS.
—Austin Pinheiro, ,

Why you no read my e-mails pig??! there are ways around this.
—Sergey, ,

Yesterday I heard that one reason the FCC might abandon Net Neutrality is pay back for the telecoms cooperation with the NSA for giving up private costumer information. If this is true it is unconscionable. Please prove that this is not true and stand up for everyone by supporting net neutrality.
—Katy White, naalehu, HI

The Internet is a wonderful, world-connecting, little-guy-enabling phenomenon and one of the very few things that hasn't been monopolized by greedy corporate interests. How could the Syrian uprising have happened if AT&T had cornered most of the bandwidth and the rebels were unable to communicate effectively? The Internet is the single most democratizing force ever to appear on this planet. Please do the truly American thing and help us keep it that way. Keep the dreams of our forefathers alive.
—Harry Ettling, New York, NY

Citizens United opened the door for big money to buy elections, do not also let them buy control over expression over the Internet!
—George Ellis Grant, Toms River, NJ

Unfair!
—Ms. Margaret Goodwin, Independence, OR

This is just another example of the political corporate takeover of our government. This is nothing more than the legitimization of gouging to further the billions of corporate coffers at the expense of hard-working, struggling, ordinary Americans. These corporate political actions must stop! And they must not be condoned by the government elected to protect ordinary Americans!
—Randall Parker, Palm Springs, CA

Tom Wheeler and others pretend to be on the side of the people, democracy, a good society, when it is clear they are sold out to corporate interests. The arguments are so clear. The overwhelming majority of people educated about this topic agree. The solution of reclassification is so obvious. So it comes down to poor against rich, moral against immoral, corrupt versus free. When peaceful revolution and democracy is continually thwarted then watch out because violent revolution is then inevitable. Change is gonna come.
—Jim Wehtje, South Lancaster, MA

Net neutrality promotes innovation, creativity, and entrepreneurship – the backbone of America – by maintaining an even playing field with big business. Fast lanes and a tiered internet bows to greed by providing yet another revenue stream – for significantly diminished value to consumers – to companies already making billions.
—Randy Connell, Nederland, CO

I use the internet to research all sorts of interests and many times the information I find is used to purchase goods and services, donate to causes and plan how and where to spend my free time. I do not want my choices limited because some group or company paid to have their agenda put front and center while some other group or company that may be a better fit or that offers something more in tune with my needs is pushed to the bottom. Keep the internet neutral for the good of all!!
—Tara Sinclair, Swansea, MA

Please leave the internet alone. The providers aleeady make money off the service nd the content. They do not need additional revenues for high speed tolls. Our access to information should remain as it has always been - equal irregardless of the relative size or wealth of the content provider. Please do as you are charged and act to protect the consumer - not the corportions. Brad Baker 130 N Prospect Dr Miami, FL
—Brad baker, Miami, FL

Please do not let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. These companies would have the power to pick winners and losers online and discriminate against online content and applications. Thank you for your time -Angela
—Angela Delphenich, San Francisco, CA

Either the internet is free, or it is not what is was designed to be! Please do not allow this theft of world wide opportunity and progress.
—Jaen Martens, Forestville, CA

I will shut off my internet access rather than pay for specific access to content. It isn't right to make other providers pay for the privilege to transmit their content either.
—Timothy Wagner, Beavertown, PA

It's the fair thing to do. Allowing a two tiered system promotes a further divide between the wealthy and middle class.
—Diane Wolniewicz, Chicago, IL

I depend on the a functioning, efficient internet for my work with a small non-profit. Turning the internet over to corporate interests seems to be just another move to hand control to moneyed players.
—Dolores Farrell, Sitka, AK

This is just another service the 1%ers want to limit for the rest of us. Being disabled I depend on my internet for news, information from family and friends and to pay my bills. I also pay a premium price now for high speed internet. Your biased bill to take this public right away is WRONG. Don't do this. Since my phone service is also controlled by my internet provider it only makes good common sense to reclassify ISPs as common carriers. Protect our net neutrality.
—Rene James, Ludington, MI

The internet is the future. It is the lifeline of many generations now and future. It needs to be open and accessible equally for all, without companies' greedy paws glomming for money. We can barely afford anything as it is, we do not need companies to have a say in what we can access based on how much they or we, the consumer, pay.
—L Philips, Kalamazoo, MI

It's important to everybody and needs to remain just like it is, it is our last bastion of hope in this world where the rich have taken over everything and destroyed it all!!
—Dee Noblett, Mechanicville, NY

This should be a no brainier unless you are beholden to the corporate overlords. are you?
—Peter Leonhard, Madison, WI

Throw out y rourules and instead reclassify ISPs as common carriers. This is the ONLY way to protect real Net Neutrality.
—Kenn Reynolds, PLAINFIELD, IN

The Internet benefits so many people because of it's principle of equality. Any action that takes away the ability to quickly and easily access information is a threat to this equality. There is no reason to go through with these rules except for pure, unadulterated greed that has been undermining America for far too long.
—Kamaria Hatcher, Mount Rainier, MD

The internet belongs to everyone. We have to start standing up to big brother and big corporation's. We the people run the world, not them.
—Christopher Hughey, Moorhead, MN

I don't want to live in a world where companies with the most money get to dominate the internet.
—Saam Barati, Oakland, CA

Innovation can only happen in an open and equal environment
—Alex Budkie, Shaker Heights, OH

I don't need 2 internets, a corporate 2 tier takeover makes sense only to a corporation. Mr. Wheeler, you work for the people, not only that but net neutrality is just common sense. Throw out these rules and reclassify ISP as common carriers, which they are.
—Rickey Scott, Ypsilanti, MI

We ALL know the fix is in on this atrocity. Anyone with half a brain has figured out the fact, "the Corporations are being paid back for their part in providing the NSA with personal privet information on American citizens." Two wrongs can never make a right. Stand up for the remnants of our Constitution and say Hell No to this flagrant injustice.
—LeMoyn Salmonsen, Placitas, NM

Thats a surprise! That anything we have to say matters to any agency of government!
—Anton Christopher McInerney, Stuart, FL

Don't build tollbooths on the information superhighway!
—Mike Caetano, Fresno, CA

I believe that Americans deserve the opportunity to share in the many benefits of the internet without questioning their ability to pay excessively for the access. I we are all truly equal, we deserve equal, reasonable access. Use of the commons is a strong principle of nation's founding.
—Sylvia Dohnal, Arcadia, CA

We ALL know the fix is in on this atrocity. Anyone with half a brain has figured out the fact, "the Corporations are being paid back for their part in providing the NSA with personal privet information on American citizens." Two wrongs can never make a right. Stand up for the remnants of our Constitution and say Hell No to this flagrant injustice.
—Savannah Boone-Salmonsen, Placitas, NM

An truly open internet is needed to drive innovation and allow the free exchange of ideas and information. Calling these rules "net neutrality" is Orwellian doublespeak. Please throw out these proposed rules and reclassify ISPs as common carriers. This way real net neutrality can be preserved and protected.
—Ralph Wittal, Richmond Hill, NY

No Internet slow lane, please.
—Mark M Giese, Racine, WI

Once again the government is changing the rules in a way that benefits those with deep pockets. This change will allow those entities to choose the online content and applications they will allow. For the everyday Joe, we'll be stuck footing the bill so these companies can drive in the fast lane, while we're stuck in traffic in the slow lane. All because we don't have the money to participate fully and equally.
—Jerry Roy, Ft Mitchell, KY

We build the "Net" as a nation for equal use by all. I have used the net for over 25 years. It has worked fine for all,equally and freely, now is not the time to give prefference to those few with money we should all have equal access. ISPs are a common carrier and should stay that way.
—David Vernola, Wasilla, AK

I believe the Internet needs to be open to all, for the user to be the marketplace, to pick and choose what best serves the user's needs. It's not for corporations to determine.
—Robert Copeland, Springfield, MA

The Internet is the greatest force for democracy ever. Making access subject to commercial competition is one of the worst ideas ever. PLEASE reclassify ISPs as common carriers.
—Kathy Keenan, Aptos, CA

This country is already divided into the Haves and the Have Nots - Killing Net Neutrality is discrimination against the common people who don't have millions of dollars to throw around!
—Amy L Zeman, Pittsburgh, PA

Please protect the wealth of information sharing, business, and democracy that the internet is instead of bowing to corporate demands.
—Julie Rooney, Boulder, CO

Stop bowing to corporate interests at every turn. You cannot keep the free flow of information away from people any longer. The more you try, the more serious the reaction will be down the line. Stop. Control is not an option any longer. You exist to serve the citizens of the nation, not to roll over and play dead for big money interest.
—Tim Kauffold, Traverse City, MI

because I should have the same access to the internet as any other "person", regardless of how much more money they may have.
—Julia Fluker, Lutherville Timonium, MD

reclassify ISPs as common carriers
—Pierre B Samson, Wilson, NC

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Randy Hackler, Chicago, IL

I believe a free and open internet will help peoples across the world advance while a corporate controlled internet will have opposite effect.
—George Bennett, North Pole, AK

NN is critical. It is non-negotiable. NN is important because I run services that depend on this rule, this guarantee.
—Paul DeStefano, Seattle, WA

FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Reverend Max Lee, Fair Lawn, NJ

I need an open internet.
—Alan Musnikow, Lexington, MA

As an educator I have found that some of the best sources are those that are least commercial and would be most affected by this change. In a myriad of ways Net Neutrality is essential to a free and democratic system of education.
—Sarah Dickinson, Culver City, CA

I am 69, have a husband, four children, and nine grandchildren. We all want net neutrality because we all are entitled to it. The taxes paid by my husband, myself, my four children, their spouses, and one of my grandchildren all helped provide either the money to assemble the internet and/ or the money to provide an environment where it would flourish. Did we give of our taxes to yet again help big business have an advantage that we, the average citizen taxpayers are denied? I do not believe that this country was founded by or for oligarchs. Please demand net neutrality. Once we the citizens lose this, there will be no turning back. Anne M.McCabe
—Anne Mc McCabe, LaGrangeville, NY

the internet needs to remain an equal playing field for everyone--keep Net Neutrality!
—Martha Shade, Seattle, WA

Myst you rob the consumer with all our devices connect to the internet over the next 10 years this is a cash grab and you allow them to change the sta quo .
—Dathan Witchett, Lithonia, GA

We need freedom of expression that is unfettered, and unrestrained to survive as a democracy.
—Gary Overby, Madison, WI

Those with money will have faster transmission that new, young companies who can'nt afford to pay to play. Unfair!!! This stifles innovation.
—Nancy E. Free, Malden, MA

The internet is supposed to be the "great equalizer". It's the only thing anymore that is equal. So protect it. Don't destroy it by giving it to the wealthy. I demand that the FCC protect the open internet by reclassifying ISPs as common carriers.
—Zarna Joshi, Seattle, WA

As both a normal user and a content creator, the thought of a tiered internet is frightening.
—Rachel Oliver, Dayton, OH

Pay to play (a la cable tv) will only serve to enrich the gatekeepers at the expense of the public and content creators. Paying the toll to the troll creates no value and stifles creative efforts. lSPs and particularly cable operators do not need nor merit the privileged treatment that is being proposed. Keep net neutrality!!!
—Donald Starcke, Maplewood, NJ

We cannot allow private corporations to determine what matters to customers and what do not. We should not have to pay extra fees just to receive the speed that we're supposed to already get. This just increases debt for regular people while skyrocketing profits for the executives. This does nothing to create jobs or redistribute wealth, but just improve the conditions for the high level executives pushing for this change.
—Matthew Lin, East Brunswick, NJ

Net neutrality is important due to the increasing role of the Internet in modern life, picking up some of the existing roles served by libraries, telecommunications companies and other services. Failure to ensure consistent quality of service for all users will give providers a staggering amount of control over modern life.
—Dylan Rees, Troy, NY

The internet belongs to the people.
—Alixg1@aolcom Gordon, Miami, FL

If we value and live in a democracy, net neutrality is the only way forward.
—David Serino, Miami, FL

The internet is the greatest tool we have for letting ordinary citizens speak truth to power. Don't let the oligarchy ruin it!
—Elizabeth Lowry, Seattle, WA

This plan would take away the freedom and diversity that makes the internet so awesome and put control of it into the hands of a few big companies.
—Elias Zamaria, San Francisco, CA

I believe you are trying to create monopolies for the Internet usage!
—Douglas Lass, De Witt, IA

Net Neutrality is crucial to the technology industry. All businesses with an online component rely on net neutrality to create a shared benefit among all technology companies. Allowing ISPs to discriminate among sources of information eliminates the ability for technology companies to compete and succeed on merit and create additional barriers to entry for new companies. It hurts both small and big business helping only the mega-cap ISPs that already face the least amount of competition.
—Patrick Wiseman, Atlanta, GA

The internet, just like speech, press, and religion, should be a right guaranteed to all, not just some. This form of discrimination is extremely distasteful and i will not stand for it.
—Lawrence Trias, Hartsdale, NY

This country has already sold its politicians to the highest bidder, along with the remenants of democracy Re- classify the internet as a common carrier. It is a public resource, not a private tool for commercialsim and greed.
—Sharon O'Hara-Bruce, Lake Orion, MI

The internet is the last bastion of free expression and free speech. In a time when our constitutional rights are being attacked on all fronts the internet remains the one place where citizens can still exercise their NATURAL AND UNALIENABLE RIGHTS as granted to us by our mere existence. To remove this remaining reservoir of free expression and entrepreneurship will be the nail in the coffin for the average citizen who doesn't have enough money to afford a bought politician!
—Justin Rodriguez, San Marcos, CA

Please protect net neutrality. We need to foster an internet that allows all internet content to be treated equally, not one that allows for faster access to only the richest companies websites.
—Danny Archibald, San Francisco, CA

The changes being made lead to a slippery slope, where IPS's of the future can easily censor what content users see simply by denying bandwidth to that content. There is nothing good that can come of this for the *users* of the internet.
—Brent Walker, Cedar Park, TX

I depend on the internet for information every day and need Net Neutrality in order to continue doing so. Please reclassify ISPs as common carriers to make this happen!
—Shelby Hunt, Bristol, RI

Net neutrality is important for a multitude of reasons. The most important reason being that many people would simply not be able to afford this increase of cost and be forced to use an internet that would be rather useless and frusterating. No longer would we be able to play the online games that we had purchased, nor be able to search the web for information. With that being said, many people would also fail college as almost all college courses require the use of the internet, and as it stands, college is already hard to pay for. The internet is useful for many things, whether it be for recreation or learning. But if we have to pay to not have slow internet, we might as well toss our computers out the window since at that point, they would Just be a useless waste of space as well as an uneccessary source of stress and frusteration. Please keep the net neutral. Thank you.
—Tonya Roberts, Traverse City, MI

The World Wide Web, as designed by Tim Berners-Lee, is supposed to be free and open to all. The Internet can promote intellectual advancement and worldwide cooperation across many different fields. All of the progress that we have made, and can make in the future, will be destroyed by the act of controlling the Internet and creating things like fast lanes. Please, for the future of our world, do not allow people to control what should be free and open to all.
—Alisha Ukani, Weston, MA

There is so many people that keep contact with friends and family through the internet. Why constrict it?
—Karaline pelchat, Hillsborough, NH

Every person rich or poor should have equal benefits using the internet.
—Leslie Walker, Norwich,

Shopping is a leisure activity. If anything deserves a "fast lane," it's educational sites, local news and weather, Amber alerts, tornado warnings, etc.
—Judith Sanders, fredericksburg, VA

This proposal is no good! We need real neutrality on the internet. They're a common carrier!
—Mac Newbold, Draper, UT

As a small online retailer, the idea of discriminating companies based on willingness to pay is both greedy and unfair. The web should be a right for all, not just the big Fortune 500 companies. Neutrality encourages start-ups and small business to create and innovate with the possibility of actually developing something useful and needed in society. Stop the FCCs proposed plan!
—Ryan Roff, Grand Rapids, MI

The internet belongs to the People. Public funding paid for the development of the Internet when it was known as DARPA. The internet is a public utility and it must be classified as such.
—Miss Kathleen Hamilton, Maplewood, MN

Just dont do it.
—Michael Patterson, Idaho Falls, ID

You've already allowed many big companies to merge and reduce competition. This is just one more way you're giving these companies way too much power and control...and stripping it from everybody else. This flies directly against what America stands for and what you, as an American regulator, are supposed to stand for. Reclassify ISPs as common carriers now!
—Suzanne Fuher, Orlando, FL

Net Neutrality is important, do not take it away!
—Joady Feiner, Sea Cliff, NY

I am stuck with slow dial-up internet and anything that adds to that problem will make accessing the internet impossible.
—John Schmittauer, Chauncey, OH

I just think we're facing inequality in too many more places, and this would be another one!
—Elizabeth MacKelvie, Appleton, WI

I've worked in public television for 25 years and am well aware of the decline in locally controlled media and diverse voices (In the Albany NY market, one lone daily newspaper and one lone radio station are locally owned -- thank God for WMHT and WAMC!). We need more diversity and competition not less! Please do not hand over our internet to the wealthiest of media conglomerates. Please do what is right in the interests of the American people, our democracy, innovation, and our freedom to access and disseminate information. Reclassify ISPs as common carriers.
—Jenn Hunt Dempsey, Saratoga Springs, NY

Don't change the internet and allow for new and more innovative ideas the same playing field to reach the people without needing extra capital just to get their plans started.
—Richard Rigaud, Surprise, AZ

Just fire Tom Wheeler already, the guy is obviously just a puppet for the corporations.
—Brian Lennox, Vancouver, WA

Net Neutrality is vital to insuring that the millions upon millions of people who get most of their information from the internet are not led around by the nose. Without Net Neutrality, internet service providers will be able to control what we see on the internet, and which would be one of the greatest internal threats democracy has ever faced.
—Martin Kilmer-True, Princeton, NJ

Our Freedom !
—JC Bower, Sumner, WA

Access to information is essential in a free country and should be equal to everybody weither they use cable, DSL, or wireless access.
—Pavel Dorokhin, Broomfield, CO

This is a free speech issue, obviously.
—Richard Hatfield, Orlando, FL

It is important to me because the FCC should protect consumers and allow free, fair and equal access to the internet without corporate control.
—Raffi Petrosian, Sunland, CA

Stop the corporate thieves!
—Robert deFreitas, Santa Cruz, CA

The end of net neutrality is the end of free speech.
—Sara Brigham, Stevensville, MT

The internet is the global platform for communications and should not be at the mercy of "the last mile". Reclassifying ISPs as common carriers is the only way to insure equal and open access for all.
—John Hader, Ocala, FL

We need net neutrality back! This is a war on the lower classes and is ridiculous! How can anyone for the citizens stand for this? We will demand your resignation tom wheeler!
—Jordan Hamilton, Muskegon, MI

A loss of net neutrality will have repercussions throughout the country. Small internet businesses will be dealt a huge blow and many will close. A lot of brick and mortar shops supplement their income through the internet. If their websites suddenly disappear because they can't afford to pay more their businesses will close as well. This would be a disaster for our already struggling economy.
—Nona Lansbarkis, Bountiful, UT

The internet is a place where I can educate myself. As a Ph.D. candidate, it is imperative the internet remain accessible for me, as well as others, to remain building my knowledge database. If net neutrality is destroyed, we (the majority) will lose the freedom of accessibility to a realm of information unattainable elsewhere. The internet has become an integral facet of the education system. DO NOT take that away from the majority of the people for mere economic gain for the few. A democracy is a government by the people, for the people. In a democracy, the majority rules. A ruling toward the destruction of net neutrality is not only proof that democracy is a myth in our society, but proof we live in an oligarchical; an aristocracy. We will not let you do this. We will fight even after your ruling to regain our independence from these economic dictators. This battle is a battle you do not want to wage. For your sake, listen to the people. We are listening to you.
—John Aldecoa, Chino, CA

America has always been a land of freedom and equality. Please preserve true net neutrality by throwing out your proposed rules and reclassify ISPs as commom carriers. This is the only way to keep the Internet open for everyone.
—Cheryl Caraglior, Mary Esther, FL

Shame on anyone connected to this blatant violation of the rights of the American people's freedom of speech and a big handout in more corporate welfare!
—'Drew, Catonsville, MD

Upwards mobility. The internet is one of the biggest sources of hope for someone with a small business idea/ concept to be able to climb themselves out of the pit of subsistence farming to having truly made it in this country. Things like tiered internet will further reinforce the caste system that this country has been so busy building and longer engulf the people of this country in a struggle against the monopolistic corporations that our predecessors fight to avoid. Once all of these telecoms/utilities combine together under the same mother company, we shall see who truly wields the power in our government. The money.
—Gregory S Perchermeier, Cincinnati, OH

The Internet's neutrality it vital to the preservation of democracy. A free Internet allows all the chance to speak their minds without having to pay to exercise their God-given right.
—Andrew Kistler, North Olmsted, OH

There is no reason to "fix" an internet that is not broken. The "two-tier" plan is obviously nothing more than a massive give-away of public resources to private companies. ISPs need to be put in their proper place by reclassifying them as common carriers. The last thing America needs is an internet that relegates the majority of users to second rate status. Those who cannot afford the inevitable rate hikes that will come directly from the ISPs and/or indirectly from internet companies that pass the higher fees onto their customers will be the real losers, along with the myriad of small websites that would wither and die under these horrible new rules.
—Russell Engebretson, Norman, OK

The internet is so great a source of learning and sharing that keeping it neutral only means a better world.
—Charles Gerard Timm, Clifton, NJ

The internet has become a crucial and integral form of communication within our society. The destruction of net neutrality will profoundly impact this invaluable form of communication in the name of increased profits.
—John Voltin, Austin, TX

I am paying $80 for 50mbs and I can only use 20mbs with out net neutrality I am being ripped off.
—Collin Nunley, yorktown, IN

It is good for everyone just the way it is.
—Mrs. Diana Znavor, Tiskilwa, IL

The internet has been an important part of my work for 20 years. As small business is an engine of the economy, so is an open internet vital to the success of small businesses like mine. ISPs must be common carriers to allow small businesses to survive, grow, and help keep our economy strong.
—Dinah Sanders, San Francisco, CA

Please keep the internet neutral. Reducing it would hinder art, creativity and the overall progress that a free internet easily gives. Small companies need access to the best service, extra power to mega corporations will allow to push down new companies trying to innovate. Dont be responsible for that.
—Frederic Tarabout, San Francisco, CA

I have a small business and want to be treated fairly. The internet is fine as it is. As a consumer I want to have access to read and shop with small business owners and not corporate greedy giants.
—Elizabeth Mapplebeck, Seattle, WA

I am a small business entrpreneur in the rural state of Maine. My business is conducted entirely via the internet - I sell real time information services and software systems designs all delivered via the internet. My products and my business will suffer if my ISP is allowed to choose what services they offer routing, bandwidth and speed preferences to. It is buisnesses like mine and people like myself who have made the internet the profitable boon to business it is today for ISPs. It seems terribly unfair to marginalize the very people who made the internet what it in order to provide an advantage to those who would put us at a disadvantage.
—Blind Murray, Cranberry Isles, ME

It seems that ATT has already killed me on getting DSL now.. I tried to hook up with a lower cost provider and it wouldn't do right.. the speed fluctuated too much.. and was earlier this year with the present rules.
—Winston BeLisle, Senath, MO

Information cannot be structured around privilege or corporate interest. The existence of our democracy depends on open access and transparency. It's time the FCC started serving the public's interests and not corporate greed.
—Deborah Garfinkle, San Francisco, CA

This measure is unacceptable. Corporations due not supersede The People.
—Mrs. Berry Bartolillo, Nevada City, CA

The Internet is a public utility! No business can occur without it anymore. There is no facet of any transaction, even in cash between individuals, that was not somehow made possible or otherwise aided by the Internet.
—Jason Fasi, Smyrna, GA

How much more "common" can the internet be? Seriously, an "open" internet is the fairest, most appropriate decision.
—Jeanne Ulrich, ,

RETURN YOUR BRIBES & MAKE THE OTHER CRIMINALS COMMON CARRIERS
—Brian Laddy, Fort Mill, SC

Keep the net neutral. Reclassify ISPs as common carriers. Thank you. Casey E. Williams
—Ms. Casey E. Williams, Port Angeles, WA

How can limiting a great freedom such as the neutrality of the internet be a good idea? Either you are bought out by big business and are morally bankrupt, or simply insane. Giving that much control to anyone is a very bad idea. Remember, absolute power corrupts absolutely.... EVERY time!!! Isps should be common carriers.
—Debra Bolduc, Saint Hubert,

It's our lifeline to fix what's wrong in the world.
—Ernest Bennett, Montesano, WA

information should be easily accessible by all!!!
—Cassia, Pittsburgh, PA

Creating a multi-tiered internet is bad for small businesses, entrepreneurs, and free speech. It stifles the American Dream.
—Shoshana Turpie, Seattle, WA

We need Net Neutrality to protect technology as the way communications changes. The internet is that new standard, No different when telephone replaced telegraph as the standard of communications for that era. Please protect Net Neutrality as the future depends on a level playing field for all.
—J Kelly, Olalla, WA

Access to information via the Internet should be equally available to all. Please do not allow Internet discrimination by catering to the few big Internet providers. Protect the ability of ALL AMERICANS to access the open Internet.
—Mary Baran, Glastonbury, CT

Why do we let big business win in this country? How come Comcast is allowed to control people's access to TV and to the Internet? Sure, the abide by Net Neutrality for now, but when that agreement is up, there's no telling what they will do. They already have deals with Netflix to make sure their quality is good. But what about the next Netflix like service? They won't have a fair shake because they won't have to money to pay Comcast what Netflix does. The internet is quickly becoming the main way people stay connected. It should be re-classified as a Telecommunications service so that all content is treated EQUALLY. Period. Equal access for all.
—Josh Davis, Copperas Cove, TX

Please stop widening the economical gap between upper and middle class/lower class which is exactly what will happen by not implementing net neutrality. Without EQUAL & FAIR competition, our capitalistic economy will become one huge monopoly run by a chosen few. Don't be foolish, our economy is already struggling. Vote for net neutrality.
—Lori Swoyer, Jonestown, PA

Technology innovation and development depends on net neutrality. Allowing the further monopolization of the communications industry will only stagnate innovation and is antithetical to free speech and democracy.
—Jared Margulies, Baltimore, MD

I don't need to explain this to you. It's about human history. Come on.
—Eric Burnet, Montreal,

If you approve these rules it'll mean the end of net neutrality. Mr Wheeler - you MUST reclassify ISPs as common carriers. There is simply no other way to ensure that innovation can continue in the USA online. Its that simple. Don't let your background with the carriers color your judgement. Pay-for-priority should not be allowed.
—Christopher Hill, Athens, TX

As if Big Business doesn't have enough of an advantage over smaller, community based, and start up organizations. Internet Service Provider and Telecom giants, such as Comcast, Time Warner Cable, AT&T, Verizon; ALREADY swindle their customers for every nickle and dime over every service, change, and/or equipment rental. And it's not like internet is "optional" any more. It is a necessary UTILITY for paying bills, researching healthcare (or anything really), getting medical advise, applying for jobs, or to be productive in one's current job. ISPs and Telecom companies already spend BILLIONS of dollars trying to destroy smaller companies that might challenge their autonomy in a given geographical location. Heck, Time Warner and Comcast are planning a merger that WILL make them a monopoly and WILL more than likely be allowed, because they are lining the pockets of those who will be making this decision with "donations". And now, on top of all of this, you recently voted to approve this ridiculous internet "fast line". You should be ASHAMED of yourself!!! This will allow already successful companies to limit their competition based on capital alone. It will STIFLE innovation and destroy entrepreneurship in this country!
—Kate, Feasterville Trevose, PA

I have a roku box a much cheaper way to watch T.V. The big cable companies want to stomp them out! A fast track would do just that. Leave the internet alone!
—Edward Jordan, New Gloucester, ME

net neutrality is very important I urge you to keep it that way between the oligarchy and the corporatocracy the 99% do not have a say so in government or any real freedom left except for the internet. throw us a bone for crying out loud
—Russell Blizzard, Rock Hill, SC

The creation of pay-to-play fast lanes just further entrenches the consolidation of power in the hands of fewer and fewer people and large corporations. A truly neutral internet mitigates that overall anti-democratic trend.
—Dwight W. Thurston, Canton, CT

The internet is a database containing an enormous, if not, infinite amount of information. We never had issues with the internet in the past, why should we change things now? These changes will only benefit companies like Verizon. The internet should be left untouched by corporate hands. It isn't very fair that people like me who can't afford the extra payments will have to accept being screwed over and have slower internet access while people with more money are granted faster access. How about for once the lower class doesn't get screwed over and you leave the internet alone and open for us all so you don't have to keep hearing us complain about it.
—Melanie, Perth Amboy, NJ

I enjoy using the internet to explore and learn about not only what is popular in today's culture, but upcoming trends and history. The internet as it is today allows for open creation and consumption. The opposite of that is what only allowing those that can pay for "high speeds" would mean. Most people, myself included, will not wait 30 seconds for a page to load - that's what will happen when smaller companies and outlets cannot afford higher tiered bandwidth. Also, why am I paying for service - currently $75 a month for access that will be further culled by the "market." Please consider the impact, not to the bottom line, but to our society and future.
—Antonio Basallo, Kissimmee, FL

Don't kill the open internet. Stop Discrimination, We all need the fast internet services.
—Rosa Valentin, Miami, FL

When Barack Obama first ran for president in 2008, he did something amazing: he was the first candidate to build a successful grassroots campaign online, powering his candidacy with small-dollar donations and connecting neighbors and friends around his movement for change. That's because candidate Barack Obama knew the incredible possibilities of an open and free Internet. He said so in 2007, as then-Senator Obama: "I am a strong supporter of net neutrality… what you've been seeing is some lobbying that says that the servers and the various portals through which you're getting information over the Internet should be able to be gatekeepers and to charge different rates to different websites… and that I think destroys one of the best things about the Internet -- which is that there is this incredible equality there." Now, the former telecommunications lobbyist that President Obama appointed to chair the Federal Communications Commission, Tom Wheeler, has proposed a private, tiered Internet system just like the one candidate Obama OPPOSED in 2007. If this proposal goes into effect, it would ruin the same Internet that the president used to get elected in the first place. Obama and his supporters knew that anything short of net neutrality would create classes of winners and losers online -- corporations and organizations that were willing to pay more would win, because they could afford a special type of service that was better and faster. But we know the Internet isn't just some private service, like satellite radio or HBO. It's a fundamental part of our lives, a utility that allows the same access to a family on public assistance as it does to a CEO in his skyscraper office. By removing net neutrality, Internet service providers (AT&T, Comcast, Verizon, etc.) can dictate the speed of Internet traffic to certain websites, effectively making the websites of political candidates that they do not support dysfunctional and, consequently, giving Internet service providers more power to influence the outcomes of elections. These Internet service providers already give large sums of money to a select group of political candidates (primarily Republicans) that support their positions, so you can be sure that they will use these proposed Internet rules to dictate the functionality of websites. No one company or person should be able to discriminate against online content and applications. The only way to protect real net neutrality is to reclassify ISPs as common carriers. Please do so!
—Susan Salafsky, Corvallis, OR

The FCC should insure everybody has equal access to the internet and not support plans that allow purchase of faster service just because money changed hands. Only technology should determine speed, not how much you pay service providers. Service providers should not be the only determination of the technology used for internet access.
—Warren Bean, Garland, TX

Alternative Media is the only true media not controlled by corrupt governments. All countries are internment camps.
—Octaevius Altair, ,

Free speech is a core value. Net neutrality is fundamentally important, even without recent mergers of media giants, and judicial decisions giving a fast lane to magnified speech based on the size of a political donor's wallet.
—Lisa P Vervena, Shoreview, MN

The Internet was created to make information easier accesible for everyone. Destroy net neutraility and only a few will be able to get access. That is a direct infringement on our freedom.
—Michael Chrichton, ,

Drop Wheeler's duplicitous "open internet" nitwitrality! Not Only NO; but FCC NO!
—Vic Anderson, Eagle Lake, FL

It's about FREEdom. The FREEdom to pick and choose our content. The FREEdom to educate ourselves about what interests us. GREED and CONTOL are what opposes our FREEdoms. Please hear us. Thank you. dom to pick and choose what content we want to peruse. The freedom to become educated about what interests us. Th
—Susanne Bottomley, Redondo Beach, CA

The creation of a paid "fast lane" will, by the very nature of broadband connections, create an unpaid "slow lane". There is only so much available bandwidth, so if deep-pocketed, established companies pay for better performance, the rest of the internet will suffer, along with the innovation and creativity that has defined the internet for the last 20 years.
—Rick Baumhauer, West Haven, CT

I live in a rural area and already have slow and spotty service. Your new rules would make the internet virtually unusable for me. Allowing providers to "prioritize" content providers will work against startups, discriminate against free speech, and ultimately turn it into a monopoly controlled by a small cartel. That you would attempt this under a Democratic presidency makes me question just how much the Democratic party has the interests of the people at heart, and whether there really is any difference between them and the thieving thugs of the GOP.
—Michael Piotrowski, Ramona, CA

Stop this selfish corporate charade!
—Ralph Elias, Baltimore, MD

The Internet should be a common carrier.
—Diane Jackson, Redondo Beach, CA

How dare they.
—Corey Hennessey, Baltimore, MD

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Francisca Aleman, Clovis, CA

As the world's newest infrastructure, upon which communications and the flow of information depend, it is imperative that the Internet be treated as a public utility, regulated in the same way. Protecting equal and universal public and private access to this civilization-changing resource is the number one priority to insure and sustain the balance between private and public interests. To do otherwise, as did the Supreme Court's ruling giving corporations personhood, you add to the assault on our democracy, giving the value of wealth priority over equality, property rights over human and civil rights, and the few dominance over the many. Common carrier is the legal status that fixes the boundaries around those resources that in the social contract are are deemed accessible to all without regard to individual economic status -- a refinement of the basic inalienable rights of all people. Act to lead our nation forward in a renaissance of the principles that heralded the creation of America.
—Ken Marsh, Los Angeles, CA

wE MUST NOT BE "TAKEN OVER FROM YET ANOTHER FORM OF COMMUNICATION
—Dodie Shepard, Burbank, CA

First class passage for the wealthy and what's left for the rest of us. This is the message I get from Chairman Wheeler's stance about Internet access. I'm not sure who Mr. Wheeler represents but it's not my interests. That's for sure.
—Nathan Rosenblatt, Laguna Woods, CA

Haven't we been punished enough, we the not 1%. I have MS & in a wheelchair at home most of the time. The internet is my connection with the outside world. So please consider others like me.
—Carol Ann McCoy, Silver City, NM

The Net MUST stay Neutral for the freedom of all.
—R Clements, Anytown, TX

If it ain't broke, don't fix it. Don't give in to corporate interests. There are far more independent individuals than corporations, and, as I'm sure you are aware, we will all be extremely ticked off if you succumb to corporate bullying. Get rid of your rules and reclassify ISP's as common carriers.
—David Shelton, Casar, NC

Net Neutrality is important to me. Please make it truly neutral once again. Do something good instead of something profitable for once. You're hurting the American economy with this, and you're hurting American people all so you can make more money. That is evil. Don't be evil.
—David, State College, PA

It is profoundly undemocratic and discriminatory to disrupt the lives of hundreds of millions of Internet users in order to fill the coffers of service providers like AT&T, Comcast and Verizon. Whether for business, friendship, romance or knowledge, Americans depend on Net Neutrality as a part of their daily lives. Are we retuning to the Robber Baron age and control of American lives by greed and unfettered monopolies? As FCC Chairman, you have the power and responsibility to protect Net Neutrality. I urge you to do so. Otherwise, you will go down in history as the man who destroyed Net Neutrality.
—Jeff Harmon, Van Nuys, CA

Please start placing the interests of the public and smaller businesses ahead of these large, extremely profitable ISP's. They have obviously lobbied the FCC pretty hard to produce the atrocious rules you've recently published.
—Christopher D Wiley, Austin, TX

The internet was developed for everyone and meant to be open. No way should ANY corporation or company be allowed to interfere in ANY way with the flow of bits over the internet.
—Terry Laug, Hermosa Beach, CA

Creating a "fast lane" will only make inequality worse.
—BJ Novitski, Eugene, OR

I have already seen censorship on the internet. Do not continue ruining our internet bh censoring data etc based on monetary benefitsto you. Restore Net Neutrality.
—Inesse Diehr, San Rafael, CA

It is important that the internet remain open for all users. I live in a rural area and would be one of those affected by these changes because it would slow down my service considerably. My business and my farm depends on the internet. as many other business do, and should not be discriminated against just because I cannot afford to spend millions to lobby like the giants (At&T, Comcast, and Verizon) can.
—Amy Hollinger, New Madison, OH

my laptop is my main connection with the world. Corporate interests want to interfere with that connection. This would be a good time to remind you that you work for the people and not the communications industry.
—Tim Blaes, Hendersonville, NC

It' is the last place for the average citizen to have a voice.
—Moira Lourie, Kensington, CA

The current classification of ISPs is a historical mistake that was made before we knew what was going to happen with the Internet. We need to modernize the rules to be more closely aligned with reality. We can't give control of the Internet to corporations because time and again they have collectively demonstrated that they are incapable of anything other than making decisions based on short-term greed. Give them the Internet and it will cease to be any more meaningful than a tabloid newspaper.
—Brett Robert, Pompano Beach, FL

Net Neutrality is important because Internet is a free and open technology, and your proposed rules basically deny that, and are, thus, terrible.
—Gilberto Leon, ,

The crucial importance of Net Neutrality to our nation is obvious. Having to defend it is ridiculous, and shows how far from the path of fairness and justice we have strayed. Like the rest of us in this country, I want to send and receive the messages that I think are important. I don't want the likes of Comcast to decide which information goes through in a timely fashion, and which doesn't. You may as well decide that CEOs get to drink pure water, while the rest of us lap it out of foul ditches. Please use your expertise to reclassify ISPs, or the Net, in a manner that preserves true Net Neutrality.
—Margaret Nagel, Evanston, IL

Net neutrality is why the Internet works as well as it does. Taking that way means dismantling everything good the Internet has ever been used for. ISPs need to be classified as common carriers.
—Brian Edward Van Sickle, Hometown, IL

Please get rid of FCC rules and reclassify ISPs as common carriers! It's important to the people of this country, so please help us with Net Neutrality!!
—Belinda Kennington, Port Saint Joe, FL

Net neutrality guarantees the free distribution of content by everyone, not only the ones who pay the most for it. It is important that all have access to the same speed as anyone else as otherwise it will become a pay to play situation like it was in the recording industry a number of years ago. Sincerely, /Johan T. Lindgren
—Johan T. Lindgren, Brooklyn, NY

If this rule is approved it will be one of the worst things that has happened when it comes to equality, democracy, and access to information.
—Amelia Smith, Minneapolis, MN

As a rural Texan I have lived my whole life dealing with very limited choices and high cost for access to the internet and all other digital services. There is no competition and there never will be. Giving cable companies authority to charge additional fees while limiting access to content that competes with their own services will be devastating to my already limited choice as a consumer. Due to the single provider climate all over the United Stats outside the large cities, the only thing that makes sense is to declare these providers what they are. They are monopoly holding utilities with a captive audience. They have no competition by design. They make sure that the legislative and business climate remains that way through deals with other providers and lobbying. It is time to stand up for the consumer and do the right thing. For areas with one provider, the only protections we have lay in your hands. Declare internet providers as common carriers. Allow multiple companies to use the lines to provide service. I'm not asking for socialism here. I'm asking for capitalism. I'm asking for competition and choice.
—Jody Pelzel, Rockdale, TX

I work from home and require the Internet. Many small businesses and individuals depend upon the internet. This new ruling only helps big business who can afford to pay and ultimately hurts consumers who will end up bearing the cost. The only ones who benefit are the providers who already charge us consumers more than other countries. They are making huge profits and this is just another revenue stream that benefits only them at the expense of the general public.
—Barbara Pohl, Chicago, IL

My right to free access to information and features of ANY WEB SITE I CHOOSE and my PRIVACY IN DOING SO is my First Amendment right. The web providers like Verizon and AT&T just want to extort more money from web sites and users because of their privileged status as providers. THIS CANNOT BE ALLOWED TO STAND!!!!
—Mark W Pope, Houston, TX

I do not like th idea that large providers will get to interfere with my access on internet by slowing down speeds from sites I choose.
—Dr. Dr. Virginia Jones, Kalamazoo, MI

Reclassifying ISPs as common carriers is the ONLY acceptable option going forward. Period.
—Malia Harper, Santa Monica, CA

Net neutrality is vital to a forward moving nation. The movers and shakers of tomorrow should not be relegated to the slow lane simply because they don't have a corporate backer to pay the freight for quicker internet service. A local blogger should have the same access to the viewing public as one in the stable of a large media provider. Allowing a two tier system would create vast numbers of websites with pay-walls that deny access to the general public. This is a discriminatory practice similar to not allowing a shopper into the store unless they swipe the credit card in advance.
—Linda Knapp, Kokomo, IN

The current state of the neutral net is what allows small start ups to become big business. Many of the big sites today started as very small ventures and were able to prosper in the freedom of the internet. If the current rules are adopted, then this culture of freedom will be stifled by big companies deciding what can and cannot grow. Entrepreneurs will no longer have the freedom to grow and prosper. Please do not adopt the new rules. Classify ISPs as common carriers. Don't let your pocket book decide on the future of the internet.
—Chris Dungan, Edinburg, TX

I am on a fixed income and I cannot afford to pay additional cost to access the internet. The FCC should reclassify ISPs as common carriers.
—Kathryn Dalenberg, Valley Head, AL

Democracy is government BY the PEOPLE, FOR the PEOPLE, not for corporations, or only for the people that have money to give to influence votes. Keep the internet free!
—Heather Beaird, Chehalis, WA

Net Neutrality is important to me because whether rich or poor, everyone can access the same content on a level playing field. Don't discriminate.
—Rachel Voorhees, Lake in the Hills, IL

The internet gives all of us abilities to get knowledge and education for people like me who cannot afford education. Please dont take more money from us who barely can pay the bills. All our rights to freedom of the press and free education has been lost and this is just another way to make us pay for it. The internet means alot to us normal people, but with this proposal will only be for the people who can afford it. Simply put, its very unfair. Radio was never an issue in the airwaves, why is this any different?
—Beth Jones, Tucson, AZ

The internet is and should remain an open, democratic entity. Once there is a two-tiered system the majority of users will suffer, and wealthy corporations will rack up more profits from us. This is not what the internet was intended to be.
—George Hartman III, Louisville, CO

Reclassify ISPs as common carriers, please.
—Lowell Hart, Centennial, WY

I'm a partner in a small business that meets and works online -- but we're only getting started, and we can't survive in a money-take-all version of the Internet.
—Jennifer Schuller, College Station, TX

Because we ALL need truth and objectivity to prevail as well as freedom of expression!
—Monica, ,

Dont go through with this ... In this modern technological society internet is a very important thing , not only just looking up stuff but also lots of community's rely on your decision . This could probably mean the end of a lot of games that are now being massivly played online . For example , I am a league of Legends player , League of Legends is a game that relys VERY heavily on internet connection . If you have shitty internet connection you basicly cant play LOL properly . Now this would mean only people with enough money to buy the "internet upgrade" for lol would be able to play LOL . This would mean that people that dont really have that much money would have to give up a lot of fun things to do in their free time . Sorry for my bad englisch . -Thx for reading
—Ben ben, ,

We need to lesson our focus on increasing corporate greed! The Internet should be a place where all are treated equal, such as in a library as that is what the Internet is...the world's largest library. Many of us depend on a wide array of functions and sites in order to manage our daily affairs. Do the right thing and support the citizens rights to access information. Stop feeding the corporations, they're already too BIG!
—Michel Franc, Franklin, NC

I want a level field for the internet services I receive.
—Sharon M. Callahan, East Windsor, NJ

Dear FCC Chairman Wheeler: I am concerned about your proposed changes to the internet. I strongly hold, as do many of my colleagues, that an open, fair, inter net, operated on the basis of a utility, is essential to our democracy. Please, please, do not privatize the internet. Keep it neutral so that all citizens have an equal voice.
—Mychal Loving, Arlington, WA

The internet is a place for freedom of speech and a safe haven for many people to speak out on issues. MILLIONS of people NEED the internet to connect with like minded individuals around the world. I personally have terrible social anxiety and find it extremely difficult to talk openly about my problem, but the internet has put me in contact with countless others who share my plight. I too have many political and spiritual views that I feel the need to share, and if it wasn't for the internet I would probably be unable to do so because of my condition. The internet is my safe place and something that means so much to me that I don't know what I would do without it. I find so many new places online every week that are small start ups that are amazing, and with this proposed plan to change the internet would not have a chance to be there and offer what they do. Please keep REAL NET NEUTRALITY alive and give ever person a fair voice online. I beg of you to please not go forward with the plans you have in mind, it would take so much from so many people. THROW OUT YOUR RULES AND INSTEAD RECLASSIFY ISP'S AS COMMON CARRIERS!!!
—Patrick Robertson, ,

Net Neutrality needs to be done right -- with an absolute No Forms of Preference Allowed Ever rule in place -- because no matter how exceptionally noble Tom Wheeler might be, there will be future FCC chairmen, and it only takes one who dislikes regulation -- for example, anyone the Republicans would appoint -- to destroy Neutrality as a functional principle. Why is the principle important? To protect small businesses, for one thing: the extremely American tradition of working for yourself instead of being lost in a multinational getting orders from men who cut their checks in Switzerland or the Cayman Islands. To protect journalism, for another: often the best, most important reporting is done by small, unprofitable firms. To protect cussed American opinionatedness: the most interesting, informative blogs and special-interest magazines will never be able to outbid Time Warner to get their pages loaded. And, yes, to protect that more recent American tradition of staring at the television set: the end of Net Neutrality will punish the creators of expensive content (TV, movies) as their profits are held hostage by web carriers, until it's rarely worth creating expensive content anymore. I don't know if anyone working high in the FCC cares about small business or journalism or democracy. But I hope someone would miss their favorite TV shows -- maybe enough to do the right thing and classify ISPs as common carriers instead.
—Brian Block, Greensboro, NC

I am a small business owner here in Frankenmuth, MI. Even though we didn't have a lot of money, because of the nature of the internet, we were able to start our business and offer a superior business voice solution to other businesses and non-profits in our market that also saved them money. Even though we are small (just coming up on 100 business customers) we are growing because we offer a better product, superior local customer service, and better pricing. Our competition is ATT, Comcast, Verizon, and Charter. We represent a direct threat to their businesses, simply because we offer more value to our customer. If these companies provided better service at a better price, we wouldn't be in business. But this is how free markets do and should work. These rule changes proposed by the FCC give the keys of the kingdom to those who have the most to gain and lose. We pay for the bandwith access at your server locations, and our customers pay for bandwith access at their locations. But these rule changes would give ATT, Charter, Comcast, and others, the ability to slow down our service to our customers unless we pay a ransom fee to keep our streaming information flowing through their networks. And would they benefit if our service does not work well? YES, because they all make money off of their own voice services and lose revenues when a customer switches to my service. My business and thousands of business like mine will all be at the mercy of the billion dollar companies that can afford to lobby for these rule changes to protect their interests and sustain their antiquated business model. The internet has never had a fast lane and a slow lane, so why in the world would anyone want to change the internet as we know it when it has been the single largest driving force for innovation and economic growth in the United States and the world in the last 25 years.? Who has all to gain and all to lose?
—Ben Cable, Frankenmuth, MI

Please reclassify ISP's as common carriers. This is the only way to protect internet neutrality.
—Adam Ward Dimond, st. brieuc,

FREE INTERNET! FREE INFORMATION! DON'T SELL OUR RIGHT TO COMMUNICATE FREELY TO THE CORPORATIONS!
—Gonzalo de Zúñiga, ,

My internet provider is my main utility. It carries my VoIP traffic (voice / phone), it is essential, too many things can only be done practically now online. What's more there is no meaningful competition. I don't need an electricity company, I could get my electricity from solar, but I cannot deliver IP packets without an Internet Utililty - and that's what an ISP is, it is a utility. Otherwise, how come it can dig up the road, or dig up my garden, or use the public airwaves. It looks like a utility, it smells like a utility, it is a utility! Not classifying it as a utility is simply a lie.
—Mark Bartosik, Bay Shore, NY

the United States has already begun to shift from a Democratic Republic to a Corporate Oligarchy. Do not facilitate this shift by creating the "Internet Fast Lane" and destroying Net Neutrality.
—Mike Mulllins, denver, CO

I don't want someone monopolizing or putting a price on my right to informational freedom.
—A Folk, Arlington, VA

I want to be able to access whatever content I want delivered by whomever I want equally, not just the content delivered by those willing to pay more.
—da Roy, houston, TX

net neutrality is important cause who the hel is gonna pay for all that internet shit leave us alone go make money off of drug dealing or something smh
—Marisa Electra, Bronx, NY

The only people who benefit from destroying net neutrality are the ISPs, and they don't need any help making money. They're doing fine.
—Wheeler Pryor, Atlanta, GA

If it's not broke, don't fix it. The internet should be a free place for everyone and not subjected to corporate bullshit.
—Johnathan Woodall, Georgetown, IN

There is no reason that some providers should be able to choose to force me to pay more for whatever content I wish to view. The segregation proposed would only serve to pass on additional costs to the consumers who have no recourse but to pay.
—Christopher Morton, Natick, MA

Net neutrality is absolutely imperative to the American public. If we do not have it we are at the high probability risk of being subject to increasing rates and limited service due to the greed of the companies like Comcast and AT&T. ISPs are common carriers and should remains so ad infinitum.
—Barry Brukoff, SAUSALITO, CA

Comcast is an over reaching, annoying corporate monopoly. How can we keep saying we live in a free country when everything is being infringed or erroded by corporations?
—Zachary Yarosz, Baltimore, MD

Keep the internet OPEn And Free!!! Not Controlled By verizon, Attat, Tmobile!!!!! A Free Open Internet for all!!!!!!!NO Two tiered Internet!!!! NO Double Pricing for big tech companies!!!!! An Open and Fair Free Internet for all!!!! Follow the Consitution of the United States of America!!! This is NOT A Communist Country!!!!!! Free and Open Internet for All!!! I depend on Net Neutrality for work and other things!!! LIke Most People!!! Free and OPEN for all!!!! Lets Show the World what the U.S.A. Really MEANS!!!!!!!!!!!!!!!!!!!!!!!!! !!!!!!!!!!
—Joshua Heffron, NYC, NY

.
—John Henderson, Stillwater, OK

You don't need me to tell you why net neutrality is vital, not only to the future of the web, but to the future of civilization in general. Just Google it and you'll find thousands, if not millions of compelling arguments. But consider this, everything which the web has achieved in the 25 years since it's inception, everything that it has contributed towards economic and technological progress, social empowerment, the betterment of humanity, it has done because it was free and neutral.
—Rene Klinkhamer, ,

Two-Tiered Internet will not work for customers and needs to be stopped. As a customer, I already pay internet providers a hefty fee for the mediocre service I get. Internet service providers charge what they want because they can and have very little regulation controlling their actions. I have never had an internet service provider compete for my business, and as a customer I will not benefit from Tom Wheeler's plan for two-tiered Internet. Even if I paid more, I would only end up paying more for the same service I receive now and have my internet speed throttled down if I did not pay extra. Tom Wheeler's plan also allows for unchecked discrimination against what content can be posted online and who can post. This is not freedom, and it is not the Internet I want! Tell the FCC to throw out its rules and instead reclassify ISPs as common carriers. This is the ONLY way to protect real Net Neutrality.
—Brian J Lee, Beaumont,

I work from home and run 3 different businesses via the internet, I am a startup independent businessman and as such I require fairly-priced internet access so that I continue pursuing my dream of owning a business, essentially the American dream!
—Chance Unterseher, Seattle, WA

Open and available internet access is critical in today's modern era.
—Kelly Commons, Indianapolis, IN

The Internet by now being part of the Commons and paid for with block grant with tax payer funding is the property of the people. And should be Nationalized NOT Privatized. This can be accomplished by reclassifying the internet as a common carrier and correcting Mr Powells screw up the one thing Mr Wheeler is incapable of doing at this point in time is his job of protecting the peoples interest over third partied interloping parasites such as ATT,Verizon,Comcast and Time Warner to name a few..To Mr Wheeler if you find yourself unable to performing a simple reclassifying case them perhaps you should step down and put someone in place that can do the job.
—N Welch, Satellite Beach, FL

Reliable and unencumbered internet access is a civil right. There is no better way to allow people all over the world the opportunity to educate themselves than through the tools and guidance of others provided via the internet. Auctioning off internet bandwidth and, at the end of the day, access to the highest bidder will stifle the global economy and the development of young and old alike.
—Evan Walker, Chicago, IL

Don't hand over 1 more thing to the rich, leaving the rest of us behind
—Dennis Daley, Conshohocken, PA

I am a disabl
—James Mack, Binghamton, NY

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Linda Berton, Appleton, WI

Net Neutrality is one of the most important issues of our time. In an age where technological and internet advances are shaping the future of, not only our country, but the rest of the world, this issue has ramifications for all of us (the American People) than you may think or know. Your plan of creating a two-tiered lane that ISP's can charge companies and their customers for is not only the most ridiculous thing the FCC can do, it also will truly be the 'death' of the internet. To allow companies like Comcast and AT&T, who already have the worst reputations and service in any industry today, the ability to have even more control and charge even more to their customers is tantamount to shelving the United States as far as being at the forefront of innovation and being the leader of the free world. This will give notice to all other countries that businesses can control what they want, and it i the equivalent of a hostile takeover, in my opinion. I don't speak much on issues, but I felt compelled to voice my concerns on this one, because it affects me and all of my fellow citizens. This is our time to come together as brothers and sisters and say that big businesses do NOT have control over something that is supposed to be free and open like the internet. You, the FCC, have the power to make net neutrality a reality. As your plan goes forward, hopefully, just hopefully, you will have in mind the best intentions of the people you represent; us, the American people, and that being a country where net neutrality is a cornerstone of what it means to be free. I hope you do not let special interests determine the outcome of the most important issue of our time that will inevitably affect our futures 10, 20, and 50 years down the road. What you do today will affect us all in the future. Please, I beg of you, enact Net Neutrality and do NOT give Comcast and other ISP's the ability to regulate the internet and dictate our lives. Thank you for your time, Darrin T.
—Darrin Thompson, Clovis, CA

The Supreme Court’s ruling in McCutcheon v. FEC will allow enormous amounts of money to corrupt our politics and marginalize average Americans. Now more than ever, we need tough new anti-corruption reforms like those outlined in the American Anti-Corruption Act in order to ensure equal representation for every American. We, the people, should not have to buy access to our own government. If you won't make meaningful anti-corruption reform a priority, we will elect new leaders who will.
—Michael E Lewandowski, Scottsville, NY

We, the taxpayers, paid for the development of the internet. NO private corporation or entity should have ANY control over it. It has become a part of the fabric or modern day living and needs to be RECLASSIFIED as a COMMON CARRIER vehicle. The notion that reclassification would somehow stifle innovation is a flawed argument, as in reality it's just the opposite. The ISPs in this country are already charging us way too much for inferior service as it is.. Please RECLASSIFY!
—Joe Betesch, East Elmhurst, NY

Kenny Barnes
—Kenny Barnes, Glen Allen, VA

Are we going to have the best democracy money can buy?
—Sharon Moss, St. Louis, MO

While businesses serve an important role in our society, we must not forget that we the humans are most important. A nation founded upon equal rights and opportunities is a cherished gift and we should strive to do whatever possible to preserve that goal. Please do not commoditize the right to connect to the world on equal footing.
—Shawn Sonnema, Columbia Cross Roads, PA

The openness of the internet has fostered many small businesses, some of which have grown to be large businesses. Many small businesses would be unable to get started if Net Neutrality goes away.
—William D. Sturtz, Boulder, CO

AT&T, Comcast & Verizon have already established dangerous oligopolies through the FCC's inaction. Competition may exist the way the government defines it but at a local level it is a complete joke and now they want to further consolidate their power despite years of record profits. Defining ISPs as common carriers is the only way to fix the problem the FCC got us into.
—J Conrad Shelton Jr, Sammamish, WA

I am disgusted at how quickly the FCC decided to listen to a few oligarchs instead of the American people. Tom Wheeler should be ashamed. We will never forget what he has done.
—Eric Paul Jacobsen, West Saint Paul, MN

unfettered access to the internet should be a basic human right. Don't fetter access!
—Lindsay Chambers, Fayetteville, AR

Net Neutrality allows everyone to be one the same playing field. Please consider keeping the internet a fair place and make it so that major internet companies like Comcast and Time Warner Cable can't screw us over by making certain content cost more. Net neutrality allows innovation in the internet. New startups can all create content. They are only limited by their creativity. If net neutrality isn't maintained the odds could be stacked again these companies. The future of the internet is in your hands. Please listen to the people and understand why net neutrality is good for the people. If its overturned only Cable companies stand to benefit.
—Sam McLemore, Fayetteville, AR

Net Neutrality = Free Speech!
—Keisla Messenger, Edmond, OK

If we are to have true democracy we need free access to all information available.
—Dr John Hemp, Oxford,

Many consumers need affordable access to the internet in order to communicate both socially and professionally. I feel this proposed action could possibly destroy the availability of the internet to many current consumers.
—Burt Sparks, Danville, VA

This country is on a dangerous path, clearly being led by big business and corporations and the pursuit of their interests. The people of this country are awakening to this more and more every day. Their needs, their concerns, their voices, are not being heard. They are being backed into a corner by these corporations, and the civil unrest in this country is growing. I would suggest that if the powers that be want to maintain the illusion that this is a free country, and thereby retain a placated population, they make certain that corporations will not be allowed to rule over and dictate the availability of information that is, and should remain, free and open to the public via internet. I know that information is key and knowledge is power, so of course they'd want to take that away from us. But the more they continue to take from us and the more they push us into a corner, the more desperate we will become, and good things do not come from a desperate population united in desire for retribution. Learn to know when enough is enough. Listen to the people. Failure to protect the open internet from corporate rule, is failure to protect the foundation of this country. Fail to protect the foundation, and this country will crumble. It may start at the bottom with the working class, but eventually, when the backs upon which the high class ride give out, the corporate elite, that eye at the top of the pyramid, will topple down with the rest of us, until there is nothing left but rubble and we're all standing on an equal ground of desolation. Protect the foundation. Protect the open internet.
—Louis Russell, Salem, OR

Government exists to represent the people's will. It is time for congress to do something about Net Neutrality.
—Robert Avila, Trabuco Canyon, CA

The internet is one of the only places with true equality; do not change that!
—John Anderson, florissant, MO

the internet should be a place of free learning
—ben Livingston, Glasgow, Scotland,

Discrimination on a financial basis is already rampant in our society - the internet has long been one of the last bastions of theoretical, if not real, equality: to remove or facilitate the removal of restrictions meant to ensure that equality is wrong. Reclassification and the end of Net Neutrality means that free speech will be severely curtailed at the whim of any number of large corporations, several of which are already close to monopolizing their chosen markets. To think otherwise, or to say that there is only a possibility of that attack on one of our basic rights, is to ignore all that is known of human nature and corporate drive. At this time, there is no incentive for an ISP to NOT limit accessibility to anyone they deem unsuitable [which will, fairly likely, include anything they deem competition or threatening to their companies] if Net Neutrality ends, and every reason for them to abuse the license to discriminate that will be granted to them. No promise on any company's behalf to abstain from these practices can be trusted: history has always and will continue to prove that companies will pay lip service to any number of policies to get what they want and then completely ignore the promises they have made, sometimes even if breaking those promises breaks the law. There is no discernible benefit to the end of Net Neutrality for the average American, the low-income American, or, indeed, any American except for the American Corporation, specifically the ISPs that will be able to charge premiums on the access of information [which is ludicrous in and of itself] and the companies that will be able to pay for that "premium" service. For a society that now runs extensively on the internet, it is unthinkable to condone this sort of basic unfairness.
—Karin Chang, Spring, TX

Do not start the ball rolling for making most of us only be able to get second class internet
—Jim Simons, Austin, TX

Net Neutrality is the principal upon which the internet was created. The principle of the equality of data has been key to the internet's development. If there's no net neutrality, the internet as we know it no longer exists.
—Jonathan Farbowitz, Philadelphia, PA

We're getting to be a two-tiered society where the wealthy and corporations play by a separate set of rules. Don't do that to the internet. Keep the playing field level for the up-and-comers.
—jeffery dorer, Los Angeles, CA

I don't like to think about the world where only the rich are equal.
—Robert O'Connor, Pleasant Gap, PA

Where is equality now? Where is the American dream, the level playing field, the land of opportunity? Land of unfair advantage and hypocrisy I fear.
—Siri M Margerin, San Francisco, CA

This is ridiculous and I will vote against ANYONE that puts this into power. There is NO NEED for this besides greed and we are TIRED of greedy rich corporations spoiling America and the American dream for others. THE NET SHOULD REMAIN OPEN AND FREE. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Alyssa Meiszinger, Sacramento, CA

As a college student, it's not just about social media. I need net neutrality so that I can properly research for my classes. I can't afford "fast lane" internet, or to waste time waiting for pages to load. Professors are giving students less and less time for research because it's easier to find good information with the internet, but if net neutrality is eliminated, you can kiss that information goodbye. Less material will be covered in classes, reducing the value of college educations. The world needs net neutrality.
—Alison McCauley, Normal, IL

Please reclassify ISPs as common carriers. These proposed rules do not give real net neutrality. But reclassifing ISPs as common carriers will ensure that these large companies do not take advantage of startups and smaller businesses. Capitalism requires competition and these new rules will allow corporations to double dip on toll roads that they've already been given monopolistic control over.
—Alan Byrn, Kearney, NE

Please don't destroy the promise of the Internet due to the greed of a few. Your actions will affect generations.
—John Mathieu, Union City, CA

I run a small business on the web to reach customers around the world. Net neutrality, where I have equal access with "big communications companies" is the only way I will survive.
—Margie M Mulligan Ph.D., Hemet, CA

Access to information is absolutely vital to my job. I'm a freelance writer who has forged her own career in a struggling economy. My success has been largely depending on access to reliable research online. Without equal access to the sources I need, the quality of my work and my income will be affected. More importantly, however, I believe that the proposed Internet rules would exacerbate a truly troubling problem our country is facing: the widening gap between the poor and the rich. The internet provides incredible opportunities for those in poverty to find the information and resources they need to better their lives. Without equal access, it's these individuals who would be hurt the most, weakening our ability to grow and succeed as a nation.
—Ashley Henshaw, Chicago, IL

The majority of consumers already pay enough. The Comcast/Time Warner merger is probably going to increase the charges and once you give them the go ahead to charge more for faster lanes they will charge even more. I should not have to pay extra for services I already pay for (Netflix and broadband).
—Jenni Burgmeier, New Berlin, WI

- IF IT WORKS YOU DONT MESS WITH IT .AND IT WORKS NOW AND AT A PRICE WE CAN AFFORD UNLESS YOU LET THIS DEAL GO DOWN .THEN IT WILL BE SLOWER AND MORE EXPENSIVE
—Michael W Folk, pahrump, NV

The internet has become such a vital part of daily life that it should be a highly regulated utility, and not merely another cash cow for corporations. Reclassify ISPs as common carriers.
—Leonard Tremmel, San Francisco, CA

A pay-for-priority Internet is unacceptable! Please do everything in your power to keep the Internet free and open!
—Chas Garrick Rice, Garden City, KS

High speed internet is an invaluable resource for the world. It essentially puts the knowledge of mankind at the fingertips of those who use it. Tampering with it only retards the flow of knowledge, innovation, and growth.
—Deborah A Mathieu, Union City, CA

The internet should not become a privilege for the privileged, like our justice system has. Do the right thing and keep the internet neutral, no matter what it takes.
—George Stritter, Newton, NJ

Losing net neutrality would be one more step in dividing our society into those who have in abundance and those who have to make due with the crumbs. It would make the road to entrepreneurial success that much steeper to climb for the little guys who rely on the internet to get their product/service noticed.
—Patricia S Snowden, Bethesda, MD

Because to destroy the Internet would be monstrous.
—Jonas Lowery, Troy, NY

Net Neutrality is very important to me because I want everyone to have the same possibilities - regarding usage of the Internet for private persons and regarding small and big service providers. If Net Neutrality is abolished, small startups will not be able to success because they cannot pay the fees for faster lanes.
—Matthias Jobst, ,

Founding Principle #1 of the United States of America - EQUAL REPRESENTATION. Amendment #1 to the Constitution of the United States of America - Freedom of Speech. Tell me Mr. Wheeler how your current plan supports and does not violate the principles of Equal Representation and Freedom of Speech via the Internet. I, as a citizen should not have to pay any extra than anybody else in order to broadcast my views on the Internet. It needs to remain the level playing field that it is now, with EVERYONE abiding by the same minimal fees necessary to be online. I do NOT want my internet DOMINATED by corporate America. I do NOT want my internet to function to the advantage of the power-mongering, wealthy elite. They have PLENTY of advantages AS IT IS!!! What are we doing cowering and catering to THEM?!?!?!?! Their interests herein are NOT in the best interest of Americans. This is their own SELF-CENTERED, SELFISH, SELF-INTERESTS here at work. Where is their high-minded spirit of public service here? How about some civic-mindedness here! Put these smug, pandering, glad-handing, tightfisted, tightwads in their place and make them compete on the same level playing field with the rest of us. Your best option would seem quite obvious in reclassifying all ISPs as common carriers. I can't see any sense in doing otherwise. Let's take a stand on principle - indeed on the founding principle of our Country - and stand tall and fearlessly and unapologetic-ally so. I am tired of seeing our public officials cow-tow to the wining demands of the "poor, downtrodden, abused" wealthy elite of this country. Give us a break from their smothering, ever-present influence and presence in all of our everyday affairs! Please! I much more prefer the opportunity for easy and open exchange with the average people of my own kind. I don't want for this to be relegated to some kind of second tier level of opportunity. Let the wealthy whine! So what! They are NOT being discriminated against! They have NO reason for needing SPECIAL PRIVILEGES on the Internet. Tell them to "Buck up." This is America. Land of freedom and equality. If they don't like it, LEAVE.
—Craig Schuster, Holland, OH

You can't allow these companies to control the net! Don't you have any morals or conscience? You obviously do not care about individuals by even considering this type of legislation. YOU CAN'T LET THESE COMPANIES CONTROL OR INFLUENCE THE NET. SHAME ON YOU FOR EVEN CONSIDERING IT. JUST HOW MUCH ARE THEY CONTRIBUTING TO YOU? DO EVEN HAVE A MORALS OR A CONSCIENCE?
—Bruce Crawford, Louisville, KY

The internet allows the spread of easily accessible knowledge; these proposed rules would severely diminish this spread of knowledge and make information inaccessible to many people. Keep our citizens informed and able to choose where they receive their information.
—Justin Covino, Sonora, CA

The advent of the internet had been the single greatest advancement to humanity since the discovery of antiseptics. Never before has the sharing of ideas and information been so free and instant. To hand control of such a miraculous invention over to corporate interests is tantamount to plunging us back into the dark ages. Please not allow corporations to dictate the progress and sharing of thoughts and ideas. The internet is more important than any of us and only our children will benefit from the enhancements to society that it will bring.
—John R Perry III, Roanoke, VA

I live in a rural area where internet service is very poor and expensive. As a senior citizen with low income, I can't afford Cable TV. The internet it all I have and your plan to allow big corporations to gobble it up will drastically affect me and others of low income. Lyle Waddill
—Lyle Waddill, Mason, TX

Free Internet= Free Speech
—Bill G Koch, Onalaska, WI

the current proposed rulings allow for big businesses to choke out small startups. I stand against this, and wish for the current laws of net neutrality to remain.
—Nathan Whitby, Beaverton, OR

The Internet is at the heart of Free Speech today. Pay to Play gives the loudest voice to those with the most money. I want to hear everyone's voices.
—Alexandra Hopkins, La Crescenta, CA

FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—David Janssen, Green Bay, WI

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Wade Shaw, Austin, TX

As an independent business woman, I depend on a reliable means of communication and networking. The Internet, as the only one of its type (which is why it's supposed to be capitalized according to grammar!) is the most certain and most efficient means of keeping my businesses alive. Surely helping our economy prosper would be a good thing. Thank you. Have a lovely day! Jane
—Jane Simpson, Colorado Springs, CO

There shouldn't be any fast lanes for people who have the money..it should be a level playing field for all. I don't want to have the best internet that money can buy..I want the same for everyone. No exclusive deals for big companies. These proposed rules will sell the internet to the ones who have the most money and will leave out the little guy. Not a good idea.
—Christine Dabney, Albuquerque, NM

I was part of the first generation to grow up with the Internet, and I really want to share that with my children. I love the freedom that we have on the internet - there is no censorship, bias towards or against any ideas or beliefs and we have so much information at our fingertips that we just didn't have until a few decades ago. I think that what we have in the Western world is wonderful. Please don't take that from me!
—George Millman, Colchester,

Dear Federal Communications Commission: FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Ethan B., Wilmington, DE

Dear Mr. Wheeler, I am disheartened by your current proposal that would create a tiered Internet, favor other traffic before mine or even yours. Can you imagine, in an emergency, a message that could have saved lives, was delayed because movie streaming traffic took priority? Because Netflix has to pay for priority? Your current proposal threatens Net Neutrality and I can't support it. I urge you to reclassify ISPs as common carriers, allowing stricter regulation, which would protect the consumer and keep the Internet open, treating all traffic the same. Thanks for your time, -Jibran Bisharat
—Jibran Bisharat, Seattle, WA

Net Neutrality guarantees a free and open internet. This is how the internet began, and is the reason it has been such a vital resource individually and collectively. It must remain democratic and open.
—Greg Merens, Chesterfield, NH

Telephones are supposed to work when the power is out, and all else fails. It is the common carrier for communications. The internet now functions like this (for all but power failures.) The Internet should be classified as a COMMON CARRIER. Like sidewalks and roads.
—Susan Lehrer, city, WA

The internet has become a necessity in our world. It is no longer a luxury. Therefore, it is essential this is understood as something necessary for all. Net Neutrality is a must! It makes no sense to give fast service only to those who pay whatever these companies dictate. We need forward-thinking people to make common sense decisions on this to keep the Net Neutral.
—Cindy Toraya, Tacoma, WA

Big corporations have too much power as it is, at least try to not appear to be putting your thumb on the scale in their favor !
—Timothy De Martin, Lindenhurst, NY

A free and open internet is vital in a democracy, for ecommerce, innovation and new ideas. Do not stifle freedom!
—Juan Camacho, Buena Park, CA

Monopoly is illegal. Fair playing field is vital.
—Natalya Panteleyeva, Englewood, CO

FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—M O'Neill, Herndon, VA

Elimination of net neutrality will concentrate power in the hands of the already over powerful, unregulated telecommunication giants, disadvantaging small companies and creating a lower class of individual users. Loss of net neutrality will further erode and threaten American democracy.
—George L Bickel III, Lincolndale, NY

This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Tupefaavae Auelua, Victorville, CA

We (Americans) invented the internet. We need to innovate OUR creation and be the worlds most innovative country when it comes to the internet. This is going to stop if the Telecoms get their way.
—Hideki Yamashita, San Francisco, CA

Because monopolies and control taking over consumer usage of everything is getting way far out of hand, only for the benefit of the wealthy. Time to start caring about the regular average citizen again; you know, the majority!
—Cheryl Lagow, Fort Worth, TX

Freedom as defined by Google: free·dom ˈ frēdəm noun 1. the power or right to act, speak, or think as one wants without hindrance or restraint. "we do have some freedom of choice" 2. absence of subjection to foreign domination or despotic government. "he was a champion of Irish freedom" How much Freedom is enough? Should not we all be free to sale (on the internet) in an open playing field? When would the line be drawn on who can qualify to ride the "Fast Lane"? If we were all born equal (so the saying goes), why should the internet follow a different standard and make some companies inferior from conception? A level playing field should remain the standard instead of regulations meant to only benefit one over another. GIVE US NET NEUTRALITY OR GIVE US DEATH!
—Aaron Cortez, Harlingen, TX

It's really very simple. The proposed rules put more power into the hands of the few. If approved, they would not only hasten the end of Net Neutrality, they would hasten the end of democracy. ISPs must be reclassified as common carriers for the sake of our democracy..
—Barbara J. Jacobs, Satellite Beach, FL

You would be taking away my way to socialize, as I can not afford to pay.
—Marion Cavanagh, Cortez, FL

Without Net Neutrality, free and open source software providers would be at a severe financial disadvantage against their commercial counterparts. Historically, software provided under a GPL-like license had inspired innovation and stoked competition in the software economy.
—Mark Bentley, Birmingham, AL

Open communication is essential in a democracy
—Ms. Anne Anne Bassett, Jerome, AZ

Because I can't afford & refuse to pay extra to view movies or play games online just because their located at higher traffic sites.
—Wesley Atkinson, Dixon, CA

I believe that it is crucial for the function of our society to allow net neutrality to function. Internet serves the people and helps spread information easily for EVERYONE. Destroying net neutrality would also destroy perhaps one of the most important mediums that serve democracy in our country. It it not the right of ISPs to dictate who we should access and who we should not; because essentially that is what they do. This will gain them millions more and at what cost for the people?
—Melissa Zapata, Gainesville, FL

ISP's ARE common carriers, as internet access has become a requirement for modern work and play. Have you ever been in an office when the internet is down?
—Sylvan Thompson, Portland, OR

Do NOT limit high-speed internet to the wealthy. The internet should be considered a PUBLIC utility.
—Matthew Henson, North Hollywood, CA

AFTER DECADES IN A HIGH-PAYING CAREER, I AM ON A FIXED INCOME. WHO IS THE IDIOT WHO THINKS I CAN AFFORD TO PAY MORE FOR WEB ACCESS NOW THAT I AM NO LONGER WORKING, BUT STILL NEED TO CONNECT?????????????????????? ??????????
—S K Davis, Bristol, CT

An open internet supports democracy, equality, and the first amendment. I am more interested in hose concepts than in corporations making bigger profits. And I vote.
—Jennifer, Sheridan, WY

It can be agreed upon that connection is a basic human need. And in our society today, the Internet is what facilitates a widespread sense of connection for most people. It connects us to so many things, but most importantly it connects us to each other. No matter who you are or where you come from, you belong here, because everyone belongs here. You can have a terrible day and then go online and find a creation that makes you laugh and smile. You can feel all alone, like nobody will ever understand you, and gain encouragement from people who once felt exactly as you do now. You can be a wildly curious person with an insatiable hunger for knowledge and because of the Internet, you can access high-quality educational material for free. Inspiration, connection, education: do some humans deserve a 'better' or 'faster' level of access to these things? And if so, how is that to be judged? And what are you telling people by limiting their access? You are telling them that they are less worthy of laughing, of being comforted, of learning, of belonging. The Internet is messy, but it is an incredibly beautiful thing. It is a special thing. It is for all of us. If you try to clean it up, compartmentalize it, control it, or limit access to it, it will lose the things that make it beautiful. You will limit its potential, and in so doing, you will be limiting the potential of many of its users. What happens when you tell some people that they are less deserving of entertainment, inspiration, encouragement, enlightenment, belonging? What happens when citizens of a society systematically lose their empathy for one another? It is the same question. What you are proposing is going to bring us much closer to finding out the answer to that question. It is going to bring us closer to living it. Everyday, people work diligently to create Internet based education-, entertainment-, and connection-related opportunities that are open to all. To all. Show me a human who believes that someone with more money is inherently more deserving of connection, and I will show you someone who is very confused. Show me a human who believes that and is also in a position of influence and power, and I will show you a person who is not only very confused, but also incredibly dangerous. Net Neutrality is priceless, and the loss incurred by its potential collapse is unquantifiable. If Net Neutrality is ended, those responsible will be remembered forever as conscienceless and inhuman, not only for ruthlessly destroying such a priceless means of human connection, but for doing so in the face of this vocal and desperate protest. End Net Neutrality, and you will be unforgivable.
—Ria W, Chicago, IL

Equal access for all, not higher profits for some.
—Joseph A Crawford, Medford, OR

What happening to the land of the FREE?!?
—Esti Galan, north hills, CA

Net Neutrality is important to me in which I'm an intrenet user.
—Richard Beaulieu, Hollywood, FL

Not having net neutrality is an equivalent to controlling what books a person can read, censoring what information a person is allowed to have, and a caste system as to what people are allowed to have. This is almost communism. You should be ashamed of yourselves.
—Dawn Davis, Sylmar, CA

We live in the Information Age now. Internet is our bread & butter, a utility like electricity, water, and natural gas. And like a utility, it needs to be available whenever it is needed and wanted. Allowing ISPs to pay for special treatment doesn't let that happen. Imagine if your local power plant decided to provide more electricity to your lights than to your television or toaster. We would have a very frustrating mess. Please try to understand. Thank you for listening.
—Andrewdsix@yahoocom, Tucson, AZ

The internet is a public utility and should be operated for the public.
—Margaret Goodman, Glen Mills, PA

Net Neutrality should be the same for poor as well as the rich.
—Garry Scherer, lapel, IN

As far as I can tell, the only benefit of this deal is to allow a few large companies to make even more money than they do already. The cost of these new rules will be born primarily by people like me. The internet has become a basic part of our everyday infrastructure, and should be treated as such. Today, the speed of my connection is far behind most other modern developed countries (and some that are not), yet I pay far more for it. Please classify ISP's as common carriers. Please stick up for every day people who rely on open access to all content providers. Please.
—Jonathan Barley, ASHEVILLE, NC

I work from home via the Internet. Raising the cost and/or slowing down the speed out of your greed will put folks like me into a financial crisis! PLEASE DEFEND NET NEUTRALITY!!!
—Brad Stanfield, North Hollywood, CA

I use the internet every day at work and at home and like millions across the globe cherish its openness. Please don't take this away.
—Chris Toomey, Cupertino, CA

The proposed rules look like a way for ISPs to get more money, set rules that will affect the shape of what is developed on the internet, and do all of these things with no guarantees that consumers or the broadband economy get anything in return. I don’t find that reasonable at all.
—Kenneth Graves, Largo, FL

Given that these carriers have a virtual monopoly to provide internet service to our homes, this ruling will stifle innovation by ensuring that small start-ups and other less well funded could not pay the additional fees to get equal access to consumers. Why is it that Internet access in the US is at least an order of magnitude more than in other countries? It is time for the FCC to look out for the citizens and stop pandering to big business.
—David Francis, laurel, MD

Keep the Net FREE !
—Ivan Sizemore, bartlett, IL

As a senior citizen, the Internet is my link with the world and especially family. I would not be able to afford increased rates and might lose my access to so much I depend on.
—Beth Grendahl, Chetek, WI

I don't want to lose websites or internet services that will have to close down just because they don't change their business plans and won't be able to compete with big corporations' websites or internet services any more!
—Dr. Alexander Henrich, Hamburg, VA

The proposed rules are completely unfair and will only serve to increase income inequality. Do the right thing and reclassify ISPs as common carriers!
—Ryan Heichel, Cincinnati, OH

Net Neutrality is vital for democracy, freedom of speech and access to information.
—Carolina Salinas, Miami Beach, FL

A free and open internet is the single greatest technology of our time, and control should not be at the mercy of corporations. A free and open internet stimulates ISP competition. A free and open internet helps prevent unfair pricing practices. A free and open internet promotes innovation. A free and open internet promotes the spread of ideas. A free and open internet drives entrepreneurship. A free and open internet protects freedom of speech
—Bradley Bleich, Cape Coral, FL

It's bad policy.
—Ruth Quartuccio, Columbus, NJ

This plan is bringing us backwards in terms of technological development! We need to move forward, and this is the exact opposite way of doing it! The Internet is about the people, NOT the corporations!
—Christian Champagne, Ottawa,

I use the internet everyday and it is vital to my everyday life. I need a fast and reliable connection and cannot afford to pay extra for it. My wife and I both work and can barely afford to pay all of our bills. This new proposal would only put a bigger strain on our financial situation. Thank you for hearing my concerns.
—Zachary Nagy, Royersford, PA

Internet is for everyone equally!!!
—Paula Child, Salt Lake City, UT

If you would just reclassify the internet as a utility--which it is, as much as electricity is a utility--we wouldn't be having this discussion!
—Penny Derleth, Deer Park, WA

I am disabled and on a fixed income. My choices for internet service are already limited and to expensive. I feel that internet service providers should be regulated just like the telephone giants.
—Clark C Cline, BLAIRSVILLE, PA

This decision does not benefit the consumer. Its simply a money grab and a way to control innovation.
—Jarrod Lewis, Glenside, PA

I believe Neutrality is very important because if the changes that you are trying to make happen the ramifications will be great. For instance, many families only have Netflix because they cannot afford cable, so then you will have a lot less consumers. That may lead to another recession. Please leave the internet the way it is. People don't only use videos for entertainment purposes; it is used for educational purposes too.
—Jill Perez, Redlands, CA

An open and free internet is important for the future. We built the infrastructure through our tax dollars, and now you (FCC) want to hand over the reigns of it to proven untrustworthy corporations.
—Sean P Maguire, Highland Park, NJ

Education should be free all over the world. Easy and cheap access to the Internet is very important for gaining information and finding answers about matters we are interested in. Making that resource difficult and expensive for access would close the door of knowledge for many poor people and cease their chance for better life.
—Blagovesta Tchobankova, Sofia,

The internet is supposed to an open and easily accessible to everybody. Not just those who have more money. Don't turn the internet into another way for greedy CEO's to line their pockets by killing net neutrality.
—Will Arnold, lombard, IL

I am sick and tired of my government kowtowing to big corporations like Comcast and other internet providers. Our government is supposed to be for the people, and I mean real, living, breathing people - human beings - NOT corporations. In order to preserve true freedom on the Internet, it is necessary for the FCC to retract its proposed rules and to protect true net neutrality.
—Shannon Borthwick, Winthrop, MA

I believe in freedom of expression.
—Maria Valdemi, Stony Point, NY

After a fashion it is already taking place with throttling and Bandwidth access. I think these have given the ISP's consumer control like we never have seen. The airwaves are public and what is transmitted thru them should be public also. If that is not a feasible model then Carrier Neutral should hold water. Not more of the haves and have nots..... Net Neutrality seems a fair and decent plan for everyone.
—Devlin English, floral city, FL

I lived in China and abroad in other countries. I experienced internet throttling of speed and it's just plain communistic. Nuff Said. You support it- you support a communist backed platform. DONT SUPPORT a two tier system. You are limiting freedom by doing so.
—Marilyn Brier, Redondo beach, CA

Net neutrality is the only freedom that is left to everyone. It's the start of the redemption of humanity. Save it please.
—Steven, Gent,

There should be progress made towards a better more free and open internet not the opposite. It loses its purpose the more it is modified to benefit only big corporations and america will take one more step towards becoming a fascist state
—Nicholas Tocco, Columbia, MD

ISP's should be common carriers: free and equal access to the internet is vital to all people.
—David Ziegler, Chicago, IL

The internet has become necessary for many people. Work, play, education, government all now have important elements tied directly to ability to have free access to the internet. This is no longer a "like to have" thing, but is a necessary service which either requires tighter regulation, or a wider breadth of choices from which I can make my own educated choice about to who to give my money to fir service. Unfortunately, currently there are very few if any areas of this country where I have even 2 choices for internet and most include only 1.
—Joshua Kurtz, Livermore, CA

I feel we should Not Have to pay for high speed any more then we are already
—Brandon Wilson, San Diego, CA

Don't hinder competition.
—Roger N. Chellew, Clayton, NC

Censura es fascismo
—Merce Escayola Cabrejas, Barcelona, Spain,

So much of the innovation since the invention of the internet has depended upon its free and open use. Because innovation typically stems from small to medium sized companies, creating a two tiered system would dramatically slow down that innovation. It cannot be enacted.
—Patrick Russell, San Francisco, CA

The internet needs to be a level playing field for everyone and NOT just big business. Everyone should have the same fairness and usage. Free internet is a valuable resource for everyone and not just the few.
—Evalyn Pokorny, Hazelhurst, WI

Keeping the internet open is one of the most important things we can do this generation. It is my educated opinion that allowing major cable companies to give preferred access to specific websites that can afford to pay for a 'high-speed' information path will let the big companies further harm any competition that they have currently. It would also give major cable companies the ability to simply silence and censor the internet to their own liking making access to some websites all but impossible if they refuse to pay for access to the separate access path.
—Leif Lann, Detroit, AL

To whom it may concern, I am a seventeen year old boy from Massachusetts. I use the internet frequently like many my age, and I have met, discussed, and collaborated with many people I have never met in real life, only over the internet. This new fast lane proposal by cable companies is disgusting. The fact that you allow the rich to control everything in our lives is ridiculous. For once, think about the majority of the people who use the internet. We aren't all rich CEO's with millions to spend on something as ridiculous as a "fast lane". The internet is supposed to be something open, and free, and somewhere somebody can find a haven of people to talk to. I know that when I was younger I used to get bullied quite frequently, and I would turn to the internet for friends. Those friends quite literally saved my life. Please do not let net neutrality die.
—Adam Louis Rioux, Worthington, MA

I don't make alot of money. I also attend school online and most of the applications used by my college require an internet speed that moves faster than a snail. Net Neutrality needs to be protected.
—Santina Wood, Woodruff, SC

ABSOLUTE NEUTRALITY IS TO STAY
—Gennady Shvartser, brooklyn, NY

The Internet is the only outlet the average citizen has to express their concerns and ideas. Take that away, we'll be subject to misinformation and lies, don't let that happen.
—George Edward Spillers, The Villages, FL

This is our best tool for freedom of speech. If we can not hold our government and others accountable for their actions and shortcoming then there will be no trace of democracy at all. These outrageous restrictions being proposed are unacceptable!
—Jenna Michelle Kohler, Rochelle, IL

The traditional "land line" of communication, if you will, has for all intents and purposes been replaced by the internet. For this reason alone, not to mention the fact that telcos and cable companies alike provide internet connectivity, the only viable option is to reclassify ISPs as common carriers. The internet has flourished until now. it must be allowed to continue to flourish by not creating a two-tiered structure.
—Tony Starr, Kansas City, MO

Keeping the Internet available to all classes is good for the economy, from top to bottom.
—Linda Klein, Forest Knolls, CA

It's bad enough that we pay outrageous prices for cable and internet, and now you want to charge even more? This is just one reason our economy is in the toilet, because the poor can barely afford to feed themselves and the obnoxiously rich just want more and more money that they could never spend in a lifetime
—Charlene, Springfield, PA

I don't like the fact that I pay a monthly cable bill to a real big ISP and some of the sites that I use may be restricted or forced to pay premium fees to give me the same speedy service that I have always enjoyed. It's not fair and I'm looking to change providers since I found out that my ISP is involved in this.
—Vic Sinclair, Atlanta, GA

We should not have different internet access for those with money and those without.
—Bonnie N Wong, SAN JOSE, CA

Most of American's jobs are from small businesses. Most small businesses get much of their revenue from websites. If the FCC makes a faster lane for big companies only, you will be cutting off revenue from small businesses. This could mean putting them out of business, creating more umemployed people which results in less disposible income, which then results in the average American not being able to afford even the goods and services of those big businesses, which will make them lose money (with their greedy selves). Keep the internet neutral and prevent more obstacles to the circulation of commerce.
—Anita Tsalagi Asha, West Palm Beach, FL

Reclassify ISPs as common carriers. This is the only way to maintain a free and open internet which will allow for innovation and growth.
—Ms. S Dwyer, Granger, IN

I don't know about you, but I really do not want a pay-per-view internet... Honestly; I don't see any benefit aside from greed coming from something like this. They'll run it like the mob runs the underground. Can't pay the fees? Too bad. I strongly stand against this for many reasons-- one being that it's unfair to those of us who pay 70-100 dollars a month to pay and maintain their connection. In these times I don't think we need to be taxed and given fees and have what we view censored at every little turn. Hardly anyone has the money to maintain a decent life style, this will not help. I'm pretty sure if we need the internet untouched for a number of reasons these days: for jobs, job hunting, maintaining businesses both corporate and independent and maintaining communication for when a phone nor letter will suffice. It's been like this almost every step of the way for the past few years... some officials are trying to get a strangle hold on the internet. It's vexing. It's clear that no one wants these influences -- yet they still keep coming. Please reconsider this, for the sake of Net Neutrality.
—Ashley Elizabeth redfield, Pickerington, OH

Net Neutrality is the backbone of democracy, the great equalizer that allows for all people across the globe to be treated equally without the usual disparities. I demand that you keep the Internet free and open to all and DO NOT go ahead with the proposed rules. Instead, reclassify ISPs as common carriers, as they should be.
—Ms. Bethlyn Houlihan, Maynard, MA

The internet is as revolutionary as it is because of the astounding speeds it lets the world connect at. This connection has changed elections, stopped wars, saved lives, and to tell people they don't deserve this gift simply to make the rich richer is an abomination
—Linden, Cresskill, NJ

I do not want the flow of information dictated by cooperate wealth, the neutrality of the web is what makes it a truly free market. If the wealthy can influence this then we no longer have a marketplace where merit is the ultimate decider of success.
—Frank Travis Silveira, Reno, NV

stop discrimination against those who can not pay more for fast internet
—Rachel Bliss, Flagstaff, AZ

The internet is the lifeline for many seniors. Without it these seniors would be iceolated.
—Enid Cox, Vancouver, WA

My small business depends on this. Don't keep screwing the little guy.
—Doug Dilling, Indianapolis, IN

To Whom It May Concern, I am very much against the proposed changes to "Net Neutrality". These changes are anything but neutral by prioritizing money over everything else and would cause tremendous harm by making the internet an inherently unbalanced medium. This terrible idea will stifle innovation by imposing extra costs on emerging companies and technologies. It will also cost consumers and end users more as the huge access providers would have every reason to define anything they wish as a premium service and charge more for it. Finally, such a change goes against not only everything the Internet has been about since it came of age in the 90's, it goes against some bedrock notions of fairness, freedom, and what this country stands for. Keep the internet free, fair, and truly neutral. P.S. It is my hope that President Obama appoint a new Chairman and that Wheeler takes the hint and resigns rather than accept demotion. I'm sure he'll slink off back to his luxurious lobbying hole to ply his former, putrid trade.
—Tim, Minneapolis, MN

The United States of America was founded as a democracy, not an oligarchy catering to the wealthy. The giant telecoms, AT&T, Comcast, Verizon, already make incredible profits, and just how much more income are CEOs to make before it's unconscionable? When is enough enough with respect to corporate power and profits? To be informed and to participate in what is supposed to be a democracy, I and every U.S. citizen deserve equal access to the Internet and that mean upholding Net Neutrality. No U.S. citizen should have to take a back seat to the rich and powerful when it comes to having equal access to the Internet. Uphold Net Neutrality and reclassify ISPs as "Common Carriers". Thank you.
—Ms. Maureen A. Griswold, San Jose, CA

I really couldn't afford to pay extra for faster connections. I'm guessing not many people could.
—Robin Patten, Oklahoma City, OK

The internet should be considered a public good and everyone should have the same access regardless of ability to pay.
—Mr. Jonathan Schill, Kirkland, WA

ISPs need to be classified as common carriers because they are.
—Garth Molyneux, Carrboro, NC

Net neutrality is important to me because it is a international forum for freedom of speech. Without net neutrality, there would be very few outlets left to the global community free from discrimination. The loss would create censorship which would limit the effectiveness and reach of multimedia communications, and hinder creativity.
—Leah Feltner, Phenix City, AL

If you dumb asses pass this law taxes will have to go up to pay for schools and because some schools wont be able to afford it so the education levels of schools will decrease, not to mention the affect on highly trafficked sites like youtube and facebook will die out due to the fact people wont be able to afford getting on these websites and many stocks will drop and die affecting the stock market for many stockholders. With that all aside you will piss off millions for literally no reason to simply line the pockets of greedy people who already have millions of dollars. So if you would kindly tell tom wheeler to go fuck himself many will be helped. Do the right thing and protect net neutrality.
—Andy Williams, gastonia, NC

FAIRNESS.
—Jose Rosario, Jersey City, NJ

Net Neutrality is a VITAL, major part of our democracy!!
—Phyllis Arist, Evanston, IL

i have as much right to fast internet as anyone
—Fran, lindenhurst, NY

As the operator of a small business I truly feel the proposed rules would be extremely detrimental to our business in the long term as well as all small businesses that depend on the internet. In this modern era, equal access to the internet is a basic right much like equal access to any other public utility. No one "Owns" the internet and while we have given permission to private companies to build the infrastructure to access it they do not have the right to then use that infrastructure to hold access hostage. Sure big companies may be able to afford such a ransom but small companies like ours which get sometimes upwards of 50% of our traffic from organic traffic on the internet would be destroyed by these rules. We have seen what happens when private companies attempt to use a basic resource for their own gain and it is NEVER good. Please do not allow it to happen in this instance. Their is NO good argument I believe for creating a fast lane other than the profit of giant businesses who are already quite profitable as the system stands now.
—Jason Lions, Culver City, CA

A Lot of us live in the country. Why should we have to pay extra for a decent connection? Make the Internet Service providers as Common Carriers. While you are at it make them lease their lines to anyone at the same rate. Lets let the invisible hand of the market work for the consumer for once.
—Vincent incent Wilson, Pomeroy, IA

This invention, even bigger than the printing press, must remain free and open to all.
—Tommy Jansson, Helsingfors,

Net Neutrality is the same as a constitutional right for free speech. The time may have changed but the point it still lives on through Net Neutrality. With out Net Neutrality you wouldn't have the job you have. Thank you.
—Megan Adams, Placerville, CA

I need the internet in my daily life, and it would not be fair if my internet speed was different from that of someone else, because of differences in income.
—Kate Jamal, Wilmington, DE

The Internet has rapidly become a major part of democratic movements across the globe. Don't let our country become on of the leaders in holding it back.
—Christopher Hord, Tacoma, WA

I depend on the internet for news from all sources. Please do not create a two-tiered system that will kill the open internet for most people.
—Rhonda Kingman, San Francisco, CA

The beauty of the Internet is its accessibility to all information, regardless of location, income, etc. By restricting access to certain content, the Internet will become like everything else - controlled by the rich. Net neutrality matters!!
—Stephanie Beyer, Winnabow, NC

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Jarrett Silberman, Los Angeles, CA

I think we are paying the monopolies enough already!
—David C Faxon, Kingston, NH

No billionaire companies should charge fees for fast Internet service forcing all others to slow speed, that can not afford to pay. Reclassify ISP's as common carriers to keep the Internet free for the people.
—Carla Lamarr, Margate, FL

ISPs are ridiculous in their current state. We have little to no choice, and they know it. Internet is practically a requirement in our daily lives, yet new providers are hindered from existing, and there has been no innovation outside of Google Fiber in years. We call ourselves a first world country, but we lag behind on something as fundamental as the internet.
—Don L, Davie, FL

Please do what's right for the people, not the corporations. Keep the Internet open and neutral. Thank you.
—Kyle Foddrill, Bedford, IN

Net neutrality protects and encourages creative expression by all people and gives equal voice to all, not just the wealthy.
—Jill Hawkins, Mount Vernon, OH

Really Net Neutrality is important to me because it's all about my personal freedom. I don't want to be CONTROLLED by money in what I can watch on TV/
—Corde Rea, St. Francis, WI

As a previous student of management, I have never seen inequality to this degree be a successful formula in the middle let alone the long distance. So I can't say I can lawfully agree with a maneuver that is very obviously institutional discrimination in a world that is barely holding onto enough moral value not to throw peasants out of hospitals, half treated and bleeding to die in a halfway house.
—Nana Afranie-Frempong, Canvey Island,

Internet providers shouldn't be allowed to control what kind of access we have to certain websites just because they control the means to access a given site. That would undermine an individual's freedom to use certain websites, just as it would hurt a website owner by making it more difficult for people to access their business online if it happens to be in competition with or politically at odds with the internet provider's interests. That's not in the best interests of our country or any country that cares about freedom of expression and the right to openly access information without any censorship. This would be similar to a phone company saying that since they put in the phone lines, they can limit how often or how reliable your connection is when you call certain numbers, like another phone company that you may be switching to for instance. That would be unacceptable to most people and downright outrageous to even more. That is effectively what these internet providers are asking for which is why this should not be considered or allowed. The FCC should be working for the interests of the people who pay their taxes which go to pay the FCC. The the job you're charged with and look out for our interests, not the huge companies that are lucky to be allowed to serve our internet communications needs. They provide a valuable service but they are attempting to overstep their bounds here because they want more control and more money. Net neutrality must continue and be protected!
—Antreo Pukay, Portland, OR

It is just important that everyone have the same access and free speech for us all.
—Beverly Shreeve, Hiawassee, GA

The Internet belongs to the people and not the corporations. The Internet has changed the world and started a new era of technology. It must remain open in order to continue to progress as a society.
—Michael Kubala, Austin, TX

I need the Internet and cannot afford the rise in rates for more bandwidth that is available to everyone else on the planet for free or less expensive that it is currently here in the USA. Comcast and its ilk have no reason not to squeeze the public to milk all that they can without constraints - and they have no constraints today. The Internet is a utility and should be treated as such with regulations like any other utility.
—Barbara Hoch, McConnelsville, OH

I want nothing less than reclassification as a common carrier, with all traffic treated the same.
—Christopher Preu, Louisville, KY

I spend a great deal of time on the internet for work and play. The internet was intended to provide open access to everyone regardless of economic status. We don't want or need gatekeepers to decide who gets unlimited access and who doesn't. Keep the internet as the founders envisioned and not as a money tree for greedy corporations!
—Laura Logan, Taneytown, MD

We need to have a level playing field for everyone, not just those who can afford to pay more!!
—Mark Morgan, MOORESTOWN, NJ

Equality matters and allowing certain entities to "buy" the internet is WRONG
—Cecilia Johnson, Santa Rosa, CA

It's OUR Internet!! WE, THE, PEOPLE!
—Joel Kelly, Montrose, MN

ISPs have already received funding historically to provide the US with high-speed fiber but have failed to do so without reprocussion. Now your plans to award them with more easy income will only serve to push the US even farther behind the rest of the developed world, allowing ISPs to sit on their hands, failing to provide quality product while charging even more. It is time long overdue to get things right and hold ISPs accountable for the services and product they provide by reclassifying them as common carriers, enforcing strict quality control for speed, bandwidth, etc, and getting the US up to speed with high speed fiber that the tax payers have already paid for and never received. Do the right thing!
—James Dolas, Laguna Beach, CA

There is true value in having a space that is truly free (after the expense of bringing it to ones house) and that doesn't belong to the corporations. They already own enough. Please let us have true net neutrality! Thanks!!
—Elsie Smith, Fairfield, IA

Its the only way to protect consumers. ISPs have a monopoly where they are at because its too expensive for new companies to succeed in the market and without classifying ISPs as common carriers they can continue changing to benefit themselves at the expense of their customers who have no other choice.
—Andrew Trumbo, Ann Arbor, MI

The Internet plays a major role in my life, from personal, professional, recreational, etc. aspects of my life. Every day, millions of Americans rely on the open, free, and unhindered Internet, to facilitate daily activities of their lives. We moved from per-minute, dialup access to unmetered, high-speed, broadband access and it changed the lives of millions of Americans, for the better. The FCC, along with the ISPs, pushed data caps onto us, which is ludicrous and unnecessary and only serves as another revenue stream for the ISPs. Now, the very idea that the organization charged, by the federal government, to protect the people’s communications infrastructure would now be handed over to the ISPs, to do with as they wish, is absolutely shameful and repugnant. If the FCC wishes to maintain the people’s confidence, then, the FCC must start acting on behalf of the American people and push back against the ISPs. The solution to this manufactured “crisis” is a simple one and requires confidence and integrity, on the part of the FCC commissioners. It is within the FCC’s authority and the courts have suggested to the FCC that a simple and complete solution to this mess is for the FCC to act, within their own authority, to reclassify Internet access, under Title 2 of the Communications Act, as a “common carrier.” This is the proper, just, and legal method of protecting the American people’s communications infrastructure. Anything else falls quite short of the responsibilities placed upon the FCC and its commissioners.
—Shane A. Morrison, Gosport, IN

Net neutrality is one of the last good things this country has going for it. Don't dismantle what has allowed our country's technology to grow so rapidly.
—Clayton Mortimer, maple falls, WA

For someone like me who lives on a limited budget and am trying to pay my bills and regain financial solvency, having limited access to Internet would be costly.
—Sylvia M. Brown, Grass Lake, MI

I am an educator and an entrepreneur who relies upon the internet for everything from commerce to entertainment. I have many students who rely on the internet to make a living, and the current "level playing field" makes all of that possible. Keep the net neutral, and give the innovative, entrepreneurial "little guy" a chance to compete with the big boys.
—Richard Lovell, Alpharetta, GA

As a citizen, I believe Net Neutrality should be the law, period. As a small business owner, it's troubling that bigger, better funded, more established companies could make it much harder for the little guy to succeed.
—Mickey L. Glick, Lancaster, PA

All I want is fairness, all points of view, uncensored. Along with that, no "tiered" levels for the haves and have nots. Advertising pays providers well. The system is working, so please leave things as they are. Respectfully, RJ
—Robert Jason, Brentwood, TN

The internet is the 21st century's electricity. Where my parents have built a new home, they have 1 choice for internet service, which is currently saying there will be a 9-12 month for new connections. Passing these new rules would allow Comcast et al to just spend money on acquiring the competition, rather than spending money on infrastructure. Internet service in America is a joke and decreased innovation is the punchline.
—Josh W Rosentreter, Plymouth, IN

We already lag behind countries in western Europe for internet availability and speed. With this proposal, what is good for the majority is once again disregarded so that a few corporations can use the public airways to their advantage. ISPs must be classified as common carriers.
—Alice Carlson, North Bend, OR

To the FCC: This country has been taken over by greedy corporate America from sea to shinning sea. The last bastion of real freedom and rights lie on the internet. DO NOT LET THEM TAKE THIS AWAY TO..... SUPPORT NET NEUTRALITY NOW AND FOREVER. We do not need anyone controlling any more of our lives. Enough is enough. 95% of America is owned by 1% of the population and we will not TOLERATE THEM TAKING ANYMORE.
—Tracy j Tabor, queensbury, NY

As usual money talks.
—Joesph Daraio, Lake Worth, FL

The publicly financed (ARPANET) Internet must remain equally accessible to all.
—Mike and Jane Conrad, Bloomington, MN

FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers. The hard working people of the US shouldn't have to pay more than they already do for Internet. The Net is a source for information and communication for people across the country and to make it a special winner ordeal with an expensive fast track is just ridiculous. Throw out this plan, and give us real Net Neutrality.
—Lidia Portal, Gibson City, IL

The net should not be controlled by a few big companies that have proven they don't care about how much they charge their customers. They only care about their bottom line, and the dividends to their share holders. This needs to be a level playing field. It won't be if they have their way. Net neutrality must stay. Title 2 must stay. thank you for listening
—Thomas Huelster, Roseville, MN

It is imperative hat we maintain universal internet access. The best approach is to reclassify ISPs as common carriers.
—Alan MacLamroc, Smyrna, GA

It is the civilized thing to do!
—Kathryn D. Sette, Eastham, MA

The flow of information should be free and unimpeded!
—Loretta Ayrer, Myrtle Beach, SC

Net neutrality is about fairness. Maintaining timely access to information is of the utmost importance to so many in the professional domain. Many rely on unbiased, unhindered access to the internet to keep abreast of things. Setting yet another dangerous precedent where the 'haves' can buy more power and access and essentially control of all information debunks any claim that America is a functioning democracy. Acting in the best interest of corporations was not the reason you were elected. I urge you to protect net neutrality and to act in the interests of the general populous. Thank you!
—Marc, Chicago, IL

We did not elect corporations to decide who gets to use which tier of the internet.
—Jeanette West, Bradenton, FL

We all depend on Net Neutrality, you, me, our families and our children, so we demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—D Brands, Keswick,

The really free countries thrive on net neutrality. I am worried the US is working its way into a corner with lack of freedom.
—Martha Novak, Albuquerque, NM

Because Net Neutrality is real democracy
—Giampaolo Carboniero, Lusiana,

This is me standing up and saying NO to The FCC’s proposed Internet rules! Free the Internet! It should be a RIGHT not a PRIVILEGE.
—Lanette McGaha, Houston, TX

Net neutrality supports innovation and creativity. The internet should be treated as a utility and service for all to have an equal chance to get internet that is fast and efficient
—Rhett Rogers, Provo, UT

The internet needs to maintain equal access for all. From education to games, entertainment to revolutions, artificial limits that stifle communication will corrupt what it currently provides.
—Ms. Joy Westgate-Scherer, Lynnwood, WA

The Internet is one of the only places where there is true equality, no matter what one's circumstances are. On the net, the haves have the same access as the have-nots. It would be tragic for that to change.
—Cathy Lipper, Montvale, NJ

I use the internet constantly for work; without it, I wouldn't be making a living. Small websites like mine and those of my clients and employers have a hard enough time competing for interest against established giants. Without Net Neutrality, we wouldn't even have a chance. Our jobs would suddenly change from "challenging" to "hopeless," and countless businesses would collapse and vanish. Net Neutrality can be protected. It should be protected. The only question is whether or not it WILL be protected. Please take action now, BEFORE countless jobs and livelihoods are destroyed.
—Alan Matthews, Portland, ME

Without net neutrality the Internet would never have developed into what it is today.
—Michael Harrison, Saint Johns, FL

A two-tiered system would disadvantage millions of people who could not afford high-speed internet service.
—Andrew Segal, Morton Grove, IL

All internet should be treated equally.
—Terri Bear, Bethlehem, GA

They already charge customers more money for faster Internet speeds. If they slow down sites that don't pay their own fee, then ISPs are essentially slowing down the fast Internet service for which I've already paid! We created the Internet with taxpayer dollars. The only service ISPs provide is as a gateway to something for which we have already paid. They do not have the right to make more money off of what we do once we're in there. An analogy: taxpayer dollars paid for the interstate highway system. Should car companies be allowed to impede your car from driving to destinations that haven't paid them a fee? These fees will hurt small businesses/start-ups and public service sites who cannot pay them.
—Aaron Oldenburg, Baltimore, MD

IT WON'T WORK. You will kill the internet AND internet commerce.
—Katherine Gault, Preston,

Re-purpose the US Postal Service to provide universal high speed fiber optic infrastructure for everyone ,the sooner the better. The private sector has done an extreme disservice to our country and it is time to end this sham.
—Charles Dineen, Lawton, MI

There are many other countries with more affordable and faster internet than the US. Killing net neutrality would only make it worse. Netflix is now paying Comcast for faster access. Lo and behold, Netflix is raising prices to its customers. Every barrier that is put up is at the cost of the consumer. People pay their ISPs for access. Content providers pay their ISPs for access. There's no good reason for companies like Comcast to be able to monitor traffic to throttle speeds. It's a blatant money grab. The entire country will pay the price.
—Scott Scott Ledridge, Cane Ridge, TN

The Internet is not something that should ever be monopolized. It affords us so much potential as a species that it is heartbreakingly shameful to abuse it in such a way.
—Ian Hodgkins, Bartow, FL

Net neutrality is FAIR. It gives everyone an equal shot at decent internet service. Re-classify ISP's as common carriers. It makes sense and it's the right thing to do.
—Jon Larsen, patagonia, AZ

The internet is a wonderful and powerful tool for global communication and connection. Taking away net neutrality will severely impact the level of global communication which is an essential aspect of our modern world
—Elizabeth Cardozo, Denver, CO

Everyone should have equal access to the internet. People that could not afford to pay more would be at a disadvantage compared to those that could pay more. Access to information should be available to all, not just those who can pay more.
—Jody Walters, Camden, NJ

To be fair to customers, a level playing field between companies is important. This is why competition law exists. Only Net Neutrality can secure a level playing field between companies. Ending Net Neutrality means allowing big companies to bully small ones to enhance their own profits at public expense. Both personal and economic freedom are at stake. You cannot have a functioning democracy without both.
—Dr Clive R Sneddon, St Andrews,

Finally there exists a way to learn about what is really going on in the world, and you people are actually considering taking this away? Shame on you!
—Vincente Belenson, Spring Bay,

The net has ALWAYS been about equality -- the chance for everyone to participate. Way back in the late sixties and early seventies the idea was that everyone would share their knowledge with the world -- not that the rich would get special service.
—Ms. Joan Zahorjan, Cambridge, MA

We need to make sure that ISP's cannot throttle internet, this opens up opportunity for them to censor as they wish which is not only inconvenient to all of us paying customers but downright un-American. Reclassify ISPs as common carriers and keep everyone on the same playing field so the internet can continue to grow in a more positive and neutral direction
—Geo Vanasco, Astoria, NY

Besides space, the internet is a frontier for many. A large expanse for the free exchange of information and ideas, a place for people to meet, and an almost endless opportunity for fledgling entrepreneurs to pursue their dreams. If true net neutrality is not upheld, the dream for many will be extinguished by a few.
—Andrew Kralik, Cape Coral, FL

Make the internet OPEN to all; Reclassify ISPs as common carriers.
—Jerry Brown, Santa Fe, NM

Everyone deserves access to information. If you make fast lanes you limit the amount of information low economic people have access to.
—Vanessa Johnson, Indianapolis, IN

This is just another money grab by the internet providers. Current Internet providers enjoy monopolies or Duopolies in every city and thus enjoy tremendous profit margins. Coax(Tv Cable) and Copper(Telephone Wire) was installed decades ago and the cost to install ISP cable was recovered decades ago. The US ranks 31st in the world in Internet speed while paying the most. It is cheap and getting cheaper every day for providers to increase Internet speeds for everyone. Computers that are used by the ISP's are getting cheaper and faster everyday and it is very easy(Plug and Play) to add more computers to the ISP's servers room. Why open a can of worms by charging for fast lanes on the internet when the FCC does not have the tools or manpower to properly regulate the ISP's. We need to make all ISP's common carriers and regulate them like we did in the early decades of the telephone industry. The Internet is the encyclopedia of innovation and learning today and must be provided free to those that are unable to afford the outrageous prices that the current ISP's charge. I would even propose that that government, local, state or national declare Eminent Domain on all ISP's in the national interest. Sincerely, Rick Severns RGS iPad
—Rick Severns, Long Beach, CA

I depend on net neutrality to improve the quality of education my children receive!
—Teona Williams, Washington, DC

Lobbyists are ruining everything. Tom Wheeler at the FCC is ruining the Internet for corporate interests according to their plans NOT OURS! STOP THEM NOW! SAVE NET NEUTRALITY ..STOP THE NEW RULES!
—Steven Rudy, Cary, NC

As an educator I see how FAR BEHIND we have fallen in providing our young people the broadband speeds and fair pricing which will enable them and the USA to COMPETE with the other nations of the world. e are falling to the BACK of the LINE !!
—Martha Estes, Hempstead, TX

Net Neutrality is important to me because a free and fair internet is an integral component of keeping a free and fair network of information, and protecting consumers. This issue is not just about keeping a neutral internet, it's also about we, the People, keeping corporations out of our government.
—Mikaela Allen, Bethlehem, NH

All internet uses should have the same rights. It would be un-American to descriminate against less prosperous users.
—Salme Armijo, Blue Diamond, NV

We must preserve and make permanent an open and equal internet for all!
—Jeff Asch, Portland, OR

The plan Chairman Wheeler is pushing will limit competition and benefit established players like AT&T, Verizon and Comcast. This is not what the FCC should be doing. The FCC should be protecting the consumer by proposing rules that increase competition among Internet Service Providers which would lower the costs to all consumers.
—Mr. Vincent M. Oddo, Atlanta, GA

I use the internet EVERYDAY in my classroom. My students CANNOT lose access to the internet because some faceless CEO needs more money and a new yacht. DIGUSTING! SAVE NET NEUTRALITY FOR MY STUDENTS.
—Shelby Lopez, Pasadena, CA

I'm tired of having things I need hijacked by corporations.
—Sherla Finnegan, Sparks, NV

Everyone should have equal access to the internet and corporate behemoths should not be given priorities for profit at the expense of individual users. Keep the net an equal access utility for all!
—Lois Sugar, Scottsdale, AZ

As a small business owner I can't afford to have to pay to compete against larger businesses. If you take away my websites ability to compete with the competition I will no longer be able to compete with big businesses.
—Ben Myslenski, Sand Lake, MI

I cannot believe the FCC is so blind as to have done this. I wonder whose pocket you're in, certainly not the American people! Shame on you all- you should ALL lose your jobs for your corruption! ;>(
—William Rogers RN Rogers RN (Ret.), Selah, WA

We cannot allow such blatant discrimination like this. May I refer you to a group called the Thought Police. They live in George Orwell's novel "1984".
—John House, milwaukie, OR

Anyone who thinks the internet is not a common carrier utility is DREAMING. YOU MUST RECLASSIFY ISPS.
—Judith Petty, Chelsea, MI

No fast lanes! Reclassify ISP as common carriers!
—Agustin Oliva, Chicago, IL

The new rules are an immediate assault and an invitation to further assaults on the last democratic medium of communication, news dissemination, and research. As a doctor of history who researches internationally, I depend upon open access to the internet--to wit, on Net Neutrality. So too do intellectuals in developing countries, and our own students in schools and universities around the United States. Television used to be free. Now it costs more than average salaried employees can reasonably afford. Please do not take steps to allow huge corporations to be gatekeepers and toll-collectors for what should be viewed as a resource created by individuals around the world, and therefore as their property.
—John Way, Atlanta, GA

I am so tired of being at the mercy of these huge corporations and they keep jacking up my rates EVERY year. Besides it internet is not yours to sell or give away.
—C Swenning, Richmond, CA

I depend on Net Neutrality to actually put food on my table.
—Yan Morand, terrebonne,

Small graphic and web businesses like us depend on open access to the internet!
—Ivey Godfrey`, Spotsylvania, VA

It is yet another attempt to aid the top !%
—Margaret Scripp, varysburg, NY

Because all those companies care for is money. So many people depend on the internet to learn and many other things.letting these companies come together would be a step back for humanity.
—Juliana Zapata, Gainesville, FL

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Veronica Hayes, FERNDALE, MI

Please throw out your rules and instead reclassify ISPs as common carriers.
—Arthur C. Ostlund, Mt. Vernon, NY

Because freedom in America should still be important
—Randy Eakin, Columbus, GA

I am close to retiring and my husband is retired. Our income will be limited. It is unrealistic to expect people that are just starting out in life or finishing up to pay proportionally more than people in their prime.
—Gloria Zoucha, Columbus, NE

Dear FCC I as a user of the internet do not like these new rules and fear they will ruin small business and start-ups and would advise you to relabel the ISPs as tier 2 telecommunications carriers instead of leaving theme as tier 1.
—Inderpal Singh, Fresno, CA

This issue is really about freedom of speech! The government and all it's institutions and officials, are put in place to protect the rights of the average citizen, not sell them out to the highest bidder. ISPs need to be classified as common carriers because they have been given immense monopolies and there are no other options for people to turn to. In today's networked world, being offline is not an option. FCC, just get real! We live in the modern world now. Just do what's right, don't sell us out to those bastards, and I'll continue to pretend that I'm not already living in a corporate oligarchy that you're actively helping to make possible.
—Gregory Tczap, Littleton, CO

these mega billion companies, especially AT&T, have already eroded the rights of average person; and now you are planning to give them more of it. That is not at all justifiable for a government agency.
—Dinmani Savla, mountain view, CA

Mr. Wheeler, I heard you on the radio saying that your vote for this proposed protocol was only to advance it for discussion. It is totally disingenuous to "carry the ball" for the ISPs and then say that you only want to discuss later at the goal line. The FCC is empowered to protect the public and, from that perspective, it is imperative to prevent the ISPs from charging multiple level fee structures for internet access. When the internet was first passed into the telecom's hands over a decade ago, it was pointed out that this was not a telecom-made product, but it was rather developed in our universities. It was not something that the telecoms could appropriate as their own, restrict to the public, and then manipulate this for maximum profit. The government promised over a decade ago that this wouldn't happen, and now the telecoms in collaboration with the FCC are advancing that very proposal. The internet does not belong to ISPs, nor to those entities that are willing to pay more for access. FCC, do your job and do not allow multiple level pricing for internet access. That is theft of the internet from the public domain and restricting it from those that are not willing to be blackmailed into paying more. Furthermore, the internet has become an ESSENTIAL tool to everyday life and is not subject to predatory laws of supply and demand. FCC, do your job without further prevarication or excuses.
—Jerry M. Cipriano, Santa Monica, CA

Internet is something that should always be free and accessible to everyone! In this age of technology it's like charging poor people for air and then getting miffed when they can't breathe.
—Rebecca Henry, KIRKLAND, WA

Regulate the net like any other utility.
—James Barclay, Bothell, WA

I am living on Social Security, $1070.00/mo. and have an old Dell Optiplex GX620. I spend 6-8 hours a day on the internet, I have never downloaded or uploaded a large file. Please make the internet a "common carrrier!
—Mr. Tom O'Connell, Tucson, AZ

It seems very clear the certain people at the FCC are being held in the pockets of big corporations. The people have spoken loud and clear about this issue, yet you ignore those of us who are doing our best to stand up for the people and not big business. When is someone in this country going to say to the wealthy and greedy enough is enough? Why can't the FCC be that someone?
—Lynn Thelen, Saint Johns, MI

A free and neutral internet is the only thing left in our society that is truly equal. Please don't give away the last great vestige of our Democratic Republic.
—Matthew Rosen, New Orleans, LA

I don't drink, smoke or spend money on anything pleasurable but one thing, and that is a crappy prepaid phone with a lousy 2.5 gig plan. I may be dirt poor, but I don't watch TV, Netflix, YouTube or anything else. It seems to me you could let me have this ONE THING to enjoy, while I enjoy my COPD.
—DB Pope, Varnville, SC

NET NEUTRALITY IS IMPORTANT FOR PRESERVING DEMOCRACY AND TO PREVENT FASCISM FROM TAKING OVER.
—Tina Tine', Knoxville, TN

For ISPs to create "fast lanes" for those who spend more is just another way to discriminate against those of us who are the vast majority of the population. Eventually, we "peasants" are going to rise up and revolt against the feudal overlords who sit in their castles and laugh at us while getting fat on the fruits of our labor.
—Eric Jacobs, Boise, ID

I believe that the freedom of internet users to choose the websites they want to access should not be controlled or affected by the companies providing the internet connection. When I pay for an internet connection, I want free and complete access to the internet. Thanks and please support a free and open internet.
—Christopher Joseph, Two Harbors, MN

Open access to information is the foundation of a true democracy. We simply cannot afford to limit this openness in favor of corporate interests.
—Jason Scruggs, durango, CO

Not only would this allow ISP's to create fast lanes, but it would authorize them to censor websites that provide information they don't like, effectively blocking anyone who speaks out against them; but that is just the beginning of what is wrong with this proposal.
—Vernon Pope, Pittsburg, KS

Are you really trying to bring about more inequality in America and the world?
—Patricia & Daniel Driscoll-Shaw, Huntley, IL

It is totally incumbent for you to act in the behave of the public not corporate America. we may not have the wealth but there are other ways to keep our representatives doing our biding instead of the biding of the money that runs rampant in politics. be sure you act on behave of the people, for without us you would have no job.
—Charles Davis, Bemidji, MN

I am retired and my computer is my one "luxury" over clothes, furniture and costly food. I'm paying a top price to get the fastest DSL so I can pay my bills, stay in touch with friends,family and the rest of the world. If I had to choose between TV or my computer, the TV would have to go. Internet also helps me stay in touch with my health care provider.
—Barbara Bailly, Madison, WI

Net Neutrality is important because the ISPs will destroy the internet as we know it and make it unusable. What this video for an example https://www.youtube.com/watch? v=NAxMyTwmu_M&feature=em-uploa demail. KEEP and PROTECT Net Neutrality!
—Dustin Collins, Laramie, WY

Net Neutrality is what separates our information highway from the restrictions in China, Russia, Turkey, Iran, Iraq...
—Ann Haden, Birmingham, AL

This is the only way I and millions of others have to receive and share information without that information being controlled by those who have the most money. Without this, we have no more democracy.
—Kate Bancroft, Berkeley, CA

Hi, The internet is a great thing. It is a place where people can make friends, it is a place to kill time, it is a place to buy good, and yes it can be a very dark place, but that can be said about the Earth as well. This information must be kept free and open. In this day and age the internet is our backbone and the information that is contains is the information of the people. Getting rid of the neutrality of the internet will be the beginning of the end of the internet as we know it. It will take a much darker road. It will be a road paved in gold for a few wealthy few, but will lead to less freedom for everyone else. So please keep the internet free and don't let money drive your decision...let reason make this decision. Thank you, Jonathan Tatum
—Jonathan Tatum, Irving, TX

Current ISPs are bad enough as it is right now, by allowing these new rules to pass, it would make things even worse AND more expensive. Also, I don't want ISPs to dictate what i can and cannot view or do online
—Eugene Song, san jose, CA

I pay a premium for my internet connection so that I can get faster speeds and faster delivery. When I pay my internet access fee I expect to get the maximum speed that I pay for since the other services already pay their service provider or CDN large amounts of money for bandwidth. If we are both paying into the system there should not be a need to pay my provider by someone trying to serve me data as I've already paid them for my use. Additionally I don't want my traffic throttled based of content. If I want to use 40Mbits of data bandwidth to watch a HULU movie or 40Mbits to transfer work files, I should get the exact same speed. My biggest worry is that we are slowly getting less high speed options, left with only 3 (Verizon FIOS, Comcast/Time-Warner, ATT&T U-verse/DirectTV) and many of them also control content now, making it in their best interest to not provide great service to competing services that I greatly enjoy. Additionally they have no incentive to increase speeds or offer cheaper alternatives.
—Eugene Kovshilovsky, Rolling Hills Estates, CA

Half of my future relies on Net Neutrality, the internet must be a common carrier. We paid for this, please do not steal it from us the, citizen taxpayer.
—David Arntson, Bothell, WA

Small businesses like mine would not survive trying to compete for bandwidth with the giants who can just pay and pass on the cost to the consumers.
—Roy A Prefontaine, Southborough, MA

As someone who makes his living working over the internet every day, I need it to remain free and open.
—William Thickstun, Clinton, NY

Because no one should own the internet!
—James Coleman, Auburn, WA

the internet has always been open for everyone witch is what makes it so great if you remove net neutrality that will end.
—Robert Stewart, billings, MT

Democracy, anyone?
—Katlyn Stranger, San Rafael, CA

I like freedom.
—Patsy Shafchuk, New Port Richey, FL

it is important for internet users to feel safe and secure and free from big corporations...
—Kim Davis, bloomington, IN

Retaining Net Neutrality is a major issue in this day and age. It shouldn't be discarded for the needlessly greedy sake of padding out anyone's wallet.
—Brandon Bundy, Hopewell, VA

I believe free and equal access is a necessary component for an informed public. We can't force people to learn facts, but we can at least make them available.
—Margaret Alia Denny, Denver, CO

We live in a very complex and internationally competitive world and we absolutely need equal access to whatever information is available for all of our citizens if we are to thrive in it. The US cannot afford to limit access in any way if we are to lead the world in innovation and development. Also, unfettered access to information is critical to maintaining a fully informed and active electorate which is the foundation of our democratic form of government. I cannot overemphasize how important I believe it is to have true net neutrality by classifying internet providers as common carriers. Richard Severson
—Richard Severson, Madison, WI

Net Neutrality is fair & equitable. It is aligned with the nature of the U.S. Constitution. It is in the best interest of the US and every one of its citizens. Your idea of "express lanes" on the "Information Super Highway" is fine if owned by the government via eminent domain, but as it stands now, it's very anti-American.
—Merle Armstrong, Culver City, CA

ISPs=common carriers is the democratic. populist approach. Don't let greed ruin free information flow
—Paul Novak, Madison,, WI

Internet needs to remain a neutral source not monopolized by big businesses that have a greater interest than the common user. Must remain objective and remain neutral.
—Armen Sarkissian, Pasadena, CA

I live in a semi-rural area of New York in which we are already experiencing some of the effects of tiered service. Our payments for service are expensive. We have little choice or competition for service. The Internet should be a regulated utility so that all members of the population can take advantage of it for education, business, recreation, and research to become a better informed populace with opportunities.
—Karen Carney, Spencertown, NY

I was severely bullied when I was young and I found solace and friendship and I have used online services to cope with suicidal thoughts in middle school. In situations like that, one second can make a difference.
—Brooke Manning, Long Beach, CA

We need an internet that is a level playing field for all websites and all users. A neutral internet is not the same thing as an open internet. Please reclassify ISPs as common carriers.
—Susan Oehler, Asheville, NC

I work on the internet and support many of the worlds newly minted tech and content companies through legitimate online advertising. If you were to remove net neutrality, you would hurt Advertisers, Publisher, and users that rely on the open internet and it would throw a wrench into many of the new businesses being created. We need Net Neutrality.
—Radik Kizhnerman, New York, NY

It's called EQUALITY. Our country was started by people who left the inequality of a Europe where the rich ruled and the poor got poorer. An internet where big business gets preferable treatment and small businesses are rubbed out is NOT equal. Only true Net Neutrality maintains our country's core value of EQUALITY. Get the clue.
—Bobby Hendley, Murchison, TX

Please stay out of the this. Lobbyists are only looking out for their own interests and not the people who should have free reign over the net.
—Eric D Miles, Thousand Oaks, CA

We need one internet for all. End of story.
—Lee Bartell, New York, NY

I suspect that you have lost your grasp on reality. The corporations of this country do not deserve more welfare. The *bells have already stolen the time/money/infrastructure that US citizens were forced to expend to develop all communications networks in this country. There is no sane reason to turn over control of the internet in addition. Please remove wheeler immediately.
—Jeff Hibbard, Swannanoa, NC

THE INTERNET IS FOR EVERYONE, EVEN THE POOR!
—Dr. James Hansen, Spring Valley, NY

We're already paying for sub-par internet (A promised cap that's never met, and recently finicky to boot.) Why make it more legal for them to give people a sub-standard service?
—Jason Carlisle, Indianapolis, IN

Is not the internet a common resource? So why are ISPs not common carriers?
—Otto Hunt, Oceanside, CA

Neutrallity is equality, you can't give big companies precedence over small companies. By passing this "net neutrality" you would kill any small companies, you could kill the next Facebook, the next Google, or the next Amazon. The internet is great because on the internet everyone is equal. Please don't ruin the internet.
—Cody S., Raytown, MO

Because I need the Internet to be open for things like raising funds toward helping with my wife's recent leukemia diagnosis.
—Gerald Dudley, Austin, TX

PLEASE RECLASSIFY internet service providers as COMMON CARRIERS. DITCH YOUR PLANS
—Joe Newman, Bozeman, MT

I AM AN INTERNET USER. I AM NOT AN ISP. USERS SHOULD BE IN CONTROL, NOT ISP'S.
—Carole Crowe Frank, New York, NY

It allows small business to compet . Selling the Internet to highest bidder only help those who don't need help. It's worked since the beginning and it will continue if you don't sell it to highest bidder
—Eric pallocat, Ridgewood, NJ

US Citizens deserve Net Neutrality!
—Brody Hagemeier, St. Cloud, MN

People like my wife and I have only managed to get by because of the wages we are able to make with the internet, through freelance art. It is the only consistency in our lives, and it sustains itself only because of the way the Internet stands as-is, right now. We are part of a large community of freelancers, one community of many, who have been set nearly to poverty by the constant constriction of taxes and wages. The freedom to simply make ends meet is in this field, which is about to be put beyond our reach by these new restrictions. Please reconsider your stance on this frontier of ours. It's all we have left.
—Michael Kleven, Richmond, VA

Commercial radio and Tv news are rediculous and unbearable. The only way we seem to be able to get news is through the internet. If giant telecom companies can make the truth unbearably slow to get we might all have to settle for the commercial b---s---. Thomas Jefferson tried to tell us that ctizens must be informed for democracy to be possible.
—Robert Barlow, Wassaic, NY

The internet is the last major public forum that isn't entirely controlled by corporations or special interests making neutrality essential to the preservation of democracy. Every American has a compelling interest in Net Neutrality and it's preservation is a no-brainer.
—Laurie Thomas, Carlisle, KY

Letting corporations run the Internet is never good for the consumer. As a customer of Verizon Wireless, I've witnessed their greed. Please keep the Net neutral.
—Scott McIntosh, Tampa, FL

Giving these internet giants more money is only lining the pockets of the CEO's and the higher ups. Yet, there are so many young people who could do so much good in this world if they can access the information on the internet. If a parent can't afford the higher prices for the faster speed, we may be shooting ourselves in the foot. What will we gain by doing this.....making the wealthy even richer and those struggling to pay the bills every month will feel the pain of it.
—Danielle Gareau, Shamong, NJ

Hands off!
—Craig Ryan Shisler, Dayton, OH

If I don't have free internet I don't have any internet. What are you trying to do. Turn this a country like China's internet controlled country. You must be going crazy if you put a fee on internet no ones going to use any technology anymore well maybe except for phones cause we will still want to text, but still that's like reversing the time space continuum.
—Annette Shukaitis, east stroudsburg, PA

Privacy and freedom!
—Gage Shinoda, santa monica, CA

Net Neutrality is important because much of our current economy and culture happens on the internet and would look very different (and much smaller) if the internet had been allowed to split into the haves and the have-nots. Data consumers already choose to pay for the speed of their access to the internet. Data providers should not be forced into choosing between competing with huge corporations at an unacceptable extra fee, or failing to compete because their data hasn't enough bandwidth to grow. Without net neutrality, we will lose innovators in this country. Innovation is all that we seem to have over the global competition these days. Without it, everything will start circling the drain.
—Mr. Jamie Tietjen, Red Creek, NY

Net Neutrality is essential to our individuality and expression of self. The internet is a equal platform for all- by expressly ignoring over 1 million citizens and continuing to push these rules, you are denying people the right to access the internet based on their class. There are millions who simply cannot afford these bogus rules. These people are students, workers, tax payers; people who need access to the access not only for recreational reasons, but also information, news, current events, studies, contact with friends and family. You are making a mistake. Please, don't do this.
—Juliet Hope, Lismore,

I really depend on my clients and prospective clients to be able to access my website quickly and to be able to use my computer when I need it without longer waits than I have now. It is not fair to take money for faster service for a platform that was universally accepted as open and available for all. There are already differences in computer and devise speeds. Lets not complicate it further for those of us who aren't as rich as some others or who use the computer for little but important things. Our needs should be protected.
—Sheila Ahern, Portland, OR

The flow of information the ability to communicate is a right that you cannot morally take away.
—MA Cashman, Vancouver,

Net Neutrality is important because in a society where schools with good test grades get more funding, poorer schools and peoples are finding it harder to get an education. They do however, have the Internet, an information superhighway with websites designed to help children learn. Sites like YouTube also have a multitude of tutorial videos and how-tos, a useful guide for anybody and everybody. If you were to force people to pay a premium to get a good Internet connection, those people who rely on the Internet for education have almost no shot at learning. And people need an education if they're expected to be the "future of America."
—Kyle Conrad, New Milford, CT

I'm a small business owner who depends on the internet to make a living! Allowing large corporations to PAY MORE to be in the 'fast lane' benefits NO ONE except those corporations, and will slowly push out smaller businesses who can't afford to pay. The internet should be FREE AND EQUAL FOR ALL.
—Jay Simons, Mesquite, NV

Everyone deserves strong internet access that isn't bound to the word of ISPs!
—Chuck Donegan, Yonkers, NY

It is bad enough that ISP's charge individuals as myself various levels of price for various levels of speed just to hookup to the internet. Now they want to charge higher speeds to the providers from which I wish to stream video or just down load data. They are monoplies in most areas with no competition. They do not allow standalone internet service. They bundle it with other services that are frequently unwanted. It is time they built out there infrastructure and provided high speed internet throughout the country.
—Francis X Itzoe, NEW FREEDOM, PA

I support the free and open internet as a Title II utility.
—John Hrabar, Pittsburgh, PA

An ISP needs to be treated like a utility. My power company can't charge GE if I use their appliances and use lots of electricity, why should an ISP be able to charge Netflix if I use them a lot. I already pay for the bandwidth, why should they be able to charge some vendors more and slow down those whom refuse to pay the bribe/protection money.
—John Rollf, Houston, TX

Net neutrality is one of the most important ideals to have happen in the 20th century. Giving power to corporations on something they have no right to control is plain wrong. It completely takes away variety for competition (since we are already an oligopoly) and hinders everything from creativity to new business ideas if we cant even have the chance to start up. This is capitalism at it's darkest hour.
—Aaron Vazquez, Deer Park, TX

Shame on you!
—Janie Macfarland, Bisbee, AZ

Free internet is important! People all over the world need the internet to stay free.
—Caroline Haynie, Evansville, IN

We need a fair Internet that caters to all, without discriminating against those from a lower socioeconomic class. Do not disadvantage the already disadvantaged.
—Rosanna Lam, Sydney,

The internet should be open for everyone, if you give ISP's the power to discriminate against a single person or organization by taking away their ability to utilize the internet in an open way you would be giving them the option to infringe upon what this country is supposed to stand for: freedom. The wants of a few do not justify taking away the freedom of the many and this will not allow us to progress further as a society. Net Neutrality needs to be encouraged, not taken away.
—Jack Norvell, Tulsa, OK

Stop being fascists. Stop being a corporate whore. We demand to you keep net neutrality laws the waythey are. The internet is the last frontier of free speech and expression. You cronies better not take it from us.
—Jerome Simakis, Reisterstown, MD

Giving internet providers the ability to prioritise content based on income received for that content is the first step toward censorship. You say your for an "open" internet but that is not the same as equal. We demand that the internet not be turned into a pay to play medium. The harm it would do to the average person or small business would be major and irreversible , another giant step toward fascism.
—Lee Steinmetz, Emeryville, CA

ISPs must be reclassified as common carriers to protect Net Neutrality.
—Laurel Hieb, Flagstaff, AZ

I'm tired of corperations messing up things. Do your job and don't be swayed. Keep the net open!
—Tara Reedy, Fayetteville, NC

Net Neutrality is important to me in so many ways it's difficult to focus on a single message to drive the importance home to you. More and more, important business and banking is done through my Internet connection at home. I work from home full time, I don't want any of my research slowed down because an institution did not pay extra to an ISP. I don't want to have to wait to watch a video while it load slowly reminiscent of the dial-up days because the source did not pay extra to an ISP. I want an even Internet where the little guy and the big guy compete on the merits of their product or their idea. I do not want big company "A" to inhibit competitors simply by speed of their Internet content. Let's keep it a fair deal for everyone.
—David Bradford, Palm Bay, FL

Internet affects not only your Country. Internet affects all the World. Net neutrality is important for all people in all Countries. I do not want any corporation or company or government discriminating who need pay more or less, or having more or less priority, or any kind of web discrimination. Thank you .
—Alex Vieira, auckland,

Net neutrality means a "toll free Internet." All content must flow through the Internet without discrimination as to (origin, destination, or routing). This means no special treatment or any kind for ANY CONTENT.
—Joseph Bruno, Pittsburgh, PA

It's the last true level playing field in America.
—Kyle Dunn, Oakland, ME

Well here I am once more to try to explain why the FCC must vote to keep net neutrality. Unless providers of the services one uses to "surf the net" (the ISPs), are designated (reclassified) as common carriers, Americans will definitely be at a disadvantage in the world once US carriers are allowed to create levels of users. Rural users, poorer users, and those with limited money will not be able to compete with other I-net users in the world. Those with unlimited incomes will have usage of higher levels of service, and effectively cutting off bandwidth that could be used by all users. The inequalities in this country between "haves and have nots". Surely the FCC would not contribute to inequality by facilitating ISPs to restrict bandwidth to only those who can and would be willing to pay more --more 1% inequality. As a ham radio operator, I know how equitable the FCC can be in supporting radio frequencies. How much more equitable it would be in reclassifying ISPs as common carriers. It is unfortunate that this was not done the first time net classification came about, but it is not impossible to do so now. The 99% deserves it. Well here I am once more to try to explain why the FCC must vote to keep net neutrality. Unless providers of the services one uses to "surf the net" (the ISPs), are designated (reclassified) as common carriers, Americans will definitely be at a disadvantage in the world once US carriers are allowed to create levels of users. Rural users, poorer users, and those with limited money will not be able to compete with other I-net users in the world. Those with unlimited incomes will have usage of higher levels of service, and effectively cutting off bandwidth that could be used by all users. The inequalities in this country between "haves and have nots" have been addressed in many ways. Surely the FCC would not contribute to inequality by facilitating ISPs to restrict bandwidth to only those who can and would be willing to pay more --more 1% inequality. As a ham radio operator, I know how equitable the FCC can be in supporting radio frequencies. How much more equitable it would be in reclassifying ISPs as common carriers. It is unfortunate that this was not done the first time net classification came about, but it is not impossible to do so now. The 99% deserves it.
—Shirley Sharan, Fort Wayne, IN

The internet should be treated like a utility, it's part of the communication infrastructure, allow internet providers to provide a fast lane and charge a toll could become a barrier to a Free Press, not to mention education, or new technologies that will surely unfold in the future if allowed unfettered access.
—Eric McNeil, Atlanta, GA

Keep the internet in the hands of those who need it and will use it properly.
—Arvin Blakeney, Centennial, CO

America's innovation depends on a free, fair, fast, open internet. America's strength depends on its innovation.
—Sarah Maxwell, Archbold, OH

Net Neutrality is important for an equitable, democratic United States.
—M Port, Boynton Beach, FL

The Internet is an essential means of communication. To attempt to monetize it by allowing carrier companies to decide which sites load quickly and, perhaps, which sites do not load at all is to eliminate the vital contributions that the Internet makes toward allowing a wide variety of speech, expression, information, and creativity to circulate among citizens in our country and in the world. If the FCC embraces freedom of speech and freedom of expression, and in a more extended sense, freedom of assembly--our Constitutional rights!--then the FCC really must reclassify ISPs as common carriers. The Internet is, above all, a means of communication, and all means of communication must be available to all members of a free and democratic society. This is essential for our democracy. Please embrace your role as stewards of our means of communication.
—Edward Potter, Mississippi State, MS

Keep the internet OPEN for EVERYONE!
—Allen Rozelle, Santa Cruz, CA

Sharing information is how humanity thrives.
—M L, Sonoma, CA

Because you will be denying other human beings such as yourself and your families the accessibility to knowledge. If anything should be regulated on the internet it should be the tens of thousands of pornography sites...
—Jessica Peraza, Silver Spring, MD

I want the internet to remain the same for all users. I depend on you all to make sure that it stays neutral, and that future advances don't just benefit those who have money to pay extra.
—Lyn carter, Gp, TX

Do NOT give big and rich corporations another huge advantage over lesser moneyed small business and individuals!
—Jack W Blakley, pppppppp, CA

Please don't destroy the internet?! If large corporations are allowed to control internet speeds and prices, only those with large amounts of money will be able to use the internet. All of the small businesses which are thriving because of fair internet practices will be eliminated because they won't be able to afford to compete with the big companies. With the economy in the horrible state it is in, to eliminate small companies will add even more to the unemployment and hunger that is stalking out country. Please, please classify the internet as a common carrier - that is what the internet is.
—Barbara O'Neill, HEREFORD, AZ

Everything need not be for sale.
—Clint Keller, Coeur d'Alene, ID

Impartial channels of communication are crucial to a thriving democracy of ideas.
—Nate Hanson, Oakland, CA

The freedom of information is hampered by this!!
—Matthew A Weaver, Genoa, OH

I don't want to have American internet divided into the "haves" and the "have-nots", especially since my level of income will put me in the latter category.
—John Olinda, Newark, DE

The US dollar is already collapsed. How will you be able to preserve the last of the US businesses when the private carriers dominate?
—Susan Modikoane, Houston, TX

It's the right thing to do!
—M Andrews, Clinton, NY

The internet should be equal for all. Corporations are not more important than people
—Felix Gostel, Richmond, VA

Your proposed change in internet rules would end net neutrality and raise the cost of internet service for everyone. Regardless of what your motivations are for trying to do this it is an awful idea. At a time when income inequality is at it's worst in our history raising costs for consumers is not the right thing to do. I urge you to classify all internet service providers as common carriers.
—Christopher Timm, Traverse City, MI

Net neutrality is crucial for free speech around the world and for unbiased access to knowledge. The internet is currently the most important communication medium in the world and to allow certain parties with vast financial means to hold priority over those with less will be immensely detrimental to the world's population. Business interests can't be given priority over access to knowledge and free speech. Regards, Pierre Gallant.
—Pierre Gallant, Ottawa,

My primary use of the internet is communication with friends and family, but my second most-frequent use is for accessing podcasts from public/community radio stations that clearly won't be able to afford to pay for fast-track delivery of their services.
—Judith Blair, Ithaca, NY

The public has spoken, and it is overwhelmingly in favour of a truly free Internet, protected by strong Net Neutrality legislation. Everyone from the far right to the far left acknowledges that Net Neutrality protects our right to free speech, among many more of our liberties. Net Neutrality must be protected at all costs, and for the FCC to do otherwise would be nothing short of a corporate coup d'etat.
—Luc Bouvier, Moncton,

My tax dollars paid for and helped nurture the internet. It belongs to all of us.
—BC Ashmall-Liversidge, Brooklyn, NY

No one deserves Internet at dial-up speeds. No one.
—Kacie, Palm Bay, FL

The American working class is being raked over the coals enough as it is. Don't give these corporate interests the opportunity to leech more of our hard earned money from us. We need a break!
—Jessica Pearcy, Portland, OR

Because it isn't right ! Its unconstitutional and its not fair for other people who depends what on Net Neutrality . Please, have a heart and consider others who wants a fair internet access .
—Chris Trigg, Manchester, NH

Do NOT sell out to the highest bidder. Net neutrality is important.
—Monia Pezzi, Paradise, CA

The world is quickly moving in favor of corporate profits, rather the well-being of the majority of American citizens. The American economy will thrive only if regular people have a chance at good lives. Giving more power to the entrenched corporate giants of our country works in direct contradiction to that future. Please make the long-term, best choice for our country by overturning the FCC's current proposed rules and voting to truly protect Net Neutrality.
—Joshua Weld-Wallis, Grand Rapids, MI

The internet as a marketplace of ideas where people all over the world can freely share ideas and collaborate on the great innovations of tomorrow is an essential component in today's modern society. And as both a musician who depends on the internet to get my material out there and as someone who works in IT as a day job, net neutrality is especially important for me personally as well.
—David E. lay, El Cerrito, CA

We must maintain net neutrality
—Genevieve Clark, Saint Petersburg, FL

NET NEUTRALITY IS A FORM OF FREE SPEECH AND SHOULD BE PROTECTED UNDER THE 1ST AMENDMENT
—Conrad Bishop, BOULDER, CO

Because it's the right thing to do!
—Terry Blount, San Jose, CA

I can barely afford internet service as it is now. I too need access to service that is at the same speed as others, not a two class internet.
—Ocean Pellett, Waterford, CT

One internet for the 1% and one for the rest of us. This is anti-democratic.
—Harry Michaels Jr., Fort Collins, CO

Fascism is running rampid in this country and you are only adding to it by allowing communications giants to dictate how the internet should be run. The citizens of this world want a free and open internet and if there were such thing as democracy in this country then you would be listening to the citizens and not corporations. Allowing internet slow lanes is only going to pad the wallets of you and these giants and hurt small businesses and everyone else using the net. Do your job and enforce a free and open internet like the people want.
—Micah Bettis, Lake St Louis, MO

Freedom of expression. A free internet is our last true outlet of the U.S first amendment: Something you claim to follow.
—Thomas David Guthrie Ahern, surrey, b.c,

FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Marsha Montano, Lafayette, CO

I think there will be an big price to pay for anyone who goes against the public's demands for a free and open internet. Allowing private corporations to decide who will get good service and who wont is totally unacceptable.
—John J Coghlan, Brooklyn, NY

It's a freedom of speech issue.
—Martin Leir, Minneapolis, MN

We are already in the dark ages of internet speed and you want ISP's to slow it down even more?
—Kenneth A David, Tucson, AZ

The internet IS a communications utility. I get my telephone service through VOIP - meaning internet. Email is the number one communications method in the world -- INTERNET. That makes the 'net a utility. NOBODY should be blocking people from fair access to utilities just because they won't pay a premium. End this now - you knew it was wrong when you approved it, and you still know it's wrong.
—William Cernansky, Portland, OR

Please designate broadband as a telecommunications in order to continue to advance access to internet and the opportunities it can offer for all people.
—Amy Berman, Nashville, TN

We are already behind the vast majority of European countries around the world for price v. bandwidth. Let's face it. Technology is changing and utility companies don't like that we are moving in a direction to one major data line going into houses rather than multiple services for phone, TV, internet, ETC. Stop allowing greedy lobbyists of the utility companies to use their money to hold the status quo. Rule in favor of the average American citizen. Why should we have to be charged for every little service? The utility companies systems are obsolete. We shouldn't be forced to be fed whatever they see fit. This is one of the few industries where there is little competition to force them to cater to the consumer. True net neutrality promotes free speech and free thinking. Allowing corporations to decide who gets access to faster bandwidth obstructs the last true forum for the average citizen to express themselves to one another.
—William Petersen, Oceanside, CA

These companies are already virtual monopolies in their respective spheres of influence and hugely profitable. They do not need carte blanche to charge more money for the same level of service. You and your colleagues work for me and every other person who is providing this same feedback, not a handful of corporate behemoths. This is despite the revolving door of incestuous industry-regulatory relations that will almost certainly render our feedback meaningless and result in a huge financial windfall in the future for the supporters of this utter disgrace.
—Russell Drown, Clarkston, MI

It has been happening for some time now. Dial-in is still used by many and are paying through the nose for that basic service. Now, you, Mr. Wheeler and your hoarders have decided to make us pay more for even slower service. It is just a win for you since you are cutting off our voices. You won't have to listen to us unless we pay you to listen.
—Kathy Bergquist, Sioux Falls, SD

Net neutrality is the only means of ensuring fair and equal access to all websites for businesses AND for the population at large. The proposed plans to tier access speeds is tantamount to a restriction on free speech - like telling a group they can say what they like, but then sticking them in a soundproof room so they can't be heard (or, equally bad, making the right to say it a factor of how much money they have). DO NOT do away with net neutrality.
—Andrew Moss, Baltimore, MD

The fact that the net has essentially been neutral up to now is the main reason for its rapid rise and huge impact both economically and culturally. Getting rid of net neutrality will be the end of Internet innovation as we know it. Internet providers need to be reclassified as common carriers; it's the only thing that makes logical sense.
—David Beal, Providence, RI

We need to keep net Net Neutrality.
—John Medina, Denver, CO

I will not compete with wealthy people or their corporations for band width and limit my free speech based on wealth and power and position. Net neutrality works just fine now and it will far into the future if the government stops trying to regulate free speech and access to the net. How much money are you receiving to push this carp, I would ask? Jack Sanders
—Jack L Sanders, Rapid City, SD

FCC Chairman Wheeler's plan allow rampant discrimination online. If approved, these rules would mean the end of Net Neutrality. Treat ISPs as common carriers. Do not give them the power to pick winners and losers online and discriminate against online content and applications.
—Ronald E Kosman, Walnutport, PA

We are scared to death of the unfair charges we will have to pay for a service we already pay a lot for. Without Net Neutrality, prioritized traffic is inevitable. And we cannot afford this double charge. This is so unfair. Why won't the FCC just correctly classify ISPs as common carriers? Are there any human beings at the FCC? Please do the right thing. The proposal is a terrible plan for this country.
—Dan K., Cerritos, CA

I depend on the internet for unfettered access to information of all kinds, and for communication with others. Don't let it become yet another channel for pushing corporate content at the expense of personal communication.
—Richard Khanlian, Santa Fe, NM

The internet is the last bastion of free exchange of info and ideas. The internet now supercedes telephones as a method of communication. It is the PRIME method of communication and should be protected as such.
—Sylvia De Rooy, Eureka, CA

So I can find out new information that matters to me.
—Michael P Rand, Weymouth, MA

The internet is as important--more important--than telephone service was when it was at 20 years old. The internet must be classified as a common carrier. The FCC should be protecting internet neutrality and working to provide it to all Americans at prices and speeds comparable to France or Hong Kong rather than working with big internet providers to help them make yet more money off the backs of American consumers.
—Elizabeth Kinney, Alamosa, CO

net neutrality is vital to protecting fair access to information for all.
—Rachel Spigler, philadelphia, PA

Net neutrality is important in stopping and reversing the rise of fascism in America! Net neutrality is important in stopping and reversing the rise of the American fascist military/police state!
—John and Martha Stoltenberg, Elkhart Lake, WI

I personally know that the Internet has to stay free and open because it helps me in my work.Less paperwork.Also most people using the Internet do not have cable or a computer in their homes.Also the Internet was never created for Comcast and Verizon to make money from the usage of the Internet.The Internet is the World Wide Web, not just the Us alone.
—Myriam Pierre, Jamaica, NY

Please encourage the FCC to dump their rules regarding ISP providers and reclassify ISPs as common carriers. The new rules will continue to erode the middle class in the United States and limit access to the poor.
—Amy Trussell, Salem, OR

The internet is a space for the equal expression of ideas, and equal opportunity to be heard. By creating fast lanes for bigger, more established websites, you take away from smaller ones who deserve equal access to the forum. Not only that, but you encourage monopolies and favor existing websites. Before Facebook there was Myspace. What if when Facebook was trying to get off the ground Myspace was in one of these fastlanes? Would we have Facebook at all? By allowing large, existing companies access to higher bandwidth, you allow them also to force out smaller, burgeoning startups. This bill is bad for business, bad for SMALL business, and bad for the progress of technology and ideas.
—Samuel M Henry, Boston, MA

This is just a money and power grab by 4 or 5private businesses. They see potential profits off of technology they did not create and so what if it decimates online businesses in the process. Allow 4 or 5 businesses decide what I can see, what I can read and what I can say on the internet is not just anti business, it stifles free speech and it stifles innovation. America has alway been considered an open market place and that open market place is going to be the source of economic recovery. But, these rules must be thown out and internet must be made a public utility to preserve the value that is gives to American Citizens and all American Businesses. not just AT&T
—Dennis Dabney, Las Vegas, NV

I use the internet every day. I believe that no matter which website I visit the content from that site should load as fast as my connection allows, that is what I am paying for.
—Brian Willcock, Hastings, NE

Please reclassify ISPs as common carriers. We feel sorely misrepresented and taken advantage of as it is, and Tom Wheeler's plan appears to be protecting the wrong folks.
—Mr. Douglas Anderson, Somerville, MA

The internet is my only source of communication. If my news providers can not afford to pay more, then it is discrimination and free speech is being curtailed. The slow lane only entrenches big business, to the detriment of everyone else.
—Sherrylee Felger, Port Orford, OR

The internet is Common Carrier, like phone lines, and should be classified as such. Loss of Net Neutrality moves the internet from the commons, which benefit all, into the hands of corporations with the most money. Any move to allow companies to control the internet is a disaster to individual human rights, and the beginning of the end of the only medium for individual freedom of speech.
—Eric Anderson, Greenville, SC

Please don't get rid of Net Neutrality. I'm on SSDI, a very limited income & can't affords to pay more for than I already do. The Internet has become my window to the world now! PLEASE don't take that away from me. I'd be lost without it. It's not right that those who can pay more can get faster internet than those who can not, like me & I'm not alone in this country.
—Vivian Mosley, Newport, KY

It should be open to everyone.
—Jim Kerner, Bergenfield, NJ

I am an activist pretty much limited to sending e-mails regarding human rights, poverty, medical treatment of sickness and disease, trafficking, environment, immigration, women's rights, education, and others. Please don't cause my internet access to be adversely affected. Thank you. Peace!
—Mrs. Gene and Dori Dori Peters, Mitchell, SD

Please reclassify ISPs as common carriers and keep the internet a free and equal source for information.
—Jill Morrison, San Francisco, CA

Google, Facebook, Amazon, Netflix, Hulu, etc all of those businesses happen because the internet is open. They all started out from a garage somewhere. What about tomorrows Google and Amazon? Do not make decisions that will benefit only a few in our society and cause our larger society to fail in an every competitive world. The US will lose in time to the rest of the world if you break the open internet.
—Brian Singh, Secaucus, NJ

Without Net Neutrality and sufficient income, I will be without affordable Internet. There is a solution to the problem: reclassify ISPs as common carriers.
—Dr. Sandra H Cooper, Wheatland, WY

This really is a utility. We all depend on it, and auctioning access off like meat stinks.
—Stephen Fleck, Long Beach, CA

it puts average people at risk
—Michael Cooper, longmont, CO

The internet is everyone's primary method of communication now, and therefore ISPs should be classified as common carriers.
—Ronald Sverdlove, Princeton, NJ

With so much misinformation in the news now a days, how is someone going to do the research necessary to figure out the truth without the internet?
—Anna Fabis, New Britain, CT

I am a single, low-income/working mother of 2 children. One is in college and one in middle school. We need the internet for school projects and research. My children deserve a chance at a bright future. I do not want their grades and education to suffer because I can't afford enough internet access or access to certain sites that a provider decides is worth more because it is popular.
—Kimberly M Trew, Waterford, CT

BAD idea...Protect Net Neutrality!!
—Lisa Canedo, Henrietta, NY

How much are large telecommunications paying you to make this happen?
—Ben Wilson, Cape Coral, FL

Giving the larger companies an even more significant advantage over any entity that is not a large company is placing America on the fast lane to a Corporatocracy.
—Patrick Sutton, Costa Mesa, CA

All data should be treated equally. Freedom of information depends on freedom of data. Please classigy ISPs as common carriers.
—Peter Mulvey, Milwaukee, WI

it's essential - don't sell out to corporate greed!!
—Pamela Evans, Kemp, TX

The internet is a tool that exists for all of us to use - like electricity and water. Do we let water companies charge us whatever they want for use of their pipes? Why should we allow corporations to dictate life in the internet for all citizens? Do the right thing. Preserve the internet as a tool of free expression and even revolution. Serve the people and the common man - NOT giant corporations.
—Samuel S Axelrath, Denver, CO

There's no want from the consumer, or need on your part to charge more for an infrastructure that's already in place. Get your filthy paws off my bandwidth you damn dirty apes!
—Dragi Spiro, Anchorage, AK

Dear Federal Communications Commission: FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers. ~MJ Hsu
—Mei-Jean Hsu, Woodland Hills, CA

I depend on the internet being a free domain for innovation, creativity, and information. Don't work for corporations and big money, focus on the people.
—Jon Storey, Eugene, OR

If we didn't have Net Neutrality, online sites like Youtube, Amazon, Twitter, Tumblr, and programs like Skype and other widely used sites and add ons wouldn't have been made. Why? Because the internet was, and always should be, a place where new ideas, businesses, and companies can get their start. Spitting the internet in two doesn't make any sense, unless you would profit by doing so. That is just what is happening here. A small group of 'fat cats' are trying to figure out a way to control something that isn't theirs to begin with. The internet is for everyone, so everyone should get the same service at the price they pay. This is not the 90s, where the internet was new and not everyone could effort it, much less understand how it works. Every American uses it in some way, shape, or form. It has helped us grow and create all new forms of communication. It's just has much a part of our lives and culture as is television and the phone. The internet should be reclassified as common carriers because its is just as common today as is TV and phone! Personally its help me connect with people looking for my line of work (I'm a digital illustrator). It's help me make new friends, talk to my loved ones when I was far away during my college years, and keep me updated on world events, the ones that the mega news channels never seem to touch on. The internet has helped a whole generation become connected with the world around them. The only reason it has come this far is because there was no discrimination on the flow of information, who got it, and who didn't get it. And to Mr. Wheeler, I would be lying if I said you didn't make me sick. We know what you're doing, and it is NOT for the benefit of the American people. It's only for the benefit of your friends at AT&T, Comcast, Verizon, and other providers. You used to work for the NCTA (National Cable & Telecommunications Association), the NABU Network, were CEO of the CTIA (Cellular Telecommunications & Internet Association), and you were a executive at Core Capital Partners. You are NOT someone that supports Net Neutrality. You are just a lobbyist looking to kiss more ass. We need Net Neutrality.
—Karen DIshaw, Massena, NY

It is consistent with genuine democracy.
—Michael Gambale, San Francisco, CA

These large companies are already a monopoly, and this attempt to kill net neutrality will make these large companies even more a threat to smaller companies, especially start-up ones. They can use megabucks to bully their way around. What happened to the common person or our love of democracy? Please don't sell out to these large bullies!!
—Simon B. Reed, Severn, MD

Don't destroy entrepreneurship and open dialogue.
—Greg Tompkins, Milwaukee, WI

The Internet is for everyone.
—Margaret Moulden, Seattle, WA

The internet is a global public library ~ a world storehouse of knowledge that is being updated every day by millions of individuals pursuing their interests. What a marvelous resource it has been for everyone, regardless of age, gender, nationality, social, political or financial status. Has such a democratic invention ever existed before in human history? The internet unfolded spontaneously as a (global) public telecommunications service with ISPs as common carriers. Will it remain so, or will this too be degraded, hoarded and privatized by giant corporations for the benefit of a few? NOW is the time to legally protect this public treasure for all generations to come.
—Nikki Alexander, Ventura, CA

I do not agree with the idea of giving people or corporations more access to the internet just because they have more money.
—Joseph Sauer, Louisville, KY

Net neutrality is the only way to keep thing fair for everyone
—Tristen, Keizer, OR

The internet is a way for people to stay in contact with others who share their beliefs and interests. It has allowed me to make friends all over the country and world. I can't pay extra fees like a big corporation. Make the internet providers common carriers to protect the ability of the little guys to use the system at the same speed as the big guys.
—MaryKay K Rodarte, Phelan, CA

Net neutrality is a very large part of the economy and helps encourage much of the small business that will be pushed to the side with these new changes. It's a bad decision morally and economically.
—Scott Mckinnon, Chetwnd,

stop corporate grid, net neutrality is the people's way
—Victor Ponce-Juarez, Portland, OR

I work for a small local web company, we don't have the funds to pay for an "internet fast lane" to ensure our customers get the service they pay for. This proposal has the potential to harm or even put small companies like ours out of business.
—Wylan Werth, Santa Fe, NM

Reclassify ISPs as common carriers. Don't destroy net neutrality. Your rule changes will cause rampant discrimination. You will be allowing ISPs to pick the winners and losers on the internet. I will be one of the users since I don't have lots of cash to pay the ISPs. I just don't understand why you would propose such terrible rules. Do you have a a lucrative job waiting for you at an ISP after you leave your FCC chairman job? That seems to be the way government works.
—Alex J Trapalis, Elk Grove Village, IL

Nobody should be denied full access to the internet based on their ability to pay. It should be available for all people to access equally. Capitalism at its finest. The FCC should be ashamed.
—Kate Spain, Toronto,

Stand up for Net Neutrality don't allow rampant discrimination online.
—Ms. Lisa Hamill, Chapel Hill, NC

This is one of the most important issues facing us today. Please do not let Net Neutrality end. The American people are counting on you! Thank you.
—Patricia Lane, Beacon Falls, CT

Everyone needs the internet. It is not a luxury, it is a necessity.
—Megan Branning, Pittsburgh, PA

the net is one of the last real and true neutral places in the united states, where everyone is treated equally. please ensure it stays that way.
—Allan Rubin, Houston, TX

These companies are huge monopolies. Why should they be given control over the Internet, which is so important to our country?
—Jane Hadley, Seattle, WA

Net Neutrality an the open internet is the reason why I can now connect with my friends all over the world. Its the reason why I can learn about everything at the ouch of my fingers. The open internet is for everyone to use equally. It is for the citizens and it is a giant part of the world. Without it, life would change drastically. It is our right to have a free and open internet.
—Melissa Kadri, madison heights, MI

The freedom of information is of paramount importance!
—Birgit Graefner, Holgate,

Please don't destroy the Internet by creating a two-tier system. Treat everyone the same, and provide everyone with the same service. Keep Net Neutrality!!!
—Mr. Peter Rasmussen, Berkeley, CA

It is a reasonable expectation that personal communications, or even mass communications, continue to enjoy the right to express themselves without a monitor.
—Martha and Roger Cuneo, Warren, MI

The internet is not TV. I'm not paying to visit "premium" websites. What could be a premium website? Any site Comcast will deem premium. If the internet wasn't like this to begin with, you cannot implement it now and expect people not to be outraged/come up with a workaround/solution. It would be like going back to the days of paying ¢10 a text message. IS THAT NEXT!?
—Christopher, Davie, FL

We are not living in the 1940's when everything was segregated. We want equiality !
—Alex Coto, falls church, VA

I don't want the most paid for internet search, I want the best. This will take websites that are now able to operate without charging the consumer and charge them. This cost will be passed down in the cost of goods and services to the consumer. This will not allow small business to thrive it will allow corporations to be the most prevalent search available. And all ao the rich can het richer. Eventually this could easily turn into a way to censor information as well. Rarely in history has greed ever had good ratifications, this will end the same. Think of your children's children, we are in an unprecedented time with this technology era. How sad to look back and wish we would have tried harder to preserve what is right, instead of making more money.
—Lindsy Hoganson, Highlands Ranch, CO

It is critical for a democratic society to have freedom of information and ideas, not the dissemination of ideas based on how much their creators and backers pay. The internet is becoming a true necessity for participation in the modern economy, as telephones became crucial last century.
—Lara Backman, Seattle, WA

Net Neutrality is important to me as a retiree who depends on the Internet to stay connected, manage my finances, and so much more. Ending net neutrality will increase inequality between those who can afford new user fees and those who can't.
—Linda McCall, New York, NY

NET NEUTRALITY IS DEMOCRACY!
—Mr. Thanh Nguyen, New York, NY

The Internet is too important to personal and business use to allow manipulation for gain at the hands of uncontrolled service providers.
—Barbara Camacho, San Diego, CA

As a programmer and web developer, I'm very concerned about losing net neutrality. I think this change would devastate the small business that rely on the internet for much of their business, and ruin the most transformative tool for freedom of speech and access to learning and information for all.
—Boz Hogan, Wolfeboro Falls, NH

Not everyone can afford to pay fees for the higher-tier websites. What about college students like me who are barely scraping by? Without full internet access, researching would become a pain. You don't want a bunch of angry 20-somethings.
—Rachel Mullins, Lexington, KY

Phone and cable companies trustworthy? I wouldn't bet a plugged-nickel on that and neither should anyone else. The Internet infrastructure must be governed as a natural monopoly and treated as a public resource.
—Richard R Gingras, Quinton, VA

Because the internet is one place where people should feel able to be themselves, and should let their passions run free. Net Neutrality matters so much, because it allows everybody to do their own thing, without being restricted.
—Markella Votzourakis, Melbourne, GU

The internet is a cornerstone of modern life - from our day-to-day lives to businesses and jobs. We simply can't live without it, so it's time to declare that it is a public utility, not a private "service." Title II of the Communications Act of 1934 already grants the FCC the authority to declare the internet a public utility and provide greater regulation to the telecommunications industry. It's time for the FCC to exercise that authority. Regulating the internet as a public utility would solve a lot of problems and it would allow the FCC to prohibit internet service providers from creating internet "fast lanes" and "slow lanes" to extort payments from companies like Netflix, which they just pass on to subscribers. I've already PAID Netflix once ... just as I PAID my ISP once. Why should ISPs be allowd to double-dip? Allowing Internet service providers to purchase "fast lanes" could produce another cost that would be passed along to consumers. It would also enshrine the power of incumbent content providers as "Gatekeepers" at the expense of startups and smaller companies. In the past, the FCC has agreed that Internet "fast lanes" like those currently under consideration would threaten net neutrality. This proposed rule change would likely result in higher consumer costs and decreased private sector innovation The FCC ALREADY has the power to declare that it is a public utility. It doesn't require a new telecommunications statute replete with time-consuming years of legislative horse-trading and special interest lobbying. This reclassification should have been done 10 years ago.
—Michael Hirsch, Parsonsburg, MD

An open and free internet is non-negotiable. Of course the industry wants to have as much freedom as they can get to make as much money as they can, but your job is to protect the citizens of the United States, to keep our communication systems open and working for us and for our democracy - and to create the conditions for innovation. Net Neutrality is the only way to accomplish these goals, and common carrier status is the only path to upholding it. The whole reason common carrier laws exist is to protect ALL players in the market. Follow tradition and existing law and separate content from delivery. Our democracy is under intense pressure on every front, and robust and open communication systems are the fundamental to any democracy. Thank you for protecting the future of our nation.
—Elizabeth Bandy, Homeworth, OH

Please reclassify broadband to maintain equality for all internet users be they rich or poor.
—Charles Dorsey, Burbank, CA

Please understand that ending net neutrality will hurt all internet users. All business and individuals should have the ability to access the internet on an equal footing.
—Brian Byrd, Mt Juilet, TN

Firstly, I already pay out for a faster internet connection than Dial-Up. Secondly, allow to discriminate against different internet content is absurd. We've already been through this internet censorship with SOPA, PIPA, etc. When is it going to become clear that people do not want this? Just stop. Cease and desist. I am a college student, and many of my classes require an internet connection. The censorship would be damning to some research and the further increase for the internet speed costs would make it even more difficult for us students to get online at all. Throw out these rules. Leave ISPs as common carriers.
—Nathan Hahn, Elkhorn, NE

I want to keep the internet the vibrant and free-flowing information source that it is. Giving companies, which can pay more, priority access risks turning it into a commercial conduit no longer available to the average person.
—Linda Indyke, Cockeysville, MD

Please keep the internet equally usablel for all of us. Thank you.
—Victoria Grubbs, San Diego, CA

I value getting internet services from all companies large and small. But the proposed internet rules would, as is always the case, favor large companies over small. Please implement meaningful Net Nutrality
—Adam Fedor, Boulder, CO

A pay-for-priority internet is not what I want. It is like having the Dictionary close at hand all your life and then suddenly someone takes it away from you and says we have confiscated all the dictionaries we could find and now you can only use one if you pay us at our store to thumb through it. But, this is considerably more insidious! Now you want to take a giant source of knowledge out of my hands and give it to someone who wants to sell me only tid-bits of it and then profit handsomely from it. I am Very angry about this! I am taking names and remembering who it is I will not be supporting from now on! Also, If this happens it will be one less distraction (the internet) and one less bill to pay!
—Mike Gardelle, San Francisco, CA

ISP's are common carriers. What's the difference between Fedex carrying packages and an ISP carrying packages of data. Both use public access paid for by public dollars. Classify ISP's as common carriers or rewrite the rules so that all data is equal on the internet highway. We deserve the choice, not a monopoly.
—Steve Eisner, Van Nuys, CA

You must save Net Neutrality. Without it, new innovations will never see the light of day. Such popular sites as Facebook and Youtube never would have had the chance to get started without Net Neutrality.
—Mark Cook, Houston, TX

The whole point of the internet is that it's for everyone. Whether you want to access certain content online or use it as an avenue to get yourself out there, either recreationally or for profit, you can do that. That's what it was made for. This FCC bill would skew all the advantages in favour of those who are already benefitting, while skewing it away from those who could as well.
—Cole, Winnipeg,

There are already reports of service providers limiting bandwidth. What is to stop them from doing that to media sources and essentially extorting money from them in order to maintain reasonable data transfer rates? Could YouTube, Netflix, Hulu, or nearly any other streaming media service have thrived in an environment where they would have to pay for fast-lane access when they were just starting? I fear that this path leads to potential financial limitations that may hinder innovation and start-ups. Additionally, at least one large carrier is talking about limiting bandwidth and charging for overages; if they do this and charge for 'fast-lane' access for media sources, they have the potential to charge an increased amount twice for the same resource.
—Branden Ohlinger, Fleetwood, PA

The OPEN internet is WAY too important both as a source of info/products I wouldn't have access to otherwise & as a way of expressing myself.
—Herman Diaz, Brighton, MA

Don't let large companies have the advantage over the single consumer.
—Jeff Kremer, Mt Prospect, IL

Equal access to information is vital for the community to thrive. By giving favoritism to certain groups of people, who are already in high favor, it could cause a burden society cannot bear and people will rebel.
—Corrine Chancellor, Denver, CO

It wasn't broken, so why ruin it? Let's have common carrier at same speed for everyone.
—Gene Keyes, Champaign, IL

THE NET IS ESSENTIAL FOR EVERYDAY LIVING AND WE SHOULD ALL OWN IT--LIKE PUBLIC ROADS AND AIRWAVES. ISP ENTITIES SHOULD BE CLASSIFIED AS COMMON CARRIERS SO THAT EVERYONE HAS EQUAL ACCESS. AS AN AMERICAN, I AM OFFENDED BY THE PROPOSED RULES. IS THIS COUNTRY ABOUT EQUAL OPPORTUNITY, OR NOT?
—Melonie Wilson, SAN JOSE, CA

Chairman Wheeler's plan reminds me of Orwell's Aminal Farm, "All the animals are equal but some are more equal than others." That is exactly the crux of the Wheeler plan, and any comments to the contrary are simply not credible. The only way to maintain true net neutrality is to treat the internet as a utility - period.
—Dr. James Lin, Albuquerque, NM

Reclassifying ISPs as common carriers would not stunt investment in broadband. This is just being pushed by ISPs to get more money from what is commonly used by our public as content and apps, effectively creating a two-tiered Internet. It's undemocratic, it is entirely pro-business and not in the interest of our citizens, and an outright farce. Through out your net discrimination rues and reclassify ISPs as common carriers.
—Christianne Gell, Houston, TX

The ISPs make plenty supplying access, they shouldn't be allowed to gouge someone simply because they are popular.
—Mark Goss, Orange, CA

ISPs should be reclassified as common carriers. Stop large ISPs from merging. Stop monopolization. The FCC is a federal agency that is part of the United States government. Therefore, you should work for the prosperity of the majority of American citizens and uphold the United States Constitution. If the FCC doesn't reclassify ISPs as common carriers, you will be held responsible for allowing ISPs to monopolize, price discriminate, and fix prices for a service that allows us to express our first amendment right to freedom of speech. Not to mention, this will hinder the freedom of the press and media. This could open the door for companies as well as government agencies to censor the internet by blocking sites that oppose their company's or party's interests, only to force their customers to pay more money to access them. This is against the Constitution on which the FCC was built on. Please, reclassify ISPs as common carriers.
—Ben Zschunke, New Orleans, LA

Network neutrality is the idea that your cellular, cable, or phone internet connection should treat all websites and services the same.
—Jon Spinac, New York, NY

We're already being held hostage by the likes of Comcast and all the internet providers with their heavy prices. This would just put another notch in their over priced structures to charge more money and restrict a free Internet Market. This would have a bad impact once again for everyday people and businesses.
—Randall Andrews, las vegas, NV

Leave the Internet Free for everyone and stop giving the Internet companies the power to charge more money and restrict a free market.
—Anthony Gonzales, las vegas, NV

Network neutrality is the idea that your cellular, cable, or phone internet connection should treat all websites and services the same.
—Susan Spinac, New York, NY

Network neutrality is the idea that your cellular, cable, or phone internet connection should treat all websites and services the same.
—Lev Spinac, New York, NY

Net neutrality is about real democracy. It is about a level playing field which will encourage, not stifle innovation and start ups!
—Arthur Rothman, Glenwood springs, CO

Cyberspace must not be controlled by any corporation. We already pay for internet service. With the cost of living we do not need another bill or some entity controlling the internet. Keep cyberspace to individual use or neutral.
—Jim Hrastar, Hillsboro, OR

It is important to me because I am on a limited income. My fiancé lives in Australia and is, for the moment, unemployed. We talk daily on Skype. Please keep net neutrality!!!!
—Jaime La Pierre, Philadelphia, PA

ISPs should NOT be able to determine what sites are more important than the others. Why do we even need a two-tiered internet? It works great as is, and I know I don't want ISPs determining which sites I go to based on if they're in the fast lane or not. These rules need to be completely reconsidered, and the status of ISPs need to be rethought as well.
—Matthew Estrada, Highland, CA

Equal access to the net is essential to maintaining democracy.
—Steve Finucane, Prescott, AZ

I want the Internet to remain free as a source of education for all people.
—Marisa Scionti, Flagstaff, AZ

Dear FCC and Tom Wheeler, Good evening. The FCC should classify ISPs as common carriers in order to avoid allowing internet providers like Comcast to determine how fast internet is for certain people and/or content. Allowing monopolies like the one Comcast is headed towards would be a hinderance to industry growth and production. It would be a purposeful deceleration of U.S. American innovation and freedom. Please fight for open internet by reclassifying ISPs as common carriers. Thank you, Gracie Wang
—Gracie Wang, Lemont, IL

Making a fast lane means everyone else gets the slow lane including non-profits!
—Rachel Schmitz, Portland, ME

I work as a paraeducator and my income is limited. Comcast is my internet provider. As of now, comcast chargers a ridiculously high amount for high speed internet. Allowing a two-tiered internet would be devastating and unfair.
—Angela Hurley, Kent, WA

I was a computer wizard practically before I could read without a parent over my shoulder, and I think it's obvious why someone who knows computers so well would be so concerned that a few businessmen could be granted, by the government, under law, the freedom to interfere with my activities on the web that we all share, regardless of who our service provider is. I want access to all the information available on the web about anything I want, when I want it, limited only by my own ability. The fact that telecommunications companies are actually pressing claims so deep in Americans' lives makes the United States seem more like Russia every time I examine the widening cracks in my "guaranteed" rights that go back almost 250 years. The difference is that in America, these government-sanctioned trespasses are carried out not by government officials, but by businessmen who care nothing for the nation or its people, but only for the profits they now reap thanks to the goodwill they performed for a few certain individuals who say they represent the people in their speeches but based on their actions are obviously not concerned with the grievances they have brought to the blood and soul of the nation. I vote, and I will continue to do so, but I now wonder how much difference it would really make if we all stopped voting and instead just organized the seemingly inevitable protests against the candidates who are most strongly favored by our "democratic process."
—Alexander Alexander Grambergs, Memphis, TN

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers. How many times and how many people have to say this for you to actually get it!!
—Andrea Mills, Websterville, VT

Don't let the companies decide who gets what service by charging high fees for those that can afford it and force everyone else to have slow speeds.
—Frank Kiernan, Olivehurst, CA

The internet is the greatest tool for the free collaboration of people in world history. Giving corporations the power to tilt it to their interests will stifle countless entrepreneurs and do untold damage to the USA's technological superiority.
—Nate Logan, Indianapolis, IN

The service providers are already killing us with high prices. Compared to Europe, we're being raped in access fees. Net neutrality is imperative and the net should be deemed a utility. Even the playing field.
—Shirley Morrow, Oklahoma City, OK

stop giving in to big business as usual. There is only one way to protect net neutrality and that's to make ISP's common carriers! If you follow through with the current proposed internet rules you'll introduce discrimination via who can pay the most money. Big Business wins and everyone else will lose.
—Donald J. Rhoads, Gilbert, AZ

Net Neutrality improves our democracy
—James C Roberts, Palouse, WA

The internet should be a place of communication, knowledge, and leisure. Regulating the speed of particular websites versus that of others will be highly detrimental action, one that could serve to put an end to what people enjoy about the internet in the first place.
—Meggie Diedrich, Fond du Lac, WI

The internet should be a public utility. Taxpayers paid for the internet. The internet should be reclassified as a common carrier. Stop the corporate give aways. STOP!!!!!
—Colette Walczak, Santa Monica, CA

FCC, Throw out your rules and reclassify the internet as a common carrier. This is the only way to maintain the internet for the common good of the people.
—Andree Walczak, Chesterton, IN

It is a ridiculous idea and would be terrible for people who either are always online or those who work from home online.
—Matthew Timothy Dinehart, Fredericksburg, VA

I don't want to live in a country that puts corporate interests on a pedestal like this. It would open a huge can of worms, and pave the way for even more thinly veiled corporate fascism in our country. Please stand against this terrible idea, protect American citizens, and our internet access that is so fundamental and important.
—Meredith Phelan, Frederick, MD

WITHOUT IT THE NET IS DEAD...CRAPPY....THE FCC IS IN PLACE TO PROTECT THE PUBLIC FROM ANY ONE BIG BUSINESS TAKING OVER, OR CONTROLLING ANY ONE MEDIA, LIKE THE INTERNET.....WHAT YOU ARE PROPOSING IS LETTING A FEW COMPANIES CONTROL WHAT CONTENT WE CAN AND CAN NOT SEE, AND WHO CAN AND CAN NOT BE ON THE INTERNET.....NO FREEDOM....THIS IS HOW CHINA DOES IT'S INTERNET!!!! IS AMERICA BECOMING CHINA AND RUSSIA??!!!! THIS IS JUST SO WRONG, AND SOOOOO STUPID!!!!!
—Deborah Smith, OKLAHOMA CITY, OK

Why would one put the foxes in charge of the hen house? Why would one let these companies decide what I can and cannot access because I can't pay them information highway robbery fees? Don't AT&T, Comcast (who have lousy cable service and poor customer service records), and Verizon make enough money ripping their customers off? We already have cable to frustrate us (and their prices are going up!), we don't need greedy incompetence online, too. Reclassify ISP's as common carriers.
—Virginia Hildebrand, Mountain Top, PA

It is the most important way of communicating with others in this day and age and Net Neutrality upholds our constitutional right to freedom of expression.
—Barbara Wishingrad, Santa Barbara, CA

Unfettered communications are vitally important for functionality of our society. ISP should be classified as common carrier utility because that is what they are. Fast lanes and slow lanes will engender oligarchy, that is not desirable for democracy.
—John Dodge, Homer, AK

Please do not put financial priorities on consumer products
—Nancy Blastos, redlands, CA

I am a small business owner and much of my advertising and new business comes from clients visiting my website. This is just one reason Net Neutrality is important to me. This is only going to cost consumers more money and decrease the level of service we get from these companies. Comcast is the major provider in our market and are one of the least popular companies, providing the poorest level of service of any utility company already. Why would you reward this behavior? Please do what is best for consumers, not the big corporations.
—David Horton, Jacksonville, FL

It is important to prevent means for descrimination. Net nuetrality ensures that at least there is equal treatment of all content.
—Vanesa Bettez, Allston, MA

Access to the Internet should be available to everyone....the way it always has been....not restricted in anyway.....Thank You
—Janet Ostrowski, Waukegan, IL

If the internet is not open, it is not the internet anymore. The profit of large companies is not worth trashing something that works just fine the way it is now. You know that effectively creating inequality among internet users is wrong.
—Mara Zakrajsek, Colorado Springs, CO

Please protect Net Neutrality. Net Neutrality ensures Internet users can access websites without unreasonable delays. Net Neutrality allows individuals and organizations with modest means to set up websites viewed by thousands, sometimes millions, of people. Net Neutrality gives Internet users easy access to information. Please adopt rules protecting Net Neutrality. Sincerely, Douglas Olson
—Douglas Olson, Brainerd, MN

Net Neutrality is important to me because free and open communication in all forms is and should be a human right. Eliminating net neutrality would be a direct action against this right, and send us back to the information dark ages.
—Ben Bargman, Beverly Hills, MI

As just an average American, I see on a daily basis the direction our country is going and Big Business is taking over. This must stop so that the internet stays open and equal to all and not to be run by companies with the biggest wallet. If this happens only the rich and well off will be able to make use of what started out as a free. Keep the net neutral and pressure for the generations of the future.
—Addison Reeder III, Girard, PA

As a college student, I can't afford to pay extra fees for faster internet, and I depend on net neutrality to do online homework.
—Doug Weber, Blue Springs, MO

With Net Neutrality, all students can use the internet to complete required coursework in a timely manner, all adults can use the internet to find and pursue employment opportunities, and all people can use the internet to research public transportation options. All of these things benefit America as a whole: better educated and more technologically savvy students, fewer unemployed adults draining the system, and a cleaner environment for all. These are just a mere sampling of the benefits of a free and open internet for ALL.
—Liza Potter, Fairfax, VA

I really think that the internet should remain free and open. Having fast lanes for only those who can afford it is unfair and undermines democracy.
—Vikki Bristlin, Providence, RI

KEEP US FREE
—Jeanne Tatum, Rowlett, TX

Free speech is fundamental to our democracy AND our everyday lives. Without Net Neutrality, the ability to communicate without corporate interference will become impossible.
—Brendan Banerdt, Roslindale, MA

I want the internet to remain equal for all users. ISPs should be reclassified as common carriers.
—Micaela Pronio, Oakland, CA

It means i can talk to others on the web and if u do not classify service providers ascommon carriers i might as well go back to dial up prices as they will raise the price and i wouldn' t be able to afford it!
—Paula Moats, pinellas park, FL

It's time for our Public Servants to actually look out for our interests ahead of the greedy service providers.
—Michael Feeley, Goffstown, NH

The fact that you would consider creating an internet with fast and slow lanes is absolutely ridiculous. I am FURIOUS thinking about it every single day. You make me sick. You are disgusting corporate crooks who deserve to hang. Don't kid yourselves that such a change would be anything but horrible for the consumer. I'm don't know how people like you can sleep at night.
—Chris Browning, Portland, OR

Companies should not have any more control over my world.
—Nadine Youssef-Hatch, Greenfield, IN

Dear Chairman Wheeler, I am writing to say stop! Do not go forward with your flawed proposal that eliminates net neutrality. Broadband must be deemed a telecommunication and regulated as telecommunications in order to avoid your proposal from expanding the digital divide, at the cost of our most vulnerable citizens. Allowing corporations to garner shot term profits at the expense of families that need unlimited access to the internet in order to have a chance of not losing ground. Access to broadband internet directly impacts academic achievement, connection to community, job income potential, ability of families improve socioeconomoc status and a host of other factors that build a stronger America. Your decision must place American families first, ahead corporate profits. Scrap the proposal, and work on behalf of American families, not corporate profits. Kindest regards, Al De Vos Salinas, ca
—Al DeVos, Salinas, CA

This is a matter of denying me the information that is available to others on the internet. ISPs should be classified as common carriers, or Access providers. The current classification is injustice and untrue. The information is on the internet, and ISPs are not information providers. If they have the right to decide, or pick and chose, what the public is allowed to view and not on the internet, then the internet loses its honesty, reliability, security and neutrality. If ISPs are allowed to be classified other than common carriers then they are given the chance to directly SENSOR The information provided through the internet. All servers, services & products on the internet lose their freedom and their market to the Internet service providers rendering the web to be a no longer free market. The fact that they can deny accessibility is a crippling ability. It will not only cripple the free market, but also accessibility in times of need (if there is only one service available in an emergency and that service is blocked). HELP ME SPEAK OUT ON THIS ISSUE!!!
—Torkil William Harris Grimsrud, Houston, TX

This is a terrible idea. Having Internet access should be cheaper and easier than having electricity. Our government needs to develop and regulate the Internet so that it efficiently serves us all.
—Robert Qua, Boston, MA

Why mess up a great thing? Must we always think of money as King? The internet means freedom, so stop putting a price on freedom for all of us.
—Nancie evoniuk, woodland hills, CA

We need to keep the internet same for all!
—Olga Savchuk, antelope, CA

The internet is evolving in a natural and remarkable way. It's the one pure mode of conversation, invention, ideas and community not mucked up by corporations that want control for profit. This is the moment in time to take a stand FOR THE AMERICAN PEOPLE, not the corporations! Do not go forward with the proposed rules; reclassify ISPs as common carriers!
—Valerie Crawford, McMinnville, OR

Internet Service Providers should not have the power to throttle (or privilege) access to any internet site or service, as this would produce barriers to both economic competition and free speech among smaller players. Please reconsider these burdensome and threatening rules.
—Daniel McClure, Bellevue, WA

AT&T, Comcast, Verizon and their ilk are becoming the robber barons of the 21st century. The only way to stop that is with robust legislation that enshrines fairness and equality of access to communication services, including of course Internet.
—Steven Lindsay, Atlanta, GA

I use the internet to pay bills and do banking among other things
—Bill Clark, Louisville, KY

Net neutrality is my main means of remaining up to date on the news...you must protect the open internet
—Mr. Gene Herman, Berkeley, CA

Working Americans and students depend on the internet for information and communication in order to stay competitive. Don't use the internet to turn us into second tier citizens.
—Sarah Axelrath, Centennial, CO

Many people depend on open internet access for their mental and physical well-being - the free internet provides invaluable resources to assist people with a variety of issues, from mental health to abusive households, and pretty much everything else. If Net Neutrality isn't passed, many of these resources will be gone!
—Colby Skeggs, Portland, OR

It matters to me because I do independent research on the internet and without net neutrality, I would not be able to find obscure sources of information. Also, start-up businesses might not have enough money to make a go of it on the internet.
—Mark Bales, Norman, OK

Net neutrality is vital to free speech and privacy. Please respect our rights and protect it!
—Jana Dake, Moore, OK

Keep the Internet open and don't raise the price with a two tier system
—Frank Salonia, Carlsbad, CA

We need true neutrality in order to protect our democracy.
—Mike Mooney, plymouth, MN

free comunication is a human right
—Bernardo Alayza Mujica, Chatsworth, IA

The internet is now the main form of communication for most everyone. It's one of the largest reason the US Post Office is having a hard time making a profit now. It is how people apply for work, pay bills, monitor their house, plan vacations...the list goes on. It has far surpassed the telephone for being a connection to the outside world. Net neutrality needs to be protected.
—Ryan Starr, Lafayette, CA

Nowadays the only area in which the US really remains competitive in the global market is technology, and most technology needs the internet to some degree. By allowing ISPs to deny good internet speeds to users of services provided by small startup companies without the money to bribe ISPs for their "fast lane" access, the viability for new technology companies and innovation in the US will drop to effectively zero and we will no longer be able to compete. Chairman Wheeler, if you and your FCC don't want to go down in history as the traitorous bastards that doomed the US to become a third-world country, for the love of God throw this bullshit out and reclassify ISPs as common carriers like you should have done a long time ago. Doing that will ensure that we can remain competitive in the global market and a frontrunner when it comes to innovation in technology. Thank you.
—Gregory LeTrello, Lake Saint Louis, MO

I don't think it's right that they would slow down a re internet because we can't afford it and with education being so heavily reliable on the internet it would just be wrong!!!!
—Henry Correa, Davie, FL

Internet has become more than a luxury in this country. Many people depend on it for their livelihood. The government should be supplying the people with a way to support their livelihood and not to stifle it.
—Olaf Anderson, Thousand Oaks, CA

Corporate for profit companies will ruin net neutrality
—Granger Evans, Kelowna BC, AZ

I don't want the internet to get messed up by the monopoly internet service providers.
—Barry Lefsky, Oakland, CA

I depend on the internet for both information and to communicate with others. The community groups and non-profit organizations to which I belong depend on the internet to get word of their activities out to their members. If net neutrality is lost, I fear that only the wealthy will be able to use the internet and that its value to average people like me will be lost.
—Karen Jacques, Sacramento, CA

The Internet is the most powerful form of communication, source of education, & entertainment ever conceived by mankind. We as a free nation have a right to access this worldwide network without being bottlenecked by corporations who seek to squeeze every last possible cent from its customers. The FCC should not be puppets for these telecommunication conglomerates but to serve the American people who depend on this service everyday.
—Michael Vargas, Tracy, CA

The Internet is more than just a technology or commodity – it has become a vital piece of our social and economic infrastructure. Any future plans should be about facilitating competition in online content and applications, keeping barriers to a minimum, and promoting innovation and free speech. It appears that the current “market based” approach fails to value these essential considerations and instead promotes unjust discrimination. The big losers will be small and medium-sized businesses, entrepreneurs, start-ups, independent media, and content producers. These groups, the very people who have made the Internet the success it is today, will find themselves at a huge disadvantage vis-à-vis those companies who have the financial resources to purchase faster access to Internet users. The FCC should throw out its rules and protect the open Internet by reclassifying ISPs as common carriers.
—Jeff Stratas, Oxnard, CA

We should have faster internet for everyone and not just the select few.
—Mark Carlson, St Louis Park, MN

I depend on Net neutrality to get all the information I can on topics and issues, so I can make educated decisions based on truth. Killing the open Internet would be censoring our information as it is done in communist and terrorist countries. The Internet would become a useless tool of propaganda. Please stop over regulating this country!
—Kim Waldrop, Garland, TX

It is undemocratic to allow the Internet to become corrupt by allowing preferential access to users in return for money. There also needs to be free market that does not limit competition of internet providers for consumers that will be an incentive to invest in bringing the United States the high speeds needed for a nation watching video streaming content from the internet with Smart TV's in the future. Therefore, I support net neutrality and ask you take whatever action is necessary to prevent the hijacking of technology by self-serving forces.
—Robert Parkinson, San Diego, CA

I do a large share of my freelance work online, and I have to have dependable high-speed Net access in order to remain competitive. It's difficult enough to afford high-speed cable rates in my area, where there is already a lack of service providers to choose from. This will terribly impact my ability to continue to provide professional services to my clients. Just do the right thing for ALL of us: create and preserve real Net Neutrality.
—T A Peckham, Madison, WI

Net neutrality is important because controlling The internet is useless and moneywasting
—Bikbulat Zaripof, Kazan,

Make ISPs classified as common carriers it would save net neutrality.
—Logan Durham, Richmond, IN

A free, open internet is undoubtedly the greatest technology developed for the people. Control of access should not be at the mercy of corporations. Keep it free!
—Karen Genest, Vancouver, WA

As a software developer, I rely on a neutral Internet to support my career. As a citizen, I rely on Net Neutrality to enable me to remain informed about social and political issues.
—Jesse Weinstein, San Diego, CA

Net neutrality is important to me because of the opportunities it gives me and others. The internet has been a new frontier for entrepreneurship, and new businesses, like blogs, and online market places, precisely because anybody can take advantage of its full potential, provided they are willing to put in the work. I myself was able to start a small news blog, and launch my journalism career, because of the internet. But if Net Neutrality is done away with, this will greatly handicap people from starting online businesses, therefore retarding economic growth, and destroying this once thriving force in American Business.
—Edward Punales, Miami, FL

This new law will ruin the internet, and should not exist. This type of favoritism discourages competition and will stagnate the creativity on the internet.
—Nicholas Christoffels, Victorville, CA

A democracy should not be rules determined by the highest bidders. Everyone deserves an equal voice. But more and more these days (ever since the Citizens United ruling) it seems like money makes the rules, and that is just fundamentally wrong! The only way to stop this corruption from completely taking over is to stand up for what is right every chance we get, starting now. Net neutrality may seem like a small thing, but the effects on real free speech could be dramatic. If Chairman Wheeler's rules aren't changed, then the few groups with the most money will effectively determine what we see and hear on the Internet. This is the antithesis of free speech, and it's not what America stands for, or at least not what America should stand for. So please do the right thing, and do it now.
—Tiffany Tainter, Coppell, TX

The internet is the single largest exchange of information on the planet. To allow so great a pool of knowledge to be directed by a few self-interested corporations is not only foolish it is dangerous. Please help keep the internet a just and free system wherein one may freely converse and share, not let it become a propaganda tool of the ultra-rich.
—Alexander Clark, Harrisburg, PA

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Kevin, Phoenix, AZ

It is the most democratic thing we have in our society.
—Linda Medeiros, Cloverdale, CA

I really don't want Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. These companies would have the power to pick winners and losers online and discriminate against online content and applications. And no one would be able to do anything about it.
—Younes ezekari, Portland, ME

The proposed will actually form a 'closed door' which would perpetuate discrimination. The internet should be classified under net neutrality giving equal opportunity for all. We already have enough discrimination in this country. Please do not add more!
—Roberta Swann, Clearwater, FL

History tells us how corporations will handle this. If we let this happen we all lose. It will create an unimaginable new level of social and economic tyranny.
—Jesse Campbell, Wellford, SC

A free internet is one of the truest expressions of democracy. Don't let big business restrict it.
—Jen Banet, Hermosa Beach, CA

An open internet has allowed the sharing of information and the connecting of the world in ways we could have only imagined decades ago. Limiting the ability of people (not corporations) to communicate in this way would have ramifications the depths of which we may never be able to fully appreciate. You can not put the genie back in the bottle. The people won't stand for it. The power of the internet must be shared equally.
—Jeff Light, Melbourne, FL

Allowing ISPs to charge a premium for faster service would be a disaster for startups, nonprofits, independent content creators and everyday Internet users. This would, and already is, smothering the chance for innovation. By selling the Internet to the highest bidder, it loses everything that makes it the amazing tool that it currently is.
—Danielle Rhoades, Austin, TX

Slowing down the internet speeds of my ISP, and by my ISP is not right and should not be allowed to happen. This is outrageous!
—Alex Silverio, San Jose, CA

We need common carrier rules for ISPs because the old broadcast system is dead and being replaced (auctioned off to the highest bidder) by giant ISPs that only care about money. Grow some balls and do the right thing for the people by supporting net neutrality!
—Wayne Boaz, Portland, OR

Net Neutrality is extremely important. The internet is a tool, so having the tool tell one what to do with it just doesn't make sense. The internet is a place where people go to find things out, and if there is no net neutrality people will simply stop using the internet to do things. The potential of the internet is huge, so to see it go away because of people wanting to make money would be a shame. It truly is a shame that ISP's have to be a part of this great public entity because without their greed, the internet would be a much more open place already. Adding more restrictions doesn't make a whole lot of sense to keep the internet a Neutral place. Please don't let the ISP's do this to us.
—Levi, Edwards, CO

Allowing internet service providers to create internet "fast lanes" and "slow lanes" would do nothing more than allow them to extort payments from companies like Netflix. It's time for the FCC to admit, as indicated by the courts, that the internet is a Public Utility requiring regulation of ISPs as Common Carriers under existing law, not an unregulated information service. The Cisco programming "priority" option is not intended for the proposed use, yet that appears to be the only mechanism available for implementing the proposed "fast lane" on the predominant internet routing technology. In any event, in theory any scheme for prioritization is likely to result in a similar set of problems, with either excess packet delays or significant instances of packet loss, unless the effect of losing out in a prioritized collision are carefully researched and specified by the FCC. The inevitable result will be internet traffic jams, which the public may end up reasonably attributing to the FCC. As a Systems Engineer who studied queuing theory in college and who recently worked on an Army network system that included proposed prioritization of messages, I can warn you that serious harm to network traffic will result from attempting to implement a priority scheme that gives priority to any sort of video stream. The likely result will be an internet that becomes increasingly unreliable or unusable for many many users. Any scheme that attempts to prioritize one video stream over another will in many cases seriously degrade all lower-priority traffic. Priority mainly affects the performance of a network or node loaded near to or beyond capacity. A network that has plenty of capacity will be unaffected for the most part by prioritization - and it will provide little or no benefit to the entity granted the priority. The only reason to implement a priority scheme is if the internet service provider intends to under-invest in capacity, or if the network is (as in the Army case) inherently limited in capacity. Thus, one mitigation would be to order any ISP who offers priority to any internal or external traffic, to assure that network capacity is adequate to prevent degradation of service to lower-priority customers. This, of course, also requires the FCC to first begin regulating the internet as a public utility. In the Army (FCS) case, prioritization can be effectively used to prevent delay of text reports or alerts, or weapons and flight control signals, by the much higher volume of video or audio traffic that pushes the limit of the capacity of the system. On the other hand, if a General Officer, or those seeking to "help" him, seeks to use the priority scheme to prioritize the video that he is most interested in, unacceptable loss or delays to weapons and flight control signals, and potentially unacceptable loss and delays of textual data, unless the system automatically gives those a higher priority. That in turn further degrades lower-priority video or audio used by the troops. Positive storage and confirmation of delivery can be used to mitigate loss of data, but at a significant cost in network capacity and/or requirements for new technology capable of storing large volumes of delayed traffic, especially as the network capacity approaches its limits, even at a single node. This commenter would support the potential availability, in a regulated system and after adequate testing to assure there are no side effects, of prioritization for low-volume critical traffic, such as autonomous vehicle or aircraft control signals, provided that is used only for e.g. updating route instructions, and not for real-time direct control which would require higher volume. The proposed prioritization of favored or paid video streams by ISPs is the exact analog of the general's video, and must not be allowed. A slow lane for lower-priority high-volume (video) traffic makes a bit more network sense, but the ISP would need to be required to automatically provide the higher priority for all non-video traffic to avoid disrupting or degrading non-video services, and to maintain adequate capacity to avoid any noticeable degradation of the lower-priority video. There are two ways of handling lower-priority packets in a collision: dropping them (lost packet) or storing them for later transmission. The latter case requires additional router resources to store the delayed traffic, as well as limits on how long traffic may be delayed before priority must be ignored. Prioritization that affects multiple nodes is potentially much worse in a packet loss situation than in a store and forward with delay scenario, as lower-priority packets which get through one node may be lost at another, and then need to get through the first node again. This effect can exponentially increase the negative effects of prioritization. As packets will retry only so many times, and failure of one packet generally makes the entire transmission fail, and many internet systems are not currently configured to handle this situation, the result will be gross unreliability of network services that are currently taken for granted, such as e-mail. Moreover, as lost packets start to be re-transmitted, the volume on already overloaded network nodes is increased, making the congestion worse. Thus, any priority scheme should be designated to affect only a single gateway to the ISP on any route connecting the ISP to outside services, or to the ISP's internal connection point of lower-priority ISP video sources, unless a packet store-and-delay scheme is used to handle lower-priority data packets. The choice of which method is used for collisions may also depend on the type of traffic (i.e. the port and/or protocol used to encode and encapsulate the data). Thus, network theory predicts that attempts to prioritize high-volume services such as video will be in practice an abuse of the concept of network priority, and will predictably result in serious degradation and unreliability of the Internet. This should not be allowed unless rigorous testing shows the particular prioritization scheme can be supported without degradation of a loaded network, and appropriate regulations are in place to assure network capacity will be sufficient to prevent network traffic jams. This in turn requires the FCC to follow the law and the science, and declare the internet to be a Public Utility, and ISPs to be Common Carriers.

—Matthew Filler, Seal Beach, CA

I've been involved in small, medium and enterprise level businesses, and all of them are better off with Net Neutrality as a core tenet! PLEASE support business, innovation, and freedom over punitive and dogmatic exploitative policies! Thanks!
—Brian Perry, Seattle, WA

Net Neutrality is important, because why should companies and the government decide to charge how much they want for the internet? The internet should be public and shouldn't be operated under these shady, large companies. They only want to take over the internet so they can make money off of it, and that's wrong. The internet is a place for to knowledge a lot of knowledge and being able to state your opinion and voice. Charging more for sites like Youtube would give people a less chance to voice their opinions and being able to have freedom. The internet, to me, seems to be our last bit of freedom, and every year, these stupid, big companies, and the government try to make these new rules and laws, like SOPA, to control the internet. The internet should be a public place where we can have freedom and be able to voice our opinions without the government and large companies interfering! We need net neutrality!
—Victoria Varela, Henderson, NV

Net neutrality affords access to information across a broad socioeconomic and political spectrum. Allowing ISPs to discriminate against the general public via financial hierarchies based on corporate greed and political power undermines ISPs accountability as well as the public's trust. Regards, Casey
—Casey Wollschlaeger, Minneapolis, MN

No one should have this power. It's supposed to be FREE, as always since the beggining
—Juan M NatalSido, Ensenada, PR

The only cable provider in my area restricts my access to the internet, but charges me more and more for this reduced service. There are websites I cannot visit without refreshing the page several times, and it's because they aren't paying my provider enough to be seen. This situation is a ridiculous mockery of the "free market". I have no choice of provider and I do not get the service I originally signed up for any longer. This company and it's ilk have destroyed technological progress on the internet while other countries pass us by leaps and bounds. Please stop supporting this tiering and bribery that is becoming standard operating procedure. The "chairman" was put in office to do as he was told, but there are four more of you. Please support net neutrality in every proposal the commission offers.
—Christie Childs, Arcata, CA

Net Neutrality is a no-brainer. Anybody saying otherwise has clearly checked their brain at the door. Reclassify broadband to its correct classification.
—Paula Lynch, Calabasas, CA

As a professional blogger I need my content to reach everyone; without net neutrality small time guys like me can't compete
—John durst, Zephyr Cove, NV

I depend on the availability of free and unbiased news reporting, which, at this time, is ONLY available on the internet. The internet is one of the few, if not the only , things left that the Kochs and Exxon Mobile do not completely control. Please do not take that away.
—Judith Tiedemann, Mohave Valley, AZ

Please stand up for net neutrality and I am sorry if it isn't popular with cable companies, but it is a common carrier. We only have ONE cable provider for high speed internet in my area (Charter) and I have no where else to turn for internet access that will meet my needs. If they start asking companies to do pay to play or if you allow them to speed up some and by result slow down others - it will directly affect my home based / internet based business. The internet levels the playing field and allows people to make a living without being always tied to traditional means of income (with a company). I can be an independent consultant because of the internet. Please keep the American dream alive and allow everyone a chance to be heard online. Sincerely, Judi Fox
—Judi Fox, Madison, WI

In order to keep a more accessible internet for eveyone, since it has become a daily necessity for many people similar to local news and other informational services.
—Mathew Ridley, Old Saybrook, CT

No corporate entity has the right to restrict our freedom of speech and assembly. No corporation has the right to restrict our options or sabotage free-market competition. Oh, who am I kidding? The megacorps already own you, FCC, and you enjoy the privelege of dolling out virtual monopolies to the highest (usually the most criminal) bidder. Prove me wrong, I dare you, when I claim that the federal government is OWNED. The people of this country are chattel. You have made us so, with the neo-feudal policies your masters have bought and paid for. To you, the bill of rights is a bath mat. Some one will probably block this message, and my broadband rates (like my wireless rates) will suddenly and inexplicably triple!
—S A. Bellin, Los Angeles, CA

Net Neutrality is crucial to America being able to compete in a global economy.
—Sarah Robbins, Waltham, MA

The Internet has the potential to continue being a diving force in the economic, technological, and cultural development for the human race, much like electricity or plumbing. The internet is a Utility. The proposed fast lane system is unacceptable, it will cripple future technological innovation, cultural expression, and entrepreneurial enterprise. Internet service providers offer a utility and should be bound by the same rules as the other utility services.
—Justin Stone, SOUTH RIVER, NJ

I want the internet to be considered a common carrier. It should not be handled in the same manner as a cable company, since content can be generated by any individual at any location, much like the phone service. Please do not allow an end to net neutrality. The corporate lobbyists should not be heard over the public.
—Andrew Lish, Nashua, NH

Culture depends on distribution of ideas. Selling distribution is selling culture.
—James Roberts, Ukiah, CA

This will hurt more than help! Keep the Internet neutral. Reclassify ISPs as common carriers!!!!
—Olga Cavallo, Phoenix, AZ

Classism is already such a huge problem in this country. If you allow those who are already priveleged with wealth to help themselves to the best the internet provides, you are subverting the purpose of the internet itself, which is to connect all peoples and nations together regardless of means or identity. This is yet another kick in the face to the poor, who are already struggling in schools to have access to the information they need. I think it's about time you stopped trying to pull stuff like this and just let America be the free nation it was meant to be.
—Emily, Oregon City, OR

The government is supposed to support me and NOT Comcast!! Throttling the internet for profitable "tiers" is basically indeed "killing" the internet. It's unconscionable that you would even consider this idea - and that it's outside of the general public's ability to do anything about. STOP THE WORDPLAY GAMES - MAKE NET NEUTRALITY REAL!! TODAY!
—Jacqueline Fowler, La Porte, TX

By creating an internet "fast lane", what they are actually doing is creating an internet "slow lane"... where they can force those who they don't like to take. I could go on, but in short, this is a free speech issue. Unregulated communication of all, digital or otherwise, is free speech... political donations is not.
—William Harold Hinkson II, Youngstown, OH

Internet traffic should not be treated differently. I don't believe we should cater to requests to be able to charge more for a "faster" version of the internet. This is clearly a scam by ISP's to bleed money off of internet services that average citizens use frequently and enjoy.
—Greg DuBose, Rapid City, SD

I am on the net all the time, I've been a long time user back in the old IRC, chat program, DOS days. Don't do this, I know you think you're being modern but the internet in all it's lightning fast, quicksilver glory...that's modern, because it's in real time. And on a level playing field, anyone and everyone is a contributor
—Lori Stoner, Bryan, OH

Net neutrality is the vehicle in modern society that protects our rights to free speech and freedom of the press! The actual "press" has been almost completely overtaken by corporate interests. An Internet that is equally accessible by all who use it is all that stands between us and a return to the Feudalism and horrible living conditions and society of 14th century Europe!
—Linda Lee, Atlanta, GA

To all Freedom isn't just word. Freedom is a way of life. Part of that freedom is our ability to freely communicate. And the number one method that the American people communicate the written word today is via the internet. Our ability to both send and receive, to communicate the written word demands entirely on unrestricted, open, and EQUAL access to those written words via the internet. the Recent FCC ruling literally destroys that freedom. Without such a key and essential capability to communicate, liberty and freedom die. You cannot put corporate profits that in reality benefit a handful of people ahead of the needs and wishes of the American people. The polls (not paid for by the corporations) overwhelming show along with the comments you receive that the wishes and will of the people demand you rescind this ruling and restore net neutrality. In short you work for the people of the United States not the corporations. Start doing your job.
—Daniel Dearborn, Amherast, NH

Please vote for the common person,and not big bussiness
—MaDonna Thacker, Richmond, IN

Stop bastardizing America. This country is already fucked in the ass dry and tight, stop trying to make it even worse. "Your comment really matters" Yeah. Okay. Stop.
—Bradly Anderson, Littleton, CO

My wife and I sell art over the internet. Our website has over 700 webpages and 6000 images on display. We cannot afford to pay high rates to get our art to people on line, many of whom use it to identify works that they own. Pages with many images will not work at slow speeds because they take too much time to download and people will just give up before they have a chance to see the works we are displaying.
—Andrew D. Weiner, Upton, MA

Please keep Net Neutrality! These large ISP providers will only drive basic costs higher. I've seen my basic cost increase with Comcast because we REALLY DON'T HAVE COMPETITION!
—Tenny Locke, SEATTLE, WA

Preserving Net Neutrality is the only way to keep the internet fair and open to everybody. Net neutrality gives everybody an voice free of discrimination from ISPs. These new rules will invariably result in an internet that is not free, open and equal but one that is completely dominated by those who have the most money, while those who are less wealthy will be discriminated against and have their voices silenced.That is not right. The internet should remain an open tool for everybody to use without unnecessary limitation. Net neutrality ensures a level playing field where success in competition is actually dependent on the quality of what you produce, and not how much money you already have. But these new rules will change that. Not only will they devastate the array of choices that consumers have on the internet, but the monopolies and oligarchies that will replace that choice will have less incentive to provide quality content and services. The internet with net neutrality has enabled us to build an amazing landscape of cultural and scientific accomplishes. These new rules are the first step in destroying all that we have built over the last 2 decades. Furthermore, even though ISPs act as middle men in providing internet services, the infrastructure that the internet is based on belongs to nobody in particular and thus the internet belongs to everybody. It's not right for ISPs to be able to control and limit the internet for their own profit at the expense of digital freedom.
—Eric Milligan, Coquitlam,

You cannot control our internet.....it is criminal....give it up
—Patty Little, kula, HI

I want the Net reclassified as a common carrier immediately. It is unacceptable to hear FCC chairman Wheeler repeatedly lying about what Net Neutrality means, as he instead works to promote special provisions for a few unaccountable corporate Net service providers. We do not need a two-tier, discriminatory setup for the Internet.
—Sigrid Asmus, Seattle, WA

free to be me, to say what i want where i want x
—Lynn Jones, Bristol,

Net neutrality is necessary for commerce, innovation, science, research, and creativity. Net neutrality is necessary for small businesses and for startup businesses. Net neutrality is necessary for education and for classes on the Internet. Net neutrality is necessary to keep the United States competitive with other countries. Net neutrality is necessary for communication and the free exchange of ideas. Net neutrality is essential for consumers, and it is essential to keep the cost of Internet access affordable.
—David Garrett, Dolan Springs, AZ

Those of us who are STILL looking for work MUST be able to access the internet in order to look for work and to communicate with those who are helping us to find work. Without that access, we will continue to be long-term unemployed, dependent on government for EVERYTHING that will allow us to merely survive...
—Sherman Wright, Boulder Creek, CA

The anything for a dollar attitude is selling our rapidly declining nation to the highest bidder. Is there such a thing as corporate integrity?
—Eric Torgerson, Eureka Springs, AR

I want a fair and balanced internet throughout and do not want to constantly worry about rate increases and ridiculous slow downs. Keep net neutrality a reality and leave it alone for once. It's good as it will ever be right now.
—Joshua R. Fotsch, Washington, IL

The Internet has seen growth over the last few decades on an unprecedented scale. It has redefined the way we work, communicate, and learn. Net neutrality is largely responsible for this. We have made the internet great, and giving corporations like Comcast, AT&T, and Time Warner, which already face almost no competition, more control over their customers is irresponsible and without benefit. Real Net Neutrality is the only way to ensure that the innovation and success that the Internet has seen over the last few decades continues.
—Alexander Means, Folsom, CA

Net neutrality is essential to a free and open internet so please reclassify ISP's as common carriers, thank you.
—Aaron Quinn, Brighton,

Net neutrality is important to me because I believe it to be fairness and equality on the web for everybody. I don't want all of us to be drained of our money to support families and pay for food. Money is already an issue. Why make more money problems. More money, more problems.
—DJ-Marcus Madizon, Pinole, CA

Enact STRONG Net Neutrality rules. Back them up with authority under section 706, but ALSO back them up using the full authority of the FCC under Title II of the Telecommunications Act!
—Dave Kalata, Seattle, WA

The reason why it's so important is the free flow of information. We are blinded from the truth way too much these days. The internet is the stronghold to it all. All they want to do is take, take,take. It's bad enough to pay for internet but now you want to go a step further essentially robbing the public. Disgusting. This should never happen.
—Tim, london,

I don't believe in an internet that is a toll highway. I believe in an internet that is free and open for everyone.
—Akira Wong, san francisco, CA

More repression, oppression and suppression; not acceptable in a democracy by corporate.
—Gary Weaver, Franktown, CO

If it's not broke- don't fix it. I like the internet the way it is and as far as I know, so do most other people. What is being proposed here would not benefit the people using the internet, whether for personal or business purposes, but would only benefit providers like AT&T, Comcast etc..
—Chad R Maley, Waukesha, WI

Macedonia is a small poorer country. If this starts in America, why wouldn't it spread everywhere? No matter how willing I am personally to pay high rates for internet there's a big chance high speed wouldn't be made available at a manageable price in Macedonia, if at all. It's a small market, so why should anyone bother? We don't have pay pal, our debit cards are useless on many pages despite being able to pay for things, we simply don't get things and don't get a say. I work online as a video game artist. If I don't have high speed, I don't have a job because that industry is nearly non-existent in my country. I am paid far less than what is minimum wage in America. Despite having a Masters from the UK. I already have a lot of trouble getting good stable internet. I live in the capital yet electricity here is unstable because of monopolization and I had to protect all my electronics with UPSs. Don't make it harder for me to get connected to the rest of the world. It's the only contact I have from here. Or I will have to migrate somewhere. What choice would I have? America out of spite, probably. Out of sight out of mind, right? Better make you deal with me there.
—Rumena, Skopje,

Net Neutrality helps make the Internet a level playing field for democracy and democratic values.
—Shane Carlton, Waukesha, WI

Please, come on it's dot in American public best interest. That why supposable no monopoly's. This clearly un-American. America's under attack from the gready.
—Brian Carlstad, Coeur D Alene, ID

Let's not turn the internet into the "haves and have nots". Keep the playing field level.... Please!
—John Donald, Methuen, MA

It doesn't seem like a very bright idea to make it even harder for people with a small website to afford having it, stuff like youtube is great and all, but they already have an effective monopoly, and giving any company a full on monopoly just doesn't seem like a good idea.
—Paw Peter Kiss, Køge,

Consider: AT&T requested permission from the FCC to decommission the current POTS, switched telephone network as they state VoIP is the future. VoIP, of course, uses the Internet.. Therefore, the Internet (based on AT&T request to the FCC) is a common carrier.
—Mark Garfinkel, Aliso Viejo, CA

Never in recorded history had the monopolization of an industry given the consumer more choices, but HERE YOU GO.....Stop being a timid little middle management clone and represent the normal person!
—Ric Taylor, Los Angeles, CA

The internet has always been a place where the little guy with an idea has the same chance at success as big corporations. What the FCC calls "Net Neutrality" is poised to kill innovation on the internet and is anything but neutral. If this passes there will be no new Youtube and the Internet will be owned by big corporations with big wallets.
—Tom Walsh, Hackensack, NJ

Net neutrality puts all enterprises and content, large and small, on an even playing field in the digital space of the Internet. A two-tiered, less-regulated system which has not been definitively shown to have effective preventative measures against creating a bias in favor of content that can pay for a 'fast lane' is not in the best interest of American people, and only seeks to secure the prosperity of pre-existing successful businesses.
—Laura Dickson, Davis, CA

I want to have acces to all information free, because I think that this is purpose of internet.
—Michaela Krejcikova, Praha,

The internet is one of the few great levellers left to us. The gap between rich and poor is ever widening, and the 'net's neutrality means that millions - often even people in otherwise poor and underdeveloped countries - have access to information and even education. China and North Korea we expect to mess around with access, and we chastise them for it. It is inconscionable that America expects to get away with this.
—Sarah Warren, Newent,

The internet main purpose was to share information and it should stay that way. To end net neutrality is to go back in time. All the research and inovations would slow down. It would be really a step backwards.
—Matyáš Hlaváček, Praha,

An American (and Global) right to freedom.
—Ron M. Romberger, Royal Oak, MI

The Internet has allowed small businesses to thrive. A tiered Internet would give those who can afford the top-tier an advantage over the lower-tier. Suppose the lower-tier would consist of the current internet ex
—Michael Flahiff, Fresno, CA

Equal opportunity education, communication, and entrepreneurship.
—Cienna Rominger, Sacramento, CA

I feel that if net neutrality isn't protected, we here in Canada will see the after effects of it. If net neutrality loses, with Harper's government it wouldn't be long before he would consider allowing companies to come over and start allowing laws to penalize citizens and regulate our internet use over here.
—Terri-Lynne Petahtegoose, Windsor,

Please keep the internet open and equal for all. Those who have do not need more advantages over those who have not.
—Angelina Simmons, Harpswell, ME

Neutrality is very important
—Rebecca cox, Melbourne, FL

Do not let these massive corporations decide who should get what--keep the internet democratic!
—Amy, Island Pond, VT

This move serves only to benefit the "big" carriers while creating hardship for many people who rely on the internet to perform necessary daily business and research activities. It is simply another money grab by corporations with no regard for the "little" guy.
—Diana Duffy, Oscoda, MI

freedom of information
—Ms. Danya Spencer, brooklyn, NY

Inequality is already our country's biggest problem. We will end up with a caste system like India or Apartheid like Israel.
—Tom Driscoll, Natick, MA

I don't want the internet to become a fiasco like cable television is. It's too important a common carrier to "get what you pay for". Please do the right thing and keep the internet neutral.
—Fred Guenther, Chester, CT

Stop trying to screw the world over. the internet is humanities only chance for survival, if you make it so big companies get faster service it is only the beginning of humanities downfall.
—Jordan Esber, Ithaca, NY

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Ricardo Esteves, Lisbon,

Net Neutrality is the only way to go. Anything else is outrageous and unfair!
—Karen Osk Petursdottir, Reykjavik,

Net Neutrality gives us the freedom to use what websites we want to be on not what the provider tells us to be on.
—Marty, Pittsburgh, PA

Net Neutrality is paramount to maintaining a democratic society. Wheeler's plan lets internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the majority. Net Neutrality gives all people equal access and speed to everything. It does not favor one business over another. It is simply free market. The FCC's current rules would take away free market and take away access for most people. I am thrilled that you have opened this up for public comment. Please listen to everyone. What they would be putting in place would be discriminatory. Please Please Please throw out your rules that you have created and reclassify ISP's as common carriers!
—Nancy Kalina, Bloomington, IN

The internet was created for the good of everyone. It should remain free!
—George E. Richter, Belton, TX

I'm a college student. I can barely afford to pay off my college expenses and just daily life, adding this will not only kill the information era as we know it but will take the internet away from many struggling college students like myself. There is nothing wrong with the internet now, if it's not broke don't fix it. If this does pass I hope you have the conscious and guilt to realize people like you have killed the information era and ruined the lives of millions of people.
—Rebecca Stanley, Cocoa, FL

As a retired senior citizen I depend on the internet to connect to my community and the world. Please allow this resource to be available to all and not just those who can afford it.
—Phyllis archer, King of Prussia, PA

Let's put PEOPLE first for a change!
—Brian Wood, Sagamore Beach, MA

With a few like-minded large corporations gradually taking control of our media, I feel that it is important to keep one source where a free exchange of ideas and content may take place. I also feel that it is discriminatory to charge a "premium" fee, which would inevitably create better access for a few, while the rest of us struggle in a world of slow speeds and controlled content and applications. Please reconsider your decision.
—Janet R. Stafford, HILLSBOROUGH, NJ

Net neutrality is important because our country is built on innovation and entrepreneurs. Killing net neutrality is essentially destroying any hope of great new web-based start-ups taking hold. It seems insignificant, but each time we take a step in the direction of a tiered internet system, the slope of our decline to a completely unusable internet gets that much closer. The internet is great because everyone gets a fighting shot. There are so many amazing things out there and I can't wait to see what people think of next. Don't stifle the possibilities for the sake of money.
—Hannah Walker, Durham, NC

Net Neutrality is important to me
—Fillipus Shivute, Windhoek,

Because it will not allow my students to research in a holistic approach. It means that the ISPs will only allow the sites they WANT to show us, and that doesn't allow for enough of a view for them to develop their own opinions on the topics in questino.
—Stuart Guberman, New York, NY

It's critical that we avoid another "carve-up" for the benefit and profit of the few. Tim Berners-Lee put it exactly right: "We need a global constitution – a bill of rights. Unless we have an open, neutral internet we can rely on without worrying about what's happening at the back door, we can't have open government, good democracy, good healthcare, connected communities and diversity of culture."
—Walter Sedriks, Palo Alto, CA

Net neutrality is essential for small businesses and organizations without major funding, as well as for the freedom of communication of all individuals.
—Paul Maschhoff, Wakefield, MA

Our wild new world requires that all people are connected and free to communicate easily and quickly with others across the globe. No one knows where the next big social movement or solution will come from, and it is unethical and crazy to give preference for internet speed to the rich.
—Beth Herman, Baltimore, MD

Equality of internet service and speed preserves this invaluable resource for all.
—Jann Gest, Aurora, CO

Open and equal for all, not just those with the most funds to control a public utility!
—Mr. David Lock, Ada, MI

Because my wealth should have nothing to do with how I'm treated by my internet provider!
—Velvet Spicer, Caledonia, NY

The open internet is what feeds innovation!! Rules like this would have prevented Facebook, Twitter, Amazon, Netflix, and so many other companies from ever having a chance... how can new companies stand a chance?
—Ryan Kaper, PARMA HEIGHTS, OH

FCC Chairman Tom Wheeler's plan would kill the open Internet which is so important for democracy, education, and the whole future development of the human race. True neutrality is the best - in fact the only - guarantee that the internet will continue to serve the best interests of people in general, rather than just those of "big business"!
—Brian Burns, Talasani,

Do what is right. Let the common people have unfettered access to the Internet.
—Thomas Gonick, Travelers Rest, SC

This should be a public utility not another chance for corporations to charge more money without any meaningful improvements.
—Joseph Esman, Kalamazoo, MI

As the taxpayer, I deserve net neutrality. Priscilla Delaney Green Party (member)
—Priscilla Delaney, Wynnewood, PA

I rely on the Internet every day for business. It is vital that our infrastructure be improved to deliver higher speeds for all traffic, and not allow ISPs to charge "for access to their customers" when said customers already pay for Internet access. Doing so bars new competing businesses and chills innovation, in addition to degrading the rest of Internet traffic speeds.
—Scott Drake, Wallingford, CT

Consumers do not need any more leverage on them than what the current ISP providers currently have. Real net neutrality matters.
—Roger, las vegas, NV

Please keep the internet free from money hungry corporations who want to siphon more money from hard working Americans.
—Jay Carrasco, Springville, UT

It's important
—Bryan Flores, Houston, TX

I run a small, home based photography business. Having a free and open internet is key to my business' viability on the web.
—Samantha Pranger, Duluth, MN

The "tiered access" model only benefits existing very larger providers like Comcast, who frankly are not innovating at all. I've been waiting 8 years for Verizon to bring FIOS to my home despite their franchise requirement to do so everywhere in NYC. They are merely profiting from their oligarchy. Net Neutrality has been the most important driver of high tech entrepreneurial innovation and classifying ISP's as common carriers is the best action the FCC can take to support current and future entrepreneurs, creating jobs and improving our economy.
—Daniel Mainz, Brooklyn, NY

Please. Don't fix the Internet. It's not broken
—Peter Oliver, West Palm Beach,, FL

Net Neutrality is important to me because I depend on the web for my "micro" business. So many small businesses have developed and grown because of an open neutral internet. Please don't break the web!
—Joan Winkler, Wilmington, NC

Hi FCC. I am a daily user of the internet, and I would very much like to it remain open and free for all to share their content on. If you allow Net Neutrailty to die, you are shooting yourselves in the foot, because there are enough people around who will not tolerate it and they will be forced to go elsewhere and create their own internet systems. You cannot seriously mean that the internet should suddenly be supervised by private companies who egoistically can divide the users of the internet into Classes so that some who can afford it will get a fast internet, and those who cannot will get a slow, useless one. If you allow this, which I see as a secretive way by the same private interest groups to slowly usurp unconstitutional, undemocratic control with the content on the internet for nefarious purposes only, as they have tried with PIPA, SOPA and ACTA before, you will create a massacre on people, companies, institutions everywhere who due to no doubt coming record high prices for at fast, reliable internet connection will fall by the wayside for reasons of inability to compete with more powerfull, rich people, companies and institutions. The very proposal to kill net neutrality reeks of conspiracy, and immoral private interest groups who don´t care about the rest of us. With the death of Net Neutrality you ensure the death of freedom to turn the internet into something akin to a Cable TV Network where a small amount of people can determine the content on it. It is murder of the freedom to express oneself, and the birth of intellectual tyranny! Please keep Net Neutrality! Sincirely yours, Flemming Bech, Denmark.
—Flemming Bech, Broenshoej,

We need Net Neutrality so that the big players don't crowd out the small players. I am one of the small players.
—Kenneth Ruby, Salem, NH

I strongly oppose the FCC proposal to allow Internet service providers (ISPs) to charge web sites like Facebook, Twitter, Google, etc., for faster service. I have three key issues with the proposal. 1. Discrimination. The Internet was designed to be open, allowing every web site and service to operate on an even playing field. If this proposal goes into effect, larger organizations will have an unfair advantage over the independent blogger, up-and-coming musicians, etc. 2. ISP double-dipping. Currently, ISPs charge customers for Internet access, but if this plan goes into effect, ISPs will also be able to charge corporations that want to use the so-called "Internet fast lane." These costs will likely be passed along to customers in the form of price hikes or new charges to view content that was previously free. 3. Stifling innovation. True net neutrality ensures that innovators can start out small and yet still dream big without facing hurdles. If this proposal goes into effects, start-ups, innovators and entrepreneurs will be muscled out of the marketplace by large corporations that have the finances to pay for the "Internet fast lane." This proposal is not true net neutrality and it needs to be changed in order to prevent the above issues from happening.
—Tim Weston, Orlando, FL

Net Neutrality is important to me, because I want access to as much FREE, undiluted information as possible. I'm a student, and MY education IS my future. MY education is YOUR future. MY education is the COUNTRY's future. And you fuck with that, and you ruin our country. PLEASE RECLASSIFY THE INTERNET AND SAVE OUR FUTURE!
—Michael Huarachi, NEW YORK, NY

I am a college student in California. I am not the CEO of a powerful company. I am not a lobbyist in Washington DC. I don't have the influence or funds to buy any special treatment for myself on the Internet. The Internet is no one's and everyone's. This fact needs to be remembered and the just decision to allow freedom of Internet be upheld.
—Eddie Hamel, Oceano, CA

Only a free and open exchange if ideas is consistent with our cherished principle of free speech. Eliminating neutrality puts too much control in the hands of corporations -- that have too much control already!
—Daniel Cavanaugh, Belleville, MI

I am so disappointed in you. The internet is for the exchange of ideas with all being equal. Are you selling us out to the big corps. Please do not.
—Paul Young, Long Lane, MO

our global competitiveness relies on this. google, facebook, youtube all were possible due to net neutrality and the potential investors saw in them. without net neutrality, investors will shy away from these sorts of internet start-ups. without investment, companies of this sort cease to begin and compete. without these companies competing, non-US companies take the lead on key internet businesses. don't hurt the US
—Brian Fuller, Cheshire, CT

I know a lot of people want faster internet and that a lot of websites deserve that faster connection, but it shouldn't be done by blocking the rest. I think the way to move forward effectively is through technological advancements, but not ending net neutrality.
—Paul Xi, Bath, ME

By ending Net Neutrality, which this plan absolutely does, you are completely destroying the very thing that makes the internet a tool for innovation. It will cause America to regress. ISPs should be classified as common carriers - they are granted monopolies and should be regulated like monopolies.
—Andrew Fry, Indianapolis, IN

ISPs, in ALL FAIRNESS to website owners and consumers alike, SHOULD BE classified as common carriers. Corporations should NOT have control as they desire. It is to their benefit ONLY. Granting them this unfair benefit IS the first step to CENSORSHIP.
—John van Kleef, Chicago, IL

Democracy is dependent upon the right of free speech which an open Internet provides. The freedom of the American people requires genuine Net Neutrality.
—Nickolas Pittman, Oak Park, MI

The Net should always remain free and neutral for the benefit of all mankind! Sharing is caring!
—Erik Heyns, Bertem,

The internet should be free and open to all. Creating tiers of service is creating inequality between those who have money and those who do not. America needs to stick to it's original intent of being free and open to all...especially where access to the internet is concerned.
—Mark Rhoades, Austin, TX

Our society has enough "pay to play," I need to know that what I have available on the internet is free of undue influence of those that want to influence public opinion to feather their own nests.
—Margaret Brown, Hanover, PA

The rich can already afford higher speed internet. I've worked with homeless people for years. They need to be able to search for jobs and study for tests online at libraries and at social work offices. Children need study aids at home. Please don't give another hurdle to the underpriveledged.
—Ryan, Little rock, AR

I cannot afford to pay more than I do now
—Stephen G Lasher, REGO PARK, NY

It's crucial that we have a fair and balanced internet that won't be ruled by money and competition. We all deserve equal access and equal choice on the internet.
—Molly Bancroft, ann arbor, MI

As an American living in Canada, I hope one day to return to the states. However, as much as *everything* is now the internet now, I'm picturing what it will be like even just 10 years from now. I suspect a loss of net neutrality will mean not only mean the end of the internet as we know it, but will result in the US becoming a third world country where news and information about the world outside the US is only available to the select few. I'm already finding many of my relatives choice to VPN tunnel through my Canadian ISP so they can see all the things that are currently region blocked in the US. Imagine how much worse this will be once ISP's are in on the game of limiting access to content.
—Bill Riemers, Stoney Creek, Ontario,

From what I have heard and seen, passing to discriminate internet use and power is like discrimination among races, not allowing certain people to use or do certain things just because of what they do and/or don't have. For years the internet has provided us with many things from entertainment to news bulletins and has successfully grown to an enormous size, WITHOUT the need to use discrimination rules for the internet. This plan can also cause a problem for the one thing we strive to stop and contain: crime. In some ways this these rules would have a massively negative effect, equivalent to the prohibition of alcohol. With the rules set in place, people can and will find ways to make loopholes and solutions that would bypass these rules, thus causing more problems to containment rather than more solutions. In all essence, I have no power whatsoever to stop this; HOWEVER, you can stop this problem from ever occurring in the first place. Please stop these rules from being passed into reality, or it will all be too late for every one of us.
—John Zachary Spear, Yardley, PA

Allowing this to happen would be in way limiting out ability for free speech.
—Cory Seesz, Tacoma, WA

I'm a sole trader who needs internet consistency that's affordable for all and with no preference of one group over another. As an internet user on a personal level, I value freedom of expression and creativity and fear these would be lost if there are two tiers of internet in the US or elsewhere.
—Amy Parker, Sale,

The internet is a part of my generation. This is something that hasn't been ruined by previous inheritants. Not only is it wrong, you lack the moral right to remove the open internet. This would be destroying its original intent, similarly to the lamentable disregard of the constitution. I'm sixteen and I know better. You should too.
—Aaron Leighton, Fountain hills, AZ

Do you guys even try anymore? Does the FCC really care about making sure the USA stays competitive on a global scale or are you guys more concerned with what plush job you'll have lined up at Comcast/AT&T/etc. when you leave your post? Grow some balls, put America's interests first and enforce Net Neutrality!
—Mr. Clark Wolfe, Dayton, OH

Why should anybody pay more for the speed we already have? This is one of the stupidest things. Not to mention you're affecting the whole world - from the US!! Could you BE any more self centered?
—Gail, Jerusalem,

The internet was not invented or developed by Time-Warner or Comcast, and they shouldn't own it. The internet should be a public utility.
—Gregory L Kruse, Morrison, IL

The internet should be free to everyone and should remain a source/outlet without discrimination. Furthermore, the FCC needs to throw out its rules and reclassify ISPs as common carriers. Net neutrality is a must, needs to be protected, and should be fought for at all costs.
—Kristi Rohrbaugh, Millsboro, DE

I've paid income tax since I was 15; that's for over a half century. My income tax dollars made the internet possible. And now you propose access costs for the internet go increase and for me to be kicked off the information super highway and told to take the dirt road, bum. This is obscene. Ever hear of anti-trust? Do your job.
—M C Kubiak, BMI, IL

Laws should be set in place for the benefit of the people, and it is clear that the majority of people in this country have benefited from a neutral internet and oppose the two-tier system. This is an important ruling for freedom in this country, and the proposed rules place us firmly in the wrong direction. I urge you to throw out the new rules and restore a neutral internet.
—Micah D Hintz, Walnut Creek, CA

I contacted Mr. Wheeler and he promised that an "open internet" was important to him and that he would take no action to hinder that. Either he lied and is, or somehow the FCC is going over his head. I support an open internet...do not allow companies to buy favor.
—William Dobbins, Chloe, WV

Mr. Wheeler, I'll keep this brief. I don't trust your open internet proposal, especially the "commercially unreasonable" clause. Instead of trying to convince people that your plan is indeed for the open internet, just classify ISPs as common carriers to prove you are really for the open internet.
—Joel Swenson, Minnetonka, MN

Knowledge and education is a human right. You can't take back a portal to such great knowledge. To do so would put you on the wrong side of history. Viva Net Neutrality!
—Matthew Sipple, Fort Mitchell, KY

Throw out those stupid rules and look what your erasing for everyone!
—Olivia Baregrounds, Holly Springs, NC

Large broadband carriers should not be able to control what sites and services are winners and losers. This could shutdown millions of small ecommerce websites costing tens of thousands of jobs. Amazon did a study showing 100ms of website response time was equal to 1% of revenue for ecommerce sites. Small ecommerce sites will not be able to negotiate the same rates are large companies that buy in large volume or they simply will not be able to afford to pay it.
—Kansas Serritt, Calhoun, GA

The internet is a valuable educational, entertainment, and economic resource and the ISPs should have NO SAY in what or how it is consumed. I'm not paying my ISP for content, I'm paying them to deliver the content I choose (to paraphrase Vi Hart). ISPs should be reclassified as common carriers to preserve net neutrality.
—Ryan NIswonger, Portland, OR

Please reclassify ISPs as common carriers. Fast lane Internet will destroy what is left of the digital free market. Do what's best for everyone and stop this foolishness.
—Jason Brumbelow, Calhoun, GA

America is a democracy, not an oligarchy.
—Chris Kubiak, Bloomington, IL

Equality.
—Tom Larsen, vadnais hts, MN

This doesn't truly benefit the people. It merely enables large companies to become larger, weeds out potential competition and continue our societies march from a democracy to an oligopoly.
—Dale Block, Milwaukee, WI

Net neutrality is a critical component of the human right to free speech and personal improvement through access to learning and culture. It is indefensible and detestable that the FCC, an organization meant to protect this basic human interest, would betray the people's trust and its own mission in this way. I urge Tom Wheeler and his associates and employees to remember their moral responsibility and reclassify ISPs as common carriers.
—Travis Tindall, Whitman, MA

Net Neutrality means equality. It means a level playing field.
—Jeremy Bethel, Roanoke, VA

One man, one vote. Equality for all Americans. Liberty and FREEDOM. The FCC should keep the internet equal to the COMMONWEALTH for the WELFARE of all Americans and all the world. thanks, erryl eyster
—Erryl Eyster, Polebridge, MT

Stop trying to segregate the internet. The only advantage the two tier plan has is to the profit margins of the giant ISPs who already are hugely financially successful. It hurts everyone else. Represent the people you work for, not the tiny powerful elite. PLEASE!!!
—Michael Goforth, Olympia, WA

The quality of service is already lower and more expensive than many other countries. Don't believe me? Compare it to Korea who's service is some 12 times faster while being less expensive than our own. We need more and better options here.
—Chris Cady, Bellevue, NE

Net Neutrality stops ISPs from taking away what makes the Internet so useful.
—Elijah Love, Hingham, MA

The backlash from this will cost you your job. Of course Comcast will continue paying you.
—Bill Davis, Yukon, OK

millions use the internet. It should not be up to the moneyed class
—D Goldsmith, Portland, OR

Open internet helps the free flow of information and counters corporate monopolies and cartels.
—Keith Steffen, Blanchardville, WI

Internet is a utility, just like electricity and water.
—Anne Iulianelli, highland, MI

The FCC serves the lobbyists. We will never quit. We are not stupid, but getting angrier each passing day.
—Nathan stehle, Madison, WI

The FCC appears to be another captured regulator which protects the profits and monopoly of the industry it is supposed to be regulating at the expense of the public welfare.
—Albert D. Viener Esq., Miami, FL

Our country was built on a constitution that is now being ignored for the greed of the goverment and large companies. Reconsider what you are changing as it will affect the live of all our generations to come.
—Shannon Turner, Windsor, VA

Net neutrality is very important to me because I don't want any company yo control what I can and cannot do or view in the internet.
—Sian Smith, Richmond, VA

Think of the Children!
—Carrie Trochet, vallejo, CA

I just don't understand. How many Americans have to tell you people that we want to protect Net Neutrality before it sticks? 100,000? 1,000,000?
—James Wainio, Brandon, FL

Without Net Neutrality, I can't study as much on small. sites. Also, nobody owns the internet.
—Danma Rin, Monroville, PA

Net Neutrality is a vital part of what makes the internet such a valuable tool. It is the only way to ensure that freedom of speech and the pursuit of happiness are upheld and maintained for the future of the internet.
—Ethan sparks, wayland, MI

you know where the profit motive will take the system and these rules will give them license to do so in a big way.....give the small guy a chance and keep our internet a source of innovation and competition....
—Mike King, roseburg, OR

It's our greatest resource and it needs to be preserved so everyone has equal access!
—Ms. Karen King, London, ON

The internet would become almost useless as a few large corporations buy up the speed
—Andrew Viau, Plainville, MA

This "fast lane" version of the internet is uncalled for. You're automatically killing the next Google/Amazon/etc because the large companies will be able to reach computers faster since they can afford to pay to do that. Also giving the crappy telecoms more money. You're making it quite obvious that you used to lobby for Comcast. Stop the fast lane and make every bit on the internet have the same weight across a network!
—Tony Lemke, East Lansing, MI

We essentially have a monopoly when it comes to ISP carries. In my town I can either chose Verizon or Comcast. There has been no innovation in this industry, prices continue to rise and competition gets gobbled up by the big guys further limiting the options. Looking around the world the prices are lower, the options are numerous and the service is better. We're supposed to be innovation leaders in the world. Instead we are letting big business take over and stomp on the little guy. The FCC proposal will be the final nail in the coffin. It does nothing to further innovation and advance the industry, it does not help the american people, it only allows the ISPs to make even more money. You need to throw out this proposal and reclassify ISPs as common carriers. Its the only way to protect real Net Neutrality.
—Kyle Reilly, Hopkinton, MA

Independent internet is important in my community because all people need to be able to access information as a basic human right.
—Tate Breswick, Portland, OR

PLEASE do not remove Net Neutrality! It is the only neutral playing ground and truly free thing left in the world. It should be a right just as freedom of speech. Not only that, I should be able to have the same ability to build a business on the internet without having to pay Cable companies for a service they already provide. The internet, for the most part, should be free. You proceed with your plan, and you take away freedom, innovation, and give control to companies that only see people as cattle and want to exert more control.
—Frank Varela, El Segundo, CA

The Internet is a Utility and should be classified as a common carrier, not as something to be controlled by private corporations at the public's expense!
—D Lancon, Tujunga, CA

Without Net Neutrality, the internet will be exploited by the giant telecoms and content will become censored.
—Rebecca Vickers, Portsmouth, RI

Telecommunications corporations can make a profit without disenfranchising their customers. Other countries have shown that profits can be based on efficiencies, rather than monopoly practices.
—Edwina White, Sacramento, CA

The internet was built on equality for all, please don't take that away from us!
—Jan van der Lugt, San Francisco, CA

Please re-consider this issue. I am a Verizon internet user. But, I do not want Verizon choosing for me what I have access to and what I don't. This is limiting my freedom of information and limits free enterprise. Please re-consider this gross misplace of trust in large commercial companies to continue to provide freedom of speech and freedom of development. Thank you.
—Barbara Mulich, Uniontown, PA

Don't let our internet be pushed around by the big corporations!
—Austin MCDOUGAL, Boulder, CO

Those with money have too much influence/control already. The internet has become critical infrastructure and must be regulated as such. Our country depends on the internet not just for free flow of information (even though too much of it wrong) which supports democracy but also for innovation and development of new enterprises.
—Diana Smith, Denver, CO

Mr. Wheeler and his colleagues need to classify ISPs as common carriers. Treat them like utility companies. No fast lanes for the privileged few!
—Mr. Timothy S Naughton, Roseville, CA

The internet is one of the primary channels of communication in the modern world. It's how we access information, the news, connect with friends, relatives and strangers in countries we've never visited. One of the reasons the internet has become so important is that so many people have easy access to the network. Many of those people have built the programs and interfaces that have changed the internet and the world. Taking that away would be hugely detrimental. A tiered pricing scheme for fast, effective internet connection will undemocratize the internet. This is a BIG deal in the USA and for the precedent it may set worldwide.
—Emily willobee, Grand Rapids, MI

I can do my work and learn and educate others . I can be on the same level as someone with a higher class and people on lower classes are the same to me.
—Joseph D Ruiz, Arvada, CO

Net Neutrality is essential to the survival of democracy in the U.S. Losing it will close the last avenue of communication not controlled by big-money interests. The Federal Commumications Commission should not stifle open communication.
—Don Rohmer, Muenter, TX

This is equilvalent for only letting rich people own books or the go to the library. The internet is the information boon of our time. Don't limit access based on 1% desire to control information. We need one place the public is free to express itself and not have to have money to be heard.
—Hildy DeFrisco, Danville, CA

Throw out your rules and instead reclassify ISPs as common carriers, please. We need net neutrality.
—Marilyn Kohring, Dayton, OH

It is very clear that ISPs should be treated as a common carriers. These companies have semi-monopolies, and consumers have little choice but to use them.
—Edward Goff, Phoenix, AZ

The Internet is a utility and a necessity. I have a very severe physical disability, quadriplegia. I rely on the Internet for accessing the news, communicating with medical professionals, family and other people. I use both email and VoIP. These are necessities, not luxuries. Am also very fearful that the Internet will become like cable TV which favors wealthier people and reduces the ability of people like myself to access all parts of the media. I also work for a small nonprofit. Net neutrality protects this nonprofit, and others from being discriminated against because of financing.
—Dennis Heaphy, Boston, MA

The proposed system would cater to an oligopoly of big internet service providers which would in turn affect the success of smaller media distributors. (small online gaming companies especially)
—Carl Sommer, Indianapolis, IN

I'm new to this partially because I didn't have a very good understanding of what "Net Neutrality" was, this article was very informative and I'm sure I still have a lot to learn which i will be using the Internet to educate myself. I do not want my lower socioeconomic status to hinder yet another aspect of my life. If i am already paying an outrageous about for Internet services trough a "name brand" ISP I should not ha r to pay additional fees to use certain websites (especially when those sites already charge you a fee of their own) this change up will cause an uproar (it already has on a professional level) & it's now reaching to the little people like myself and my fiance who use the Internet regularly for school and other personal wants I.e. social media or streaming movies and videos! I will educate myself regarding Net Neutrality and I will not take this lying down! Equality for everyone & everything!
—Alyssa Schartz, Southgate, MI

Leave the internet alone.
—Mr. Regg Williams, Walkerton, IN

The internet is a frontier. It is a level playing ground. Don't take that away!
—Eric Bennett, Portland, OR

You're going to ruin it for everyone--including yourselves--if you do this! You'll send this country back to the dial-up days.
—R Lauer, Orlando, FL

Come on guys, this is not cool
—Sam, Renton, WA

As a young college student with an interest in computer science and web development, any limits on the internet will directly limit my professional future. Please reclassify ISPs as common carriers and prevent them from forming a monopoly over the internet-- this is going to directly affect YOU as a person who also needs reliable access to the internet!
—Acacia Dai, Fairfax, VA

Aas teh net now stands it is fairly affordable to most people that wont to use it on some level. In order to maitain this ability the rules for use must reflect that I SPs are seen as common carriers
—Rick Nevitt-LaMantia, Capitola, CA

Corporations have no business turning the internet into their play thing. The abuse enough in this country as it is.
—Eric Lee, Lake Charles, LA

The Internet was developed with public funds and therefore should be regulated solely as a public service in the public interest. Consequently the FCC should reclassify all ISPs as common carriers and regulate them as such.
—Mrs. and Cregg McCullin, West Monroe, LA

If Net Neutrality is not maintained our internet will face a lot of negative changes. If an ISP is allowed to dictate who runs at what speed than the door for discrimination and corruption is wide open. Essentially this would discourage innovation and competition in our related markets. In no way can this result in anything positive.
—Daniel Applebee, Evanston, WY

Your proposed rules will put another nail in the coffin of equality and democracy in this country, where almost all the nails are already in place!!
—Michael Babitch, Kimberton, PA

I can not afford a change.
—R Elosua, albq., NM

Net Neutrality is important for Democracy. It is also important for small start up business. The net should be treated as a public utility. Cindy Vantrease, Bellbrook Ohio
—Cynthia Vantrease, Bellbrook, OH

I have a small business the depends on my customers having fast and reliable access to my server. I make a living but I couldn't if I had to start paying for reliable access to comcast or verizon customers. I use to work for verizon and I know that it's only a matter of time until they would charge me if they could.
—Mr. Mark Myers, Tigard, OR

This is our freedom you are threatening! We don't take kindly to threats! You are warned!
—Elijah Asaro, Kent, WA

It is important to not allow big business to squish smaller business and private users of the internet. Many people and companies depend on the internet for income, and limiting it to those who can afford would deplete their resources and diminish their existence.
—Christina Johnson, Firestone, CO

Internet belongs to the people. Don't hand it over to corporate. It's really not a good time to take anything else away from the people.
—Marianne Sippel, Nevada City, CA

Classify the service providers as common carriers, net neutrality is what it's all about. No 2 teired net, go back to basics.
—Haley H Haynes, Lake Orion, MI

The internet as we know it today is the last remaining true democracy. People from all around the world can freely express their beliefs, share information, lessen the divide between rich and poor, topple dictators, allow for great innovations, and generally just creates a larger but closer world. By allowing ISP's to essentially control the internet should never be allowed or tolerated. And allowing ISP's to create paid fast lanes is not a better alternative. It stifles innovation, creates a larger divide between rich and poor, can eliminate the free transfer of information, could force access to corporate agendas not our own, and segregates the United States of America from the rest of the world. The easiest solution I see is to break up the monopolies the ISP's have on Americans. When you live in a city where you have only one choice for a connection to the internet, that is monopoly. Satellite and DSL do not count as competition, as they pale in comparison to true broadband connections. By breaking up the monopolies, the FCC takes over the cable infrastructure already laid down and paid for by the ISP's, essentially allowing for greater competition. It's amazing how competition helps innovation, brings down costs, and allows for greater connectivity to citizens like myself. Years ago the FCC broke up the telephone industry. I'm not sure how you allowed the same thing to occur years later, but I hope you can fix things before they get out of control and we lose the last true democratic piece to the world we live in today.
—Eric Putz, Rancho Palos Verdes, CA

I'm a web developer and having the internet be free for everyone to use is very important to me. I don't want to make websites that people have a hard time accessing because their ISP is shutting down their connection.
—Paul Marek, Woodstock, GA

Net Neutrality is import to me because the start-up community relies on an open and free Internet to become successful and produce innovative, new products.
—Robert Landis, The Woodlands, TX

I can't imagine the internet with slow and fast lanes. THAT is against the public's best interests!
—Nick Berezansky, Ridgewood, NJ

Why are you messing with something that isn't broken? What is your goal behind this? Leave OUR internet alone.
—Richard Laporte, Calgary,

Net neutrality is the voice of the people and to deny Americans their voice is to deny freedom to all. Your job is to protect this freedom.
—LuMarion Conkliin, Flagstaff, AZ

We already pay more than other countries for slower connections. These carriers don't need any more power.
—Brett Digre, North bend, WA

We need reliable information. There is no other media outlet we can trust.
—Dort Rothafel, Santa Cruz, CA

Net Neutrality keeps the internet democratic!
—Christopher Tuch, new braunfels, TX

Let us continue our new Age of Enlightenment. Avoid invoking new a Dark Age.
—Brody Harris, Mableton, GA

Preserve freedom of information and the right to know.
—Mary Esther Gilbert, El Mirage, AZ

How about a landmark, heaven resounding breakthrough, where somebody big DOES NOT decide on the side for the biggest money. You could make a different kind of decision altogether. A righteous, ethical decision--above money.
—Sandra V O'Neal, Cave Junction, OR

We want a free and open internet, not a corporate monopoly internet! Listen to the consumers instead of the lobbyists and do your job for the American people! The FCC is supposed to represent the consumer not set the stage for future monopolies.
—Robert Wheeler, Winter Park, FL

I visit a lot of small websites which would be put out of business by these rules, which violate the basic precepts of the Internet.
—Susan Freas Rogers, Grass Valley, CA

The internet belongs to the people, it does not belong to corporations nor is it there for them to control, make money from, or intimidate with. Please reclassify ISPs as common carriers so that we can all have equal access to the WORLD WIDE INTERNET and so that we in America, supposedly a free country, can say that we are part of a Democracy and not living under a repressive and domineering regime of corporate, mob-like greediness! The government does not condone The Mafia or any other group that uses similar strong arm tactics. Well, the end of Net Neutrality smells an awful lot like The Mafia. Please give the Internet back to the people where it belongs! Thank you for all your efforts on the behalf of all of us who want to keep our country free and for the people!
—Jan Ketchel, Red Hook, NY

The internet is like a library - each book can be checked out the same way. There is no "faster checkout" for more expensive books. I decide what I want access to - the ISP has the responsibility of providing me access to the sites I want, not the sites they want me to go to.
—D T Ptak, delevan, NY

The Internet was created with public funds. It belongs to ALL of us.
—Thom Fistner, Fountain Hill, PA

Classifying ISPs as common carriers will prevent the largest corporations from determining what online content and applications we have access to. This is a First Amendment issue.
—James Knowles, Hertford, NC

I cannot believe these rules, despite the obvious public obosition, are actually on the road to get pushed through. This is proof to me that leaders of the government and it's commissions now work to line their pockets and the pockets of corporations rather work for the people they are supposed to represent. Whether we like it or not this decision does not only affect the us but many nations around the world because so much of the internet is hosted and regulated here. It is selfish and unacceptable that this is actually getting pushed through despite the comment of the American people. I want to move to another country.
—Eric Anderson, Lakewood, CO

Lets try to keep America fair for al its citizen. The rich and corporations keep winning and the inequality continues.
—Toni Jones, Greensboro, NC

This is a vital channel of information, communication, free thought and progress. Preserve it!
—Heather Dale, Wilsonville, OR

Stop putting your own personal funding ahead of what the people want. Reclassify the internet and save it's neutrality. You are harming the entire democratic party and are making yourself look like a fool.
—Joel Haines, Gainesville, FL

Please reclassify ISPs as common carriers, as that's all they really are and should be!
—Robert, Iasi,

Telecom monopolies block measurable civic progress in this country and have enough power and profits for what they provide. The internet was created with public funding and interests. With fiber optic grade communications, communities such as mine could revolutionize their business, labor, educational environments and cut costs and advance revenues toward better investments that will pay for decades to come. The telecoms have actively and knowingly blocked expansion toward this goal against the public interest in order to build toward the vast ownership leverage they are now expressing--primarily to promulgate cheap entertainment as their civic contribution.
—Keith Baughman, Ashford, CT

I am a telecommuter that relies on a fast Internet connection to perform my duties. My employer does not pay for my connection and I have doubts that I could afford to pay for a fast Internet lane on top of the service fees I already pay.
—Jered Hollon, Monett, MO

This legislation would assist the creation and continued existence of telecomm oligarchies. The role of the Federal Government is to deter oligarchies and monopolies. This is an abandonment of your mission and ethics.
—James Parks, Falls Church, VA

Equal access to information is a key component of a democratic form of government. Without it there is no democracy. Or honesty. All is economically driven advertising, with the human person cast aside. Is this really to ANY ONE's true benefit?
—Pascale Macleod, San Francisco, CA

Net Neutrality affects our First Amendment right to equal freedom of speech for all. Please reclassify IPSs as common carriers!
—Felicia Sanders, Dorena, OR

Net Neutrality is the basis for a free transfer of information across the internet. It's bad enough we already pay some of the highest prices per MB in the entire world, and they are trying to make us pay more?! That is robbery; information is free and should remain that way.
—TC Marker, Cleveland, OH

Net Neutrality is important to me because its the only think that keeps those ISPs from overpricing their services while worsening their services. They don't want to work for the money they received for their services. They don't want to work for America. They are hurting America with their greed, crushing the great speech tool that is the Internet, thus threatening Freedom of Speech with it. That's why Net Neutrality is important to me.
—Alexis Niebla, Calexico, CA

I use the internet daily. It is used for paying bills, shopping, communicating with family and friends, also to interact with my employer and colleagues. I am not young anymore so having the advantage to shop online with delivery is a bonus for myself and husband. We also use it to learn and educate ourselves. My children and their children use it to also educate in order to obtain degrees. The internet already has a high cost to use, ours was just increased again! For many seniors it is a means of entertainment as well. I tire of the imposing greed for huge corporations and we the "middle" class are always at their mercy. Thank you for listening and a bigger thank you for hearing.
—Kyle V Feldhousen, lockport, NY

As a small business owner who sells online, my livelihood depends on an open internet.
—Jason Strong, Glendora, CA

I am a small business owner.
—Jim Riley, Berwick, ME

If I wanted my internet censored, I'd move to China.
—Letitia Susi, Baltimore, MD

Welcome to communist china Tom Wheeler!!!
—Carlos R Rodriguez, Vero Beach, FL

No regulation is better than the proposed regulation which allows ISPs to hide behind the logistics of the FCC's rules. A tiered internet means small businesses will be left behind and consumers will be faced with ever increasing charges as ISPs get paid from content providers which in turn raise rates for content subscribers. If there is to be regulation, as it stands now there is too much ambiguity for it to be effective in maintaining a fair, competitive internet.
—Stuart Massie, Placentia, CA

Net neutrality = free speech.
—William York, Bloomington, IN

I'm extremely disappointed that those whose responsibility it is to make informed decisions on matters that impact the way the human race will communicate moving forward are so incompetent. If the policy makers don't understand what real Net Neutrality is they either need to get educated or resign. It's not difficult to wrap your head around - internet freedoms are critically important for the betterment of humanity. Greedy corporations want rape your online freedom and put us all at their mercy. It's unacceptable. Time to choose - be part of the problem or part of the solution.
—Seth Lewis, Winnetka, CA

Net neutrality is something that millions of other countries enjoy because the corporations are not gods to them. Corporate takeover of our country must be stopped and this is a hugh step in the right direction.
—Patricia Bereczki, Vancouver, WA

internet should NOT be subject to anyones arbitrarity. it should be free and accessible to anyone, anywhere, anytime. who control it or restrict it in any way?
—Manuel Arreaza, Oakville,

Its the right thing to do. Ive already sent many letters and sign petitions. Just do what the people are asking you to do, we have voiced enough but we will continue to voice till get true Net Neutrality.
—Vincent Cuccia, Fayetteville, AR

There is such a vast amount of information available on the internet that it seems an insurmountable burden to let private companies decide who can reach what.
—Michael G. Price, Los Angeles, CA

Dear Federal Communications Commission: Net neutrality is essential for consumer fairness. A 2-tiered Internet will be a huge win for ISP corporations like Comcast and another huge gift to those who can afford to pay more. Tom Wheeler's current plan will be another example of how too many recent government policies increase the gap between the haves and have nots. We urge the FCC to keep the Internet neutral by reclassifying ISP's as common carriers, thereby subjecting proposed price increases to scrutiny. The FCC has the power to prevent just-short-of-monopolies like Comcast and AT & T from continued rampant price gouging. Please have the courage to stand up to corporate interests and greed by standing up for the average consumer. Make ISP's common carriers with the accompanying regulations that help protect me. Alicelia and Robert Warren 2122 Bridgeport Way W University Place WA 98466
—Alicelia Warren, University Place, WA

the free access and flow of information is too important for too many reasons to make the Net a multi-tiered carrier. Not every endeavor needs to be corporatized, privatized. Net access, Net Neutrality is one of those endeavors. thank you.
—Jack Migdal, Chicago, IL

This is the antithesis of good customer service!
—Vierre Weathersbee, Morrow, GA

As an IT professional, I rely on technical forums on the internet in my work daily. Most are cooperative sites that rely on user donations to support and maintain their site. Allowing ISPs to charge these sites for bandwidth, that I've already paid the ISP to deliver, would bankrupt many of them.
—Robert Carrick, Dayton, PA

I do not think you or workers really WANT to patrol what we're all doing, therefore you shouldn't charge, because with charging comes an unneeded responsibility of patrolling! Please don't! **Keep our net free, both money wise and patrol wise!**
—Emily Boldt, Denver, CO

Keep freedom of choice, and keep the ability of anyone with a good idea to flourish despite a lack of money !
—Michael A. DiZio, Arlington, MA

Protect open i-net--make ISPs common carriers. "NO" to pay-to-play!!
—Gayle Goff, Austin, TX

Net Neutrality is a necessity because the Internet has become a utility. Millions of people use the Internet to talk to each other, have business meetings, spread new ideas, alter old ideas, transfer information, shop around, entertain other people, do many forms of business, get library books, find local events to attend to, and many other functions. Net Neutrality would ensure that all forms of traffic are treated as equal, so that a small website (such as a small town's) can be just as quickly accessed as a big website (like Netflix).
—Jonathan Maschke, Port Hope, MI

It is ridiculous to classify cell phones as a utility, but not the internet.
—Asa McCurry, Stillwater, OK

The beauty of the Internet is it belongs to no one. If the Feds have to step in to maintain an open highway, then so be it. How will we know what is missed when we can't make the decision to see what is out there first? No, this is wrong, contrary to what the public accepts as the purpose of the Internet.
—Margaret Auth, Anchorage, AK

We have an open and democratic Internet, and we need to keep it that way. A two-tiered Internet would be discriminatory and just plain wrong!
—Nancy Kosnar Hartman, Louisville, CO

We are already suffering from an unchecked monopoly in this arena. Please do something to keep the internet accessible and affordable.
—Sarah Gilchrist, Baltimore, MD

I am a small business owner that relies heavily upon the internet and internet marketing techniques. Countless small businesses rely on the internet to bring in customers and get their message across. You would be killing the innumerable amounts of small businesses out there that need the internet to survive. We cannot afford the extra expense of paying for their website to be in a "fast lane." And when you lose small businesses, the economy is hurt and people lose jobs. Don't be a pawn in these corporations' game - keep Net Neutrality alive!
—John X, New Lenox, IL

We shouldn't have to pay more. We already have internet set up in a fair way, that everyone can access, without bias to class or income level. This is another way to keep information out of the already impoverished's hands, and makes it less likely that they will be able to educate themselves on their own time, and changing that to favor the already-favored-by-society (the rich) is simply disgusting. It widens class disparities even further when we should be trying to even the playing field.
—Jessie Heglin, Grand Rapids, MI

Net Neutrality would help to enforce the basic concept of equal opportunity, influence, and power on the Internet. Allowing ISPs to give certain traffic, or websites priority over other traffic opens the door to corruption and abuse of power. Please do not alter the way the Internet has been functioning and thriving. Numerous very popular websites and services have thrived on the ability to start from nothing and create a massive following and audience. If they're not given the same priority and exposure as any other corporation, then how are they expected to grow? Please reclassify ISPs as common carriers. Thank You, Paul Myers
—Paul Myers, Lubbock, TX

It is sad to live in a country whose leaders are only interested in corporations and not the people. They get to Washington and forget what their job is....doing what the voters want. We pay the bill. Have a corporate job waiting for you?
—Mary Oego, centenniual, CO

If the ability to get information is stratified according to income, then there is no hope for equality.
—Jean Leung, Brooklyn, NY

Net Neutrality fosters a level-playing field for all content providers, not just a few.
—James Reamer, Ashland, MA

In order for all political opinions across the spectrum to be aired, and truth in politics to exist, without the directing of sites favorable to the mega-giants of communication, the internet needs to be open to all, as it always was, with free access to all--there already is monopoly enough with the few companies who provide the service at rates that are non-competitive--why would you, who are supposed to represent "the people's interest" find in the direction of content controlled by the few, and coporations at that! Clearly you must be corporatists yourselves, or on their payrolls, back door or front, to consider such a move--it is very transparent--I suppose at the level you have reached, it is no longer necessary to have a conscience, but just go along with the greed crowd
—Ruth Strauss, Los Angeles, CA

The Internet, like the phone companies qnd electric utilities, are and should be treated and regulated as utilities. Please move in that direction for the sake of the people you serve (in the broadest sense).
—Peter Munson, Shelter Island Heights, NY

To much control would be under corporate America. Everything would be regulated and process would keep increasing. Our freedom of choice would be almost removed.
—Erika Krueger, Crystal lake, IL

I already pay almost $100 for phone. TV, and internet. Since I live primarily on SSI I cannot afford any faster internet service but need to stay connected.
—Lizette weiss, Fort Bragg, CA

Everyone's access to the resources on the internet should be unimpeded, regardless of how they connect to it. I don't want something that I want access to be slower because they can't afford priority with my internet provider or theirs. It will stifle everything that an open internet has fostered like creativity and open exchange. This is also a step toward monetized censorship.
—Mike Bresser, Merrill, MI

This farce has gone on long enough. Stop taking away the free internet.
—David Samuel Stowers, Galveston, TX

Dear FCC I oppose your proposed net neutrality rules. There should be no restrictions on access to content over the internet. It should be illegal for ISPs to have more than one price or more than one speed or ability to access content. There should be no slow lane and no fast lane, only 1 lane! Regulate them as a common carrier, please, as necessary. thanks Doug Nevel Albany, NY 12158
—Doug Nevel, Selkirk, NY

How does slowed information work in the stock market. Not fair. Who buys an old news paper? We already have slower internet access than other countries. There's a political revolving door, and clearly unfair money power in politics, let one invention stay ideal.
—Colleen Rosby, San Francisco, CA

The creativity that flourishes on the Internet is dependent upon everyone having access to sounding boards of equal strength. I do not want the current state of things--where the Internet allows even the most obscure, unconnected, and shallow-pocketed among us to be heard by all with Internet access--to be just a blip in the history of the Internet. We need to preserve Net Neutrality in order to preserve the power of the Internet to be a democratic, empowering technological advance. It's one of the few such "places" left.
—Kathryn Warren, Dallas, TX

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Lowell Webb, Soquel, CA

Internet is the last and (by now) ultimate platform of human freedom, free speech, free will, free education, free expression and global communication. Forfeit it and the evolution of the human collective as a whole becomes corporate statistics, our very first steps toward true unity waí into tiny footprints being washed away by a sea of currencies and petty ambitions. Your choice, but not only your responsibility. I made mine.
—Márk Nemes, Kaposvár,

Net neutrality is democratic and will give critical access of information to the public. It is the FCC's responsibility to ensure access and to manage the internet in a way that is fair and democratic. As a consumer and as an American citizen I want access to a diverse array of information which is the ultimate foundation of a free nation. WE WANT OPTIONS, WE WANT TO HAVE A CHOICE!
—Angie Morteo, Alhambra, CA

Stop taking money from corporations and do what's right. We're already slaves to multinationals. The Internet is the only place where everyone can be equal. It should have rules, but it should only be monitored, NOT controlled.
—Jeroen Palmans, Geel,

Just because all other aspects of our lives are controlled by corporations, must the electronic commons be sacrificed to the almighty dollar?
—Jeffrey Panciera, Seattle, WA

We should all have access to whats on the net in a even manner. We don't need to be funneled by big companies to specific websites and things they own or have a hand in. Let Us have the choice to what we view online. Limiting things like this would absolutely kill what the internet means, what it stands for and for what? just for the benefit of those who want to control it.
—Rodrigo Rodriguez, Romeoville, IL

I already have slow internet, and can't afford to buy better. I'd be forced to if these rules were to become a reality. It would not only affect my browsing speeds for my own liesure, but it would also have a powerful, negative impact on my job as I connect with everyone via the internet. Without true Net Neutrality my job and my family are in jeopardy.
—Keith Walker, Chino Hills, CA

We already have been totally outclassed by other nations with regard to internet speed. Do we really need to establish class differentiation when it comes to data? Holding our citizens down and making us compete with one another, while just one factor, is a reason that other nations are able to be more intelligent. How many more races will we lose with the rest of the world before we are nothing but a bully with no academic backbone.
—Jeff Thomas, Collingswood, NJ

Wheeler's plan will destroy the Internet as we know it, raising prices to criminally high level's!
—Michael H. Sodos, Frederick, MD

ISPs are trying to double dip. If I pay for a certain speed, I should get it, no matter what website I am viewing. The idea that there would be two "lanes", one that discriminates against certain content is greedy and unethical. The ISPs should provide the internet service at the speed, I as the consumer, pay for, period. It is not their right to dictate which content I can view smoothly or efficiently, effectively dictating content they "approve of" and "do not approve of" as well as stifling variety and new content or businesses. Enough. Reclassify ISPs as common carriers and go further, break of these illegal monopolies so consumers have choice. A free market is only free when customers have knowledge and true choice.
—A C. McGarry, Belleville, MI

The internet is for everyone!
—Amanda Cochrane, albuquerque, NM

If you make it possible to use the net as a way to increase profit margins we all lose. GO POP! That means pull your head out of your arse and see and smell whats going on!
—Roger F Dancy, Berlin Heights, OH

I don't want to live in a world where a corperation makes my decisions.
—Tyler Yee, manchester, NH

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Brittany, staten island, NY

Please keep the internet equal for ALL to use. The people really paying for the "fast lane" isn't the service providers it will be people like me that pay an increased fee to use their service. In the end the FCC is hurting the people by letting the greed of corporation control the internet.
—Brian Middleton, ALOHA, OR

This struggle is for our basic freedoms.
—Doloris Mikkelsen, Sutherlin, OR

I want to be able to use the internet on a regular basis. However, the monthly subscription is already becoming too expensive for older folks to afford. I would not want to have to choose between food for the month or internet. It is almost to that point now.
—Donnmaria Killinger, ELIZABETHTOWN, PA

The rise of new technology, new services and new ideas require a level playing field in competition with the established players. Please keep the Net neutral!!
—Chris Jeske, Canoga Park, CA

My family uses the internet for many things from homework to entertainment. This is our only extra we have as money is tight and we shouldn't have to pay more to access sites we use now.
—Jennifer Sleeper, Taunton, MA

I can't afford to pay anymore than what I already pay for internet. Keep Net Neutrality.
—Ron Chin, Ozone Park, NY

We need to save net neutrality!
—Sandra Dryden, Tucson, AZ

I have friends and family that use the internet as a source to broadcast media such as written work or art. They use websites they built and host to display such work. If Net Neutrality was eliminated by the FCC, people from around the world would not be able to visit these sites. This is just one example out of hundreds. The end of Net Neutrality will kill jobs, hinder those that use the internet for their businesses, and eliminate competition amongst successful and unsuccessful websites.
—Alexander Hilliard, Lancaster, PA

Capitalism shouldn't be allowed to run off with the internet. The fact that fast lanes are even possible shows services are being withheld. This is backwards and opposes progress.
—Joel Jensen, Milwaukie, OR

I pay for internet access at certain speeds. It's not fair to throttle the websites and services that I want to access based on if THEY also pay. They already have to pay for access, as well! This is crazy and will stifle innovation for the future.
—Evan Nevermore, Reisterstown, MD

The internet is an amazing resource for many reasons. One of the most important is the access that everyone has to make their voices heard. Net neutrality is hugely important to continuing this. These regulations will fundamentally change the internet. PLEASE keep the web open for all.
—Joshua Weichsel, Minneapolis, MN

What you have done is not fair to the people and will ruined the internet as we know it please fix it now before it's to late
—Collin Cline, monroe, NC

Knowledge for all.
—M Raquel, rochester, NY

i want too enjoy my internet, just keep it how it is.
—Brian Malanga, aguora hills, CA

Freedom of information means equal access
—Emma, Jarrettsville, MD

The future of the open Internet is in your hands. And yet you have proposed rules that would actually break it. Your proposed path would open the door to widespread discrimination online. It would give Internet service providers the green light to implement pay-for-priority schemes that would be a disaster for startups, nonprofits and everyday Internet users who cannot afford these unnecessary tolls. I urge you to scrap these proposed rules and instead restore the principle of online nondiscrimination by reclassifying broadband as a telecommunications service. The internet is my last bastion of freedom. I can find information and entertainment that I cannot get in the mass media dominated by the "free speech" of money. I consider pay for priority schemes, which would discriminate against online content and applications, as nothing less than censorship. The internet would become just another mass media outlet promoting the pro corporate agenda and mind set while numbing and dumbing its users. Money is swearing at us from all directions so please don't let it take over the internet and drown out everything else.
—Roy C. Wilson, New York, NY

People all over the world use the Internet more and more, and have become more dependent on it. As such, the Internet should remain a common good, and not class-based service. Please do not adopt the proposed rules.
—Elizabeth Greer, Tucson, AZ

Net neutrality is important to me because the freedom to share information is essential to maintain a free world.
—Kristina Rohder, Stanwood, WA

You have two options. You can under-regulate and create an unequal playing field, or you can regulate under Title II. The latter comports with the reality that the broadband market is nearly competition-free. So treat the ISPs as utilities, so they can be regulated properly. _Then_ lobby Congress to limit the regulation to just what's necessary to protect net neutrality. Start from a position of strength, not self-inflicted weakness.
—Bruce Donnelly, Shaker Heights, OH

Why would you even THINK about let alone enact such an absurd policy? The FCC is supposed to work for US, the citizens and NOT corporations who want to suck every last penny from us! Why should THEY get a fast lane and WE get the dirt lane? You KNOW this will ultimately despite their claims to the contrary. We already pay much more for Internet access than the rest of the world and most of us can barely afford it as it is! To have to pay even more is atrocious! PROVE ME WRONG, DO THE RIGHT THING AND STOP THIS IN ITS TRACKS!
—Terry Angelli, Malden, MA

Reclassify ISPs as common carriers. This is the ONLY way to protect real Net Neutrality.
—Jerry Ruiz, El Paso, TX

It is so important to leave the road open to all users, I think especially of news programing. Complete power of the wealthy would have devastating results on the nation. Thank you for reading this.
—Jacquelyn Weddington, Greenville, SC

The internet is a important source we rely on for so many uses everyday, from applying for a job, bills, to learning about a certain certain topic or learning about a plant. With the current plans put in place I see it would put the internet we know and love in serious jeopardy. This from what I have learned is not real Net Neutrality! The internet is meant to be a public service commons and never a total entertainment hub. No company has any right to choose what to put out of place, and not out place. That is truly not free, hampers freedom of speech and creativity. Please stand up for a truly free and open internet or it looks like there will be no use for it all. There is too many of us that will not settle for the current deals in place. We expect the FCC to protect us and stand up for free and open internet!
—Brandon Head, Lakeland, FL

because the net should be open for all people to use at the same speed. Always.
—ariel Moore, Lake In The Hills, IL

In order to keep an open society, that is a basis for a real democracy we need net neutrality.
—Mark Boyd, Washington, DC

You can't give companies more power than they already have because they are not here to help people or play fair. A business operates to make money and crush all competition. The FCC can not be relied on to review every claim of infraction that will be made after ISPs are given the go ahead to do as they please. Letting net neutrality be weakened like this is only a lazy way out of dealing with the issue. No company can be trusted to make fair and lawful practices. The internet is today what running water, electricity, radio and television were to generations before us. The defining points of a generation that are necessary for the generation to progress, and it needs to be treated as such.
—Jonathan P Leone, San Antonio, TX

It aint broke, don't "fix" it.
—Mr. C Dickerson, Portland, OR

My livelihood depends on internet accessibility.
—Erika Deoudes, Henderson, NV

The internet is not something that should be put up for privatization. This goes against exactly what the internet is all about. Free, open sharing of ideas and thoughts. Being able to use the same internet everywhere is what makes us all equal online. It looks like the death of net neutrality would easily create untold profits for the corporations that set the prices, but is that needed? Just because we COULD, does that mean we should? The internet is not owned by anyone. It belongs to us all, and is made by the people of the world, so it and it's contents needs to be equal and open for everyone, not arbitrarily short changed and sectioned off. NO ONE benefits from this, except for those looking to make lots of money on this. It is plain and simple to us, the general populace that this would be little more than a way for corporations to generate money for the sake of generating money and offers no public benefit.
—Matthew L Brabham, Albany, OR

It is biased thus unfair!!!!
—Carol Joan Patterson, Eureka Springs, AR

I love the internet, and the way it is now works. There is no need for so drastic a change, and the nature of the internet as a source of information and entertainment could be altered if this proposal goes through. I know "big businesses" see the internet as a money printing machine, but I see it as a helpful tool with school work, and a way to keep in contact with people. Allowing certain companies this power to pick and choose which sites get what internet speed, something they already do anyway to a lesser degree, would ruin the freedom the internet gives us. It would increase advertisements in an effort to make more money to afford the faster internet access, and destroy the neutrality that alows start up like YouTube to form. It just doesn't make sense for anybody but the "big business." If it doesn't benefit internet users, then what is the point?
—Regan Talley, Southlake, TX

as an artist, I am a self-employed entrepreneur who would have a much harder time competing online in a two-tiered internet. I've already experienced this with Facebook's pay-for-post-boosting system that crowds out non-paid posts. Without REAL net neutrality, I would have no alternatives to this system that favors the well-funded.
—SC Whiteside, Christiansburg, VA

The Internet is one way to level the global playing field. The people who use it the most are those who are not über wealthy. Don't compromise this innovation in order to give a small number of people even greater profits.
—David & Mary Anne Buerge, Seattle, WA

Hi there, Hopefully someone is reading this, and understands the idea of net neutrality. I hope that the FCC can keep it safe since I value the idea of 'equality'. Whether it is in modern day racial situations or the internet's go anywhere, do anything idea, I really value the freedom of choice that I have in America. Please, do not take away from me.
—Paul S, Champaign, IL

I count. I am a real person.
—Ronald J Schlesinger, Rockville, MD

Since we have no competition between ISPs we need to require net neutrality.
—Andrew Morton, Reno, NV

I work at IBM, and Net Neutrality is important to me and to all Americans!
—Stan Latta, CARY, NC

Equality regardless of financial status in the eyes of the government is key!
—David Johnston, Portland, OR

The internet needs to remain free and readily available to everyone as it has always been and not by dictating a higher price for speed. Stop the greed!
—Tim Wheeler, Orlando, FL

The internet should be an equal area and not governed by fear of security threats or conglomeratization. Competition and high speed internet access is a must have in this day and age and allowing a few companies to monopolize the industry would have the same negative repercussions as AT&T's phoneline monopoly decades ago.
—Rebecca R Johnson, Pittsburgh, PA

All data on the Internet should be treated equally, not discriminating or charging differentially by user, content, site, platform, application, type of attached equipment, and modes of communication. One issue that will arise, is which sites or online services garner priority fast lanes. More than likely it will be companies that can afford to have fast lanes open to their sites, hindering online startups.
—Jon Dotson, Stone Mountain, GA

Net Neutrality is key in maintaining a free and open internet, without it innovation and prosperity will falter.
—Brad Wallick, Osmond, NE

I am a researcher who often finds the information I need in the "nooks and crannies" of the Internet. Please don't make valuable information even harder to get by pushing it into a slow lane behind the big entertainment providers.
—Patrick Lufkin, Berkeley, CA

Net neutrality is important because with out it there is no freedom of press, education, and it would make it harder to expose government courruption, the internet is one of the keys to positive progress of American culture, mainly because it has exposed alot of the disgusting imperialistic crimes against humanity. it makes it so that your fake history classes in public schools have very little power to brain wash children the way the fascist capitalists want them to, the internet is good for the economy because it makes it so that their is no need to rely public schools or classist tuitional collages for a higher education, those useless organization now only exist for people to get degrees to get money, not for education. and also these capitalist corporations have done nothing for the internet since it was created, all they have done is buy other peoples ideas and then ruin everything that was good about that idea, for instance look at what google has done to youtube, corporations do nothing good for humanity, they destroy the environment, democracy, the net, education, all forms of communication, and degrades cultures. The internet is what america is all about. Free, and its going to stay free no matter how pathetic your apartheid state fails at lifting a finger to not become a capitalist fascist imperialistic despotic tyranny. Stop justifying a much needed insurrection.
—Thomas Houston, fulton, MO

Your proposed plan is appalling! Please keep Net Neutrality, have the FCC protect open Internet by reclassifying ISPs as common carriers! This is hugely important to low income, and disabled, people like myself. Gesine Lohr
—Gesine Lohr, Alameda, CA

Dear Federal Communications Commission: FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Charles C Marye, germantown, MD

ISPs have enough money. We don't need to turn the US into a fascist third-world country in order to give them even more.
—Linda Rogers, Port Angeles, WA

Everyone has the right to equal information. It must not become something you have to buy.
—Helen Gex Greer, Tucson, AZ

The intrinsic neutrality of the internet leveled the playing field when it was becoming so incredibly imbalanced in favor of corporations and against the common citizen. Please don't undo so much opportunity to make a few dollars and then a few more dollars when you return to the corporations from whence you came.
—Jeremy Carlson, Los Angeles, CA

Don't give corporations more power than the people.
—Louis Wagner, Gloucester, MA

Why is Net Neutrality not important to you? Today the middle class is shrinking dramatically. The income disparity between the "have's and the have not's" is great and not good for our economy or democracy. How will making the internet less equal serve our economy or democracy? In a time where "one man one vote" is becoming a punchline, we need to protect that which gives us access to information.
—DC Dr. Pete Borboa, los angeles, CA

Listen to what Americans want not greedy ISPs corporations. We want net neutrality and increased regulation of ISPs so we can obtain competitive internet and innovation.
—Jude Nguyen, San Francisco, CA

Listen to what Americans want not greedy ISPs corporations. We want net neutrality and increased regulation of ISPs so we can obtain competitive internet and innovation.
—Jude Nguyen, san francisco, CA

I'm disappointed in the results of the meeting this last Wednesday. I've already sent you my opinion once before so I'm just going to voice my disapproval. I'm telling every one I know that you are speaking out of both sides of your mouth Tom Wheeler! (P.S. Just in case your mom didn't tell you, that means you're lying) Below is my previous letter of concerns: Dear FCC, I was disturbed to hear about the court ruling against net neutrality. I am an aspiring internet entrepreneur and I am worried that if you let the telecom industry dictate the speeds of its competitors that entrepreneurs like me will be left out in the cold. I have already seen in my web analytics that if a user has to wait 4 seconds instead of 3 for a page to load 80% close the page before it even loads. I'm not sure if you are aware of how important every second of speed is in order to compete in this crowded market place. So first I want to make it clear how this affects the ability for small entrepreneurs to compete with big companies. The internet is one of the few areas we have left that helps us build a middle class. The internet needs to be a public utility. To not do so is an affrontement to the middle class. Secondly, I fear that your sense of urgency to protect net neutrality has diminished because of the increased density of entertainment that is on the web today. Just because every day uses now include things like Netflix, does not mean you start to treat it like a cable service. The reason we had net neutrality in the first place was because originally most of the content on the internet was information going between educational and government institutions. It was easy to put a box around that type of information and say this needs to be protected, but now since we have Netflix, Youtube and a slew of publishers that produce seemingly trivial content, mixed in with that, it seems to diminish the need to protect net neutrality, because the internet looks more and more like cable. But it is not like cable. It is a place where innovation and activism thrives, where individuals have a market place for their own creative outputs. It is a place where we conduct almost every transaction conceivable. It is raw power, just like electricity, it is agnostic to its use. Thirdly, the telecom industry makes the point that non Netflix users shouldn't contribute to paying for part of the Netflix traffic. This sounds unfair at first, but the reality is that everyone watches videos on the internet. If they are not paying for Netflix they are paying for Youtube or Vimeo. If they are not watching videos it is because their internet speeds are too slow and thus are paying less anyways. The money that goes to upgrading the internet for Netflix makes it a better internet for video, for everyone. Forth, Comcast has stated that it is not fair that my subscription fee is being distributed across all the different sites out there, for which I am not using. For every site I use there is someone out there paying for it by using sites I don't use. Even if the distribution is not equal, you can't enforce that. Take insurance companies for instance, they take in money and redistribute it to those who need it. They do this and make it work financially, Comcast and Verizon have done this and can continue to do the same. Net neutrality is the insurance plan for freedom of speech, equal access to information and the American dream. It is insurance for the American dream that you can compete in the market place to do it better than the next guy or even a big company. Without net neutrality it is back to not who can do it better but who is better at controlling the system. Fifth, the telecom companies have made the point that they are suffering under net neutrality. They were able to exist just fine before the courts allowed them to single out services like Netflix. So, you have to admit that this is not an issue around creating a fair system where Comcast and Verizon has the money to support a better infrastructure. It is an issue around weather they have the right to use their monopoly of networks to reap huge profits. This is not a "how do we pay for the infrastructure?" issue. They do it just fine in europe where they preserve net neutrality. In conclusion, I want to state my firm belief that the internet is like electricity because it is information agnostic. As such, it should be treated as a public utility. Innovation must move forward, Comcast and Version are not immune to the disruptive forces of innovation and they are trying to find a way to outlive their obsolescence. In the same way newspapers have had to adapt, to find a way to survive they also must do the same for the greater good. Lastly, I want to leave you with a promise. A promise that if you do not, correct the error of the courts and make the telecom industry a public utility, that if you fail the American dream and freedom of speech. I will identify the public figures responsible for this failure and actively work to educate my network of contacts about who was responsible. May wisdom guide your decision, Sincerely, Nicholas Dunbar
—Nicholas Dunbar, Boulder, CO

Hitler would have tried to destroy Net Neutrality too.
—Amber Atwood, Kenilworth, UT

So much of what all Americans do is currently based on the internet. Commerce, entertainment, innovation, education all depend on access to the internet. Giving corporations control over what the public can access and how quickly they can access it is a betrayal of the American public.
—Kristin Harbuck, Bozeman, MT

Mr. Wheeler, it really is unthinkable to me that you would allow the internet to be sliced and diced and sold to the highest bidders just for the financial benefit of a few greedy corporate mobsters. The internet belongs to all of us, and allowing those ethically bereft, rapacious, insatiable swines to charge for it like cable television, with different tiers of service, is despicable, and I would not want the Karma of the guy who allows that to happen. I sincerely hope you believe in some kind of power in the Universe that is bigger than yourself, Mr. Wheeler, because this is a big deal and you don't want the Cosmic retribution that will be coming your way if you allow this travesty of justice and all that is decent, to go the Corporatist Oligarchs way. Do the decent, and right, thing here Mr. Wheeler; preserve net neutrality.
—Dianne Whitehead, Santa Barbara, CA

our rights and freedoms need to be protected and that includes equal access to the open internet for everyone
—M Brennan, Barrie,

I get more than 100 E-Mails a day. It's a full-time job dealing with them (and I'm retired). I can imagine the burden a slow Internet will have on me, much less a person with a full-time job.
—Kenneth W Johnson, Oakhurst, NJ

Net Neutrality is important because it is Net Neutrality that allows, through competition and open communication, for innovation in all endeavors, including education, technology, business and healthcare. Killing Net Neutrality will lead to greater human suffering and death. Killing Net Neutrality will diminish the quality of our children's education, the effect of which will last long beyond the reversal of the mistake you are considering. Killing Net Neutrality in any form, including the introduction of "Fast Lanes," will kill the existence of a competitive marketplace, eventually destroying our economy. Countless millions will pay for this mistake through unemployment, hunger, and malnutrition. Destroying Net Neutrality will reinforce the fact that limited money translates to limited speech, further eroding the power of the people to have a voice in the direction of our future. Killing Net Neutrality will affect communication, impacting the landscape of our election process, and eventually costing us our ability to petition our government for the redress of grievances. Killing Net Neutrality will diminish transparency in our government, leading to increased levels of corruption. Having studied Communications, Economics, Finance, Business and Technology, I can state with some expertise that the truth is that this is much more common sense than the corruption in our system is pretending it to be. It is the responsibility of our government-- It is your responsibility-- to ensure the common good, to promote the general welfare, and secure the blessings of liberty for ourselves and our posterity. It is not your responsibility to protect the profitability of a few select corporations.
—Robert Collins, San Jose, CA

As an artist, promoting myself is not something I should be made to pay for with my career because I can't pay enough to be allowed into the big leagues. Goodbye America, democracy is dead, it's all for sale.
—PrairieRose Leyba, Ola, ID

Our corporation owned politicians and bureaucrats have already given these same companies the gift of digital broadcasting, which requires virtually all TV viewers to pay them ridiculous fees. The internet does not and should not belong to these special interests.
—George Metsopulos, Gig Harbor, WA

You must reclassify ISPs as common carriers
—Mr nicks, Beverly hills, CA

What is now the Internet was paid for with taxpayer dollars. Therefore, all citizens should have EQUAL access to it!
—Dennis Fogarty, Columbus, OH

I want a network of information free of censure and corporate control so that i, my family, friend and us as human beings can speak our mind and discuss topics freely. Net Neutrality enables me to make up my own views on things and share my opinions as well as received the opinion of others. To me, Net Neutrality and free information is THE leading factor in a peaceful, resourceful and free society. Reclassify Internet Service Providers to Common Carriers please as Net Neutrality is very important to me.
—Bruno Anghene, st-lambert,

We need ISPs as common carriers so that the Internet can still be a free place to get information which is not censored.
—Neva Steffens, Greenville, SC

Regulate this like a utility for the greater good of American society. Otherwise, you begin another division of haves and have nots.
—Gary S Albright, Reno, NV

It is one of our first amendment freedoms and to change it s to skeleton away one of unique American rights. Our forefathers gave their lives to uphold these freedoms. In this day and age, our freedoms are more important than ever before in history. Please consider the impact your decision will ave for many years to come! Be wise!
—Mary Burgess, Belvidere, IL

The Internet is a part of infrastructure, not a resource to be controlled by an already consolidated industry. We already pay more, and receive less. Net Neutrality, and faster access, are key to a democratic society.
—Paul Drowns, Saco, ME

Because its opposite, internet fascism, is not my cup of tea, nor my idea of freedom, safety, health, sanity, safety and sovereignty.
—Diane Pilikian, Colorado Springs, CO

protect true net neutrality.
—Danny G, Los Angeles, CA

Internet is a basic human right and is fundamentally the greatest beacon of democracy that currently (or likely) will ever exist.
—Eric Iafigliola, Willowick, OH

There is no democracy without equal access to informatiation
—Carrie Santulli Schudda, Oregon, WI

We need a level playing field. There is no reason to give big money corporations ANOTHER leg up. You know this. It is so flippin' obvious, I can't imagine why you need to be told.
—Yvonne Baab, Montpelier, VT

The founder of the World Wide Web, Tim Berners-Lee, has said it all time and time again. In a Scientific American article in November 2010, "Long Live the Web: A Call for Continued Open Standards and Neutrality" he wrote, "The Web evolved into a powerful, ubiquitous tool because it was built on egalitarian principles and because thousands of individuals, universities and companies have worked, both independently and together as part of the World Wide Web Consortium, to expand its capabilities based on those principles." He saw the threat to the web even then. Rise to the occasion. Preserve net neutrality. It's so easy to do.
—Nancy Belmore, Victoria, BC

Stop favors for the rich. Let all people be able to communicate on a neutral Internet.
—Paul C Hans, Scottsdale, AZ

Our tax dollars gave the ability for these companies to even HAVE the backbone for internet. Pay to play caters to nothing but big business. It can lead to backdoor deals third party contracts to eliminate compitition. It's a really bad idea.
—Richard Ford, Morgantown, IN

As a man who works for a major company as a contractor, having non-tiered internet service is essential to my being able to work. The internet is no longer a luxury that we can do without: it is a necessity, and by giving the power to make a tiered system to ISPs, you are definitely giving them carte blanche rights to discriminate against any company and use that to extort and blackmail them to pay more. If the company I work for is unable to connect at a consistent speed, or if I am unable to connect to my company's network via VPN because my internet provider decided to 'slow down' my connection, this impacts business and global orders can grind to a halt. The internet should be a utility, no tiered service provided to everyone equally. That is the absolute only way to ensure that every business gets fair and equal access to as many customers and their suppliers as needed.
—Jared Brokaw, Moline, IL

There are so many things I have learned or am looking forward to learning that the internet makes easily accessible to me. Nobody should have the ability to take that from people or jeopardize it in any way.
—Alexis Vick, Palm Coast, FL

PLEASE, do not implement Wheeler's plan to change the Internet. The Internet was created freely for everyone and should stay this way. Please, do not make this mistake in taking whatever is left us for free. It would be extremely sad to see this happens, with some companies being able to broadcast on a faster lane than others. This is going backwards in time. Please, do not allow that to happen in this country or anywhere else in the world, in the name of real progress, please! I did vote for President Obama and now am regretting giving my vote to someone who'd give Wheeler the power to make such a decision. The Internet was created for the people, for humanity and MUST STAY THIS WAY! Enough is enough!!!
—Sandra Oliveira, Tustin, CA

The internet is a global entity. A single government giving limits to it's usage is against the very foundation it was created upon. Don't destroy the internet because of corporate greed.
—Kevin Mason, Mesa, AZ

The one place where the 1% has not sucked the life out of the rest of us and now that may go too? NO!
—Shari, Westfield, MA

I use the internet for recreational purposes mostly, but also for research. If all of what I did became classified as "high-traffic" or "premium" services, It would financially bankrupt me, as well as cause potential harm to componies that provide these services. Perserve Net Neutrality!
—Jonathan Banks, Lakewood, CO

Not only will this hinder business for small business start-ups and reduce potential economic recovery for the nation, but it hinders the rights of Americans to use the internet as they please for business and personal use by restricting access to sites that are willing and able to pay for better quality service. We need the ability to have open communication and exploration to feed innovation, and Americans should be free to access the internet sites they choose without restriction.
—Tina Silk, Wolfeboro, NH

Stop playing games with applications of semantics to what a telecommunications is vs. a data communications vs. television network etc. Look. Its real simple. The internet belongs to EVERYONE EQUALLY. The truth of the matter is that access to it should be wide and varied and super fast and most importantly free in every way, because when it comes down to it, it is a vast library and information system, it is education, communication, music, and videos, and all that there is, in a perfect documentation of our society the world over. It is a library and a grand museum and a story that all, every single human should have access to. In america, and other world powers over, education and history are the cornerstones to our lives. They are what makes us all, great in our strengths. Just as much as a library, is most always public, and free, and there but for the service to the patron. Stop playing with the internet...make it strong, make it free, make it equal, and then, make sure that every single person that you possibly can has access to it and its wondrous treasure trove of all that there is as fast as we can create and record and input it all. This, is perhaps, the greatest achievement of all that mankind has accomplished because...it is communication, a leveling field between cultures, a way to seek and understand and grow, and it could rival our haloed US Constitution and all that we stand for as to the importance of it. Your decision right here, right now, in this generation that you have been entrusted to not only carry out the will of the people, but, to protect what is right. A free, neutral, protected, equal, un censored, un throttled, un molested internet is was is RIGHT. And Im willing to bet that you know it. The question is, what kind of person(s) are you? The kind who would bow to corporations and their greed and ever encroaching control for their own purposes over the good of the people? Or...are you an American...a Human Patriot who can recognize the importance of what you choose on our behalf? I am asking that you protect the good of the people, trust in us as a humanity in whole for all the good and bad of what is out there with this vast internet we built...that we as a greater proportion will use the internet responsibly as it will enrich our lives, that you ensure it with the same vigor and defiance you would apply to priceless paper tomes in an millennium old archive, or as a national treasure, or in a very basic way...our very lives..because, too late to reverse it now, the internet is so engrained in our lives that it is a very part of us as a persona, a way of living, and an invisible appendage. You must see the internet as the entity it is, its remarkable and exponential potential, as a medium for crossing nations and reaching out to one another, as the tool and existence of our lives in it…to make it a monopoly of corporations would be as to indenture humanity to CEOs. Make this Right, Make it Neutral. Fight for US. Very Respectfully, Nicholas A. Charlebois
—Charlebois Nicholas A, Gresham, OR

Net neutrality is the engine we need to leverage people's creativity.
—Philippe Laurens, Lansing, MI

Please don't be pressured by large businesses throwing money around. Small businesses need a say too.
—Jeb Makula, Rock Island, IL

The internet is the last place where you can find a free press not muzzled by state and political interests, the last place where there is still a free market where people can carry out business with whomever they so choose, and where there is still freedom of speech and expression. Take all that away and all the internet will become is another gigantic, corporately controlled department store with little form or substance. Keep corporate and government cronyism out of the internet! Don't give corporations exclusive buying power over everybody else for bandwidth speed and information access!
—Dar, Billings, MT

I probably send 300 emails to my friends for each one phone call. I've been using email since February 1981 (in Sunnyvale and then Palo Alto, California). It is an essential part of my life. Please recognize that fact (I'm not the only one who feels this way) and reclassify the Internet as a common carrier. It's the right and reasonable thing to do. Thank you.
—Paulianne Ann Balch-Rancourt, Port Orford, OR

Please reclassify ISPs as common carriers. The internet is the very last place of freedom of information and to make one internet for the CHOSEN FEW, and one for the UNWASHED MASSES to do this is tantamount to jim crow in the civil rights era to segregate one group from another & make access to something everyone should be able to access on the same level with no upper tier & lower tier KEEP THE INETRNET FREE!!!
—Sara Wing, Bristol, TN

The large corporations need to be stopped. This will help to further shut down the mom and pop run businesses. If this passes it's further evidence that big corporations are running this country.
—Matthew Hinz, Fullerton, CA

We made the Internet not corporate giant! To earn or gain profit from us is like taking the money from the poor.
—Adrence Apong, Malaysia,

Uphold Net Neutrality and STOP selling out to big business. Do something right for a change!
—Will Cortes, NEW YORK, NY

Because free speech is important, and Internet service in America is already slower than in many developed countries.
—Kieran Fenlon, Cookeville, TN

The Internet must be free!
—Jm, Santa Cruz, CA

I am a 16 year old regular teenage Jersey boy. I love the Internet for YouTube, online gaming, and most importantly to me DeviantArt. I have a DeviantArt account, and I love digital art and without Net Neutrality, then my goal is basically "ruined". I love online games, and without online games like Roblox, and other online games that are located in America they will have huge effect for it American players who normally play the games. Not just that but think about those online games like Roblox would not only lose a ton of players, but have to quit their own businesses. Therefore no more updates for those players in other countries.
—Louis Morrell, Moorestown, NJ

I heard an interesting program about this yesterday. There is absolutely NO reason for people with money to have faster access on the internet, or better access. and why should telephone companies get any more money? ISP's are common carriers. Thank you.
—Bonita Parodi, Boise, ID

Please reclassify all internet service providers, the known big ones and any others (not yet known or small ones) as common carriers. The internet needs to be neutral and permanently safe from the hands of greedy corporations.
—Marilyn Coleman, windsor, CT

Sir/Ma'am, Internet service providers primary mission statement is to maximize profit using all legal methods available. They are under no legal obligation to innovate or upgrade their infrastructure. My concern is that combined with the lack of local market competition, reclassifying ISP's as information services, will cause non-paying content providers to lag behind as consumers become impatient with access times. Thank you for your time, Gary Butler
—Gary Butler, Keesler AFB, MS

Net Neutrality protects me from some CONGLOMERATE controlling the Internet and with it charging fees, etc.
—Peggy L. rth, Spokane, WA

I'm not interested in supporting Big Business efforts to control humanity and the planet for profit, greed and control!
—Stella Yfantidis, Singapore, WV

Because we live in a democracy!!!!!
—Urania Messing, Elmsford, NY

A system of haves and have nots is not the principle on which this country was founded.
—Warren Desonia, Portland, OR

Net Neutrality is important to everyone, the big guy and the little guy providing content. It is only fair everyone gets the same treatment and not have a two - tiered level of Internet service.
—Donovan Corzo, Grapevine, TX

I pay for internet service at specific speeds, I should determine what I want to use that bandwidth on.
—Sheila stafford, South bend, IN

Without effective equality of all internet content providers, which means enforceable rules to prevent discrimination based on ability to pay the owners of internet pipelines, the free flow of information that is the lifeblood of democracy in the 21st century will be staunched and ultimately strangled to death.
—James Bell, Burlington,

The idea that having internet access, or an internet presence for a business, is optional or a luxury is absurd. Anything less than true Net Neutrality is discriminatory at best.
—Valerie Mehring, Seattle, WA

I have given up on main stream media and rely on the internet for my news to fill in the blanks in the information feed to us by big media. If we lose Net Neutrality we loss the only source of local aid international events as they occur as the independent news sources will not be able to pay the high fees a monopoly of providers would demand to keep the small sources competitive with the large providers..
—Phil Orzech, TUCSON, AZ

Internet access is a part of the commons and must not be enclosed through commoditization. The FCC has the responsibility to guarantee internet access for all citizens. Let the agency not fail to discharge its responsibility faithfully.
—Norman Traum, Louisville, CO

The internet is for everyone, not for bloated corporations to line their pockets with even more of our money. Please reclassify ISPs as common carriers. For access for all.
—James Gardner, San Antonio, TX

I want Net Neutrality equal to everyone.
—Rafael Varela, SAN ANTONIO, TX

We should not be an oligarchy! We need at least one thing to remain fair for smaller business/websites.
—Kendra Williams, Chicago, IL

E-commerce is the continuing wave of the future... if it is not "neutrally" accessible to all, our great experiment will begin failing and the economic implications of that would be horrendous. PLEASE maintain a EQUAL NET NEUTRALITY!!! Thank you!
—Vera Ellen Rich, Green Cove Springs, FL

For a country that allows all people (even liars) to have free speech over the air. Talk radio hosts like Rush and Glen Beck constant bombard the airways with their opinions and whether we like them or not it is part of the constitution. Well the internet should be part of the our rights to free speech, not to be censored or slowed for any reason especially as a means to get money. This would allow the rich freedom of speech and information and everyone else less than. I am against this and so is everyone else I know. DUMP THIS BILL!
—Dennis Wells, Las Vegas, NV

Net Neutrality is essential if liberty and freedom are to be preserved in our United States.
—Douglas Caddy, Houston, TX

Wealthy individuals and big corporations have been steadily gaining more power in our country. Continuing to allow everyone equal access to the internet is extremely important to allow freedom of speech for all, not just the rich.
—Janet Campbell, Corvallis, OR

I don't want to be bought! I want freedom to make my own choices at the same speed!
—Betsy Fouts, Coatesville, IN

We have very little choice for broadband internet. Please do not take away net neutrality. Please require all Internet Service Providers to treat each packet neutrally. With a near monopoly, be should not be doing anything that would allow ISPs to discriminate or make fast lanes. Please keep the Internet open and neutral!
—Joshua Prescott, Bartow, FL

I doubt you remeber me but I have personally written each and every member of the FFC regarding my opinions on this matter. To make my statements breif, I want the FCC to respect the internet and leave it alone. Do not place rules/laws/regultions or other upon the internet to try and allow discrimination of any form. It is very obvious these laws that support an open internet are in fact trying to generate more money out of an already cash strapped country. The internet was fine. LEAVE IT ALONE. I do not want to be discriminated against; I do not want my fellow people discriminated against for money. Choosing to allow discrimination for “commercialized content” for pay is wrong. I want to be able to hear all the voices on the Internet not just the big ones. I want diversity and uniqueness not just what someone says I should have. I do not want people making choices for me on what I watch, how I use Internet telephones or anything even remotely similar. I am just a small time YouTube girl with barely any subscribers. However, I would like to have a future or to have possibilities of growth and freedom on the Internet.
—Merry Weather, Savannah, MO

As a consumer, I expect to pay for what I use. However, tiering prices at the carrier level simply squashes innovation and gives the big Telecom companies control over which businesses can provide viable services to me.
—Dave Prescott, Bartow, FL

Please reconsider your plans for the internet. This is something I feel very strongly about. Net Neutrality is very important for the future of our country. I know that the proposal put forth by the FCC would be a disaster for Net Neutrality and small businesses. Please reconsider your plans and instead reclassify ISPs as common carriers. Thank You.
—Charles Edwards, Marion, NC

Please don't turn internet access into one system for the rich and another for the poor.
—Paula Shafransky, Sedro Woolley, WA

The internet is the best thing since public libraries. Please let it stay that way.
—Deborah J. Miller, Austin, TX

Every website needs to have equal access for all customers.
—Vickie Jones, Hermitage, TN

It feels like the brink of a dark age. Free unfettered Internet has been golden, expanding culture, humanity, brotherhood. If it is given to the commercial realm, as so much else has been, the jail bars of commerce will strangle the heart of creative spirit. Think carefully , very carefully. Do not be bought. Classify ISP's as common carriers all the way.
—Elizabeth jenness, Tampa, FL

Leave the internet a level playing field. Dont make those without money also lose their voice.
—John Turcotte, Bristow, VA

If your proposals are taken up in the States then it is not too hard to envisage other countries becoming portals for an open net which would thus leave your country behind. For your own sakes I hope you leave the net alone.
—Robin Wingrove, Duffy,

I'm tired of you FCC cowards trying to control our lives, it's not right for you to regulate the internet connection. You guys are corrupt scum. because we all really know what this is about and that this is not really about money and allowing people who pay more money to get their connection dilivered faster, This is about the NEW WORLD ORDER and your plan for TOTAL CONTROL. CONSOLIDATION THEN REGULATION. I want you to know that WE THE PEOPLE OF THE UNITED STATES OF AMERICA SEE YOU AND ARE AWARE OF YOUR EVIL SCEEMS.
—Raymond Nelson, Brooklyn, NY

COMMISSIONERS: In the interests of commerce, small business, and entrepreneurial innovation, uniform accessibility to the Internet should be available to the big and small content providers alike. IN ACCORD with the recent federal ruling on web content and retrieval accessibility, the easiest way to accomplish this objective so critical to a growing economy is to classify all Internet Service Providers as "common carriers" within a function in the public domain. Appreciate that the understanding by the public-at-large is that the electronic infrastructure of the world-wide-web was derived from a DARPA network at taxpayer expense. As such, it is widely appreciated that in speed provision or any other discrimination of content by providers, a two-or-more tiered Internet would be a "give away" to ISPs and well vested interests which can more easily pay for optimally available content. . Thank you, Sam Stetson .
—Sam Stetson, Charleston, WV

Re AT&T merger w/Direct TV: AT&T would not support commercial free independent stations (Link; FSTV; AJAM, etc.) currently on Direct TV Re 2-tier Internet: Not democratic; we have already given up ownership of our commons to telecom companies; do not side w/already privileged companies; do not approve these rules; do side w/citizens;let us keep open access on the Internet; do reclassfy ISPs as common carriers. Simple as ABC,
—Lorraine Mann, Chicago, IL

The definition of neutral is: not helping or supporting either side in a conflict, disagreement, etc.; impartial. Net Neutrality is being impartial to everything on the Internet and not taking sides. The FCC's proposal takes sides.
—Jim Cvitkovic, Powder Springs, GA

Please protect us all!
—T Francis, Dayton, OH

Net Neutrality is a hallmark of a free society. Anything else opens the doorway to oligarchy, privilege, and exactly the things which led to the actions our USA founders felt it necessary to take way back in the 1770s!
—Catherine Woods, Fort Collins, CO

I have maintained a web site since 1999 for my personal profession as a mortgage broker my practice is best described as "boutique" we do a low volume of business by industry standards however the quality of our services are great. I know that innovation and competitiveness will be damaged in our country with this proposed plan.
—Jay Cooke, Magalia, CA

I own a small, bootstrapped web-based software company (coachaccountable.com). It is successful, and I don't know that it would have been possible without access to a free and open internet.
—John Larson, Glendale, CO

Freedom of speech is guaranteed by the bill of rights. Support the bill of rights.
—Dr. Roger C Johnson Phd, Mc Kenzie, TN

The internet should be free and not bound
—Wendy L Stafford, carlsbad, CA

We need to keep the internet exactly how it is. thank you for your consideration,,, Michael
—Michael Grundt, Fountain Hills, AZ

Freedom of Speech is on the chopping block! Preserve this liberty.
—Jim McCormick, Laurel Springs, NC

Having equal access to the internet at equal speeds equals free speech in this day and age. Equal access to the speech of others equals the same. A two tier system is tantamount to canceling the most revered freedom the constitution provides. It is utterly unthinkable that an oligarchy of communication and information be installed in this way. DO NOT LET THIS HAPPEN. Or we might as well be living in a Taliban state. Truly.
—Sarah Brennan, Pacific Palisades, CA

OPEN INTERNET - Can't BE open if you charge for different paths
—Michael Pennington, West Palm Beach, FL

I don't want an Internet that favors corporate interests and increases my cost to use. When Netflix has to pay more for access, who do you think that cost gets passed on to? Net Neutrality is the only fair way to administer Internet access and allow the open Internet to provide the innovation and freedoms we have seen thus far.
—Douglas Barstow, Independence, OH

These large corporations should not have control of what I can find on the internet, period. It should be free and open for all types of businesses, charities and groups without regard to money. Please reclassify ISPs as common carriers. There should be no "fast lane" allowed for those with money to pay, or it will become an internet for the rich only. This will also give the internet carriers to much power to block or bury information that may be detrimental to their pocketbooks. This is censorship, pure and simple.
—Donna Rowland, Seattle, WA

The democratic main street superhighway that is the web must not be devolved into yet one more private piggy bank for telecom monopolies Time Warner/AT&T. The web must be open to all voices, not just the corporate propaganda spewed by Wall St.
—Rick Freeman, louisville, KY

The net is free for a reason, and everyone depends on it. We're not a third world country where internet access is strictly controlled. Let's keep it free.
—Yvgeniy Zhuk, Valley Village, CA

Net Neutrality is important because an open and free Internet to everyone is key to its powerful ability to equalize people of different classes and privileges. It's also essential for the formation of communities that can't form elsewhere, including those for traditionally oppressed folks who may not be able to afford higher fees for access.
—Shannon, Rockville, MD

because i am a loser who stays on the internet most of the day
—Ryan Nguyen, B, OR

Focus your energies on making ALL our internet speed equal to fast Hong Kong, Korea and Japan. NOT on limiting the majority of us from having access by allowing big companies to buy it.
—Elizabeth Finders, PORTLAND, OR

Please do not further widen the gap between rich and poor with these proposed rules. If our civilization is to last, we must do as much as possible to create equality in our society - these rules would deaden creativity and innovation and boring people with money would decide everything. Our country became great back in the days when education and libraries and a just society was our primary concern.
—Katherine Wagner, Studio City, CA

Instead of adopting the proposed Internet rules, reclassify ISP's as common carriers and protect net neutrality! Thank you for your consideration.
—Brian Wolff, Stockton, NJ

To learn the truth, not mainstream propaganda
—Biddy, Colne,

It is essential to free speech. Two or three tiered internet will enable the ones with the deepest pockets to have the loudest voice. This is not constitutional.
—James Ryan, Sea Cliff, NY

I want a neutral network because it is my human right. And that's it.
—Ariel Romero, San Salvador,

Net neutrality helps us to make money and make a living online. Its good for buisness.
—Andrew, sebring, FL

The Internet should remain a neutral entity. The end users pay ISPs for the privilege to access the Internet and make the decision based on their needs how fast they want their Internet to be. The content should be provided without bias and the providers of that content should not be required or encouraged to pay extra for better, faster, or more reliable connections. The US should strive to be a modern country where access to information is a right not a privilege, and access to the Internet should be considered a necessity. To hinder the access to certain sources of information and not others is a concept that is completely un-American. Keep the internet neutral and make ISPs common carriers.
—Mark Moline, Brookline, MA

Please, I value equal access to every website without prioritizing traffic and ask you to reclassify ISPs as common carriers. Please restore net neutrality!
—Oleksandr Tsyupka, Chuckey, TN

An open internet is vital to innovation and the fair practice of equal access to all for all. Without neutrality the character of discovery and advancing technology would be lost in the minuscule short-term financial gains of large media conglomerates who will rule and select by way of unnecessary tariffs what the people of the leading democracy of the free-world and the international community are entitled to view and experience in the greatest single technological innovation of the 20th Century.
—Jon J Curto Jr, Dunedin, FL

We pay for internet service, and with that, are told we get certain access speeds. AT&T, Comcast, etc already get a huge fee and truly do not deliver on the speeds they guarantee. As a prior PacBell employee, I am aware of this inability to deliver as promised. To add additional charges is just one more insult of greed by the communication monopolies. Let's use some common sense, just say no. Keep internet "Net Neutrality."
—Tracie Feldhaus, Magalia, CA

It gives us the freedom to decide where the truth lies.
—Eric Roberts, Highlands Ranch, CO

I do not want the middle man(internet providers) to decide what I get to access. The internet should be like a library, all of it open to everyone.
—Christopher Shanley, Bloomfield Hills, MI

The potential for abuse is way too great. We need government to back down, not rise up. Look at what Google has done. They didn't need the government's help to create Google Fiber, but with the new regulations, it will be harder for them to expand their service. The beauty of capitalism is that businesses are forced to innovate and improve, and having to government swoop in and hinder the ability to innovate and improve doesn't make sense at all. I realize that these new regulations have good intentions, but like some other recent laws (cough, cough, ACA) we know that laws with good intentions don't always help the country. Please just leave well-enough alone.
—Alex Ohannes, Seattle, WA

This involves prioritizing human freedom of expression in the digital age. There are few issues of equal importance to the future of humankind and democracy and freedom.
—Lee F Greer Ph.D., Riverside, CA

First of all it's prejudice, the rich benefit, as alway's, and the unfortunate are left empty handed and left to feel like their looked downb upon. Secondly, it's a sure way of becoming a war of the "Classes" .Bottom line is the Outcome will not be a positive one. Do'nt allow "Greed" is the number one factor that is behind the decline and destructure of our planets problems , from an increase in tornadoes, increase in "Wildfires" our water supplies depleting, which is causing towns to extinction, Huge snowstorms in warm climates have just about doubled. Droughts are more wide spread. It all comes down to "Greed" do these corporations really want to have a hand in what "Greed" is doing to us, and each other, Our very Planet? How about helping to solve the problems instead of being a part of the problem? Sad as it is, I do'nt have to be a psychic to know the Outcome, do I ? P.S. could not close without mentioning how certain "Sites" are already controlling what you are saying and "Fining" you for speaking out of context, what happened to freedom of speech ? Our rights are already being violated online just for giving our opinion, speaking our mind ! I literally felt my jaw drop when I was reprimanded !
—Helen Hunt, Watertown, MA

net neutrality is important because the internet is a vast open world just waiting to be explored. it is the only thing in this country i still consider to have freedom and taking that freedom away by taking away net neutrality will, in my opinion, cripple the internet.
—Jason Novak, NORTH AURORA, IL

As a small (really small) business partner, the internet is vital to our performance company for advertising and booking events. Everything is time sensitive. Our family's most important seasonal work is in November and December -- yes, Santa. Delays, missed connections and people being unable to access our website means that children won't know the joy that a visit from Santa can bring. Last year, Santa visited military family parties, homes, and public events. Net neutrality will keep Santa flying from house to house.
—Debra Burrell, Norfolk, VA

I disagree with the FCC's plan to let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. These companies would have the power to pick winners and losers online and discriminate against online content and applications. The Internet, as a form of democracy, should be kept open for everyone to access.
—Kimberley Jutze, Washington, DC

Because yall going to fuck everything up like yall always do. Leave us the fuck alobe, and leave the damn web alone jesus fucking christ already!
—Paul Johnson, MVOMEOMOME, SC

Because The Rock says that's why!
—Dwayne Johnson, Know your role blvd., GA

The internet is the truest expression of freedom and human progression. If it is allowed to be corrupted like so many other facets of our global society in the name of profit and corporate greed. There is no hope for humanity. Remember what really matters and do what is required to be able to call yourself human.
—Jake Schwenke, Melbourne,

Chairman Wheeler, I am deeply concerned with the subject of net neutrality. I am aware of the arguments made by industrialists in favor of the ability to portion and package internet access; I won't belabor the point with arguments you've undoubtedly heard before, but I will stress that the role of the internet is different and more integral to the fabric of society than most of these industrialists seem to grasp, assuming the best motivations, and that the dissolution of the internet as we know it would be akin to selling our roads to various interests, narrow in the scope of their pursuits and shortsighted in the implications of their policies. I pray on behalf of everyone in this age of information that you are mindful of the weighty implications of the decision you make to the very nature of humanity's ability to comprehend and communicate with each other. I beseech you from the bottom of my heart as someone who regards the internet as a milestone achievement in human history not to allow this great work to be undone for the sake of thinly-veiled desires to build trusts by another name. With respect, Peter Deer
—Peter Deer, Magalia, CA

Because is really important for the people that want open internet.
—Fong Chang, Warren, MI

The ONLY reason that exists to make these changes to the internet is so some huge conglomerate can rake in even more dollars from the American public. Why would our government want to okay that? Is there something to be gained for the people (of which our Government is supposedly made)? If the Government of the United States practices selling us out to big business, we know what will happen. Hopefully no desire to do that exists. THERE IS NO REASON IN THE WORLD TO ALLOW ANY ASPECTS OF THE INTERNET TO BE CONTROLLED BY A FEW BIG BUSINESSES. Do the right thing!
—Judy Granda, Largo, FL

Net Neutrality means an open and free internet, a place where people can say what is on their minds and if these new rules go into place it will ruin it and make the internet a place that doesn't allow people to have their stand from which to speak. Also there are many other companies that use the internet for their business and if you let the ISPs have their way then you are also going to be costing the country billions from losing the money from these small businesses going out of business possibly. So please consider the consequences of your actions before letting these rules pass and reclassify ISPs as common carriers, Thank you for your time in reading this.
—Hayden Shelby, Shreveport, LA

It is the way it should remain.
—Doug di Giovanni, San Mateo, CA

Money should NOT determine the speed of internet that the rest of us get!!!
—Rebecca Hickey, Portland, OR

No multi-tiered access! This society is too divided by wealth already - it's time to classify as the common carriers that they are and we need them to continue to be.
—Diane Clark, Staten Island, NY

Net neutrality is important to me and my family because it is our only source of information of the truth about what is happening around the world. The TV and it's outlets are consumed with big corporate B.S. And ever increasing rate hikes for mindless trashy programs. Other countries have free internet access, why does the US control and suck every nickel from the American people? The land of the free, what a joke.
—Sue Krill, Anoka, MN

Dear Chairman Wheeler: It is my understanding that the First Amendment to the Constitution guarantees free speech EQUALLY to ALL. It does NOT say, "The more money you have, the more right to free speech you have." Although I certainly understand that some services use more bandwidth than others, that is "the cost of doing business." It is not a justification for infringing on a basic right that we, as Americans, have held ever since the Bill of Rights came into existence. Allowing corporations to trample on this basic right is the beginning of a very slippery slope. Sooner or later, corporations will decide what we can and can't have access to. There is no need to "design" new rules that will allow corporations to do an end run around our basic right to freely access and disseminate information. The internet should be designated as a common carrier and that would clearly and rightly settle the matter once and for all. Thank you for your time. Sincerely, Bruce Baker
—Bruce Baker, Hazelwood, NC

Net neutrality matters for everyone on the internet for common reasons. Not everyone goes to the leading websites that may cost money because theres a cheaper alternative elsewhere. Creating this new paradigm essentially eliminates this cheaper alternative branch in favor of larger corporations that can pay the large amounts of money to shut other websites out of running. Wh9iich sounds pretty un-American to me.
—Juan C Rodriguez, Phoenix, AZ

As President of a small non-profit arts organization, I depend on people finding us on the web. When I say small, I mean we are really small, but we make an impact only because of net neutrality. We depend on it.
—Irene O'Neill, West Chicago, IL

Your proposed rules will benefit large corporations at the expense of everyone else, or is that your intention? Where are your concerns for ordinary internet users? Isn't your mission to protect the public within the communications network?
—Mike Rummerfield, Onalaska, WA

Please keep the internet open to all and do not let Big Business destroy it.
—Stephen Anderson, Deerfield, IL

Thank you.
—Michelle Buerger, Madison, WI

My wife is disabled, so her only interaction with family and friends is online. We also play online games and get most of our entertainment online. I personally keep in touch with my parents across the country through email. We need a completely neutral Internet or I fear we will see a major loss of services as the big companies only give fast access to those websites that are willing to pay them. It's bad enough that we have some of the slowest internet service in the developed world, don't let the big corporations choose who gets the better access to the Internet.
—Steven Moore, Pocatello, ID

Freedom to search and educate, entertain, connect should be expected in a world that revolves around the internet.
—Kiyomi, Portland, OR

If it aint broken ..... don't fix it, in other words keep your hands off the internet it's the way people communicate destroy that and you'll have a lot of pissed off people looking for your blood, leave well enough alone.
—Karl, milwaukie, OR

Throw out these new rules and instead reclassify ISPs as common carriers.
—Henrietta Taylor, sebring, FL

Net Neutrality promotes the free exchange of ideas.
—Gary Shade, Pasadena, MD

Without an equal playing field many of the recent inventions and innovations would not have gotten to where they are today.
—Kevin Tharp, Santa Rosa, CA

I feel The Internet Should be equally available to all. I do not like that these new proposed rules, would give wealthier persons preferential treatment to the internet,than people who can not afford to pay as much.. The corporations would gain too much power., Please do not enact these rules. Respectfully Submitted, William G Keller
—William G Keller, Cobleskill, NY

I'm a small business owner. VERY small business. The opportunities to network over the "free" internet have helped me find people, and helped people find me. My work has saved my clients money, and helped me feed my family, quite literally. If not for the internet, my hobby would still be nowhere, I'd still be unemployed, and I'd still have NO CHANCE at turning my hobby into a business that can provide an income for my family. I live in a semi-rural area and do not have enough local business to sustain myself. I also live an a moderately economically depressed region where jobs are hard to come by. I cannot afford to "pony up" all of the extra money I'm bringing in through business found via the internet to internet companies, or advertising firms or newspapers whose track records over the last FORTY years are as unreliable and falsified as Putin's claims of self-determination the Eastern Ukraine or Ahmadinejad's claims that the Holocaust never happened.
—Craig Simons, Nooksack, WA

Reclassify Internet service providers as common carriers. This is the ONLY way to protect real Net Neutrality.
—Erik Larsen, Johnson City, TN

Dear FCC, It is very important that you guard Net Neutrality for now and for forgeable future. Internet is still a very new mode of information transmission and taking the Net Neutrality will cause demise of the egalitarian net access and transmission. It is also very vital for entrepreneurial startup since the cost is low; however, taking Net Neutrality away will greatly disadvantage startups. Taking Net Neutrality away will also hinder the ability of free expression. I urge you to please keep Net Neutrality as a basic need for our society. Thank you.
—Reza Chowdhury, Columbia, MD

The telecommunications cartel cannot bevallowed carte blanche to charge whatever they want while at the same time throttling traffic to and from competitors. The Internet must be relayed asa public utility.
—Rhonda K McDougall, Vancouver, WA

The great thing about the inter-net is there being open access to information. The lack of filtering is a great strength and with the cable companies and internet providers using the technology to filter and everyone pays more for less, and less. Unless you are big bucks corporation and have the power to who gets on the inter-net and who doesn't. The slippery slope is grease with greed, and being a common carrier the regulation is about access to all, and every one has a connection.
—Ted Liljeholm, Portland, OR

Net Neutrality is the only way to keep all content on a level playing field. Not having Net Neutrality would once again put consumers at a disadvantage. It would favor those companies with enough big bucks to put smaller sites at a speed disadvantage, resulting in a supreme disservice to the consumer.
—Lisa Eisenberg, Salt Lake City, UT

The internet is wonderful. It has given me and others the ability to do marvelous things. Net Neutrality goes hand-in-hand with the wonders that the internet gives us. The internet provides us with wonderful opportunities to meet and interact with people from all over the world. I've talked to people from other parts of the U.S. and from other countries as well. It has been fun learning about how different cultures do things. It has been fun making new friends as well. The internet has provided many artists an outlet to share their work and make their name known. Musicians have utilized YouTube. Physical artists have utilized deviantART. They can display their works through sites like those, and then connect with and meet fans through social networking sites like Twitter, Instagram, and Facebook. The internet provides people access to knowledge of various kinds. For example, I love language. There are a lot of different sites that help people master languages that they are learning. I have utilized many that have helped me to grasp difficult grammatical concepts and confusing vocabulary of foreign languages. Speaking of language, people are able to look up on the internet things that help them with their native language as well. It is easy for people to look up grammar questions and find quick answers that help them succeed in writing and speaking their language. I have also found it nice to be able to do a quick search to find local movie theater showtimes, the length of a movie, the open hours of a restaurant, or even some unique things like the feeding habits of boars. (I actually needed to look that up recently for a novel that I'm writing. The internet made it easy for me to find the info that I needed and get back to cranking out those words in my book.) The internet has always been free, and I believe that it should remain free: Because it connected those two strangers in American and the UK. Because it helped that artist to make a career out of what she love. Because it helped that student write an essay for school by providing the information that he needed grammatically and factually. Because it helped that couple plan their movie and dinner date night. Because it helped that man learn to speak French. Because it helped that woman learn how to use her smartphone. Net Neutrality is important to me because, in this day and age, the internet is how we connect with the world and learn things. It's a resource that has been made available to anyone with a computer or smartphone with no discrimination because of lack of money. I have had as much access to the internet as the wealthy businessman and the single mom living paycheck by paycheck. Net Neutrality is important and should be reserved.
—Ryan Robidoux, Columbia, SC

This is an outrage! Internet providers can not tell us what we can and can not do or site we can visit. Talk about total control!
—Jennifer graves, Sacramento, CA

Hello. I’m writing you to express my disapproval with the new “Net Neutrality” proposed by the FCC, 15 May 2014. Neutrality is defined as state of not supporting either side. So why is this proposal giving ISPs more control of my internet? You are effectively segregating the population between rich and poor. If you want internet to be neutral then classify ISPs as telecom carriers under Title II of the Communications Act.
—Jason Baldwin, Alamogordo, NM

Your rush to clamp down on Freedom and institute a new Police State of America will backfire.
—Eli Dumitru, Medford, OR

The proposed FCC rules are abhorrent and make no sense. Free speech and the health of our society hangs in the balance. I demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Johan Rindegard, Sunnyvale, CA

Net Neutrality is important because I can look up many thing quickly without leaving my home. I can get the latest on a new story. My grandchildren can get home work help. I and many others have used the Internet to educate ourselves about many subjects easily using the Internet.
—Rosa Parris, Bronx, NY

Net neutrality must be maintained. All of us should have equal access to the internet. It should never be compromised by giving big businesses and monied access a louder voice that will drown out the small businesses that are the backbone that made this of country what it is. We have allowed company interests to monopolize our country and if net neutrality is not kept it will be another nail in the coffin of the battles this country is losing to the power of the few with no moral scruples about anything except making more money. We need to draw the line now and stop this madness.
—Steven C Kniss, Palm Beach Gardens, FL

I turn to a variety of sites and sources for my news, my cultural information and my work. As a working parent, time is of the essence. If some sites become slower than others it will, without a doubt, direct more traffic to faster sites, and this will give information on the faster sites an advantage. All the information on the internet should be equal. Money already determines what people learn and see on tv - the internet is the necessary counter to the flood of money on television.
—Linsay Firman, Brooklyn, NY

Please grant the Net Neutrality! It is important to me for my personal freedom of communication! No two tired Internet!
—Tuncay, München,

Without net neutrality, there is no internet. We cannot see our internet to die. Save net neutrality.
—Badar Jamal, Lahore,

Please stop. Please. You know it's wrong for your constituents. It's wrong for the world. This could seriously start another dark age for humanity.
—Matthew dark, Mountain Mesa, CA

Reclassify ISP's as common carriers, that way EVERYONE can have fair and unrestricted access to the net, not just those that can afford it. The net was created neutral and it needs to STAY neutral!
—Pat Brunson, Las Vegas, NV

The FCC's proposed rules benefit no one except the large internet companies and could potentially allow large web-based companies to buy faster internet speeds for there sites and then increase prices that there customers must pay, in addition to multiple other issues that the internet service providers could take advantage of for their own benefit. I therefore am strongly against the proposed rules and think it would severely hamper net neutrality.
—Tate Demaray, Camp Pendleton, CA

I do not think it is the right of big businesses to get in the way of how the Internet is controlled. Paying ISPs to "promote" their companies to consumers by use of an internet "fast lane" is not fair to smaller businesses trying to compete with them. I urge you to reclassify ISPs as common carriers.
—Amanda Zehner, Athens, GA

Do not destroy the Internet by selling out to multibillion dollar enterprises. It is too important to all 300 million Americans.
—Christopher Finta, Honolulu, HI

Net Neutrality is of the utmost importance to me and everyone else. Save America and our freedom of speech.
—Jeannie Lovell, Phoenix, AZ

even if im not in your country, i believe in net neutrality. aside from pay for convenience being unfair, i think that foreign users would slowly stop going to websites that have not paid, slowly killing them therefore forcing smaller website owners to pay unnecessarily.my favorite web sites don't belong to large companies but are originally from america. please don't be pushovers who do what money tells them to and keep net neutrality alive.
—Panayoti, athens,

net neutrality is vital to a free and equal internet...what wheeler's plan would do is to discriminate so that people who could pay for the fast connection would get it and others who don't want to pay the high speed would get slow speed internet. Internet providers would also be able to discriminate against online content and applications. And no one would be able to do anything about it. this is not net neutrality and should not happen! Throw out FCC rules and reclassify ISPs as common carriers. This would protect net neutrality.
—Tlaloc Tokuda, kailua kona, HI

My Hobby
—Saydur Rahman, sylhet,

All surveys on net neutrality show that the overwhelming majority of people and businesses, including Microsoft, Google etc, want net neutrality to remain. Removing it would benefit a small minority and the overwhelming majority would face a reduced service or greater cost, this is not fair or democratic. Net neutrality should be kept.
—Iain Moodie, Sheffield,

Please reclassify ISPs as common carriers. Net Neutrality won't lead anywhere enlightening or creative, think of what will be sacrificed if the TCC bows to Tom Wheeler's whims.
—Lauren Rothman, West Hollywood, CA

First off a fast lane i and a slow lane is propositus. If you have paid internet you have to take the bandwidth from somewhere. (E.g. the slow lane.) Second, this would discriminate against companies that don't have the deep pockets to pay for this type access. Next, instead of forcing companies to upgrade their infrastructure to keep competitive, bandwidth management would be their goal. It's bad enough that there only 2 broadband providers where I live, but to never to have infrastructure to grow to keep up with newer technology or new population demands? There is no other way but to reject these rules and reclassify ISPs as common carriers. This is the ONLY way to protect real Net Neutrality.
—Michael Joseph Gaul II, Northglenn, CO

I know many fellow artists and small business owners who rely on the internet as their way of sharing their work and seeking to make a living. If big corporations are given the power to determine what content is available at faster speeds, they also have the ability to take into their hands the success of many small buisness' and artists. I put NO faith in large corporations to respect and stand up for the little "guy" ...and I ask you to be the one to say, "Yes, we will make sure the internet remains a fair and free service for ALL!" Please do what is best for EVERYONE that calls this country home! (Not just those who can pay extra.) Thank you from all of us out here who are just trying to share our work and make a fair living!
—Mary Ruth Kamp, Kidron, OH

for a better world
—Uwe Thomas, berlin,

Democracy rests upon a well-informed citizenry. As the Internet is critical for the free-flow of information, it is imperative that we allow no corporation or group of corporations to impede ready, universal, and uniform access to its content, including the creation of slow versus fast information lanes.
—Glen Wallick, Gaithersburg, MD

The proposed rules give monopoly power to ISPs. This would be unacceptable.
—William Christiaanse, Westport, CT

Keep it free
—Gloria Love, Central, SC

Net Neutrality matters because it was the biggest driver in creating new business and hence it created alot of jobs. End net neutrality and only big established companies will rule the internet and a no new jobs will be created. Furthermore billions of people have access to the internet but the USA has the biggest influence on the internet. Therefore the USA has the highest responsibility for a technique that is important for freedom of expression, especially in countries where this freedom is not guaranteed, moreover to spread news (not only to generate profit) who are not manipulated by governments. It helps millions of people to get information and education who otherwise can not get these. The internet is too important for the whole human society to let some companies decide about it! It needs to be neutral by any means!
—Christoph Mußmann, Cottbus,

Without Net Neutralty I cannot afford it.
—Ms. Alberta Sabin, Chelsea, MI

like voting, the internet allows for a level playing field where any and every idea has as much weight as an individual chooses to give it. Allowing big companies to decide what we see and how long it takes to access information they don't profit from ruins this platform...a platform that has launched countless innovations and social movements. We can not afford to loose that.
—Christopher Maiurro, Long Island City, NY

The internet is extremely important to me for both personal and work purposes. First it is very affordable given that It provides an invaluable research tool, provides limitless opportunities for education, social contact, entertainment, and a vehicle for communication with anyone, anywhere in the world. For the sake of our present as well as future generations, please maintain net neutrality and have all ISPs reclassified as common carriers. Thank you.
—Simon Castillo Jr, San Antonio, TX

This is important to maintain Democracy and freedom of speech. You must protect this for us and future generations!
—Beverly Gould, Brooklyn, NY

It's a terrible thing when our democracy is co-opted by oligarchs and giant corporations, bur it's even worse when the FCC, which is supposed to be looking out for the interests of the people, deliberately sets out to give away our rights to freedom of information and freedom of expression to the highest bidder. I especially fear for education and research if you murder net neutrality. Take it back and do your duty as a guardian and defender of the people. We already have a two tier justice system and a two tier voting system and a two tier health system. This is your opportunity to stop the slide. Thank you.
—Diane Fails, Fremont, OH

The President promised
—Robin C Newquist, PASADENA, CA

No one should have a preference over another person simply because they have more money!! We are all equal under the eyes of God!!
—Edna Brown, Cordoba,

Should be open to all not just for wealthy companies.
—Keith Rycroft, Chester,

I work from home and depend on high speed internet to do my job. If I have to pay outrageous price for better service, my company may not be willing to pay for it. I would lose my job or be force to drive 3 hrs per day to nearest office. I'm tired of being gouged by companies who are already making mega bucks and get out of paying their share of taxes
—Amy, Wooster, OH

Please dont allow discrimination in internet usage
—Nijith B Nair, Ernakulam,

This is the only area that has true freedom of speech. You can speak your "opinion" and find resources free of regulation. The FCC has already damaged the businesses of Television, terrestrial radio, and the music by deregulations of standards in those industries, and the censorships of certain topics and words discussed. So because of this action, entrepreneurs have found the internet as the new source of innovation. It has obviously taken notice over the years, as the consumer has ended business with mainstream and migrated to this new tech. And now big business are threatened by it as they see they're precious 8 to 9 figure profits shrink, and want to give they're money to the FCC to funnel out the new businesses that depend on the internet so they can regain monopolizing the competition. I say no. These businesses have no right to control us citizens what our quality of product is, and cannot force us to make themselves the only provider. And the FCC does not need to be briebed by the corporate cash. FCC..... get your god dam hands off our internet!
—Adrian Houston, moorpark, CA

The internet as a free and open source of information should remain that way, and not be tilted toward the same entities that control our elections.
—Jeremy Evanchesky, Lakeland, FL

I feel that the internet, as it was created, is to be used as is. We shouldn't have to suffer from ISPs growing larger and imposing more fees for basic daily uses. We pay a monthly fee for ALL the internet, as it is. Please do not allow an ISP to determine what we can and cannot see, based off of their ideals, and bank accounts. Please keep REAL net neutrality.
—Robert Frateschi, Syracuse, NY

I believe free speech and open communications are essential for democracy. Pricing people out of the game is Fascist.
—Jack Smith, Seattle, WA

because everyone has the right to go on internet if this law passes that statement will no longer be true
—Noah Vanhalteren, omemee,

Net neutrality is essential for a open and free Internet. Do not let corporatians have full power over it, you will kill the Internet as we know it, and dare I to remind you that by doing this you are messing with the entire world.
—Mikael Eilertsen, harstad,

The internet is and has always been a place to research and learn about things never taught n school. It is source of communication around the world. It is glowing example of free speech, whether we agree or not. Do not take away this ability away from many of having these things by choking it off in a 2-tiered system. Please keep an open Internet with net neutrality.
—Debra L. Cox, Newark, DE

throw out the rules and instead reclassify ISPs as common carriers.Protect real Net Neutrality.
—Ralph Calabria, Cold Spring, MN

The greedy corporations and industries are steadily robbing the human citizens of our nation's assets and wealth, and are controlling all of our communications. We are becoming slaves to the oligarchs!
—Mike Testa, Raleigh, NC

The Net is where I learn, read, get unbiased news, shop, communicate with friends and family world-wide, and play. Please don't give that away to big giant media who will control even more than they do now. What ever happened to fair competition?
—Beryl, Arcata, CA

I am not wealthy and cannot afford pay as I go internet. I pay plenty right now just for access to it.
—Patricia Fuller, Canton, IL

Information is critical in a democracy. Net neutrality is necessary for ALL people to have access to information.
—Bg Kenley, Mechanicsville, VA

I do not want to be relegated to a slower internet connection. Just because this started under the previous chairman, you can change it. You have ability to do so, so everybody gets the same.
—Katherine Tweedale, Eastpointe, MI

I am dirt poor, but don't like being controlled.
—Robert Kames, Kalamazoo, MI

Why are you doing this? This is America and YOU are letting BIG corporations destroy it!
—John Zimmermann, Fort Lauderdale, FL

The internet is a public utility bought and paid for by the American people. President Obama needs to act immediately to secure the internet for everyone .. Not just the rich and powerful. It takes only Obama word to the FCC to make this happen. If he does not, he will go down in history as the president who handed over the internet to the highest bidder. Very very disappointed in Obama . Once an enthusiastic supporter but now disheartened and sad.
—Dane LANCASTER, Novato, CA

I think it's quite obvious why. Just read what the majority have said.
—Randy Eckardt, Ocean View, HI

The Internet must be free and open for all of us.
—Nancy Mueller, Chapel Hill, NC

Privacy is our right and you have NO right to take it away from us. If this bill is pushed through it shouldn't only be "the people" that are monitored, YOUR life should be invaded as well, after all all corporations are a living entity.
—Ashley Kennis, Sault Ste Marie,

Net neutrality is important because its the only completely democratic way for people to express themselves in.
—Erik Granelv, Stockholm,

The internet is a conduit for information and communication, and, as such, should be classified as a public utility. We cannot allow corporations to regulate the flow of information based on how much the source of that information has paid them. This would effectively silence any source whose information was critical of the corporation in question, or contrary to its policies and goals. This is rapidly becoming a First Amendment issue, where truly free internet speech will no longer be possible.
—Wendy Battle, Dallas, TX

Wheeler’s plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. These companies would have the power to pick winners and losers online and discriminate against online content and applications. And no one would be able to do anything about it.
—Mary Stookey, cincy, OH

Ideas not bucks need to rule the internet.
—Mark Wahl, Langley, WA

Liberty!
—David Eppelsheimer Sr., Wauwatosa, WI

ISP's should remain neutral providers of internet access. These monopolies already throttle the internet for profit, enough already.
—James G Whitehead, Mount Clemens, MI

All Citizens should ENJOY AMERICAN RIGHTS!
—Billy Hamilton, Granbury, TX

Net neutrality is one of the most important things for me that's connected to humanity and population! Everybody should have equal rights, and that's true for the internet equality (neutrality) too! I don't want any company or man to have better priority or access if he pays more, that's just not fair, not equal. Please, we already said a lot of times, WE WANT TRUE NET NEUTRALITY.
—Nagy-Kristófi Dániel, Oradea,

If a news agency shows something that it's sponsors don't like, you get a media blackout. If a website isn't deemed worthy of equal access (to or from it's patrons) and has it's bandwidth throttled, it's akin to censorship.
—Chris Dozier, Prescott, AZ

Please keep the internet and all its related services free from censorship and draconian control by special interest groups and other businesses that only care for profit over what is in the best interest of the people of the entire world. The internet is the worlds most powerful and important collaborative tool that humanity has created to date, if you destroy the neutrality that allows access to all equally, you will take from everyone. Who knows when or where the next Nelson Mandela, Johaan Sebastian Bach or other creative or philosophical genious may arise? If you allow corporations to control the internet, sharing and the free exchange of ideas will be stifled simply because any one company in control will be able to lock, delete or block ANYTHING said or done. This is an important moment in history. Don't let the people of the future have to look back on this moment and proclaim we had and lost our chance to make the internet a truly free place for all people to share and exchange their ideas freely, without fear of deletion or reprisal.
—Shannon E Bentley, Jefferson City, MO

I want to decide what websites I have good access to. I do not want my ISP deciding for me. Or giant companies creating monopolies by having an a financial advantage so they can buy faster access putting smaller companies at a huge disadvantage. It is already hard enough for small companies to compete against the wealth of large companies.
—Christopher J. M. Hodges, Atlanta, GA

Internet activism is one of the few powerful tools the middle class has left against the monied interests. With the 5 Right Wing Supreme Court whores destroying our political system through rampant dark money, we need an equal ability to influence public policy through internet activism. Destroying Net Neutrality will destroy that activism and be the last nail in the coffin for democracy in America. Just learn to say No to the bastards flashing the big rolls of money.
—Harry and Jill Brownfield, Newport, PA

It is important to have a level playing field. It should not be whomever pays the most. That is not neutral.
—Patricia Doyle, burr ridge, IL

I believe in freedom of speech for individual citizens that should be favored over corporate media and power. Reclassify ISPs as common carriers.
—Kent Homesley, Greenville, SC

We must make access to fast internet available to everyone in the USA. We don't have that yet, and to give advantage to high paying corporations would strangle citizen access.
—Elizabeth Barger, Summertown, TN

The FCC's proposed Internet rules are out —and they're terrible. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Mario E. Castillo, Los Angeles, CA

The internet has to remain as it is - free access to all the information that's out there, and not jus the information that comes from big companies.
—Yonathan Zarkovian, Holon,

Regulating my ability to search for information and intellectual propertyis not an act of freedom.
—Chris Callahan, Bozeman, MT

Please throw out this silly rubbish rule. Leave the internet as it is. Service providers are already greedy enough and you all are putting fuel to the fire. Wake up, leave the internet aside from greed.
—Brazil D Uluwita, Long Beach, CA

Net Neutrality is one of the rare remaining platforms of equality and egalitarian function. Comcast already dictates to its 'customers' way too much, overcharges, arbitrarily cuts off services, lies about charges and then says, "We have to make a profit." when confronted about the latest lie.
—Ria Tanz Kubota, El Sobrante, CA

I will not and cannot tolerate your attempt to create a social caste system by perverting our freedom of information. The public says no.
—Brian Vincent, Maspeth, NY

its time to stop the monopolys taking place in the internet. isps should be common carriers and we need net neutrality
—Jerry Vanalstyne, gloversville, NY

To lack internet access today is to be precluded from participation in the world. Internet has become so integral to our lives that it can no longer be considered a luxury or privilege; it is a right. If we allow providers to manipulate internet service, we exasurbate the inequality that is already far too pernicious in American society.
—AE Chipkin, Bethesda, MD

We are all equal and should be treated as such.
—Shirley M. Ross, El Dorado, CA

I believe that what people want is to be able to access all websites at a good speed. If tier speed programs are put in place, I want something that will guarantee, even the lowest of these tiers operate at high speeds. In other words, a minimum internet speed limit.
—Raymond Huang, Naperville, IL

I feel net neutrality is free speech
—Candee Wadsworth, Syracuse, NY

Because we're not a totalitarian country. Everyone deserves to be able to have any type of information whenever they want it. Isn't that what our freedom constitutional right consist of?
—Melissa Rizo, Los Angeles, CA

The free and open internet is a key extension of America's commitment to personal liberty. Killing net neutrality would take away power away from the people and place it into the hands of large corporations. I urge you to protect net neutrality and, by it, the liberties of the American people.
—Daniel Perlmutter, San Jose, CA

Net Neutrality, with one price for all, serves better to build the overall economy --ultimately much more so-- than the exclusionary, user-discouraging two-tiered internet being proposed by the FCC . As it functions now and has historically, the internet (broadband) serves us all as a utility and should be treated as such!
—Charlotte Trolinger, Boulder, MT

Net Neutrality is important to me because I believe a truly open internet is the greatest invention of our time. The ability to access information and content as you desire whether it be video lectures from Harvard or reruns of house wives of some city or another. It leads to a fair environment for everyone and encourages competition where the focus is on service and quality which benefits consumers. Most importantly though is that it protects free speech. Allowing companies to start regulating access to information is one more step closer to a facist state for this country. Fascism as quoted by Mussolini should more appropriately be called Corporatism because it is a merger of State and corporate power. With recent supreme court rulings allowing companies and their owners free reign to use money to influence politics, we have moved one step closer to corporations controlling the state. Allowing for fast lanes or other such options that circumvent true net neutrality, you're giving companies one more means of influencing information flow and exerting corporate pressure. How easy it would be for an ISP to decide a liberal based media site uses too much bandwidth and customer who want access will have to pay an extra $3 each month, slowly choking out their voice or offer up faster speeds to a liberal site on the other side of the coin making their content much easier to access creating a preference in consumers over time. This type of bar onf free speech is unacceptable and to give companies the power to do so is unconscionable. Time over time we have seen that industries cannot be trusted to act fairly or in the publics best interest, don't allow ISPs to become the next chapter in that book.
—Brendan Loughrige, Elgin, IL

The internet belongs to everyone. Letting it fall victim to corporations would be a huge disaster.
—Hugo Zink, Dordrecht, FL

By restricting the ability of the majority of Americans to communicate effectively with each other, you have shown yourself to be unwilling to do this job that you have accepted. Your actions and inactions regarding this and related matters have been, are being and will be remembered by all of us who will live in the world that you are shaping with your decisions right now. We are all in this together.
—Sam Inabinet, Virginia Beach, VA

the noose is getting tighter and tighter for stopping freedom of expression in the USA.
—Marie Schmid, weehawken, NJ

Reclassify ISP's as common carriers!
—Liz Hourican, phoenix, AZ

The Internet is a needed public resource
—Alex Tracy-D'Unger, Chicopee, MA

It s important to keep the internet open to all, but especially to tose new, young and upcoming independent voices.
—Jean L. Corcoran, Tarpon Springs, FL

Stop making everything a money bank. The internet is for funny cat videos, not monopolies!
—Morgan Baker, Kensington, MD

I use the Internet every day, and I know how lousy it is when Comcast screws up, which is frequently. I don't like it when my access is slowed down significantly, and I am quite sure that is what will happen if they can sell fast access to some.
—Emily Willoughby, Tukwila, WA

It should be the people's internet. In exchange for using the people's airwaves and public utility right of way in order to make a profit the corporations should be forced to keep the net nuetral.
—Michael Tuohy, suffern, NY

We need to protect free press for all peoples. This is a constitutional issue! I want to be fully informed on all issues in our country and the world!
—JoAnn Smith, Valley Village, CA

I want the idea of a "dumb" internet to persist so large corporations shouldn't screw with a fair system
—Ari Rieganu, Fremont, CA

It is an extension of the ongoing erosion of my civil rights being redefined in favor of corporate America and the extremely wealthy class, not only being supported by my tax dollars through subsidies and the like, but enhanced by them.
—Robert Kleyweg, West Jordan, UT

The FCC should protect net neutrality and not let big corporations dominate the Internet. We have a right to hear everyone's voice and receive service at the same speed. Net neutrality is important for innovation and democracy. Tom Wheeler should work for the people and not for large corporations!
—Janet Davis, Madison, WI

At this stage, the internet is the vehicle left for the preservation of democracy. Citizens United has destroyed all the other safeguards. Obama's presidency will already be remembered as the period of greatest assault on America's constitutional democracy. But that can be blamed on the Supreme court. If you don't protect the internet, he will become the president - and you the FCC Chair that gave the Constitution away.
—Andrea Swift, Astoria, NY

FCC Chairman Tom Wheeler's plan is a type of discrimination towards people & small businesses that can't afford to pay more. This could be devastating to some of the smaller companies! Please throw out these plans and keep true Net Neutrality. It is the only thing that is fair for EVERYONE!
—Heather E Greene, Phoenix, AZ

The information superhighway does not resemble an actual superhighway with fast and slow lanes. At this point there is no evidence that having internet users are suffering slow website retrieval times, even though the number of sites continue to multiply. Allowing a few providers faster hookups will only complicate the efforts of alternative sites to connect with interested customers. That, in turn, will reduce the overall democratic nature of the Net. It could dis-empower the general public. Not fair and not democratic. It would restrict how the Net continues to develop and channel future developments into traffic lanes the government or corporate megalopolies want the public to travel. Very odious. I don't think our Founding Fathers would approve one bit.
—Stephen Henning, Beachwood, OH

This is a basic communication freedom...let's keep it
—Dr. HH H. James, Durango, CO

I am disabled and do not receive enough money to keep pumping money to my cable bill. I use my smartphone to help ease my pain while at the doctors office and some times that means watching a video. I am already paying more money for my cable and phone bill than that of my bills , gas and food. I think that is ridiculous. There is absolutely no competition in Cable. I would like to have a lower priced cable service that my neighbors have but because of my zip code I am not allowed that company. So how does competition help with addressing this issue. How does allowing for price increase help disabled or those who are on fixed income enjoy the same rewards of the internet. You are basically saying the poor, elderly, and disabled should not be treated with respect and the same as those who have too much money. Who cares about us, DO YOU?
—Mr. Reynold Alberti, Temecula, CA

I urge you to fully protect net neutrality. It is the only way to ensure full participation of the public in electronic communication. This is a public right, as our taxpayer dollars paid for the development of the internet, and corporations should not have the ability to limit our access to information.
—Jane Yater, Austin, TX

It is important that everyone has equal access at equal speed. All "men" are created equal, right?
—Nancy S Diehl, San Antonio, TX

The internet should not be income or demographically priced or served. All people should receive the same service.
—Martha Dragovich, Martinez, CA

ISPs should not be allowed to control access to content they do not own. The internet is an infrastructure of its own, and the sum of an ISP's work should be to provide access to it. This process should not involve cutting the world's largest readily accessible database into little pieces. That would be a tragedy.
—Jeremy Stubbs, Atlanta, GA

We live in a free country and should have a choice!
—Chandra Sigmund, Austin, TX

The web is an open, democratizing platform. It is a public resource that deserves protection.
—Tom Rogers, Minneapolis, MN

Keep freedom of speech free!!! Don't hand it over to the corporate fascists!!!!!
—john G, Louisville, KY

True Net Neutrality means an equal playing field for everyone.
—Maryann LaNew, San Clemente, CA

Please save net neutrality it is the American way
—Santha Locklear, GREER, SC

The internet is a public good. Public goods are not to be sold to the highest bidder leaving inferior service for the rest. Keep it open, keep it equal. I am a citizen, not a lobbyist. My voice is just that, of a citizen, not a lobbyist's representing Comcast or Verizon, AT&T or Time Warner whose interest are to make the most money and not serve the people
—Rebecca Schildkret, Somerville, MA

At this point in time, the Internet is effectively a untility due to its importance to conduct basic activities in daily life. Classification as a common carrier is the proper way to treat this utility. Particularly when the phone carriers who supply Internet connectivity are trying to dump their POTS obligations and move phone service to and IP/Internet based system. Prove for once that you work for the citizens and not corporate interests.
—David Waratuke, Round Lake Beach, IL

Keep the internet FREE !
—Bronnie Meadows, Livingston, TN

As a public health professional, I am outraged by the proposed FCC plan. A healthy pubic requires healthy public policy and a healthy democracy. Access to information is key. Let's NOT vote in favor of expanding inequalities in this country. FCC, please toss out your rules, and instead reclassify ISPs as common characters.
—Julie Beschta, Seattle, WA

That was as it was conceived, and why it has developed so much. Losing it, at the end of the day, would be a loss for everybody.
—Marta Gazquez, la Vall d'Uixó,

Net neutrality provides equal opportunity to access education. Businesses shouldn't be allowed to meddle in that access - we should be able to learn and research without that online content being bogged down by not being able to pay fees. And online content creators like web cartoonists shouldn't have to pay more to give their content to readers. Right now the open sharing of the internet promotes creativity and the sharing of culture. Businesses will kill that, and it will be a great loss for everyone. I depend on Net Neutrality for my growth as a person through learning and art, and I demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Nicole Ryan, Mesa, AZ

The internet should have equal access regardless of your income.
—Marcia Annenberg, New York, NY

I don't use JUST "fast lanes" that my ISP wants me to - I roam the Internet, both personally and for business. What Big Telco wants stifles free expression and innovation!
—Timothy Liebe, Syracuse, NY

This was promised by President Obama. I live in a semi-rural area with few options for internet service. I DO NOT want a two-tiered internet. Once again the wealthy will have an advantage if this happens.
—Jane A Roberts, Delavan, WI

This country is based upon the principle of equality. Net neutrality is the application of that principle. Do it!
—Richard Croner, Houston, TX

The FCC should reclassify the internet as a telecommunications service. After all, phone companies cannot control what you say over the phone, and internet service providers should not be allowed to have separate fast lanes for websites that can pay and slow lanes for websites that can't. Chairman Tom Wheeler's proposal to allow a two-tiered system is unacceptable. It is not just ordinary people like me who think this way. Some big corporations like Google, Facebook, Amazon, Twitter, LinkedIn, and Netflix agree. Net neutrality is so important that groups that disagree on most issues agree on the importance of net neutrality, like MoveOn and the Christian Coalition.
—Michael Aaron Karsh, Martinez, CA

A 2 tiered internet, would increase the rate of start up companies by skewering the market to existing companies. This would reduce competition, reduce innovation and increase prices. It would also limit freedom of information, as the only timely information would be from the rich and powerful.
—David Kronheim, K of P, PA

Net neutrality is important to me become I think that the ability to share information should be open and free. Adding a fast lane to the service known as the internet would give bandwidth priority to large companies who have money to pay for it. This would make it harder for people to ever have that opportunity because this would give those companies so much more power. It would make it hard to compete with those companies that can afford it.
—Noah Muller, North Vancouver,

It should be considered a Public Utility. It is a integral part of the social and economic life of all Americans.
—Howard Woolley Iii, Melbourne, FL

Giving a fast lane Internet to those who have the money is completely contrary to what makes the Internet so successful. It is the most important social technology on the planet and more. Don't corrupt it with businesses ideas for making more money. I feel very strongly about this.
—Roland Cruse, orlando, FL

It's critical to have a voice in our society.
—Ellisha wright, Portland, OR

net neutrality
—James T Smith, laguna beach, CA

Net Neutrality is important to me because it is currently held in common by all the people who use it. We should not fence in the commons to allow only rich companies access to its services. Such an action would effectively shut normal people out of the most important information highway of our time. We would only see websites promoted by rich companies, and minority opinions might never see the light of day. This is dangerous for democracy. At the time of our revolution, newspapers and pamphlets were published and distributed by many different sources. Individuals could easily share their ideas with a wide audience - including Thomas Paine and his Common Sense. The practice of ordinary individuals able to print and share ideas is the cornerstone of democracy. Today, instead of pamphlet writing, we use blog writing. Do not kill Net Neutrality that allows modern individuals to uphold democracy which is so important to our country.
—Aimee Polekoff, Lansdale, PA

America needs a more open Internet, one which more people have access to, not a two-tiered one which makes it harder for people to access the information and services that they need and want.
—Lorena Wolfe, Rialto, CA

The internet is a sacred place and people will fight to the end to protect it. They will hack servers take down websites and fight back. We love what we have and people don't want regulations of any sort
—Alexander Talbott, Folsom, CA

I use the internet to stay informed on politics and world events.
—Glenna Draffen, Montgomery, AL

this is just another corporate push to take control for profits. I pay for internet service and I want the whole product delivered to me without added cost or filtering by some company who just wants me to view what they choose to put in front of me.
—Tina Baker, kenmore, WA

Classify as common carriers!
—Cynthia Wood, Bolinas, CA

It is the only way we can express our opinion anymore...and Corporations don't want that.
—Ms. Ag Waring, Weed, CA

Everyone needs access to the internet!
—Judith Max, Philadelphia, PA

Look up the Sherman Anti Trust Act and you`ll understand my concerns.
—Tom Rose, Portland, IN

Please through out your proposed rules and instead reclassify ISPs as common carriers. This is how they should have been classified in the first place. This is the ONLY way to protect real Net Neutrality.
—John Hartman, Tulsa, OK

Please through out your proposed rules and instead reclassify ISPs as common carriers. This is how they should have been classified in the first place. This is the ONLY way to protect real Net Neutrality.
—Roseanne Hartman, Tulsa, OK

Please do away with the old rules and reclassifyI SPs as common carriers. Everyone can have a fair share at a better rate not only those who can affoed higher payments.
—Marguerite Desir, New Yotk, NY

Please through out your proposed rules and instead reclassify ISPs as common carriers. This is how they should have been classified in the first place. This is the ONLY way to protect real Net Neutrality.
—Nicholas Hartman, Tulsa, OK

The rich have taken over our country. We are well on the way to becoming a third class country. Stop supporting the rich. Keep everyone equal!
—sylvia richey, Fort Myers, FL

The Internet is where our future is created. Discrimination is something that belongs in history books. Don't let it get in the way of progress!
—Viktor Denisov, Newark, DE

Access to the Internet should be treated as a human right in this day and age. Keep the Internet open and place no restrictions in any form.
—Rose Bostaph, santa rosa, CA

FREE INTERNET FOR ALL
—Piero Zoro, Houston, TX

I have a solo legal practice and depend a lot on my website and internet presence for adverts. My website will likely never get traffic without net neutrality.
—Gigi- Penn, Olympia, WA

My job is to facilitate the flow of business across cultures. Most of my work is with SMEs. This move by the FCC puts me and my clients, who are the lifeblood of commerce, at a disadvantage. They're not playing in the same league as the corporations that will benefit from this move. You are undermining the very foundation of global commerce with this foolish move, and if you choose to proceed I predict the blowback will far exceed your expectations.
—Bill Watson, Kelston,

Dear FCC: I count on the Internet for my online teacher licensing classes, and for communication and entertainment. I am low income and cannot afford faster Internet, even though I would like it. I pay $60 plus taxes and fees monthly for 25 mbps Internet and a land line; I do not have a cell phone or cable service.. Please develop new rules to protect the majority of Americans who are nor rich and who are losing help, protections, and financial ground daily. Please reclassify Internet service providers as common carriers. They, in fact, are. Please protect net neutrality and the American consumer. Yours truly, Karen T. Kane
—Karen Kane, Roslindale, MA

A fair and open internet is vital to democracy. Net neutrality supports that.
—Julie Walker, Tigard, OR

Please reconsider your current plan to allow internet service providers to charge more for better and faster service. As an individual, I can't afford to pay the kinds of fees that big businesses can, and neither can the small business that I work for. Please reclassify ISPs as common carriers. Please support an open internet for everyone, and not just those who can pay for it.
—Christine Nafalski, Haskell, NJ

The internet needs to be open and tier free.
—Linda Maimone, Cincinnati, OH

To ensure net neutrality is to stop the stealth of a future for our children far less cruel
—Ian Daniel, Cairns,

I like the internet the way it is.
—Kat Van Sice, Annapolis, MD

A nondiscriminatory internet means nondiscriminatory information is accessible to all people; it is crucial that this be protected
—Rebecca McGehee, Seattle, WA

Net neutrality means to me, freedom of speech and access to information, both of which are hugely important to me when researching. Please keep the internet free and accessible to everyone in the world, without discriminating based on what they can pay. It was created for everybody, and nobody should ever 'own' it. Please, please protect this incredible vehicle of free speech, community and commerce, thank you!
—Susan Barnacle, London,

Just don't muck with our freedoms please.
—David James, Auckland,

I have basic needs and I don't have enough finance to support something as unnecessary as this.
—Michael Denbrook, St.george,

If this plan goes through, we would have "the one percent" problem in yet another area of our society - an important part of our society that is only going to get more important. And it only works if its freedom is preserved. /You wouldn't segregate us in real life. Don't do it online./
—Todd Olfert, Winnipeg,

The push is on to render those with less money less and less visible, less and less heard, less and less able to defend their rights and interests against those who have lots of money. So those with lots of money use some of it to keep changing legislation to further enrich and empower themselves at the expense of the less rich until . . . . Until what?
—John Young, San Benito, TX

The Internet has long been a place for the free exchange of ideas, and it has been a tool for democracy and equality from the Arab Spring to Ukraine's Euromaidan. An educated citizenry with free and equal access to every type of information is essential for the welfare of the country and its people.
—Matt Quarterman, Seattle, WA

Fuck this. We NEED Net Neutrality.
—Sakura Vesely, Martinez, CA

The internet has become a utility that everyone deserves equal access to. Content providers who happen to be given the rights to local internet pipelines should not be able to influence how those lines are used for their advantage.
—Gregory Breault, Simi Valley, CA

I am retired and have limited income and I cannot afford to spend extra money to be able to use the services that I now enjoy on the internet.
—Michael Lee, Bremerton, WA

please keep the net equal!
—John Bona, Enfield, CT

I want to go where I want and see what I want with no-one restricting my ability to get there by throttling back bandwith or blocking a web site entirely. The Internet will die if the cable TV business model is allowed. Technological innovation will suffer as well, as new startups will not have the money to buy access to the fast lane. The Internet is such an integral part of our society, it should be treated the same was as our power and water supplies.
—Mark Euclide, Two Rivers, WI

Net Neutrality is important to me and the rest of the country, and also the world because the internet is the most important database for everything that we use. If the internet was transformed into a systematic caste of who could pay and who could not pay, that would fundamentally rip citizens of their rights and put big business ahead of everything, a problem that the United States has had since the 1870's. Don't let that problem come back. Net Neutrality is an essential right for everyone in the world because it allows everyone to interact freely and avoid conflict. If this was taken away, we can surely expect conflict. Please protect Net Neutrality.
—Dominic Fikany, centennial, CO

Internet content creators need a level playing field for fair competition. Without net nutrality, some content creators could get unfair advantages by entering into deals with ISPs to make their content stream faster. This would mean they would be getting an advantage just from their speed, not the actual quality of the content they create. Treating all data equal facilitates the best content being made.
—Harrison Wynn, Mulvane, KS

The ISP tiered internet system threatens all internet traffic that touches a United States based system. This effects not only users within the U.S., but people from all over the world that utilized services hosted within U.S. boundaries. This issue expands beyond the scope of domestic rights; it will adversely impact the global economy.
—Jeffrey Sutorus, Baton Rouge, LA

Net neutrality matters because we need fair, open line of communication! The internet is fast becoming the easiest way to interact and for us to move forward via this form of communication it can not be discriminatory! If you kill net neutrality, you are also killing everyone's ability to use it. -and if you are sitting there, thinking that doesn't matter, then I suggest you look at all the natural disasters recently and consider the helpful part open Internet communication has played. Would you take that away?
—Bridget McNamara-Bates, Mt Victoria,

The oinkers are already getting a very large percent of folks money.
—Sheilagh Creighton, Fairfax, CA

FREE FAST INTERNET FOR ALL
—Piero Rendoni, Houston, TX

The net needs to remain democratic. Do not give corporations an unfair advantage. They will abuse it!
—Stephen Markel, Los Angeles, CA

The rescues I volunteer with which are all non profits would be decimated by this.
—Joanne Wagner, Madison, WI

The internet is the most important communications medium the world has. To allow for-profit entities to police what information takes a higher priority than others effectively means they decide what information is more important than others - effectively giving them free reign to censor and control information by allowing/denying others' access to it.
—Tim, North Olmsted, OH

Net neutrality is very important to the voting public.
—Barbara Wood, Punta Gorda, FL

Because the internet should be for everyone to enjoy freely.
—Mario A Valdez, Irvine, CA

Don't make changes to something,which isn't broken. Seriously reconsider the consequences of the FCC's pending changes, which aren't necessary.
—Nancy Yoksza, West Hartford, CT

The net is worthless if it isn't neutral.
—Larry D. Hols, Kansas City, KS

My small internet business is one of 4 of its type. There's only one major competitor that will easily kill any traffic to the rest of us 3 that aren't remotely as big. The loss of net neutrality will completely destroy competition for smaller sites like mine.
—Matthew Kernes, RESEDA, CA

I am a 27 year old graphic designer, and I am utterly heartbroken to hear that my generation's future is being sold for the short-term profit of a few, goliath internet service providers. We millennials are already inheriting a devastated environment, a crippling national debt, and a bankrupt social security system. Please don't force us into an artificially "two-tiered internet"—where information can only flow freely if comes through companies with deep enough pockets. The internet should have common carrier status. It has all the hallmarks of existing common carriers: We pay for how much electricity we use, not what our electricity is used for. We pay for the length of our phone calls, not for who we were talking to. Forty years from now, I'll pass down some form of the internet to my children and grandchildren. Please let me speak highly of Chairman Wheeler and the FCC's ultimate decision. Please let it be a net neutral internet.
—Jared Norby, Los Angeles, CA

my opinion, my likes, my money, my loves, my life and my data are just as important as the next user's. period. not supporting net neutrality is effectively negating this belief and weighting the importance of a user's data based solely upon how much more money they spend for their service. seems kind of silly when you consider that someone 'liking' a Facebook meme page could get prioritized over something much more important, like a final message to someone on their death bed, simply because they pay for priority. keep it even. my 1's and 0's have the same values as your 1's and 0's.
—Drew Moore, Charleston, SC

the internet, i see it as a haven for people to communicate and have fun in a free way, freedom for everyone regardless of background, race, sexual preference, and life
—Evan French, Palm Harbor, FL

Every one on the net should have an equal path, both the websites and the users.
—Barb Travis, Ewa Beach, HI

The Internet needs to remain a level playing field. Do not bend over to the backbone companies. They already have tiered use plans to cover themselves for different levels of usage. They will only continue to bite your ankles until you make it clear they cannot. Reclassify the Internet as a Carrier backbone. We pay $101 per month at the lowest speed level for access now and do not even have phone or TV over the Internet!
—Claude Hayn, Frederick, MD

Whether America gets to keep its internet open will have dramatic effects on the whole world since the internet is by its nature a global landscape. Please keep in mind that stifling innovation and hitting at the heart of the very thing that has made the internet the brilliant cultural force it is will not only have negative effects within the States. It would be a disaster globally.
—Dionysis Kapsalis, Thessaloniki,

The internet needs to be kept open and free!
—Nathanael Brown, Cedar Crest, NM

Give me net neutrality or give me death!
—Cactuspat Pat, Quincy, FL

Net Neutrality is the only fair and democratic way. There have been enough assaults on our freedoms.
—Mary Kay Pinnick, Walla Walla, WA

Net neutrality I'd important to me because I'm on a LIMITED income and can't afford all those fucking crap fees that ISPs charge the small people. The internet is my ONLY way to communicate with the outside world. It's how I get my groceries, pay my bills such as electric and internet and fuel. It's how I keep in contact with my family, friends and even my DOCTORS! Taking that away from the people like me who need it is MURDER!!!! It's how I get my meds delivered that are necessary for me to stay alive. It's how I manage my life despite my age. Taking that away will LITERALLY KILL me! Which is considered murder. I may not be the smartest or prettiest person in the world but I AM a fucking Person. A living, breathing HUMAN BEING! You know those people that you are SUPPOSED to PROTECT from all of those money hungry people in the world!! GET RID OF YOUR STUPID FUCKING RULES and RECLASSIFY the INTERNET to PROTECT IT and US!!!! Make it so that the little people that can't afford to pay OUTRAGEOUS fees are protected from big name ISPs. RECLASSIFY ISPs as COMMON CARRIERS!!! Don't fuck this up! Cause there WILL be HELL to pay if you don't reclassify those as*h*le ISPs! Do not become a serial killer cause that is what you will be if you don't take the PROPER Action and defend the people by reclassifying ISPs as common carriers and the internet as a communications thing to protect it.
—Tanya Hill, Orangeville, PA

Common sense says that the Internet is a tool for communication of ideas and as such the ISPs should be held under Title 2 and reclassified as common carriers. Let common sense reign.
—Jim Siderits, Rialto, CA

Freedom of information, whether it is on Tv, in books or on the internet, is an important piece in distinguishing this country as different than a country like lets say Soviet Russia. Once we have indirectly censored the internet will we be censoring TV programs and news reports? Maybe we will follow that up with some book burning parties. A building doesn't collapse all at once, it falls down one piece at a time. Once one part of the building's structural integrity fails then another one is sure to follow. Soon the entire building will come crashing down. You are part of the structure that holds this country and its freedoms upright. Don't fail on us.
—Nicholas Childers, Gastonia, NC

Competition is important in a democracy, and America used to stand for opportunity. As a small business owner who may be subjected to slower speeds because I don't have the dollars, I am outraged this is even a consideration. If you side with monopolization over competition and fair business practices, then please quit your job now and register as a lobbyist for the industry you came from and stop pretending to be working in the public's best interest when we know you clearly are not on our side - if you were, this would have been settled by a rule change months ago. Do the right thing.
—Ida M. DeLisi, Burnsville, MN

As an American, I believe Net Neutrality is essential for America because it promotes free speech and innovation. These rules would destroy our free speech rights and negativly affect innovation. Please give the People REAL Net Neutrality, the Internet is for the people, not for the ISPs.
—Nate Pressley, Howe, TX

Please keep net as neutral as possible!
—Lauren, Rockbridge, OH

The internet's innovation comes from two angles - increasing transmission speeds and the freedom of new companies to utilize those speeds for new products. Every potential loophole that distracts the infrastructure providers from investing in improving transmission speeds is bad - whether that distraction is in lobbying, in lawyers to find loopholes in regulations, or in technology that they can segment service and claim it is not creating a slow lane - it's bad for the end user. Any effort they put into creating their separate-but-equal fast lanes could and should be put into the basic service, moving the infrastructure companies out of the picking-winners-and-losers game and into providing quality service. We are falling farther behind Hong Kong, South Korea, Sweden, and other countries since the US infrastructure providers have more incentive to play politics than invest in new technologies. It's time to fix that misprioritization. Protect Network Neutrality. Treat all packets equally.
—Matthew Smyth, Lafayette, CA

Because the water can't tell me how i use their water. Why should ISPs be able to tell me how i use my internet. I believe Tom Wheeler bought his way into head of the FCC using the same companies he worked for as a lobbyist. Having a former lobbyist for the cable and phone companies as head of the FCC is a huge conflict of interest that shows how the influence of lobbyist has corrupted the basic functions of the government.
—Kyle Colby, Midland, MI

Pleas keep internet neutrality.
—Ann Kelly, Mount Laurel, NJ

Broadband technology has yet reached Hoopa, CA. We are working on a grant project to connect in two years. The end of net neutrality will turn the technology in yet another means to extract more of our financial resources. We are already limited to one telephone service provider, Verizon of CA, and they are already taking large sums out of our pockets on cellular telephone service.
—Joseph R. Orozco, Hoopa, CA

A monopoly does not benefit the public interest, which you were formed to protect. You are morally bound to do your job; to promote competition.
—John F Kohler, Daly City, CA

This legislation is just another way for big companies to squeeze every possible penny from the consumer. Broadband coverage is subpar in the country compared to many countries around the world. You want to regulate something? Regulate how the big ISPs SPEND their profits, instead of how they make them. They are already extremely profitable, and should be focussed on infrastructure and service quality above charging extra for services we ALREADY pay for.
—Jason Boucher, Norco, CA

Because the internet should always be a neutral information pipeline. The companies that want to change the rules wouldn't have been able to get started had these rules been in place
—Jeremy Miller, Marina Del Rey, CA

I do NOT want my access to the internet to be tampered with or decisions made FOR me regarding about whom, what, where I may do my reading and research. Joni Carleton
—Joni Carleton, St. Louis, MO

This is the only illusion of freedom we have left.
—Kat Von Hausen, Athens, TX

Dear FCC, Do you think that helping these conglomerate companies to take over a single resource is a fair use to use our hard-earned tax dollars that pay your salary? I frankly think you need to turn your attention to more of what's on "TV" which is your first obligation which is the reason your division exists within the United States. There are curse words and questionable content on all networks, worry about the ones that were meant to be controlled. The internet was created to be free as we were at one point. Curb your attention to the fact that you're denying the people whom pay you, a freedom. What would occur if we all decided to stop paying our income tax? Where would that leave the FCC? Sincerely, Yancarlo Reinoso May 24th, 2014
—Yancarlo Reinoso, Atkins, VA

FCC, If you take away Net Neutrality then no one will be able to torrent and there are so many great people in the world that have become rich because of Net Neutrality and torrent also it is a free world we should be able to do anything we want on the Internet.
—Tej Dungarani, PLYMOUTH, MI

Because why fight and have shit intednet when yoy can have good internet
—Sean Anderson, wallingford, CT

Equality for all! Reclassify ISPs as common cariers.
—Dana Monroe, San Diego, CA

Political systems all over the world have shown that when you allow those with money to drown out the voices of others, corruption and suppression are quick to follow. Keep the Global Communications Network that is the internet free from these corrupting influences, and ensure every person has a voice.
—John Gosling, Chicago, IL

This country is founded on free enterprise; on fair competition. It's unconscionable to allow large corporations and conglomerates to abuse the law in order to squash small businesses. That's what's happening here. It's un-American. It's shameful. It's wrong. Don't let this happen.
—Kathy Fieler, Orlando, FL

The internet is the one place average people (like us) can communicate with out representatives, our friends, and our family. In other words, democracy personified. Do not take it away in favor of corporations who already have WAY too much control over our lives.
—Jan and larry J. Slobin, Portland, OR

An open internet is needed to maintain a free and open exchange of ideas which is required to maintain a strong economy. Without this our society will be unable to compete with other countries and lower our level of quality.
—Richard D Fieler, Orlando, FL

Dear FCC, have some pride and don't sell yourselves like common streetwalkers. Do your civic duty and protect the Hector's of the world from the Achilles of the world.
—Michael Miles-Coccaro, Chicago, IL

It is the chance for FREEDOM
—James Garule, Shenandoah, PA

All deserve an equal shot and they find it on the internet
—Jacob Murphy, Hartforn, CT

Give the bribes back to the ISPs. Do the right thing to protect real internet freedom and declare ISPs to be common carriers.
—Mary Jozwiak, Dripping Springs, TX

It would effectively destroy anyone's ability to create new content, and new methods that aren't fed through already established giants. Loss of competition is what breeds poor service. If Hulu and Netflix never have to worry about a competitor (a certainty with out net-neutrality) they will be able to raise rates with impunity and no one will be able to pay the IP providers enough to compete creating an overall loss of effective service to the consumer, i.e. the group you should actually be campaigning for...
—Daniel Levin, Los Angeles, CA

Tom Wheeler, you and your cronies, Alvarez, Vervus, Carr, Pai –minions of Comcast and Verizon—you are on one side of the revolving door between a corrupt government and the corrupt, un-American corporate establishment that drools over current prospects to grab their next tier of unearned profits, while stepping in front of the American people to solidify their desired grasp on the peoples' internet and block the free flow of information. They, through you, will get what you all have already agreed upon. Can you redeem what you have started? You would have to disappoint the very zero-point-one percent whom you represent and serve. President Obama presides as usual.
—David C Bauer, Santa Rosa, CA

Allowing Internet Service Providers to discriminate against certain websites or services that they do not agree with will severely hamper the use of the internet as a communications utility. Not to mention that it would encourage monopolies of certain online services, putting an end to smaller web-based companies that would be ignored by ISPs for more profitable partners. By allowing corporations to control a vital communications utility, you are allowing them to exert a certain degree of control on the citizens of this country that they are not entitled to. Please rethink your decision. Go down in history as someone who protected the people's ability to use the internet freely, instead of one who hampered that freedom.
—Jesse Slomka, Bemidji, MN

Companies are taking over our democracy. Free internet is crucial to freedom.
—Mel Metje, West Chester, OH

So many things in our culture has become corrupt by the pull of money, PLEASE do not let net neutrality be one of these great mistakes. We all need, no we DESERVE net neutrality. Allowing corporations to control what businesses have a fast lane to more business and customers is horrible. It would be impossible for a small business to thrive without even another financial hurdle to overcome. Please don't allow this atrocity to go any further. Thank you for your time.
—Javan Clark, LA Vergne, TN

I know you claim to support "open internet" Mr. Wheeler, but we need you to PROTECT the people against being in the slow lane and paying higher prices to access the same service that corporations will be getting. NO PREFERENTIAL TREATMENT FOR CORPORATIONS and NO EXTRA FEES for the little people.
—Cheryl Liniman, Parma, OH

Net Neutrality is a necessary part of the net. Making others pay extra for the service that they currently have is absurd. This means of abandoning net neutrality means that others won't have the same opportunity's as others on the net. It also means that services that pay to be in the "Fast Lane" will raise their services to become faster and handle their load on the server. Other who don't have this luxury will not be able to handle their load and will be left behind by the competitors. Removing Net Neutrality limits the business opportunity's for all the other people in the world, and their innovation might be lost because of it.
—Tanner Wendland, Bolivar, MO

I did not elect a President and a Congress for the benefit of corporation. I did so for the benefit of the American people. Do not do what is not in the long term best interest of the PEOPLE of the United States.
—Mr. Vladimir G Ivanovic, Los Altos, CA

Access to communications infrastructure must never be in the private sector.
—Danny Dyche, Hillsboro, OR

Net Neutrality is important for me because it lets me be able to do some of my hobbies; like watching netflix, or streaming music, or playing games, or watching tutorial videos on youtube. Without it, anyone could deem that my hobbies aren't as important as someone else checking their facebook page. Now granted, I understand that I am not the most important person in the world, and that the things I do aren't more important than what someone else is doing, but I do think that people that are using streaming devices or that are gaming should have more speed than a social media page.
—Adam Edward Grosjean, Kuna, ID

This will restrict the ability of people to look at what they want. People already pay for 'high-speed internet' from these companies and yet they're being greedy by wanting to charge the web domains money for the services the customers are already paying for. This is extortion. Not only that, but if ISPs were labeled as common carriers, it would prevent monopolies from taking place. This would be a win for the economy and the consumer.
—Jason Rivera, PONCA CITY, OK

The internet is part of the "commons" something that is shared with all of us and should be classified as a utility that is regulated to be sure that we are not being gouged. It was developed by the government, not by the cable companies, and are part of the public utility. The cable companies are already making more money than God for something that was pretty much handed to them. We need unfettered access to research as well as finding unfiltered news and information at the same speed as the rest of the digital world. I don't want companies to have the power to discriminate against online content and applications just because we aren't paying extra fees to get the fast speed.
—Anne Karppinen, Kenmore, WA

I rely on the open internet to work, play, and live. Please ensure ISPs are common carriers. Thank you.
—Kyle Knight, Huntersville, NC

freedom of speech is equality of access.Monopoly of access is the definition of fascism which is corporate rule.
—Roderic & Amy Sorrell, Truth or Consequences, NM

Net neutrality means equal opportunity to all: individuals and corporations regardless of wealth. The idea of creating tiers in internet traffic means tipping the balance in favor of the wealthy and affecting not only new entrepreneurs but the end-users themselves. Tiered traffic is a recipe for stifling innovation in services and content and has the potential to restricting content and expression. Unrestricted, unfiltered, uncontrolled internet traffic without ISP interference is important to me because it provides us all with opportunities for free expression and communication. The potential for growth and innovation cannot be overlooked - services like google, amazon, youtube, facebook, and wikipedia, among others, had humble beginnings and would not be what they are today if it wasn’t for net neutrality. Please don’t contribute to crony-capitalism. Take action to keep the internet neutral, open, unrestricted, transparent.
—Gustavo E. Carpio, Houston, TX

Corporations are not to be trusted.
—Rich Moser, Santa Barbara, CA

i believe the only way to harbor freedom of expression and continued growth of new ideas is through true internet neutrality.
—Damon Stuart, nokomis,

This is unacceptable for so many reasons. A big one being that it will make it much harder for new businesses to start up. Which is a shame, because as we all know, most jobs are created from small businesses. Well, I suppose the 90+ million Americans unemployed will befine with it, so long as the big corporations have their way. As always of late, another government alphabet agency looking out for corporate interests rather than the general public.
—Lane Adams, Grandview, MO

I'm strongly opposed to changing the rules to a two-tier system which favors corporations with lots of money and leaves us,the public, with the crums. THIS is not RUSSIA or the MIDDLE EAST. IF this is approved, the voters will just throw all YOU (BOUGHT-AND-SOLD) Fat cats OUT next
—gilda I victoria, Santa Ana, CA

Net neutrality is of highest importance to keep our country a Democracy. Otherwise money will dictate who really has the power.
—Elsie Kent, Palo Alto, CA

We want to be able to choose ourselves what we want. Governments are unable to decide what we want.
—Garry Jones, George Town,

It is the last primary protection of our democracy. Our government--President, Congress and the Supreme court is doing a poor job. We still are able to make our voices heard via the internet.
—E Joan Emery, Front Royal, VA

It is a bad idea to limit access to internet sites which are unable to pay internet providers for faster speeds. The argument could be made that access will not be prevented to any site on the web, however an overly long wait time to load a web page is essentially the same as not being able to access the the site. I ask that the FCC reclassify internet service providers as common carriers.
—Oliver Topp, Pullman, WA

Net Neutrality IS freedom of speech, it's the ability to get the whole truth and nothing but the truth instead of what businesses with the most money and media receiving the biggest bribes or with the most dishonest agendas will spoon feed us. Keep the net neutral and keep the world honest and free!
—Michelle Potter, Conroe, TX

the interned is supposed to be an unbiased tool that treats all information of equal importance. this means my netflix has the same priority speed as my email should. allowing IsPs to create fast lanes is a way of breaking the internet. Please do the right thing and keep net neutrality and classify the internet as a utility. don't let them ruin the most important form of communication since writing.
—Patrick Bickel, Hammonton, NJ

The American people deserve better than to be bullied by corporations who are determined to make as much money as they possibly can. When the American situation of the Internet is viewed in a relative perspective with the rest of the world, we pay far greater amounts of money for significantly slower service. What Tom Wheeler is planning in allowing paid prioritization of companies' web sites is simply making that situation much worse at the expense of the people. ISPs must be classified as common carriers, and the Internet must be classified as a public utility. Why a public utility, you may ask? The Internet is a necessity in this day and age, and to pay exorbitant amounts for intentionally slow service with the goal of maximizing profits for ISPs would significantly limit the access to an all-too-necessary resource in this telecommunications-based society. Thank you for your time.
—Antonio Diaz, St. Cloud, FL

It was brought to my attention that our current system is under threat by corporate interestes. Although it doesn't suprise me that this is taking place, my concern is mired in our ability to receive and share information to the benefit of all in this nation. Small business start ups, students, the eldery, and those who are impoverished will be unable to learn, participate or contribute to this outstanding resource. That would limit opportunity which would greatly impact our society. Dumbing down information gathering and sharing I would suggest, is a or should be a national security concern for all. Our strenght has always been in our ability as a nation to offer opportunities for growth among its citizenry. Limiting information via cost/pricing variables is not the way to go for this wonderful resource. While this nation was built on commerce of all kind's both good and bad, the internet is a resource that should be available for all to access, communicate and participate through. I ask you to please reconsider and make the internet forever an open forum in this country. Thank you for your consideration.
—Jo Drew, New York, NY

This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Brent Christensen, Omaha, NE

We should have the right to use the Internet as well as a corporation does-their work matters but so does ours.
—Robert R Moore, Clio, MI

I pay a fair sum of money to enjoy high speed Internet access, which allows me to access websites, listen to music and watching my favorite TV shows and movies. Ending net neutrality could possibly either put those activities in jeopardy, or result in me paying even more for the services. It is a completely unfair idea, and I implore you to look out for the customers whose dollars go towards enough services. Thank you, Brandon Foster-Gray
—Brandon Foster-Gray, Norfolk, VA

Net neutrality is vital to maintain an equal and open internet in which important information can be willingly shared around the globe
—Camille Cronkhite, Huntington Beach, CA

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Rachel Tomaselli, Gunnison, CO

Freedom for all.
—Sonya Locklear, Greer, SC

The internet is one of the few even playing fields left.
—Ryan Cooper, Fredericton,

Dear Federal Communications Commission: FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Mariah Dawn Shepherd, Evansville, IN

Your responsibility is to the little guy not the corporate overlords, they have the SCOTUS looking out for their best interest. Do your job, dammit!
—John J Audette, Boston, MA

Should you and I not be able to breath the same air as well as have freedom to view all that is on the internet without interference? Why is Net Neutrality even up for debate or discussion other than the bottom line in America is always the dollar bill. Give Neutrality a chance...please.
—George Zuk, BELLINGHAM, WA

Because we need to learn from our history and learn that just as the Railroad companies screwed americans in the past before being controlled, broadband internet providers are wringing their hands with glee just waiting to take advantage of the American public.
—Wayne Fletcher, Des Plaines, IL

It levels the playing field, as far as giving the same opportunities to everyone to succeed.
—Victor Magana, Fresno, CA

These rules are censorship. Plain and simple.
—Collin Locklair, Atlanta, GA

Those of us in the rural areas still don't have access other than dial-up in most cases. The internet needs to be treated as a public utility for those of us out in the sticks.
—Perry Williams, Ramsey, IN

The Internet is a powerful tool And fundamental to operating in the world today. Everyone deserves equal access to the web!
—Gabriel Iverson, Oregon City, OR

I'm retired. If the content providers have their rates raised then my rates will rise as well. This means I will have less content because I refuse to starve. How is this serving the people?
—Pete Eichstaedt, Lombard, IL

because everyone should have equal access to the internet not just huge companies who can buy their way to the top!
—Paul Gobbeo, colorado springs, CO

By doing a two tiered internet you would make it unfair and it would just make things worse, net neutrality keeps everyone happy.
—Randall James Mintz, smyrna, TN

Isn't freedom to publish online freedom of speech? There is no excuse for restricting that.
—Amy Norton, Columbus, OH

The Internet is the only resource people have to freely access information, particularly unbiased news of what is happening in the world. The Internet belongs to ALL PEOPLE on the planet. To allow corporations to have preferred access to the Internet is going to lead to limited access and slower access to the Internet and the resources it holds. As an American citizen and world citizen I ask that you NOT provide preferential treatment to the corporations such as AT&T, Verizon, etc. and protect our right to equal access for all to the Internet.
—Patti James, Rancho Murieta, CA

The internet should be free to all as an avenue of communication and not sold to the highest bidder. It will enable education, freedom of press, and a knowledge-based society which will improve our economy. Please protect the open Internet and reclassify ISPs as common carriers with all providers on the same equal page.
—D Tam, Arlington, VA

A free and open internet promotes innovation, stimulates competition betweeninternet service provides, facilitates the spread of ideas and most imporantly protects FREE SPEECH.
—Katelyn Rogers, Westlake Village, CA

Stop continuing to be lobbyists for Comcast et al. The vast majority of Americans want these isps to be classified as common carriers. What will it take for you to do your job and do what is in the best interest for the American people- not a couple if corporations you use to represent? If you destroy net neutrality for your personal interest, you are thieves. It is unconscionable that this is even happening. You work for us not Comcast!
—Deborah Grossberg, san Rafael, CA

I am a partner in a small business that relies on the internet to communicate with our customers and research. Additional charges or slower speeds, directly or indirectly, would be detrimental to the growth and future of our business. Lower prices and better service are driven by completion not monopolies like the FCC is proposing. Please make us voters, home owners, parents, home owners, small business man, tax payers ect. First not the big ISP. Please keep the the internet free and open. Please understand this is a free democracy issue and must not be approved. Thank you
—Ken Magargee, Yorba Linda, CA

Bad enough our service speeds are far below those of Korea and Japan.
—Anthony Deen, Brooklyn, NY

In this ever expanding system of two-tiered justice, one set of rules for the rich and powerful and another for the poor and weak, you could do nothing worse in your career than to be complicit in allowing corporations additional means of controlling internet content. The corporate goal is milking fees from an internet as meaningless and controlled as mainstream news.
—James Griffin, Harrisburg, PA

Please take action to insure net neutrality - don't bury something so simple in dense jargon and try to tell us that you support neutrality while you are giving in to the big service providers. Keep it simple - don't be complicated - reclassify ISPs as common carriers. Ordinary people in this country are being nickeled and dimed to death everyday: don't add more to this trend with added fees and charges. Don't give in on this. We need people in government to hear and respond to the voice of the people, not the voice of the moneyed interests. Do the RIGHT thing for once.
—Nelda Ferlic, Germantown, MD

The Internet is not something that should be controlled by the highest bidder in the marketplace.
—Frank Ortiz, Los Angeles, CA

This is public space. There is no reason apart from the almighty dollar that it should be controlled by Comcast, ATT, Verizon--none of which think twice about charging for each minute of current service. Utterly absurd.
—Valerie Heinonen, NY, NY

It is necessary for the internet to STAY a fair place for all. Net neutrality is a MUST for the good of this country and planet!
—Samantha G Swartzmiller, Traverse City, MI

For now, everything seems ok. You open a "fast lane" here, tell sites and companies you'll give better connection speed for a price, everything is hunky dory. But when the technology gets better and the speeds naturally connect faster, is everyone getting a boost? Probably not. The smaller sites will remain at a crawling pace as bandwidth is allocated for profit, possibly even purposefully slowed down to "show them who's boss". Free and non-profit sites like Wikipedia, which does not rely on a service fee or advertising of any kind, will reach a point of unaffordability. Starting a site will be impossible, let alone allowing it to grow. And when that happens, when the costs get to high to actually share information, do you know what happens? Those charges trickle down back to the consumers. Facebook will require a setup fee. Google Search will be a subscription. Everything we know and love about a free and open internet will crumble. The internet is not a bookstore. We do not pay for the individual materials unless they're premium. The internet is a library, a commonwealth of information that should be shared and fully accessible to and by all. Imagine, if you will, a convention center. People already have to pay for space and to be there. They can set up their booth however they like so long as it falls within the guidelines for what a booth can be, and buy a bigger booth space if they like. Everyone who pays to go to the convention has equal access to every booth. But what happens if you block the paths to those booths? You put up a barricade or move that booth to a nigh-inaccessible backroom and tell the booth buyer "Pay us more and we'll make it easier for people to see your booth"? What if it happened to everyone? Is it fair then? The answer is no. They have already paid to be there, and they should not be required to pay more for folks to see their booth. Some can't afford it, or in order to afford they would have to raise the price of whatever they were selling, decreasing their consumer market. That's exactly what is happening here. Websites who can't afford that "extra" speed as allocated by ISPs will be forced to push that extra fee onto their consumer base. The internet will no longer be open and free to all. It will only be accessible to the wealthy. Being a part of the 99% not considered "wealthy", that is not a sound prospect to me. Renew Net Neutrality. Do not let an unsustainable idea of profit get in the way of Free Speech, Press, and Access to Information. By allowing this to pass, our Constitutional Rights, set down by our fore-fathers, are in jeopardy.
—James Weldon, Hutto, TX

The internet has been fostered by its open and equal architecture. Selling access to the highest bidders will severely limit future development including the next big thing.
—Norton Allen, Arlington, MA

ARE WE REALLY GOING THE ROUTE THAT CHINA IRAN MOST OF THE DICTATORSHIPS TOOK WITH THEIR PEOPLE AND THE INTERNET!!!!!
—Abraham VASQUEZ, new york city, NY

Thank you for your acknowledgment but you have made the internet two-tiered with fast lanes for business class and slow lanes for the rest of us. How fair is that? It's the kind of equality that passes for democratic government these days where the big corporations use their lobbying power and money to protect and extend their privileges. The FCC needs to use its authority to protect people's rights. Be fair, withdraw your two-tier discriminatory plan and restore net neutrality which is the true equalizer in a privatized, wealth-advantaged world.
—Kendall C Lovett, Preston South,

The government has no business messing with the internet. You have enough mess to clean up
—Cindy Evans, Palm Bay, FL

Consider how much innovation and creativity has been fostered by an open Internet. Our world today constantly reaps the benefits of an Internet where everyone has a chance to be seen and heard. I feel the prospects of an unregulated Internet would ruin the very essence of this tool that had transformed out world. Please reclassify isp's as common carriers.
—Madeline Buck, Edina, MN

The Internet is a public utility, and those that provide internet access should be regulated as "common carriers". The FCC has the obligation to regulate that utility in the interests of the American people and the public good. Access to content may not be restricted in any way. The freedom to provide content shall not be infringed in any way! All content providers and those who access that content shall be treated as equal by ISPs. Look, I've been following this issue for years as the telecoms have repeatedly tried to find ways to exploit the Internet for their gain at the expense of consumers. This is yet another way for them to drive up costs and further line their own pockets at public expense. Furthermore these telecoms have done nothing to improve the speed and quality of the service they provide through the exorbitant fees they already charge. Their profits go toward executive salaries and shareholder pay-outs and do not filter down to consumers in the form of better products or services. The Internet is the property of the American people. It is a utility we all must use to conduct our daily lives and business. As stewards of a public utility, those who provide Internet access (ISPs) must be constrained to serve the public interest.
—Lynne Schrupp, Troy, MI

I am graduating high school this year and I want the internet to remain unadulterated for future generations. It is the greatest tool for communicating that has ever been created and it allows people around the world to connect in ways that were never conceivable before. If net neutrality falls, however, greedy corporations will be able to discriminate and choose how quickly each person's messages are sent, limiting freedom of expression for my fellow Americans.
—Wade, Saint Charles, IA

The internet shouldn't be regulated by huge multimedia corporations.
—Mike c, Chicago, IL

If the broadband companies can make the speed faster for some, they should make it faster for all. They are common carriers uncommon two tier carriers.
—Richard Monahan, San Jose, CA

Everyone deserves equal access to the internet.
—Collin Magargee, Villa park, CA

The decision to create a two-tier Internet Service in the USA will have na major knock-on effect to all Internet users around the World and therefore as a European I feel I have a say in the matter. The FCC must maintain Net Neutrality to avoid complete domination of the Internet by rich multi-National Corporations. I believe selling priorities online will leave all the average users like myself at the bottom of the pile.
—Terence Waites, Stockton-on-Tees,

The big Internet providers already have enough of a monopoly on Internet transit; giving them the ability to tier traffic based on content or source would make the Internet just as bad as the cable TV or telecom industries, both of which are horribly corrupt and above the reach of the FCC as it is.
—Chad Sutton, North Haledon, NJ

You NEED to reclassify ISPs as common carriers. This is the ONLY way to protect real Net Neutrality. Just DO IT!!!
—A Mogavero, schdy, NY

Net Neutrality & free speech go hand in hand. Please protect net neutrality & the constitution!
—A Poindexter, Bennett, CO

The internet is part of my daily life. It is how I communicate and where I get my information. Access to these functions should be available to everyone and preference should not be given to anyone due to an ability to pay higher fees.
—Becky Scott, Madison, WI

Interbet Service Providers may NOT be allowed to infringe upon our First Amendment rights! Thet are Common Carriers, end of story.
—Linda wickenkamp, Lakeland, FL

WE HAVE THE RIGHT TO OUR FREEDOM , NOT THE "RIGHTS" UNDER BIG BUSINESS !
—Alita DeMarco, Ypsilanti, MI

Our rights as free citizens hinge on our ability to transmit our speech in any way we can and with no unnatural hindrances. Net Neutrality upholds that. Uphold net neutrality, uphold freedom.
—Abdiel Yescas, Austin, TX

Stop this nonsense in the name of FAIRNESS
—Gerald Thompson, Granite City, IL

Introducing different levels of service into the internet - providing full service for people who can afford to pay more and crippling the access of people who can't - benefits no one but the bottom line budgets of huge ISPs. It will introduce economic impediments for small businesses and start-ups that rely on the level playing field of the Internet to be able to create and promote new products and services. This will shut down one of the greatest engines for economic development that the world has seen in our time by raising financial barriers to creativity and increasing the transaction costs of doing business. On the consumer side, it will reduce consumer choice and allow our buying and spending habits to be increasing controlled by a small, set number of pre-existing, established players, who will be able to lock out new sources competition by out-spending them to promote their own services, and therefore have no incentive to improve their offerings. Introducing discrimination into Internet service is wrong - not only for consumers, but for our the health and strength of our economy overall. Do not cave in to the complaints of the ISPs who are trying to find a way to carve more profit for themselves out of the Internet at the expense of everyone else.
—Rachel McCleery, Tallahassee, FL

I don't want the privileged class and the second class on the Net.
—John Edakara, San Rafael, CA

Protect Net Neutrality! Everyone has a right to internet speeds and this would be a huge step back for humanity for the gain of large corps. People over money!
—Brett Wilkins, Olympia, WA

The internet is no less than the most free space that exists on planet Earth. The possibilities in terms of liberating the human species into new equally free states of being cannot be calculated, but they can be imagined. In light of this alone, no one should be allowed to erect any barriers between any human of any social strata, and those vast possibilities.
—Jason Yawn, Annandale, VA

Must I even start?
—Robin Lerios, Santa Cruz, CA

As a web developer, "fast lanes" at higher rates poses a financial hurdle to starting a new product or business that may be data-heavy.
—Art Lawrt, Beverly, MA

So, corporate America rules again. You can take your proposed new rules and put them where the sun don't shine. In the meantime, how about ensuring that we serfs can have an open and fast internet. Why is it that in France, citizens users can have 4X the speed at 1/4 the price????
—Richard Miller, Flower Mound, TX

Reclassify ISPs as common carriers. This is the ONLY way to protect real Net Neutrality.
—Elena Vanko, Towson, MD

To make it short and meaningful, a two-tiered internet would make it so someone with as much talent, but as small of a budget as me would never be able to fulfill their dream of working by creating and selling art online. In order to make it accessible to as many people as possible, I'd have to shell out a lot of money that I can't afford to spend if I want income... IF I even HAVE the money to spend! Starving artists are called that for a reason, it's already hard enough to make a living as one. Having this extra roadblock would not just make it difficult, it could make it impossible for not just me, but hundreds of thousands of other artists out there wishing to make an occupation out of their passion.
—Matthew Tritz, Omaha, NE

Net Neutrality has been a topic of confusion and hot debate as of late. The confusion is completely unnecessary: ISPs want to govern access to content through money, and they've been fighting tooth and nail to get that control. Censorship is still censorship, by any other name. Official definition : "the practice of officially examining books, movies, etc., and suppressing unacceptable parts." Giving the ISPs the freedom to slow or speed up connections to specific content is absolutely a form of suppression. That article that has information making my ISP company look bad? Good thing we can slow the connection so less users are inclined to see it! We have a chance to nip this in the bud, now. Classify the ISPs as common carriers, we don't need someone else deciding what content is worth having a better connection to.
—Erica Evans, Anacortes, WA

As an old computer scientist and software engineer, I am consious of the importance of SIMPLICITY. Please reclassify ISP-s as common carriers. Complicated tricks that try to reconcile 2 tiers (aka fast and slow lanes) with net neutrality will FAIL. Net neutrality is an important public good. Tiers are just a way to make more money for ISP-s. Making money is fine; trampling public goods to make money is not.
—Barry K Rosen, Stormville, NY

A tiered internet would be a deathblow to startup entrepeneurship, damaging the economy and ruining many peoples shots at the American Dream. Reclassify ISPs as Common Carriers.
—Harrison Taylor, Tallahassee, FL

People have the right to a free market.
—John Lary, oak grove, MO

Reclassify ISPs as common carriers to protect Net Neutrality. Keep the internet free and open to all and not anther avenue of corporate control.
—John Barker, Antigo, WI

Net neutrality is the basis for democracy, corporations should not be allowed to sell, restraint what we can do online
—Mortier, Brussels,

As a older person with less access to the outside world, ne neutrality provides me with the access I need to stay connected with the people in my life, with the goods and services I need, with what's happening in the world and with the means to have a voice about that. As an American citizen, I count on all that continuing for me/us and being expanded to all across this great country. Equal access for all. Thank you.
—Karin Welsh, Ballston Spa, NY

Without free speak/info freedom like, a omelet but without eggs ...
—Huseyin Kocabas, London,

Please OPEN YOUR EYES to the FUTURE.Net Neutrality is a very large and integral tool for operating a fair and unbiased forum for ALL walks of life. As a diverse country, My country, The United States of America , was founded on Freedom and Justice for ALL. Look it up. We only race faster to our own demise as we feed th caseum developing between the Lower "99" and top 1%
—Nickilee Greenwalt, st paul, MN

Net Neutrality is really important to me because it is important that companies and individuals who can't afford the higher price of bandwidth would be limited in the kind of information and content they could provide. Most of the content providers I subscribe to or care about are individuals or small providers who would suffer from this loss of bandwidth availability. Also, in my eyes, this means that big companies would have an advantage in the information and media systems. Their opinions and interests will have increased exposure to the masses, while the smaller companies and individuals will struggle to get exposure. This could negatively affect many aspects of our communities, because it is well-known that big businesses are usually more interested in their own profits than the well-being of their customers, the very people that their exposure would influence. I beg you to consider that I as a consumer have the right to choose what I wish to be exposed to, regardless of whether my chosen media is from a big company in New York or from a middle-class individual in Wisconsin.
—Katelyn M Cabe, Coshocton, OH

Net neutrality assures information, ideas, and possible solutions to problems. Mainstream media's presentation of these things cannot be trusted due to controlling interests.
—Kim Baptista, Colonia, NJ

Net Neutrality is crucial not just to the individuals who utilize the Internet as a tool. It is a symbol of their freedom to communicate openly and without persecution. Allowing Internet Service Providers (ISPs) to regulate the traffic on the Internet is simply another form of the government bowing to its corporate sponsors by giving them more rights than the people to whom the government is responsible. It's analogous to annulling Bill of Rights because it prevents some major company from making more money. ISPs already restrict the data rates in the United States by charging exorbitant service fees for mediocre quality, at best. This action to annul Net Neutrality would compromise the digital freedom of the citizens of United States of America.
—William Lyons, Valley Glen, CA

we should all have the access to the same internet here in the us. Some of us can't afford the faster and off the internet that you guys want to create. just leave the way the Internet is right now alone.
—Douglas Bomer, Eagle, ID

Mr. Wheeler, Thank you for your service to the country. I feel it's essential at this time to prevent the corruption of the internet by ISPs. And I don't believe the new rules that have been proposed will do that. The only way we can assure that the ISPs behave properly is by classifying ISPs as common carriers. The internet is more important than all the other communications mediums that came before it combined. And it is poised to replace all of them. If we don't reclassify the ISPs as common carriers, the internet will naturally shift to a corrupt, closed payola marketplace where only the elite will thrive or even survive. Please understand that this is how your constituency feels and that we're counting on your actions to directly reflect our needs. Thank you for your time!
—Andrew W Rozendal, Granada Hills, CA

My livelihood depends on it.
—Nelson Hebert, Marietta, GA

I don't want the little guy, the startup, to be at a disadvantage on the Internet. Forcing them to pay extra to get equal access to the ISP's customers would stifle innovation and progress - just the things the Internet has stood for.
—Richard Chimenti, Twain Harte, CA

If we allow companies to just throw money at the political system and get away with it then i have lost all faith in American politics. Don't let this happen!
—Brennan Giles, Sherwood, OR

ISPs are nothing more than common carriers and should be reclassified as such. Although I work for a municipality, I often work from home evenings and weekends. This would interfere with my important government work.
—Vicky Matsui, Seattle, WA

Because the efforts by industry-friendly FCC to further consolidate corporate control of ALL content undermines the Commons, but it sure does hand more control of our activities over to corporate once again. All arguments to the contrary by the FCC and it's corporate handlers is hogwash. The FCC can prove this wrong by throwing out these "rules" that would mean the end of Net Neutrality. If past actions by the FCC are any measure of what we can expect on this next "ruling" -- we're all in trouble. Of course, I doubt the corporate-controlled FCC cares one iota what the public desires of its government institutions. Tell me I'm wrong -- please. Tell me I'm wrong by throwing out its rules (designed to thwart the will of the public, be damned) and instead re-classify ISPs as common carries, which the are.
—Nancy Hatfield, Marysville, CA

Allowing "fastlanes" on the Internet to those who can afford it will end Net Neutrality
—Steven Fenster, Pemberton Borough, NJ

The World Wide Web revolutionized our access to information and our connectivity in the modern world. It enabled a brand new form of education, and opened the doors to freedom for millions around the world... It's a crying shame to witness the destruction, so soon, of this still young innovation, first through the illegal and unconstitutional actions of the NSA, and now through this more basic capitalistic threat to net neutrality, in which the quality of one's net access would be determined by one's ability to pay a great deal more than others... just too sad. We really need to hold on to the grand steps we've achieved, instead of passively letting it all slip away from us, so soon....
—Hilary von Waldenfels, Berlin / New York, NY

It is a necessary part of infrastructure and should be considered as such, regulated as such, available to all, and priced accordingly.
—Linda Bailly, Albuquerque, NM

I rely on the Internet for my business. It should be open and equal for all. This really is a no-brainer.
—John Sodrel, New Albany, IN

Totally unfair to the public.
—Stephen E Sussman, Finksburg, MD

I have been using the Internet since it was universally available and I do not want to see my access restricted by ISPs. Please keep the Internet open for all users.
—James Nicholson, Manassas, VA

You have no right to use your position -which was not earned- to enact your benefactors agenda
—Failea Bocanegra, Whittier, CA

Internet speed is very important to me and effects most of what I do. I also believe everyone should have equal right online.
—Orlando Speed, Anderson, SC

I think corporations already have too much power over what consumers/customers are able to access easily. Please don't give them any more power to control the Internet.
—Cyprienne Schroeppel, anderson island, WA

The telephone company was a monopoly during the a part of the last century. They had brutal control over the cost of service. I was a service representative for Ma Bell so I can attest to their lack of concern with the underprivileged part of our society. I had to tell a mother she would loose her service because she missed her payments (due to emergency medical bills) Later I was a mother myself, living it NY and had to choice between milk for my kids or a call home to check on an family emergency in the mid-west. That is the situation you allow when companies become so big they have unlimited control. If there is a means to increase the speed it should be a benefit for all and not a profit for a few!!!
—Beverly Tangen, valley village, CA

I'm a college student, I can't fucking afford to pay any extra fees as it is, just so you can line your damn pockets.
—Janine, Forest Grove, OR

Throw out the FCC rules and reclassify ISPS common carriers. I want net neutrality!!!
—Sarah Arneson, quincy, MA

A free and open internet is important to me because it is how I get my work. It is a tool, a utility I must have in order to survive in these modern times. Without it, I cannot take emails, I cannot look up important and valuable information, and I cannot connect with my network or job hunt. With a different structure, the internet will become more expensive, and ultimately lead to pushing consumers who require internet to do their job, out of the work.
—BHawkinson, Los Angeles, CA

The internet must be alowed to be accessable by everyone everywere at an equal cost and equal speed to promote freedom of expression - politics - religion - knowlage - with no restrictions - without compromising privacy - freedom of commerce - to not be controled by corporations - governments - or any one individual.
—John Sadler, Roberts Creek,

I use the internet for far more frequently for non commercial purposes. This sort of usage will be negatively affected by the corporate moves to take over the internet.
—Kenneth Thompson, West Grove, PA

the average person in this country cannot afford to be ripped-off by these mega giant companies who already charge excesss prtices for their services .Do not give them even more power.It is your job to protect the citizens of this country from these companies. Thank you, Juidth Cohen
—Judith Cohen, seattle, WA

Everyone relies on the internet to conduct business at many different levels. As a future entrepreneur it is very critical to the success of future business to be able to communicate on the same level as everyone else around the world. We must keep communication lines open to everyone to better our world.
—Bryan Magargee, Yorba Linda, CA

I want to be able to access content that is not being paid for by corporate interests.
—Laura LaVertu, Alexandria, VA

I want true net neutrality! Free and open internet please!
—JL L. Good, Topeka, KS

The internet should be free and unbiased. Big business has enough control in the US. Give freedom of speech and sccess to it a chance.
—Genie Tartell, Kingston, NY

Net Neutrality is important to me because companies should not have the power to control the internet simply because they have the monetary means. This will keep huge amounts of vital information from the public and allow the largest companies to control what we the people are exposed to.
—Anna Dresdale, Brooklyn, NY

Because it's our rights.
—Bryce Jones, Belton, SC

Please let Americans have a choice.
—Christy Clark, Tucker, GA

There is absolutely no way to get around the fact that the FCC must define Internet providers as Title II Common Carriers and regulate them as defined. There is no cute language that can be substituted in their decision in order to placate the ISPs while preserving a democratic and open, neutral Internet. The Internet has become a utility to consumers, no different from water or electricity or natural gas, with ISPs having nearly the same monopoly in specific areas as providers. This is not negotiable.
—Ron A McCullough, Nashville, TN

The FCC should declare ISPs as common carriers, and they should be forced to let competitors use their network, especially if that network's construction was subsidized by the Universal Service Fund. If any "ISP" does not want to allow use of its network, it can choose not to be an ISP, but in doing so, it loses the right to claim it offers internet access, at least not true internet access, and any portion of "its" network built by the USF. If a company wants to be classified as an ISP, it would have access to use the USF, however, it would have to allow competitors access to the network and wouldn’t be allowed to give any company proprietary access through the network. Exceptions could be made for services (e.g. telephony service), but ISPs would not be allowed to provide specific companies special access; they would just be able to proprietary access for the protocol that service uses. Meaning that the end user is the one that gets to decide which service they use, not the ISP. Whether a company wants to be an ISP or not, the decision should be a definitive decision; a company should not be able to claim its network is private in areas where it has built its own network, but that it is an ISP in areas where it has not or will not build infrastructure. Either companies should be a regulated entity or not, and that decision should dictate how they can run their business and what assistance they get from any government entity. This should bring competition to the internet industry either through competition using existing infrastructure, expansion of private infrastructure, and/or construction of more public infrastructure. Once this is done, citizens should be able to expect a superior, high-quality service not just hope they get one once companies feel there are enough incentive to bring one.
—Brian Burwell, Momence, IL

It's important to me because we shouldn't have to pay even more to see or read things on top of monthly fees
—Terry Pirame, Rahway, NJ

To the FCC, I see all of humanity as one peoples. No nations, no divisions. Just brothers and sisters, fathers and mothers - all of us together in the struggle for happiness and fulfilment. Though the reality of the world at present is that: there are borders, there are divisions, there are differences that seem to be insurmountable, I still do my best to bring about a world where all people treat each other with empathy, acceptance of their differences and at least respect for one another at best love for one another. In all of human history that dream seemed like an idealistic utopia that could never be attained. But now in the twenty first century with the advent of the internet the world is becoming smaller, the borders are becoming less relevant and we are becoming more and more one peoples - the nation called Human. The internet enables this unification of humanity for in it everyone is truly equal to all others and has as much chance as anyone to express herself (himself) freely and openly through their creativity, works and opinions. Please do not allow this freedom to be diminished in any degree, because if you do my firm belief is that you will be delaying the end of all wars, all poverty and all oppression. Please let our children have a better chance in living in a slightly more livable world than We were, are and will be living in. Sincerely hopeful, Anton Atanassov.
—Anton Atanassov, Sofia,

As a former paid lobbyist for the cable and wireless industry, Mr Wheeler should have no ability to vote in this decision. Mr. Wheeler has no interest in a level playing field for all internet users, start-ups, and competition in the field. Mr. Mega-Merger should be his title. The FCC must classify now make the decision that they have balked at stopping short of doing and now make the decision that is fair for all users and companies on the Internet: to classify ISP's as common carriers. If it is the position of the government that all people are to have access to the Internet, then ISP's are no longer just a service, they are considered part of the infrastructure that is replacing old copper lines and bringing high speed internet as a common carrier to the last mile of all people in the United States. Mr. Wheeler, you are no longer a lobbyist. You now represent the people and are in a position to make the right choice although it goes against what in your heart of hearts you really want to kill - equal access for all. Common carrier status for ISP's is now required. Do the right thing!
—Kent Stutzman, Newton, KS

A world with limited internet access isn't right. Everyone should have the same access with the same price range.
—Jazmine Martinez, Panorama City, CA

Everyone should have equal access to this vital means of communication and information.
—Sandi, Caledonia, WI

My taxes helped pay for the development of the Internet. That was sufficient reason to insist that the Internet remain totally neutral and not just another source of corporate greed. No exceptions.
—Edward Thornton, Swarthmore, PA

Fast internet for all! FCC - throw out your rules and instead reclassify ISPs as common carriers.
—John H. Young, Encinitas, CA

A free, open, and accessible Internet is a key backbone of democracy in the modern world. Corporate structuring of the Internet, of any kind, is a threat to democracy.
—Robert Arumdale, Fairbanks, AK

This plan kills net neutrality and allows ISPs to essentially censor the internet... I don't want any company to dictate my life,especially any company life Comcast.
—Eugene Golden, Aurora, CO

corporate greed needs to be destroyed. equality needs power.
—Johanna Bon, new york, NY

Net neutrality is important in maintaining our democracy in the face of vicious, arrogant, power-hungry special interests. These people are tyrannical. They are drowning out my voice!
—Sue Christiansen, Iowa City, IA

The FCC's proposal will completely change the internet for the worse. The creation of internet fast lanes will only help internet companies make more money without providing benefits to the user. The new rules will result in paying for direct access which will create a fast and a slow internet, not “one internet” as we have now. It is unrealistic to think the FCC's proposal will keep providers from slowing down content from non-paying internet companies. The FCC's proposal gives an unfair advantage to companies that can afford to pay-for-priority and makes it a lot harder for startup or smaller internet content companies. The internet should be classified under Title II, which would treat the internet as a utility, keeping the internet open and neutral. Rules should be put in place that stop broadband providers from trying to limit Internet openness.
—Cullen Mumley, Orlando, FL

ISP's should be classified as COMMON CARRIERS. FCC's leadership is in bed with Comcast. Power is greed. Stop it. Preserve Net Neutrality.
—Matt McHUGH, Des Moines, IA

Many people including me cannot afford to pay extra fees to get a good Internet speed. The tier system idea is unfair. Internet service providers should have always be classified as carriers. They are merely a pipe for the Internet.
—Grant W. Levy, Costa Mesa, CA

We have seen how the concept of two Americas with respect to income equality has cost our countries future. Creating a tow-tiered system for the INternet would only further exacerbates those effects.
—MIchael Rosa, west hartford, CT

we don't need AT&T OR VERIZON OR COMCAST TO CHARGE US FOR THE INTERNET ITS FREE INFO KIDS CAN LEARN FROM IT IF AT$T OR VERIZON N COMCAST TOOK OVER IT WILL BE SLOW CERTAIN WEBSITES WILL BE SLOW OR CAN'T GET ON ALL 3 ARE CORRUPTED AND CROOKED EVIL BECOMES EVIL STAND BY THE PEOPLE LET THE CORPORATE GREED ROT IN HELL666 STOP SERVING THE BEAST UNLESS THEY ARE BRIDING YOU
—Thomas Roles, forest hills, NY

A free and open internet is pivotal for innovation, the spread of ideas, and it is, in modern times, the greatest example of freedom. Eradicating Net Neutrality is the best way to abolish the freedom of the people, cut off access to education and drive our nation's poor deeper into poverty. Our Nation is envied for its freedom--this is a direct violation of such. I implore you to preserve it in all facets.
—Angelique Phelan, costa mesa, CA

Please protect Net Neutrality and reclassify ISPs as common carriers so we can enable the internet to grow our economy.
—Bradley Roy Williams, Brush Prairie, WA

I make my livelihood on the internet. The internet slow lane will cripple my ability to job and feed my family.
—Rachel Dukes, Los Angeles, CA

It's important to me as one of the "little guys" that I have equal access to the Internet!
—Anne Graydon, St. Petersburg,, FL

Corporations already have too much control of our country. Please protect the open internet.
—Pat Hanbury, Reno, NV

I am very concerned that non-profits and entrepreneurs will be hampered by these awful rules. Please reconsider.
—Chris Holbein, Gaithersburg, MD

the net is too important to be in the clutches of korporations.
—Michael Boshears, crestline, CA

This is important to me as this is our last true freedom of speech left to us. Without this we are a slave to the corporate tyrants.
—Terry Andrews, Rhome, TX

Because the internet and all of us should be free
—Cynthia Davis, Needles, CA

As I am on a limited income, the government needs to stay out of the internet, let the market rule!
—Douglas Hackney, Nampa, ID

Ending Net Neutrality will strangle new businesses trying to gain a foothold on an uneven playing field and hurt consumers with slower content.
—Dan Brassil, Saint Louis, MO

I want to do what i want on the internett. I dont want anyone else to see what i am seaching at at any time.
—Sondre Nergård, hagan,

Freedom of Speech
—Markmonkman, San Francisco, CA

This gives unfair advantage and control to big businesses and little to none to small businesses who can't afford the cost, creating yet one more difficulty for small businesses by making it more expensive to have an equal challenge against big businesses who can afford the cost.
—Susan, St. Louis, MO

Net neutrality is the backbone of the high tech economy. Thousands of start-up companies and millions of jobs depend on it. A two-tiered Internet would strangle American innovation - and prove to the world that America is now no better than Russia, China, or Iran, since it has a controlled Internet just like them. If we want to remain both a prosperous free market and an inspiration for freedom, we need freedom on the Internet.
—Jason Dickey, Bellingham, MA

America was founded on freedom. Why limit the freedom of Americans by letting people control the internet. We are already light years behind in the internet speed race with other countries (which majority have an open free internet unless you want to be a communist type and control it). Listen to America and don't change the internet.
—Nick Pearson, Birmingham, AL

Do you people have to sap any more right out of us than you already have. Geez, at least let us keep our internet.
—Jakaila kearney, warrenton, NC

Dear FCC, please stop supporting monopolies and think of ordinary citizens who want a fair, democratic internet!
—Timothy Bombar, Sammamish, WA

As more and more people get there news strictly from the internet, net neutrality is vital for ensuring that a select few are not able to control what the public knows and what they don't. It is already hard enough to find news that is not controlled by the interest of cooperations as many of the largest news sources are owned by companies with political interest. The internet is one of the last places where we can find unfiltered information. If companies are aloud to buy internet speed, crucial information and extremely politically relevant information will be blocked by inability to access them in the short period of time that consumers have come to expect. This is even more vital considering that more news is now being broadcasted by online videos which cannot be watched if the internet speed is not fast enough.
—Adia White, Santa Cruz, CA

It's a higher ideal. It's up there with freedom of the press. Everyday I sacrifice my life to the betterment of humanity and give more money than I logically should to help mankind. Why because it's a moral imperative. Nuff said
—Bryan Ward, Bloomington, IN

I'm afraid that if the Net Neutrality does not continue then information that powerful people do not want the public to know will be pushed to the back page of the internet and the information that the elite want to spread will be on the fast lane of the internet. There should not be an opportunity to prohibit free speech.
—Troy K Unruh, Newton, KS

I feel that by allowing the ISP,s to be allowed a 2 tiered system will just be the beginning . As you've probably noticed by allowing media conglomerates to procure more assets has had a very bad affect on our media! They will never get enough . Also many industry loving poliicans have restricted their on people from staring ISP's that would compete with the present telecom giants Please reign these monsters in before we loose another aspect of our democracy completely!
—Michael S. Thomas, Merchantville, NJ

I demand Net Neutrality!
—Susan Christiansen, Iowa City, IA

The internet should made available to everyone regardless or heir income or ability to pay. This will violate our ConConstitution. Equal rights clause.
—Earl Goldstein, Santa Ana, CA

I use the internet as a resource to learn and help in my personal and professional progression. Without access to this resource, I will be greatly hindered in my endeavors. I will always stand up for net neutrality.
—Cole Jorgensen, White rock,

Allowing libraries and business to be gouged by power hungry corporations with an insatiable thirst for every last cent they can squeeze out is un-American and closes the door to future entreprenuership. Does that sound like a promising path for the free world?? NO.
—Josue D., San Jose, CA

Tech innovation will be crippled without net neutrality!! The Internet should be equal for every single regardless of how much they pay the big ISP'S!!!
—Sergio Gomez, Sunnyvale, CA

It's the only way I can keep in touch with lots of folk, given my busy life.
—Laurel Facey, Millers Falls, MA

Every person in any economic bracket should have equal access to all information.
—Janet Dore, San Diego, CA

I think Net Neutrality is instrumental in ensuring that the Internet stays accessible to all.
—Janelle Palmer, Detroit, MI

Net neutrality was the way the internet was conceived. You have no right to change it for love of the unholy dollar. Shame on you for even thinking of changing it. Is nothing sacred in this country...everything seems to have a dollar sign on it....its all take take take and never giving back. Someone should really investigate this Tom Wheeler and see how much he is being paid or blackmailed to due this awful thing. I can't believe the president is putting up with this shit. Shame on him.
—John Di Fatta, Burbank, CA

I h use internet to contact all members of my family, to get latest news, and to investigate health related information, the latter of which I need to keep up with latest news, like side effects of medications I must take. The ability to do this is allowing me to stay out of medical facilities which drag on Medicare. I would think the FCC would care about saving money for Medicare usage. Please vote against whatever lobby decided you should make such information harder for us to get!!!
—Mary Pat Larsen, Concrete, WA

We americans want the internet open as it is now!
—June jones, Gilbert, AZ

Please just keep it a it is.
—Cole Richardt, No, MN

It is my will and the will of millions of other people that the internet has net neutrality so that there is not tiers of service for different rates and at different speeds.
—John Paul Troy Cooke, Edmonton,

You shouldn't be able to bully small business online by buying up all the bandwith. This will destroy what's left of the american dream.
—Ron Brownz, Greenbelt, MD

US telephone and Internet charges are already out of control because of government failure to regulate the industry. Currently, unlimited telephone and Internet DSL service in Germany is available for 30 to 35 Euros monthly. THAT IS $41 - $48! Stop screwing 99% of US consumers.
—Robert Edborg, Los Angeles, CA

You won't care what I say, you are owned your corporate masters. If you have any shred of morality left you will reclassify these huge ISPs as common carriers as should have been done years ago.
—Mr. Leonard Heether, Trufant, MI

BECAUSE IT REPRISENTS WHAT IS AMERICAN !!!
—Constance M Rodman, seattle, WA

The internet should be a public utility. It is a necessity in people's lives just like heat, electricity, telephone, television.
—Constance Engle, Hendersonville, NC

As both an artist and a small business owner, I rely heavily upon the internet for sales, website construction and getting the word out about my products. Not only am I incapable of paying the higher fees to "fast track" my products, but many buyers would be unable or willing to spend the time necessary to find my products. In short, a two-tiered internet would be devastating to both my sales and the promotion of my artwork. And I am only one individual. Combine this with all other sellers and you will find a widespread devastation to our already fragile economy. The only way to ensure equality would be to reclassify ISP's as common carriers.
—Michael Camarata, Medford, OR

not just net neutrality all forms of communications, stand up for the little guy we're paying the bill, You are pushing our great nation further and further behind, get your head out of your rectum and your hand out of the fat cats pockets and truely help the american peoples
—Chancellor Ibberson, Rochester, NY

An open internet, free of "slow lanes", allows innovative ideas to be shared with millions. If an individual makes a great website, but the website competes with an internet service provider's service (say Netflix vs. Xfinity), that ISP can throttle the individual's website until he/she pays the ISP. This gives ISP's an excessive amount of power. A video explaining my view point can be found here: http://youtu.be/wtt2aSV8wdw.
—Jason R. Rector, Chicago, IL

You need to stop.
—Stephen Severance, Mout Ephraim, NJ

Keep corporate power out of everything. We are a democracy
—William Resseguie, Phoenix, AZ

I need an open internet for my livlihood
—Harriet Heywood, homosassa, FL

As a retiree, my income is already very tight. Having to compete with businesses to get internet time, would put me at the back of the line. Please don't allow a system that would discriminate and put people like me at a disadvantage.
—Barbara Martin, Delaware, OH

Slow down the NSA- NOT the public!
—Stan Banos, SF, CA

Net neutrality means freedom of expression, one of the founding tenets of this country. Hijacking the net to feed corporate interest takes this intrinsic right away from the American people.
—Juliette, Havre de Grace, MD

as a neutral opinion, perhaps it would be better for them to instead of scrapping their rules, rewrite them to feature balanced areas of the original rules, sans loopholes, and also take into consideration a few of the internet's different pleas
—Charles Facette, Ottawa,

I want quality communications, network and video in my life. I do not want monopolies,higher prices and bad service. Make these corporations innovate to earn their money, not just make crappy Wall Street deals that enrich the few at the expense of American progress and quality of life.
—Chris Wegner, Moscow, ID

Tom Wheeler, in response to corporate dictates, is attempting to create a two-tiered internet: one for the 1% (and their clients and customers) and one for the rest of us. Stewart Brand once told us that information wants to be free. And it does. But corporations want to attach a high price tag to everything and make nothing free except their own endlessly and exponentially expanding profits. Say NO to corporate dictators and YES to the free exchange of information (as guaranteed in the US Constitution). Support Net Neutrality. Keep the Net Free!
—Leigh Clark, Granada Hills, CA

Net Neutrality is important because it levels the playing field among companies supplying content to the internet. Without it, ISPs will be able to restrict or price out vendors who they do not favor. This is not in the spirit of competition that this country has been built on. Government should be forcing competition, not restricting it.
—Adam Felchner, HONOLULU, HI

Eliminating Net Neutrality by Tom Wheeler is another insidious step that would take America further down the path towards Globalist Corporatist Fascism and be another block set up in the developing Architecture of Tyranny that is blatantly being pulled over on We The People. Keep the Last Bastion of Free Speech In America - the open and free Internet with Net Neutrality!!! Who are you working for Tom Wheeler?!? We are watching you.
—Rodolfo Bahr, Ortonville, MI

We all need to communicate the way we are now---freely and on a level playing field.
—Carole Abrahams, New York, NY

Because people are being gouged by the humongus corporate internet providers. Isn't the FCC supposed to look out for interest of the citizens. The internet is NOT, if it ever was, an information service - it is a means by which people receive information amongst themselves, from businesses, schools, non-profits, corporations, etc. can get their information out to people. It should be designated as a common carrier and the commissioners of the FCC do not understand this then they have been living in DC too long and don't know what's going on with the American people whose interests they say they are protecting.
—L Parker, Everett, WA

As a frequent internet user, net neutrality matters to me because I believe the internet has only become the breeding ground for innovation that it is to day because of the principle of net neutrality on which it was founded. Allowing the giant service providers with extremely obvious conflicts of interest the ability to dictate the flow of traffic on the internet would be catastrophic. All of this aside, the internet is quite clearly a means of communication and should be classified as such.
—Geoffrey Martin-Noble, Seattle, WA

The First Amendment is terribly important.
—Ann B. Clarkson PhD, Portland, OR

Most stuff I like is independently created and having fast internet for the big guys would make it harder for independents!
—Peyton, St Kilda,

There is no benefit to this for 99% of America. There is only a benefit for the CEOs and the 1% that is stripping our economy. The government is not serving us.. if the internet is restricted and it cost money to use for certain websites.. then it is only another roadblock to the success of American youth. Lets remove this roadblock before it exists.
—Tony Darnell, Cleveland, OH

Freedon of speech
—Kurtis magargee, Yorba linda, CA

For many low income people, including the disabled, the internet is the equivalent of library, radio and television. Breaking net neutrality would harm the vital flow of information to the people who need it most! Imagine if FDR could not have reached the citizens suffering from the effects of the depression with his fireside chats? Or if Carnegie's libraries split into members only seeing the best resources? The gentrification of the internet will be a death knell to freedom.
—Pam Parisi, Kingston, NY

This is one of the worst things to happen to the internet for everyone. Games, techies, non-geeks, EVERYONE!!! The internet was made for the free and open exchange of information, and they are trying to put the brakes on that. Its sad! Not only that, but they are trying to line the pockets of greedy ISPs and screw everyone else. They want the customer to pay more and the providers of high-bandwidth services to pay more. You know what that means? Crazy price hikes coming from all sides and stifling of innovations. This will screw internet startups and hurt quality services that we all enjoy.
—Aryar Rachogan, Ranch Cordova, CA

It seems obvious to me that internet access should be regulated as a common carrier like telephone. The technology is mostly the same now and the merged communication medium makes differentiating them odd. Preserve free speech and the free flow of ideas (why the internet was developed!) and preserve true net neutrality. Thaks
—Garth Shaneyfelt, Greenfield, MA

Hello, I am against a two-tiered Internet. It would ruin what the internet has been about for so many people. To create a two-tier internet and hand control of the web to major corporations would only cause problems for the little guys.
—Patrick McDaniel, Tampa, FL

Current plans will stifle innovative uses of the Internet. While this could provide a competitive advantage to some companies, it can provide such relatively worse performance for new uses that it will be a disencentive for consumers who may otherwise use a new idea or product. I do not create nor provide services nor products on the Internet. This is my opinion as a consumer.
—Craig A. brown, Fayetteville, AR

Net Neutrality is a very important issue. If this doesn't go through, the ISPs WILL start applying extra fees and a multi-tier system. They're already starting to do it in some cases. ISPs will raise prices, slow services, and never upgrade the bandwidth available. Net Neutrality is needed now.
—Jeremy Fischer, Durham, NC

I will never be able to afford the fast lane.I won't be able to afford Netflix or even basic cable. It's not fair that the 1% get every advantage.
—Lori Mulvey, Comstock Park, MI

Broadband access is a utility, please protect the American people's interests. Thank you, Shon Barrett
—Shon Barrett, Houston, TX

The access to information and fast and quick is important to me because it helps better understand what is going on in the world.
—Sarah Fordjour, Nazareth, PA

I voted for Obama because he promised to maintain net neutrality. What happened to that?
—Tita Owre, sarasota, FL

I am fed up to be spied
—Marie-Jeanne Leduc, Salaberry-de-Valleyfield,

The internet has become the primary mode that I use to obtain news and other important information that I use on a daily basis. It is essential to a well funtioning democracy to have an informed citizenry, which in this day and age requires the internet be kept open, neutral and free to all users.
—Barbara Schweizer, Philadelphia, PA

Stop the takeover of the Internet by corporate america.the internet must remain free,
—Steve Cummings, Mt Vernon, IN

Everyone should have equal access. Carriers may want to make more money, but the internet is a public utility--information should be available to rich and less rich schools and people-and ALL of the internet-no one should decide who can see what how soon. The open and free internet must be protected.
—LuAn M Keller, Catawissa, PA

The internet is NOT meant for a class system. There are enough problems in the world when it comes to classes, we don't need the only medium left to have this issue as well.
—Callum Mizzi, Fairfield,

Paying for internet speed should be handled at the user's end as it currently is. I pay $46 per month for bandwidth that is well below what other first-world countries receive. Internet providers should be classified as common carriers and not allowed to filter information content by dollars.
—Tom Videen, Santa Fe, NM

Everyone should have the same access regardless of social standing or affluence.
—Richard Sarafin, Shutesbury, MA

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Leonor Steiner, Spokane, WA

Most retired persons that I know spend large parts of their time on the Internet, so a free, fast Internet is especially important to us.
—David Brock, Mathis, TX

Classify ISPs as Common Carriers because that is what they are. They use our phone network to make money so we should all have the same access.
—Tom Barger, Mexico, NY

Net Neutrality will allows all of us to enjoy a communication system that is without economic bias for quality of service. Lets not make the Internet a class filter of haves and have nots.
—Tom A Wiley, Houston, TX

Net neutrality is quickly becoming a cornerstone point of our society. Being able to connect to the web is slowing being recognized as a human right. Limiting the internet in the ways you have proposed allows companies to discriminate against information, and double dip, charging both the consumer for access and the provider to access that consumer. It is at best a dirty business practice and at worst, a horrible horrible precedent. Maintain Net Neutrality... for the good of everyone, let it be our right.
—Mark Taylor, LEWISVILLE, TX

Net neutrality will destroy competition and drastically hinder innovation. The barrier to enter making your own streaming service based on a new tech will too large (any amount for a startup is too large) for anyone to start themselves. I depend on making sure my sites are fast, none of my clients will want to pay more to make their sites faster. This is a ridiculous idea. ISP are just a gateway connection the internet and should just be a common carrier, not a service to say who's traffic is more important.
—Alex Bor, Manchester,

Allowing ISPs to control content is a slippery slope, down which the end result is the control of information and the stifling of liberties. The internet should not be controlled by anyone or anything. ISPs should be considered common carriers.
—Davin Hazirjian, Newburgh, NY

The greatest thing about the internet has been that everyone has equal access. Why must those who have more money be allowed to buy faster access? It will ruin the internet.
—Ellen Asbell, Boyertown, PA

Net neutrality is basically a technological advancement which parallels the constitutional provision where "all men (and women) are created equal..." Whether by way of reclassifying Internet Service Providers as common carriers, or by way of categorizing the internet as a telecommunications service, the important action to take is to simply protect net neutrality as it it now exists - and this protection will thus further protect the equality of those who utilize this technological advancement.
—Joseph Schuchert, Brimley, MI

As a programmer, I use the internet to download libraries and supporting files for writing programs as well as keeping up-to-date on the latest languages with coursework. Without net neutrality, taking classes over the internet would be severely impacted since schools are already strapped for cash.
—Chris Jones, Odenton, MD

This "plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. These companies would have the power to pick winners and losers online and discriminate against online content and applications. And no one would be able to do anything about it." But most importantly it takes the freedom from the internet. It hurts minorities and other small businesses.
—Syene Jasmin, Trenton, NC

The internet has been an essential tool for my education throughout my entire life. Many of the websites I visit are not interested in making profits and therefore would not have the money to compete with websites that would be willing to pay for preferential access to costumers.Without net neutrality websites like this would be much slower, or have to focus on money instead of education.
—Juan Perez-Gea, Philadelphia, PA

Because everyone should be handled equally, whether you are a big company with lots of money or you are a small company with little money.
—Robbe Janssens, Eppegem,

The idea of creating a two-tiered Internet and abolishing Net Neutrality is the height of ignorance and corporate corruption. Congrats Mr. Wheeler, you have proven yourself to be a totally unethical, bought and paid for corporate puppet. You are a complete DISGRACE!
—Karl Pavloff, Cincinnati, OH

Neutrality is essential to allow justice and libertiy to be an expresion of humang beings in benefit of the hole environment, and this shoud not be bloqued or reduced. It is through all people actions in liberty and respect how we must live and grow. It is YOUR responsibility now to make sure it can be managed in the best way to defend the interest of the planet we live in. It is through Internet that we have the way to change things in order to have a better world for all, by SHARING IDEAS IN BENEFIT OF ALL. Please assume your responsibility. I am doing now what i think i have to do, by writing this to You. Kind regards, and Full Consciousness for You. Please do not consider this information if you think it is manipulated, or consider it if you think you should. Thank You anyway. Juan Antonio Alonso
—Juan Antonio Antonio, Guadarrama,

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Rachel Watts, anchorage, AK

Net Neutrality is essential to the future of the Internet.
—Willy Karam, New York, NY

Net neutrality matters to me because I believe internet should remain a publicly available resource.
—Elizabeth Criger, Tucson, AZ

PLEASE, PLEASE don't let the Charman pander to his giant communications buddies! You have the power AND the obligation to save the Internet for ALL!
—Don Sodrel, New Albany, IN

We deserve freedom.
—Carla, Buenos Aires,

Net Neutrality is the basic idea that internet service should be equal for all. In a debate between fair and benefiting a particular group, how could you ever side with the latter? Make the hard decision and listen to the people. Do what's right not what may benefit you personally.
—Joshua LeMay, Belfast, ME

A two-tiered internet is unethical.
—Sharon Swainson, Los Angeles, CA

I depend on the internet being a open, shared space, for my business and for the creatives I work with, and this plan would take all that away. It upsets me that the FCC would toss Net Neutrality aside so lightly in favor of burdening the users of the internet with fees and a unfair system of limiting access to those who can't afford these new costs. I and many many others depend on Net Neutrality, and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Karli Cooper, Kalamazoo, MI

I want to read and publish, without being censored, facts and opinions which are against the interests of big corporations. I want to be able to protest when victims of the so called free market system complain and I want to be able to defend their rights. I want to be able to organise resistence via internet if needed. We are human, not animals and slaves of a few thousand superrich people. It is time to make economy democatic, because the balance op economic power is dangerously out of order. How will mankind survive this 'economy of the superrich'?
—Hans Potters, OEGSTGEEST,

It is time to realize we are in the 21st century, and that internet is a basic human need.
—Brent Mosher, Tampa, FL

NEUTRALITY is the only fair way to go!!!
—Bethany Lynn, Concrete, WA

I request that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Douglas Friday, Chandler, AZ

This down-is-up, tiered-internet-is-good notion only makes sense in a few profit-obsessed boardrooms. It is NOT in the bests interests of the people of this country. You are CERTAIN to be on the wrong side of the history books if you fall for this scam.
—Tom Metzguer, Hillsborough, NC

I should have equal access to all sites, large and small. It should start with the network being deemed a common carrier.
—Neil M Schuster, Lutz, FL

Everyone should have free access to the internet, not just people with money.
—Wendy Dannett, new york, NY

Here in Mexico is very dangerous where your information might end. Last year our government leaked a Data Base of many of its citizens IDs and ended up in clandestine markets for anyone to buy. Information like these is very delicate in 3 world countries like ours, mostly kidnaping and extortion comes from not having security or privacy in internet. Please help us make the internet a safe place to share information.
—Eduardo Valdez, México D.F.,

Wheeler's proposal to allow internet content providers to pay ISPs for preferential treatment of the content provider’s data streams will lead to 1) a slowdown of content from all providers who don’t pay ISPs an extra fee, and 2) the passing on of content provider’s additional costs to consumers. Currently the Internet is in the same FCC category as cable TV services. Cable TV services are historically and still predominantly “one-way” communication systems. Clearly the Internet is a “two-way” system like the legacy US telephone system, and should be in the same Common Carrier category as the legacy US phone system.
—David Hall, Rancho Palos Verdes, CA

Whoever controls the information pipeline controls the flow of information. That is an issue which affects us all. The information highway needs to be for the people not just PROFIT.
—Michael A. Morgan, Kansas City, MO

In this time communication is crucial and it must be available to all, free, protected and transparent. Please do your job and protect net neutrality.
—Susan Singh, Tulsa, OK

The internet should operate on an even field, not on who can pay more.
—Zack Brown, McKinney, TX

Dear FCC, Net Neutrality is the defining action of our generation. It's the difference between showing the world now, and the future what we care about, money and privatization of what need to be public services, or equal access to a service that is the most popular, accessible, and helpful too our entire world has right now. Don't settle for Wheeler, don't settle for throttling, don't settle at all. Make the internet what it should have been from the start, a Common Carrier. Sincerely, Ty McNulty
—Ty McNulty, Milwaukee, WI

Net Neutrality matters to me because I think that the monopolization of the internet could lead to disastrous things and it is also morally wrong, but what are morals to someone who works to promote getting rid of net neutrality. Brendan Y. 15 years old.
—Brendan Thomas Yeager, Utica, MI

Your plan doesn't create a fast lane. It creates a slow lane. I'm already paying for internet access. The service I'm connecting to already pays for internet access. And we're all getting some of the slowest service in the world. Now you're going to allow these slow carriers to threaten to slow our already paid for service even more if they're not allowed to make even bigger profits than they're making now? The internet is one of the greatest sources of new businesses and new jobs in America. One that allows new companies to compete on equal footing with large companies. It allows small brick and mortar shops in small dying towns to compete globally and bring money into their city. And yet, your proposal gives the large companies an advantage over newly forming companies by making sure that he has the most money provides the fastest service. The internet companies aren't struggling. Don't give them more money at the expense of the whole economy.
—Douglas Wise, Washington, DC

For us ancients with modest means the internet as it is provides great connection to the world at large. Please keep it THAT WAY.
—Judy K Litt, Portland, OR

Internet speeds in the United States are already slower than the rest of the world. We don't need corporate greed making this issue even worse.
—Thomas Hibbard, South Lyon, MI

Be on the side of the people and not on the side of the monopolies. Be on the side of democracy. Be on the side of a free press. Be on the side of equal access, equality of opportunity. Be on the side of innovation. Be on the side of reclassifying the internet as a common carrier. Don't be a lobbyist tool.
—BeVan Presley, Plymouth, MN

because the internet HAS to be fair. Because neutrality is it's flesh and blood. because we need new content everyday and the new providers need a fair chance to express themselves. because of a lot of other ideologies that you could call idealists but above all, because we ARE living in a society that should be ruled FOR the people. And the people have SPOKEN, a LARGE majority wants neutrality and you know it. Policies shouldn't favor neither the rich or the poor, neither the corporations neither the small businesses. Do what's right, please.
—Yann Gbedo, Merignac,

I depend on the internet for communication with my distant friends and family around the world whom I care about deeply. If I can't rely on my internet for real-time communications, then I can not rely on my friends and family.
—Ian Sanderson, Sherman, CT

We want it back!
—will Stewart, Birmingham, AL

Dear FCC, it is with in your best interest to be on the side of the people on this issue if you do not want to deal with bigger problems. I urge you to throw out your rules that favor corporations and instead establish rules that favor the people (i.e. - reclassify ISPs as common carriers).
—Victoria Perizes, Long Grove, IL

This bill will only make hackers more active to pay you and the is p's back for this. I don't want to see this and I Believe in net neutrality.
—Logan, Sierra Vista, AZ

The internet is the one place where everyone is well and truly free and equal. The end of net neutrality would mean that people with enough money and power could censor the internet, and kill the only true democracy in the world. With net neutrality, the internet would remain an open platform that promotes free speech and new ideas– and companies like Comcast, Verizon, and AT&T would not be able to pick winners and losers on the internet in a way that benefits them.
—Kalli Kerr, Chicago, IL

As a student with lots of ideas if my bigger concurrents' websites have a favorited access it will not allow me to grow bigger and spread my ideas and products.
—Sebastien Michel, Atlanta, GA

This is going to kill the internet. This will kill new start-ups and possibly many existing sites on the web. You are selfish and disgusting to charge people a ransom for what we already have!
—Holly Crane, Springfield, NE

Over the past few years the Internet has become the biggest platform of exchange in the world. I think it is important to protect its neutrality and therefore its diversity so that getting information doesn't become the privilege of a minority. The Internet should be used as a tool to promote education and connection between people, not as a mean for compagnies to get even richer than they are.
—Juliette Michel, Atlanta, GA

Big money has bought nearly everything else in this country! Free speech can not and should not be for sale. Shame on those of you who are willing to sell our constitutional rights to the highest bidder. Net neutrality is essential for a free country and free speech. No selling out our rights! ISPs are common carriers--- not owners of the Net.
—Sharon Anderson, Napa, CA

By failing to reclassify ISPs as common carriers, the FCC is transforming regulated monopolies into de facto unregulated monopolies. As gate keepers to the internet and with the FCC standing aside and allowing their charges to set up a system to squeeze the public for more cash, these companies, as all monopolies invariably do, will use their monopoly power to squeeze the public for more cash. Using their monopoly power, they will shrink the supply of fast lanes, for which they will charge a premium, and with the help of the FCC increase the supply of very slow lanes for the majority of the public. Please do not allow a few ISPs to appropriate the commons, i.e, the net, for their own personal gain. This smacks of yet another government policy contributing to the income gap between rich and poor and contributing to the decline of our democracy. Despite the fact that the comments made by the Chairman strongly suggest that the FCC has been captured by the industry it was appointed to regulate, the FCC has a solemn duty to protect the public from profiteering by those it regulates. The net is the public's collective commons to be protect by the FCC for the public's use, and not the private estate of a small number of well connected ISPs for their own enrichment, facilitated by the FCC, and at the expense of the public.
—Michael Harrod, Arroyo Grande, CA

I rely on the web as a vital communications conduit, both as a producer of content (university library, community organizations) and as an informed citizen. "Fast Lane" or tiered service models erode the value of the internet for everyone.
—Mr. Gabe Ormsby, Minneapolis, MN

because free and equal access belong to all not just those with larger funds
—Max, leicester,

The Internet must stay neutral and must not become a fast vs slow lane corporation nightmare.
—Brian Dakin, jonquiere,

I do not want my internet providers to discriminate by dictating lesser speed the speed or quality of service for rival companies. I believe that we should treat internet providers as common carriers, as the internet is no longer optional for many industries. A highway of commerce should not have it's laws dictated by private businesses who have every interest to curb and harass trade to their benefit.
—servete Kolar, Staten Island, NY

I'm a web designer, and if the FCC ends Net Neutrality, I will likely lose my job because my clients will not be able to afford to pay the extra charges to keep their website fast/accessible. I'm only trained in web design, so if the above happens, I'll be unemployed, and will likely lose my house, car, possessions, etc, as I won't be able to pay for them without a job.
—Hugh Dickson, Devizes,

Because blackmail should not be legal
—Jesse Charschan, Scotch Plains, NJ

You have the responsibility to protect public access to communication for everyone. Do your job and protect the little guy from these huge companies that have only profit as a motive. Make them do what's right, and reclassifying ISP's as common carriers would serve the purpose admirably. Sincerely, Joni Metcalf-Kemp
—Joni Metcalf-Kemp, Greenwood, IN

Net Neutrality is an important to the freedom of speech. With out Net Neutrality, there will be mass-content filtering and will lead to the redaction of the FREE internet. FCC DO YOUR JOB. TAKE THE MONEY OUT OF POLITICS. Net Neutrality is the WILL of the people YOU serve.
—David Tiao, Williamsburg, VA

It is in Americas best economic interest that we preserve and strengthen Net Neutrality. It creates an even playing field and allows anyone to access or run their businesses, communicate freely and continually push the boundaries of technology and innovation. Something America is known for. I fear that if you allow these corporations an avenue to monetize and capitalize on the very thing that makes the internet amazing; a currently free and open line of direct communication with no specific bias or set discrimination against a set people or party, you will have successfully destroyed the past decade of technological revolution. This would be a economic catastrophe seeing as how this is one of Americas most important areas of economic growth it behooves you to preserve and encourage it. I urge you to do not put more power into the hands of these corporations. Let we, the American people decide our technological and economic future! What frustrates me the most as that you hear millions of Americans against your current plans yet you ignore us and move along with it anyways. Its applauding and disappointing.
—Dustin d'Arnault, Dallas, TX

I rely on my internet connection for telephone, television, news and information and most of my personal communications now. I can't imagine a more common carrier, and the net neutrality rule proposal on the table will not protect or preserve it. It must be re-classified to be able to assert regulatory authority. The net is now a public good and should be treated as the public service it has come to be .
—Kirk Leonard, Salem, OR

The internet must remain an open platform for speech and commerce.
—Steven Blanco, AUSTIN, TX

The internet needs to remain a free and open marketplace of ideas. The end of net neutrality is the end of personal freedom on the web.
—Daniel, Butler, PA

First of all, I think it caters to the rich and is discriminatory.no individual or company should have the right to discriminate and restrict information on the Internet. It is a form of censorship, which is essentially what the TV and radio news networks do. I am a senior citizen and it is my main source of free, indiscriminate and unbiased information. I cannot afford TV
—Harold R LeTourneau, Tacoma, WA

This is really important to me. Net neutrality is vital, to prevent a takeover of the internet and charge high fees for fast service. Leave it alone.
—Elin Heard, Jerome, AZ

Net Neutrallity is important to keeping freedom on the internet. It allowes new companies to come up. It also stops big companies from taking advantage of people.
—Ammar Vohra, Collegeville, PA

As a college student who just finished her first year, the idea of some information being less accessible is honestly kind of repugnant to me (also, Netflix). I do most of my research for classes and for personal interest on the internet, and I also use the internet to interact and communicate with people from around the country and the world. The internet is too big and far too important to be controlled by selfish corporations, especially because it's sort of the last place we have where that isn't always entirely true. Although recent studies have shown that America is much more of an oligarchy than a democracy, keeping net neutrality is one of the few things that would tip the scales slightly more towards the democratic side of the scale. I hope you want that as much as I do.
—Ms. Tamar Novetsky, Teaneck, NJ

Net neutrality promotes competition, opportunity for everyone and the American Spirit! Equal access to a neutral internet is just as important as civil rights. A neutral internet will protect individuals' freedom from infringement by governments and private organizations.
—Lauren Elbaum, Miami, FL

The main purpose of the internet is to remain open and free! its our right to have a free and open bandwidth from service providers as you should be more concerned with public interest rather than businesses interest. Wheeler, you're murdering net neutrality.
—AlJawhara, Riyadh,

Keep the Internet fair for all!
—Jennie deBeausset, Grosse Ile, MI

This is an application of my first amendment rights and I feel violated that it is being messed with.
—Wilma Rittel, Roswell, NM

I entirely feel that the decision to get rid of and or end net neutrality is one that will have extreme future consequences. I feel the FCC should work to spread fiber networks across the United States, to once again make us a world leader, instead of focusing on destroying that which is of our future.(The Internet) I feel that allowing this unfair play between corporations would be a complete disaster. P.S. It is extremely hard for me the average citizen to not see this as a corrupt move on the FCC's part. My prediction is that one day this nation will realize just how corrupt this government is and in some way topple it.
—Michael Cody Stewart, ponca city, OK

The recent rules proposed by the FCC will prohibit innovation and entrepreneurship by small businesses trying to break into the market. As an Operations Manager for a tech start-up which uses video, I am constantly met by restrictions in broadband access and the reliability of the connections we employ. These new rules would further our ability to innovate and grow. Don't hurt the life-blood of our economy. Throw out these rules!
—Joseph Mabus, Evanston, IL

Corporations are not people. I am a person. Do not destroy net neutrality.
—Corey Shepherd, lakeland, FL

I do not want large industries monopolizing the internet in order to exploit their own interests instead of focusing on innovation. I believe that if large Internet providers tier the internet, development of telephone and computer industries will slow immensely. Furthermore, I like to read anything from news reports to recipes from different sources - from small, specialized news websites to personal blogs - and not just from large institutions like the New York Times. Especially as a college student who has incurred a lot of debt and is financially strained, I would not be able to afford "premium" Internet from Internet service providers; thus, I would use the Internet less, and therefore inhibit more people from innovating. Let's look at history; Western Union monopolized the telegram industry. Princeton's Starr said, "Even in its heyday, [Western Union] also devoted little to research." Rather, telecommunication incumbents "invest more in politics than in technology – indeed, they are downright frightened by innovation, whose ultimate effects they can't control." Big companies won't invest money to research and development; they'll invest it in politics. Research, development, and innovation of the Internet is important to me because it means that the small-scale political blogger will have equal opportunity to gain views as large institutions like The New Yorker. As someone who loves to read small-scale, personal blogs, I would be disappointed and angry that it would take much longer for these small blogs to load compared to the New Yorker website.
—Nancy Ko, Los Alamitos, CA

ISPs state that their reasoning for wanting to be able to treat packets differently (based upon content, customers, etc) is due to their being overwhelmed by the amount of usage and can't keep up. Well, then they need to expand their infrastructure! When a customer pays for a certain amount of bandwidth, it is an agreement that the company will provide that bandwidth so long as the customer pays the fees to use it. If the service that company provides becomes so popular that the company can't keep pace with the demand, then they have two options: expand your infrastructure or reduce your market share. Breaching the contractual obligations (i.e. ceasing to provide internet access at the agreed-upon speed) is not one of those options. The plan of the ISPs is nothing more than to create a digital mafia. Those whom can afford to pay the required protection money will have the privilege to do continue acting as they were before; so long as they don't do anything objectionable that might invite retaliation (e.g. criticize the ISP, its parent corporation, or *anything else* that is found even mildly distasteful). The Internet is, by design, a common carrier. Great minds of decades past realized the need to protect such systems from censorship - be it by the government, companies, or anyone else. Do the right thing and classify the Internet as a common carrier.
—Samuel Walters-Nevet, Rockville, MD

Net neutrality is important because it promotes a free and open market on the internet. If smaller companies cannot pay the fee to speed up their internet, the user sees this company as either having diminished quality OR the consumer ends up fronting the money, which thereby decreases competition in any industry the internet touches. The recent merger of Comcast and Time Warner is also alarming, seeing as these cable companies effectively form a monopoly on the cable industry. How is this capitalism?
—Mike Albanese, Lemont, IL

Stop Screwing Up Everything In The Name Of Greed.
—Raven Mitchell, Uttoxeter,

Its harder for small companies to get noticed on the internet because they would have to pay extra money so they get on the "Fast Lane". If they don't then there website would be slow and useless because no one wants to stay on a slow website.
—Tyler Hill, lake in the hills, IL

I have been around the world twice using internet all over and having the neutrality keeps it to where people are free to think and do as we like. Plus if this is taken away alot of hard core computer types will just end up haking the system and then you the FCC would be mad cause your losing money faster than you could make it so don't do this to us or yourselves.
—Eric N. Galloway, Grovetown, GA

SAVE NET NEUTRALITY!
—Justin M Villa, San Marcos, TX

We need to stop the increasingly dangerous income gap in America, and your duty is to ALL Americans!
—Roberta Richardson, Melbourne, FL

As a teacher of computer science and technology, I don't want to have to educate my students during a time when the single greatest benefit of the web, it's freedom, is threatened or compromised by a country that claims freedom for its people. As a society, we've already drifted down a path towards a powerless people, imbalanced by regulations that provide disproportionate advantages to the few. Information, knowledge and expression should not be a brokered commodity when we have the resources to keep the web free and equal for all. The bottom line: I will vote against any representative or administration that imposes regulations limiting the freedom of the web or that promotes policy which imbalances access based on financial means. To a degree, this is already a problem that would be made worse by such policies.
—Chris Cozort, San Jose, CA

The internet is the most powerful resource the world has, not nukes, not soldiers. I will act alongside others at the vanguard to protect the most pure resource my generation has. No lawmakers will destroy my RIGHT to the internet and all it has to offer without a fight.
—Jacob Gordon, Woodinville, WA

America is a country built upon its freedoms. Taking those freedoms away is taking away part of America itself, and in the name of what? Greed. This isn't the America I was born in, nor is it the one I want to live in.
—Leila Wilson, Pomona, CA

Because many of the people in the US who I know use the internet because they don't have the money to spend on entertainment. This will negatively affect them and many others like new companies trying to get started on the net will have a huge disadvantage toward other already established ones.
—Vito Pichini, Perth,

I thought the government wasn't supposed to pick winners and losers. The internet is a public good, just like the airwaves.
—Jeremy Bourget, Rumford, RI

we should all have access to the exact same stuff. no one person is better than another unless the are mentally or physically inferior.
—Santiago Bliss, san francisco, CA

In a true democracy-information which shapes knowledge, thoughts should be available to all equally. . .a two tiered system is propels entertainment conglomerates to the forefront-net flix, directv. . and those who can afford it but does nothing to promote a more informed society just one that is entertained. The novel "Fahrenheit 451" realized.
—K Carr, Long Beach, CA

Right now you are allowing big business to have priority over small businesses. This isn't equal. Throwing out the idea of equality so you can show favor to the elite is wrong. It always has been. Nothing good has ever come from favor the select few at the expense of others. This is what you are currently doing. We need net neutrality. We need equality.
—Lynn Pawlowski, Boothbay, ME

Dear Mr. Wheeler: I've been using the internet for years and to see it's neutrality go away would really be a heart breaker. Please protect the interests of all of us, not just a few, by classifying ISPs as what they really are, common carriers. (And we need more of them).
—Faith Gagne, South Yarmouth, MA

ISP s should be common carriers
—Don MacDonald, Watertown, MA

There is too much corporate dictatorship already.
—Murray Howlett, Regents Park,

I want Net Neutrality because I want equal opportunities for internet users.
—Lisa Pawlowski, Boothbay, ME

If the FCC doesn't reclassify ISPs as common carriers, net neutrality will not survive. When you see how the Internet is used in business and in lives of individuals, why would the FCC not reclassify it? The Internet IS the most common carrier being used by everyone today! Please, do what is best for the individual and the small business community. Our government shouldn't be in the business of ensuring that big companies continue to rake in obscene profits for their CEOs and shareholders on the backs of the ordinary person.
—Elizabeth Hinnant, Vancouver, WA

Unlimited internet access already means limited data and speed, imagine how it will be without net Neutrality
—Chuck Gushlaw, Watertown, NY

The importance of the internet to allow the people to access free information and other related outlets that provide content. Its essential, the ability to inform one self via the internet by the vast amount of distributed knowledge to educate, learn, and form one's opinion of the world around them.
—Javier Garay, Whittier, CA

Net Neutrality boils down to free speech online. Wealthy companies's voices would be heard; everyone else would be drowned out. Please do not take away free speech just because internet carriers don't want to invest in building more towers.
—Rachel Story, Cape Girardeau, MO

Because Internet acces is important for everyone - not only fpr big companies
—Michael Steinmeyer, Wagenfeld,

No blocking! No discrimination! No slowdown! No speedup. Reclassify broadband Internet access as a telecommunications service. Reclassify ISPs as common carriers.
—Gary Hosey, Greensboro, NC

Restricting communication in this manner goes against the ideals of free association and access to reasonable information. This is nothing but a money-grab that will restrict communication, reduce happiness, and further widen the worlds' growing economic gap. There are better ways to deal with the bandwidth ceiling. Keep the net neutral!
—Colin Pinnell, Stony Plain,

The internet providers can change the cost or restrict data flow without net neutrality
—Bob Tim, canton, OH

Net neutrality is important in maintaining a fair and open internet for the American people.
—Quentin Carter, Portland, OR

The internet has become a rising job market which has been helping boost the economy, and, naturally, many people's income rely on it. Slowing the internet down for sites that can't afford to pay for higher priority will severely cripple the growth in the market. We can't afford to nip this in the bud right now.
—Michael Burke, Chicago Heights, IL

You suck. The majority of America hates you. As a young adult growing up in America, I have been privileged with the right of Net Neutrality and firmly believe that with Net Neutrality, America is the leader in technology commerce and a treasured leader in free speech. Because of this, word spreads faster than it ever did, cover ups and lines are exposed, all have a voice, whether hateful or uplifting and everyone has the ability to access any information they can. But with the new proposed guidelines, who will have a voice? Who can post whatever they feel like? With Net Neutrality my voice is being heard right now by some one but what happens when it's gone? The very principle every single company started with in the wee hours of the internet age will be taken away. Without Net Neutrality, none of the current companies taking it away right now would exist. Of course you don't care about any of this, you just want your paycheck. You're discriminating against those who helped build you yet claim that it's blown out of proportion? Shame on you all.
—David Merchan, Cedar Rapids, IA

Innovation cannot thrive in an environment where the biggest wallets can purchase preferential treatment. The internet, and its startups, have been a huge source of economic growth and we need to maintain that innovation-supportive atmosphere!
—Eric Danley, 60544, IL

I strongly believe that the last mile is not a competitive market very much like the railroad industry. We need to guarantee equal access and prevent the same mistakes we made with the railroad trusts. And for that matter, why would we ever make a perpetual sale of bandwidth? At least lease it!
—James Kleckner, Palo Alto, CA

Please, keep net neutrality.
—Joseph P Piontkowski, Tarentum, PA

Don't let large business win over the common citizen. We have a right to equal access.
—Henry Burger, Palo Alto, CA

Net Neutrality is important not just for small businesses, but for diverse political discourse. Both of these things matter, and destroying Net Neutrality harms both.
—Lance Johnson, Pensacola, FL

I don't like being backed against a wall, my choices made for me by a bully who thinks he can because he is bigger than me. I've never backed down from a single aggressor who tried. I will advocate in opposition, I will never succumb, I'd rather play my uke or guitar in the woods for entertainment and kiss the internet goodbye, then to yield my freedom. I will base my future voting on who is out there to protect neutrality. Whoever even thought of the idea of this new level of control should be ashamed of themselves. Though, I bet they are quite rich from the idea and fancy themselves a great deal. Nothing like having huge corporations love you. I call that person a sell-out. A thief who sells other's rights.
—Michael Downs, Hillsboro, OR

Freedom is our right.
—Kerrie L DallaCosta, Eugene, OR

Dear FCC, The internet is a great vehicle for democracy, for the ordinary person to be heard by any and all. If you put an end to net neutrality and give control of the internet to the rich and powerful, you will essentially kill one of the most generous gifts of free and accessible communication for all. Please restore this gift by reclassifying ISPs as common carriers. The internet should not be owned by anyone, but should be shared equally. Sincerely, John Rockwell
—John Rockwell, Barnet, VT

The internet is one of our most democratic spaces. Let's keep it that way, please.
—Ariana Wohl, Providence, RI

This country is based on competition in order to make it liveable for all of us---we must not have just one provider--we need competition!
—Marian Krewson, bELLEVUE, WA

Payola has always bee illegal. By allowing companies with more money to pay extra fees you are effectively cutting out the small, independent voice. This is nothing but payola and should not be allowed to go forward.
—Marianne Flanagan, Des Plaines, IL

prioritizing what internet services can run at what speed jeopardizes their ability to effectively be heard by a wide audience. freedom of speech should truly be free and that includes the internet. What makes the internet great should be preserved or it is not worth having.
—Mr. Brian Seabury, Houston, TX

The internet is great because it's an equal playing field for all great ideas and rewards innovation no matter if a big company is backing it or not. To change that would mean the end of the greatest thing to happen in our lifetimes. A free and unbiased internet gives the people the power and allows what is good, appreciated, and wanted to be popular, not for us to be spoon fed what major corporations want and nothing more. You HAVE TO RESTORE THE LAWS THAT ENFORCE A FREE AND OPEN INTERNET! No one wants to live in a world without it.
—Michael Shackelford, Cincinnati, OH

The Internet is a public common good. Call it what it is, and regulate it that way, please.
—Stephen G Schoggen, Little Silver, NJ

Without sufficient rules and regulations, any entity will use abuse it's power to the fullest. They will try any way they can to raise profits unless the government limits them. Does the plan the FCC's chairmen proposed favor ISP's significantly versus free enterprise? Yes.
—Bascomb Arnette, Los Angeles, CA

Its important for me
—Yonathan Gordon, Northbrook, IL

We already have enough distinction between the have and have -notes. Access to information should not be in that category.
—Diane Rojas, Arlington, VA

Everything of value about the internet has been collectively created by the people, for the people. For corporate cable cartels to come in now and ruin it for their own gain is offensive to all that we have built. Throwing out net neutrality is an insulting disregard for the collective value which we have created without the cable companies who seek to rake in obscene profits at our expense. Please reclassify the internet as a telecommunications service to keep the ISPs from ruining our internet.
—Lindsey Medeiros, Stoughton, MA

Equal access to all web information is important to maintaining democracy. We should not allow ISPs to control our content by making website owners pay more to reach us better. American citizens have the right to access any information they need at equal speed of the large companies that can pay the ISPs more. We need to maintain net neutrality so that the people can control what they learn and enjoy online. Please do not allow corporate greed control us online, as it does on TV. American citizens need to feel they are more important than money - for once.
—Carolina Lavayen, Las Vegas, NV

Net Neutrality is necessary for a free internet, free people, and free enterprise. Don't kill it.
—Michael Edwards, Rancho Santa Fe, CA

The internet thrives because it is a fair and equitable platform for all types of discourse, allowing ISPs to ransom access will spell the death of the free and open marketplace of ideas.
—Michael Grgich, San Diego, CA

This is my only source of news.
—Dr. Diann Taylor, Independence, MO

I think Net Neutrality is important because the internet must be treated like a public utility and remain open for all content providers without having to pay to speed up service. This is the only way to ensure that innovation in online content continues, and to keep the internet the open, unfiltered communication channel it is.
—Donna Ellis, ASHLAND, OH

The internet has the potential to be a giant force for equality in the world... A way for human beings to connect... The global village brought home in a real way... Net Neutrality is crucial to maintaining democracy and freedom online...
—Ksenia Danylevich, Washington, DC

I don't want big telecom companies controlling the internet!!
—J martin, Henderson, CO

Corporations should not dictate the content of what I see and use. Ending net neutrality will kill the net as we know it.
—Brian Hicks, Lemont, IL

This is the last source of a free press. If a free internet ends, a free America will no longer exist.
—Michael Sullivan, KALISPELL, MT

I do not need my freedom on the internet to be taken. I do not need my prices raised and I do not need slow speeds because of this. Reclassify these carriers as common carriers, revamp the 30 year old common carrier laws to apply to TODAY's situation, and be done with it.
—Matt L Perkins, Mesa, AZ

The internet is a open medium for information and therefore should not be infringed or moderated by government bodies.
—Evan Knutson, Loomis, CA

The public needs access to the unvarnished truth, whatever and wherever that may be, without having to pay for certain venues, if our democracy is to survive.
—Linda Sullivan, Huntington Beach, CA

One of the things we Americans pride ourselves with is the ability to go from nothing to something. The ability to use our brains and skills to not only make a living but make the world a better place. Killing net neutrality will make it harder for the little guy to make a positive difference in the world because their voice will be further stifled. I hope it is evident to you that killing net neutrality is just another way for large companies to make more money and make it harder for there to be any innovation.
—L Chibesa, Austin, TX

People of all economic levels should have equal access to information!
—Mia D, Oakland, CA

Hello, I am concerned with allowing ISPs to create an arbitrary tier system of bandwidth based on a companys ability to pay. Doing so would allow IPSs to pick winners and losers, eliminate competitors unfairly and would inhibit new e-commerce growth and innovation. Please rethink your decision. This isn't just about netflix and some gamer trying to top the leader boards, it's about fair practice and free speech. Thanks for your time. Cheers, William Collins
—William Collins, Charlottesville, VA

Please throw away these rules and reclassify Internet service providers as common carriers in order to preserve real net neutrality. Please help to assure fair prices for all. A neutral network facilitates innovation and communication which benefits everyone. Please help to keep information and knowledge open and freely accessible to all without discrimination.
—Michael fernandez, alpharetta, GA

Please help the American people to have a fair say in this proposed monoply of cable providers.
—Linda Bishop, Sebastopol, CA

I'm a Realtor and work more and more on line. Even when I'm showing houses I carry an iPad to answer client's questions about this or other homes. Once while showing a house the client asked what it might cost to remodel the kitchen. I was able to check that with the Cost vs. Value report from Remodeling magazine on the spot so she could make a decision. For me to have a degraded time response because bandwidth is taken up by "priority" customers is unfair. I switched from Comcast to DSL service from Century Link last year and it was a big mistake for time spent on the internet - much slower (usually 3-5 Mbps) which is killing me. I spend half my life waiting for the computer to talk to the internet. I'll be back to a cable provider the minute my 2-year contract is up. When I switch back I expect to have the same download speed as before - 20+ Mbps.
—Dave Sutton, Portland, OR

The FCC must protect fair and equal access to the open internet by classifying ISP's as common carriers - period!
—Ms. Carol Ortiz, Montgomery, TX

This country is supposed to stand for freedom, so why are you taking that away?
—Meghan C, Lewisville, TX

Money should not determine the manner in which the internet functions. Everyone should be able to use the internet at the same speed.
—John Hunt, Sunset Beach, NC

Public, not privatization
—Rafael Stephen, Riviera Beach, FL

I believe in freedom for all. Not just the powerful
—Keith Miller, Cleveland, OH

I want an internet that is free to speak out, as America was meant to. Attempting to defeat the freedom that our nation is built on is a foolish choice, and it would be our undoing.
—Logan Overton, Cottage Grove, OR

It saddens me that immense, powerful corporations could take over one of the few things left where there is a level playing field for all of us. Can you not see how terribly, terribly wrong this proposal is? What would be the possible purpose of this other than to disenfranchise Everyman and pad the bulging pockets of out richest corporations? Is the FCC bought and paid for?
—Susan van der Naald, Oregon City, OR

I would like the FCC to throw out its rules and instead reclassify ISPs as common carriers.
—Logan Griffin, Ojai, CA

Net neutrality is a fundamental principle to an open and free internet, enough said.
—Andrew, Burnie,

The internet is functionally a public utility, and it must be strictly governed by the principle of net neutrality. No access-provider company has the right to enclose portions of the internet, and give preferential treatment based either on willingness to pay or ideological alignment with the access provider. This principle is far too important to be subject to negotiated agreements by Verizon, Google, or anyone else. The internet is a public commons, and cannot be carved up into fiefdoms governed by access provides for their own financial or ideological goals. FCC must use its full statutory authority, including the accurate reclassification of internet service providers as telecommunications providers, to ensure that net neutrality is enshrined formally in law. The existence of net neutrality in practice is already beginning to erode under the commercial machinations of ISP's, and will collapse entirely soon without FCC action.
—Jim Steitz, Gatlinburg, TN

One image comes to mind, from the FCC's current action, one line from one classic novel: "All of us are equal; some of us are more equal than others." There is no open internet when some users are privileged over others in any way or for any reason.
—Lesley Shure, Boerne, TX

Chairman Wheeler's definition isn't exactly what I had in mind. Please reclassify ISPs as common carriers. Stand up to the big guys, please.
—Mrs. Gunta Norman, Coquille, OR

Control over the internet shouldn't be handed to a few businesses. The internet doesn't belong to a group of companies. It is a huge mistake, and will hurt people unable to afford extra fees. It will restrict the freedom of people's access to online content without the say of people who use the internet.
—Meg Luce, ewa beach, HI

The US has dropped from eighth place might not be worth a worry if it weren't indicative of bigger problems in the U.S. broadband market. Marguerite Reardon of CNET recently wrote that U.S. cable providers aren't exactly encouraging consumers to adopt high-speed broadband -- "and when they do, they charge significantly higher prices that escalate as you move to faster tiers." The Huffington Post reported last month that several cable company CEOs had begun releasing editorials extolling U.S. broadband prices and speeds, likely in response to spates of recent criticism about both. And again, ninth out of 243 countries isn't bad. But if America's large cable companies keep pricing their services so as to discourage high-speed broadband adoption, the Internet in the U.S. will only keep slowing down relative to the rest of the world.
—Mr David Rose, Martins Ferry, OH

Net Neutrality is the backbone of the Internet, it's the reason that the Internet is so great. Voiding Net Neutrality would be killing the Internet.
—Erik Gustafsson, Skövde,

If ISPs are allowed to create faster internet access for people who can afford it, innovation and small business will be crushed, along with a large part of the economy.
—David Gardner, Bentleigh East,

We must have free and open access to the internet available to all viewpoints, not just those favorable to the elite interests in our society. Protect Net Neutrality!
—Jere Cockrell, Missoula, MT

Your job is not to provide unequal access to services!
—Michael Lawlor, Anchorage, AK

Supporting Net Neutrality is the only thing that makes sense for protecting the interests of the American people. Reclassifying ISPs as common carriers protects the internet as we have come to expect it, where all data is treated equally. Tom Wheeler's plan to allow for two tiered service only serves the interests of the massive ISPs that already stifle growth and competition. Real Net Neutrality needs to be protected, it is time for the FCC to stand up and protect the interests of the citizens of this country and not kowtow to the companies it is supposed to be regulating.
—Keenan McCardle, Peoria, AZ

If the FCC allows for Internet Service Providers to discriminate based on content it will be the end of the Internet as we know it, where instead of consumers deciding what they want to see and produce on the web, companies like Verizon and Comcast will get to decide, stifling the economy, innovation, and the full expression of human thought. I've made my living for the past decade online working with a variety of different communities, many of them immigrant communities and communities of color. It is already difficult enough to exist outside of giant technology companies like Apple, Google, and Facebook, if those communities also have to contend with getting through whatever cost filter Verizon and Comcast set up, the FCC might as well be saying they shouldn't exist at all.
—Kyle de Beausset, Grosse Ile, MI

It will make our e-business and IT sector far less competitive! Why are we selling our IT sector to lobbyist and monopolies.
—Simeon Bourim, honolulu, HI

Net neutural is necessary and Net neutural means that noone get to fast track.
—Mary gibbs, addison, IL

The internet is one the highest level of freedom of speech where your voice can reach nearly everyone on the planet. Limiting the internet, or putting in place payment tiers, is akin to charging extra for our right to freedom of speech.
—Joseph Naulty, Augusta, GA

I want a free and open Internet, as unregulated as electriicity, like it is now. I don't want companies controlling what I can and can't do on the web!
—Zane Miller, Fort Collins, CO

This does NOT truly benefit the consumer in any way whatsoever. It only provides CORPORATIONS and those with large sums of money to further their own interests at the expense of equality. I beg and urge you to reconsider.
—Tyler Scherer, Pittsburgh, PA

Net Neutrality is important because it means that my family and I won't have to pay more to enjoy the things we love. It means my friends will be able to have a chance to start their own business without being crushed by the bigger company and it means the Internet can be free to continue to express their right to freedom of speech.
—Charles Harris, nampa, ID

Net needs to be a public utility with unlimited access and without fees
—Lisa Patrell, Ann arbor, MI

If you change the system, access will change. It works now. Don't mess with it.
—Beth Rankin, McMinnville, OR

The Internet is many things: some good, some not. But it is fair and equal, allowing ideas to be shared across the board and reminiscent of the original ARPANET. Please allow the Internet to remain neutral.
—Frank Congedo, Wappinger, NY

NET NEUTRALITY is the one thing that almost every nation has why should we be any different. GIVE ME LIBERTY OR GIVE ME DEATH.
—Jacob Ludwig, Altoona, IA

I am the co-founder of a start-up that competes with a number of large companies. If my service were relegated to a slower speed than theirs, this would kill my ability to compete.
—Richard Barnes, Minneapolis, MN

If corporations are able under any circumstances to place a barrier in between any individual or corporation's message and the natural and maximal capabilities of the internet, it places the fundamental freedom of speech upon which our nation is built in peril. It is clear from the proposed rules that the FCC wants to create a legal method which allows ISPs to give preferential treatment to entities who will pay a premium for it. The inexcusable problem with this course of action is that currently every internet user that is providing content enjoys unrestricted access to the fullest and fastest capabilities of the networks that their content is being delivered on. There is no way for any ISP to provide a premium service over and above this current maximal ability of the network without laying many miles of new cable - something which many ISPs are admittedly unwilling to do due to the immense cost and the lack of a readily available market. This means that the only way to create a premium service for the customers who elect to pay for it is to downgrade the service available to the common user. Reclassify ISPs as common carriers so that the FCC can enact real change and control over an industry that is quickly becoming one of the most important of this young century. I understand the reluctance to regulate business too strictly for fear of losing it overseas, but keep in mind that these ISPs are forced, by the definition of the service they provide, to operate in the USA. Their capitol is here and they can't take it anywhere else. Thank you for your time.
—Michael Croweak, Cheshire, CT

The Internet is a utility and like water or power should be regulated and available equally to everyone.
—Richard Corbeil, Fremont, CA

Have you not forgotten about the 1996 telecommunications act where the ISP's where nothing but just providers, and not trying to be gate keepers as in the limiting us on going on the internet. They were supposed to upgrade our infrustructure to give us bigger speeds, not lower it. Even with the upgrade of the infrustructure going from copper to fiber optics that has not been done. How is this anyway a step forward. This is only a step backwards and a big one if it actully happens. Small buisness will get crushed, their names on the internet would not even scratch the surface.
—Erald Bardhollari, Royal Oak, MI

Keeping the internet open,free, equalfor all of America is integral for out democracy and free speech.
—Barbara postema, Rochester, MN

Dear FCC Net neutrality is extremely important to my day-to-day life. These new rules for the internet are harmful to the internet and its free-market of ideas. Phone companies don't regulate which people I can call more easily, so why should internet providers be able to regulate what websites and computer servers I can connect to. RECLASSIFY ISPS AS COMMON CARRIERS. Thank you for your time, Trevor Grover
—Trevor Grover, Logan, UT

Reclassify ISPs as common carriers! The internet is a free form of communication, and ought to remain that way. Throw out the proposed new rules!
—Sophie Morgan, Lexington, MA

I insist that you reclassify ISPs as common carriers. Any loophole or permission to allow these companies to tier the internet will severely degrade what has and continues to be our most dynamic tool for innovation. Michael McCone
—Michael A McCone, Seattle, WA

Net Neutrality is important because everyone deserves equal access to the internet.
—Ms. Jocelyn Ziemian, Washington, DC

The internet should be equally accessible to everyone. Please do not make this another situation where those with money have better access.
—Amy Parker, Williston, VT

level playing ground for start ups and small businesses is important to me as a co.founder of a new company
—Grant Ogna, redwood city, CA

Network interconnection fees are fine but fees to be given priority are not. Otherwise network providers won't have an incentive to keep the links between them adequate.
—Pablo Morales, Arlington, TX

We need to maintain an open and free internet if we wish to continue to act like we live in an open and free country. More and more laws continue to be passed which take away our freedom. Don't let this be another one of those laws!
—Caleb Snow, Inverness, FL

As an independent business - responsible for essentially all net new jobs - I depend on reliable, neutral communications services. These are often the most important resources for a business.
—Michael Inners, Grand Isle, VT

I telecommute and changes in the way information is dispersed could end my career.
—Thomas Wilson, Pottstown, PA

You do not own the internet. You cannot therefore sell the internet. The internet belongs to its users who create the content that make it humanity's most valuable asset. By giving into the telecommunications services (because that's what they are) you are stealing from the American People for profit. Do what is ethical.
—Douglas Welcome, Takoma Park, MD

As a young college student, I know net neutrality will be an essential component of my generation's prosperity in the troubled economy. A two-tiered Internet will be a tremendous setback to young entrepreneurs and the young wage earners of this country. FCC, you must stand for the people
—Joseph DiZoglio jr, East Greenwich, RI

Throw out the FCC's rules and instead reclassify ISPs as common carriers!!!!!!
—Julie Miller, Washington, DC

The internet is the future of audio-visual media access. Telecom companies already are getting premium dollars from American consumers and are returning sub-standard service compared to other countries. Access cannot be decided by telecom companies and the market. Equal access is critical for innovation and our democracy.
—Dylan, Brookyn, NY

As an American citizen, I value sound and equally shared infrastructure. This benefits everybody in the long run.
—David Modjeska, Toronto, CA

We have enough restrictions on other parts of 'freedom' - don't take this from us!
—Megan Warren, Duncanville, TX

Mr. Wheeler, I'm certain you have heard all this before, but now please hear it from me. The internet is the best thing that has ever happened to the world. There has never been a free source of information quite like it. Though it is not yet guaranteed by any particular constitution at this point, unfettered access to this information should be a basic human right. Allowing companies to pick and choose who gets more bandwidth, to charge fees for the use of it, will choke out new business and make it harder to compete with those who can pay. It will also put the power of information into the hands of the few rather than the many. I do not know how much you know about this, you may have been subject to a great deal of the misinformation lobbyists are spreading around. I have heard some of it. Don't be distracted, don't be misinformed. We are the American people. We know what's best for us. Please listen to us. Thank you.
—Mike Locke-Paddon, Watsonville, CA

Imagine a world where only the rich can go to Disneyland...oh wait, that already happened. Let's not proliferate the already increasing inequality in this world. A number of sci-fi movies come to mind, all with a common theme - inhumane amounts of power in the hands of a few egocentric maniacs. Knowledge is power and what (earthly) entity contains more knowledge than the internet??
—Stephanie Okeeffe, Tustin, CA

Tell the FCC to throw out its rules and instead reclassify ISPs as common carriers. This is the ONLY way to protect real Net Neutrality.
—Kim Christian, Las Vegas, NV

On open, unencumbered internet connection is critical for American innovation, competition, education, and political discourse. To allow a precious few to purchase, purloin, and control the free flow and access of information would be a tragic step backwards, and would impair many generations potential for decades to come.
—Justin E Hout, Fort Smith, AR

To maintain equality and free speech. Keeping the interenet equal and fair to all is truly American. What the FCC is proposing would limit freedom in gathering information and discriminate against those with limited means and opposing viewpoints leaving and open door to limiting free speech. This cannot happen!!!
—Jennifer Benesch, Brooklyn, NY

The internet provides a means for small businesses to grow, and create the jobs that this country needs.
—Alexandra Feehery, Houston, TX

Please re-think your decision. Everyone should have free and equal access to the internet. It is a repository for data and a learning tool for all Americans. Please keep the flow of information open and reclassify ISP's as common carriers. Kind Regards, Miranda
—Miranda Criger, Campbell, CA

Don't fix what aint broken you bastards!
—John Teasley, walker, la, LA

Your fast-lane plan means that new businesses will be at a disadvantage. More perks for large, rich corporations is the last thing the world needs!
—Susan Myran, West St Paul, MN

democracy
—Katharine Burns, Somerville, MA

Democracy depends on Net Neutrality.
—Lynn Musgrove, Groton, NY

Comcast attempting to buy TWC will make it so a massive amount of internet users will be slowed down unless they can pay for more. Please take down this monopoly on internet use.
—Justin Villalta, Pacoima, CA

FCC please reconsider the rules you have proposed for the internet. A tiered internet service would allow companies to effectively discriminate against online content and applications. It would basically be a system of censorship that goes against our freedoms to information. The internet is meant to be a place where we can explore freely, without any company or other thing controlling our decisions there. The only true way we can maintain net neutrality is if you reclassify broadband providers as common carriers under Title II of the Communications Act. I urge you to keep the internet a place free from discrimination.
—Kieran O'Donnell, Normandy Park, WA

We already pay to gain access to the internet, and pay more to access the deep web, it's not fair to let the ISPs levy more costs against access!
—Ms. Sandy Craft, Mt. Sterling, KY

The internet may be America's greatest asset, so long as it is open and neutral. Not everything can be fenced off by corporations, some resources must be inalienable, and the internet as a common carrier should be one of them.
—Malcolm McCullough, Ann Arbor, MI

We run a small website that offers free educational materials. Slower connections would reduce the availability of our site to teachers and parents who use it.
—Jerome Taylor, Berkeley, CA

As a broadband customer, I don't appreciate corporations dictating which content I can easily access and which I can't. I see it as the censorship of free speech. As an American, I worry about the unforeseen consequences that this will have on innovation and on public discourse. It could make America a less open and less creative society at a time when those are the major competitive advantages that we have over other countries.
—Greg Burgess, O'Fallon, IL

FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Cheryl Fritz, Safety Harbor, FL

Freedom!!!!
—Doug Pelkin, roswell, GA

No ones access to information or data should be hindered because someone is willing to pay more. Nor should a retailer be forced to pay for data lines so that their customers can enjoy their services. Demanding pay from those retailers is extortion, & brought on by greedy, unethical companies. Keep the net neutral!
—Jamie Ferguson, Maricopa, AZ

You do not own the internet. You cannot therefore sell the internet. The internet belongs to its users who create the content that make it humanity's most valuable asset. By giving into the telecommunications services (because that's what they are) you are stealing from the American People for profit. Do what is ethical.
—Michael Janczyn, San Diego, CA

Net Neutrality allows our country to remain one of freedom, education, and equal opportunity. Please, care more about the American people than about profits for companies.
—Coral Peterson, Morris, IL

I'm retired and old. I spend a lot of communicating with relatives and friends. Net neutrality gives me what I need and want! Howard Huelster
—Howard Huelster, West Saint Paul, MN

LEAVE THE INTERNET ALONE!!!!
—Jose Ruiz Ruiz, NEW ROCHELLE, NY

Without Net Neutrality, all the educational and scientific would struggle. The value of the Internet to American society would be diminished. --Margaret Pillow
—Margaret Pillow, Berkeley, CA

Net Neutrality is essential for democratic Internet access and business practices. To bias the Internet, in ANY way, is undemocratic and unAmerican.
—Bob Rusk, Point Pleasant, NJ

I do not want money to prioritize content on the internet.
—Dominique Cote, Cambridge, MA

Enabling the ISPs to terrace the internet based on QoS will stratify the internet and any streaming content into a class like system, where those with more money will benefit while those with less money will not. One of the greatest things about the internet is that it provides an equal voice to those with less to those with more. Lets protect the internet from enabling those with more to benefit over those with less. All IP addresses should be treated fairly, equally, and without prejudice, just as utilities are provided. Please do not pass any legislation destroying Net Neutrality, but carefully and dilligently further its protection and enforcement. Thank you.
—Brent Anthony, Owings Mills, MD

Information must be readily available to ensure a democratic populace. Equal access to the most important source of that information is vital.
—Harold VanderLaan, Alameda, CA

Corporate money dominates our legislature; will we allow it through commerce to control of our ability to communicate that awareness among ourselves?
—John T. Denton, Encinitas, CA

The internet is more a source of education for me rather than for commerce or social media, though I use it for all. Don't let corporate greed ruin the internet's great educational potential.
—Karen Hennigan, West Grove, PA

I have spent the past several years building websites for small business and helping them start and grow their brand. Without net Neutrality...My business and their businesses would not have the opportunity to succeed. An idea, and internet connection and hard work should be all a person needs to make a business for themselves.
—Khalid Robinson, Los Angeles, CA

Because we live in an information age, we ALL should have quick, efficient, and affordable Internet connection.
—Ms. Linda A. Heath, Senecaville, OH

no net neutrality = no freedom of information = no democracy
—Antoine Amanieux, los gatos, CA

It is very important that we have net neutrality so all can have access to the net equally.
—Robert Hertz, Palo Alto, CA

Bluntly- the freedom of choice- and I believe that this wpould increase the rates of the Internet. Please keep it so Everyone can afford it. Thank you.
—Teal Michaelson, Charlotte, NC

DON'T BREAK WHAT IS NOT BROKEN !!! DON'T SCREW WITH MY INTERNET !!! DO YOUR JOB AND PROTECT THE AMERICAN CONSUMER, NOT YOUR CORPORATE OVERLORDS.
—Keith Fabing, Seattle, WA

It is very important for me to have the same opportunities as anyone else on the internet. No "fast lanes" for anyone please, that would be the end of the open Internet and a beginning of something very unfair!
—Lucia Spark, Pezinok,

I will not subscribe to cable or satellite, and the failure to recognize DSL as common carrier service with my monopoly telephone provider has been increasingly frustrating. Do not make it worse by giving preference to corporate entities whose sole purpose is to create revenue for stockholders. Keep the Internet's playing field level.
—Margaret McCarthy, Rio Rancho, NM

Please take a stand for the people and not just the corporations. Say "NO" to a two-tiered Internet.
—Sylvia Donnelly, Hartsburg, MO

Net Neutrality is important because it was what the founders and creators of the internet imagined the information highway to be. With these proposed plans, there will be a sort of rampant censorship online. Sites that are not in the best interest of companies will be slowed down and hushed out. This is not what the internet is for. It's for freedom of expression, the ability to share any information, and everything else in between. It is not built as a way for companies to profit. I know the companies are obviously the ones backing you on your decision, but please, PLEASE reconsider. The internet is meant to be an open place.
—Justin Nolan, Union, KY

The Internet is an important place to gain information, amuse people with games & videos, and buy/sell products through online shopping outlets. As well as giving us a voice. Please don't take that away from us!
—Joe Reames, Fort Mill, SC

Net Neutrality is freedom of speech. Citizens United said money is freedom of speech and the Supreme Court ruled in it's favor. Please do not take away our Net Neutrality so the big Communication Companies can profit off of limiting our freedom of speech. People like my wife and I are retired and are on a limited income. We use the internet daily for numerous things. Having to pay more for what we have access today on the internet would be a tragic social injustice for the people by the big powers. Respectfully, A USA citizen
—Biagio Cacciatore, Novato, CA

Net Neutrality is important to a free and innovative society. Don't destroy it! Classify the internet a public utility. It already is!
—Mr. Tim McDonald, San Rafael, CA

We already pay high fees for Internet access, and that access should not be controlled by ISPs in order to further price gouge customers.
—Anna Brown, Folsom, CA

I believe that the spirit of America's capitalism necessitates Free Enterprise so that businesses can expand without the interference of monopolistic corporations. The same rules should apply to Internet Service Providers in the US, they are no different. The internet is a form of telecommunication and so the companies that provide it should be treated as such. A telephone company is not allowed to decide whose calls you get and whose you do not, and so an Internet provider should not be allowed to decide which site's content can reach you. I firmly believe that Net Neutrality should be actively maintained, not disrupted.
—Ofek Inbar, Redmond, WA

Without Net Neutrality, you have no freedom online. Internet service providers, if given evidence, can shut off someone's internet due to harassing or threatening remarks. I agree that words can hurt, but if this law is passed everyone that isn't rich will suffer. In that sense, have you noticed the "poor line" in North America has risen? There's the really rich, the rich , slightly above average, average, lower than average, poor, even more poor households. Do you realize how many people this will affect? This is a horrendous idea and should NOT be approved. It should be REJECTED firmly and the idea to be terminated.
—Lenae Witherow, Prince Albert,

The Internet should be open and fair for all - not only large companies with deep pockets. In order for businesses and individuals in the US to thrive, the Internet must remain open to all regardless of economic circumstances.
—Brian Watt, Lawrence, KS

Please make good decisions.
—Josh Pucci, RICHMOND, VA

The internet is a gateway to knowledge. If I want to learn more about a subject I don't have to wait until I can go to the library; I can usually get the info I'm looking for right now via the Internet. Please don't limit my access by creating extra fees. We don't want those with the money to be the deciders of what the rest of us can see.
—Karen Finkle, Seattle, WA

Making the internet better for people who can afford it and worse for people who cannot is the opposite of everything this country stands for. This plan would further widen the gap between the rich and the poor and effectively create a two-tiered society in which the rich have access to more information and knowledge than the poor.
—Abigail Edwards, Fort Collins, CO

The internet should be freely open to everyone. Corporations slowing access based on their own criteria is no better than government censorship. It is your job to regulate these companies to my rights as a citizen. I am deeply disappointed that the FCC is failing to do so.
—Kimberly Jones, Philadelphia, PA

Net Neutrality is important to me because we should be able to do what we want, and not forced to do things we don't want to be able to do. There shouldn't be discrimination against those who can't afford to pay extra for their internet bill, and be forced tohave extremely slow internet.
—Tye Tess, Cumberland, RI

Net neutrality is common sense!
—David Robertson, Drouin,

The idea that you're even thinking of allowing the large corporations to strangle out their smaller competitors even more is sickening from an ideological and practical standpoint.
—Christian Ducharme, Auburn, ME

The internet has replaced many household phones and is now even more important to citizens to have access to free and open internet.
—Kaela Mitchell, Wrightwood, CA

Absolutely silly the amount of loophole exploiting and lawyering that occurs in the world of big companies. This notion of discriminating against online content is ridiculous and has to be stopped. Regardless of what is said nothing good can come from such a scenario.
—Austin, Enfield, CT

When I learn about how far the US lags behind in terms of access and speed for internet, I am appalled. Then to learn that this has gotten worse since declaring the internet an "Information Service" versus being a utility, and I am even more disgusted that you refuse to see what is best for the American citizen and businesses. Instead, you are acting as though you are still a lobbyist for the telecom industry - which coincidently your predecessor on the FCC (Powell) now fills your former role. Please fulfill the promise that President Obama tasked you with - keep the internet open, and not tiered. Net neutrality is what will keep America at the forefront of innovation and freedom.
—Daniel Moore, Seattle, WA

Net neutrality is very important to me as a daily user of the internet and as a simple supporter of fair and non-monopolized business. Net neutrality is important because the internet is a complex and useful tool for people that should not be leveraged for the benefit of massive internet providers.
—Lieu T Nguyen, Haltom City, TX

Net Neutrality is important, and very important because without it conglomerates would become bigger and larger monopolies very probably would slow efficiency, (eg. National Steel and U.S. Steel) while also adding probability of corruption possibilities. Please consider stopping the potential conglomeration and corruption. Thank you for considering the possible options and outcomes. <http://www.chacha.com/question/why-are-monopolies-dangerous -in-capitalism> "Monopolies are one example of capitalism failing. Monopolies have virtually no competition and can dictate prices to their customers unless they are restricted by regulators. The customer either has to pay the price demanded by the monopoly or not receive that good/service. These are some reasons why monopolies are dangerous in capitalism."
—Jon Boren, Temple City, CA

I fear that with out Net Neutrality the internet will lose the potential of progressing into something truly unimaginably amazing. Allowing Net Neutrality to die would be extremely detrimental to the future of so.. so.. many things. So make Net Neutrality work properly PLEASE!! =(
—Derek Diehl, Rio Rancho, NM

I am an illustrator who has a large portion of his exposure come from online view. I don't make a lot of money as it is, and having to pay more for people to see my content would cripple me financially.
—Mike Madsen, Pittsburgh, PA

Can you really afford any more enemies at this point? Even if you have control of the internet for a short time it will just move every one to their own internet / internet infrastructure. Instead of the free and open internet that prevents xenophobia and promotes the betterment of man kind. Knowledge and freedom for all. Good day, Matt L.
—Matthew Lillywhite, Calgary,

Net Neutrality is important so that every person has an equal voice. It is not sustainable to live lives ruled by money. I am a small business owner and anyone searching on the internet in my line of work needs to be able to find me!
—Janet Dhaenens, Sandpoint, ID

I'm a 16 year old girl I use the internet for school and social purposes. To have the internet slowed down because one company can pay more then another is not fair and the internet should stay open. you gave Indian tribes better internet that you pay for but are going to take ours away is not fair considering we pay for it out of our own pockets.
—Julia Garulle, shenandoah, PA

Every web site big or small, rich or poor should all run at the same speed. There is no reason to change how the internet runs now. What you are proposing is descrimination and is illegal.
—Melissa Thompson, Anchorage, AK

Net Neutrality to me, is one of the last few real freedoms we have as Americans. It allows us to share our voices and also hear the voices of others. Communication is KEY in a country riddled with suspicions of foul play. But then, that may be why the FCC wants to keep the internet under wraps. The wrong thing gets out and it all comes tumbling down because pissed off Americans are going to be tired of being suppressed and lied to.
—Zackary Bridges, Hackettstown, NJ

Its important for the little guys to be seen. If we limit what we see to those that can afford the prices of the middle man then the truth will get swapped for lies. A free internet is important for an abundant diverse world.
—Zach Orford, Petaluma, CA

The people will not stand for this dictatorship!
—David Nicholas, Heatherton,

The effects of ending net neutrality will be detrimental. This is not what the American people want or deserve. The internet was intended for everyone to have access to; it should be equal for all users.
—Savannah Rodgers, Olathe, KS

There cannot be rules imposed on freedoms. That is turning freedom into privilege. Our minds are not a privilege. The only way to ensure our right and freedom expression is by eliminating vague rules and MANDATING a complete, open web. Regardless of carriers, with no extra action on the individual to ensure their access to their communication platform. No discrimination. The internet is not to be toyed with, it is everyone's. If the end to this battle isn't complete neutrality, it is not really the end.
—Nicole Cirignani, Aliso Viejo, CA

The internet was conceived and designed to be a free/low cost service for all. It was developed with government funds . . . i.e. TAXES . . . i.e. the PEOPLE'S money. Corporations should not be allowed to take this over for private profit. Corporations did nothing to develop, test, or implement the system, yet they want to profit from it. This CANNOT be allowed to happen.
—Joe Cooper, Austin, TX

Net neutrality evens the playing field and encourages innovation.
—John Naylor, makawao, HI

Remember,monopolies increase fees and expenses and the average joe will not be able to afford them.
—Glen Conkling, Euclid, OH

Two tiered net is unfair! The US has one if not the highest cost net service in existence. The FCC should support the people not specific companies to make them richer. Makes one wonder a lot about kick backs!
—Lloyd R. Jackson, Kansas City, KS

Because ComCast already has too much power!
—David Lovely, Chicago, IL

Please protect Net Neutrality for generations to come.
—Eric Fosburgh, Seattle, WA

I support upcoming companies by visiting their websites. Killing Net Neutrality would make it impossible for the public to quickly and efficiently load their page to give them exposure. I do not support the killing of this right.
—Alexis Beshara, Richfield, OH

Only the rich will have REAL ACCESS to the internet, unless you support net neutrality and put an end to this discriminatory plan! Fast lanes for the few rich will mean an end to internet for the majority of Americans, while catering to the wealthy!
—Dian Berger, Boise, ID

Only the rich will have REAL ACCESS to the internet, unless you support net neutrality and put an end to this discriminatory plan! Fast lanes for the few rich will mean an end to internet for the majority of Americans, while catering to the wealthy!
—Russ Berger, Boise, ID

I met my wife on the internet. Without her, I would probably be alone right now and very suicidal. We need net neutrality for the people that are going through what I did. Without it I'd be dead right now. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Christopher Dunagan, winston-salem, NC

If online content can be discriminated against, the news regarding environment, energy, GMO's, water poisoned for tracking (I could go on but you get the idea) could be harder to find and/or slower. It's the substantive information corporations would just as soon keep the general public in the dark about. Our country has changed for the worse. Losing net neutrality would just be another nail on the coffin.
—Leslie Johnson, St Cloud, FL

****** TITLE 2 COMMON CARRIER NOW ****** FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Alexander Utter, Hawthorne, CA

If we don't take a stand here, when will it end? will we not be allowed to speak the truth about a corporation because they have money? Without Net Neutrality the United States is on a fast track to being completely under the control of big business, the exact reason the U.S. and the world is in so much trouble to begin with. We cannot sit idly by as we are stripped of a fundamental right. This is exactly how Hitler was able to gain so much power over the German people, slow and minor changes until it was too late for anyone to deny he was in the right. A closed internet is an unconstitutional Internet. The Internet is a utility and should be a common carrier, These are the wishes of the American people, anything different is disgusting and oppressive
—Alec William Goncharow, huntersville, NC

FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Peter Kloberdans, northglenn, CO

Why charge us more than what we already pay? It's unfair and eliminates our freedoms.
—Chris Vasquez, Huntersville, NC

I am both a consumer and an entrepreneur. As an entrepreneur building an internet-connected product, I know that net neutrality is ESSENTIAL to the future success of our business. And really, all businesses like ours. We're small, fast-moving risk takers with a lot of innovation but not a lot of cash. With large companies able to pay for better connectivity to customers businesses like us won't be able to compete and grow. You will kill the next Google or Facebook or Apple before it even gets off the ground. As a consumer and American citizen, I'm personally outraged by the state of Internet connectivity in this country. Carriers charge exorbitant prices for poor quality, and their monopoly positions give them no incentive to innovate or improve. Instead, they extract whatever they can from us as consumers and then turn around and stick it to the companies. This has to stop. Please, please, please reclassify ISPs as common carriers and force them to sell bandwidth to re-sellers. It will foster competition and improve access and service. We will be better off as entrepreneurs, as consumers, and ultimately as a society.
—Haomiao Huang, REDWOOD CITY, CA

You're not making the internet better for us. You are only making it worse. Why change it? It is fine just the way it is. I pay good money to use the net. It must stay neutral. Doing this is like separating the rich from the poor. And it's not fair to the millions of middle class Americans like myself that have to pay for slow lanes while these rich nut jobs get the fast lanes. there is nothing wrong with Net Neutrality. It should be left alone and unchanged. If anything it should be protected.
—AJ Edwards, Fort Lauderdale, FL

I can't believe you would let the beautiful repository of knowledge and information fall into the hands of corporate dictators. The internet is a medium where all should have equal access and speed. DO NOT eliminate net neutrality.
—Todd Stewart, San Diego, CA

If internet is supposed to be the great equalizer, then it must remain free for all.
—Christianna Sigliano, West Harrison, NY

I believe net neutrality is a big part of why the tech boom has been so strong for our economy. Just as an example, take YouTube. At the time YouTube became popular, Google had a video service called Google Video, which was inferior but better funded. If net neutrality hadn't existed at the time, Google could have paid for better service and put YouTube out of business. The resulting lack of competition would have hurt everyone. Net neutrality ensured that, because of the level playing field, everyone had to innovate to stay alive, and the best product won, instead of the largest player.
—Nathan Paymer, Mountain View, CA

Money should not determine people's ability to practice free speech.
—Matthew Sullivan, Yonkers, NY

Net Neutrality matters so big companies can't work together rather than compete to produce a better quality service/good at lower cost. Businesses should earn their right to be the best by offering the highest quality, smallest rate, and most reliable service/ good. You can even draw connections between corporate fat cats to kings and queens. They have all the riches they have the means to distribute and share the wealth to create new business and save people money. Huge companies believe with enough lobbying they can achieve any goals they please, and the sad part is they do. Please don't strip our freedom from us, its the only thing the United States has left to brag about. THROW OUT YOUR RULES AND INSTEAD RECLASSIFY ISPS AS COMMON CARRIERS.
—Jake Bye, Livermore, CA

The mainstream media is totally biased and filtered according to what the elitist's favour - please allow the internet to be an open, unedited source of information for the people. Please do what is right
—James Neate, BONDI BEACH,

It should be a right
—Allan, El Paso, TX

I want to live in a democracy, and the government keeps proving to me time and time again that the people don't matter, and the only ones who do are the large corporations. Are you going to show me what country we live in? Or will you continue to destroy America with your greed? Your decision will show me who you really work for.
—Austin Chamberlin, littleton, CO

Because I live in Europe and do not wish my internet to be dominated by US based providers favoring only US based citizens with US based content while treating the rest of the world with the usual US based apathy and disdain. WE ARE NOT THIRD WORLD CITIZENS STOP MONOPOLIZING SOMETHING THAT DOES NOT BELONG TO YOU AND THAT YOU SHOULD HAVE NO JURISDICTION OVER NO MATTER HOW CORRUPT YOUR GOVERNMENT IS!
—Hans Engelen, Olen,

We all need the same access. Companies can not be trusted and will rip us off as all the cable companies are currently doing.
—Joe Russo, Rye brook, NY

We all need the same access. Companies can not be trusted and will rip us off as all the cable companies are currently doing.
—Joe Russo, Rye brook, NY

free internet free world
—Tomasz Cesarz, Coventry,

ISPs should be treated no different than anyone else! The internet was not intended to be a means only to make money but so much more. If you limit something such as this you limit all of us!
—Sam, summerville, SC

Net Neutrality is important to me because discrimination in any form is wrong. Everyone should have the same speed and access regardless of what data it is.
—Casey Walters, Woodstock, GA

The internet should not favour certain types of data above others: doing so will increase costs for companies (such as netflix) and consumers. The internet was created to be open to everyone - all data should be treated the same.
—Jack Sedgwick, Royston,

I do not acknowledge that a provider has a right to choose what passes over its network and how fast (this also extends to 'illegal' things and things some people don't like). Violating this allows interested parties to undermine the privacy and efficacy of people's day to day lives, who consider their activities noones business but their own.
—Philip Haworth, Worcester,

The internet is a pivotal instrument for dissemination it would infringe on individual rights to limit public access and allow corporations to control it in its entirety...freedom would have it's voice muted as it is the media of today and tomorrow....do not allow corporations to take it over.
—Jason Fournie, Gulf Breeze, FL

The internet really is the last truly democratic communications medium and is essential to keeping an informed citizenry. We can't rely on corporate media on television or print to bring truth to power. We need to preserve the openness of the internet at all costs and cannot afford to open any doors to corporatizing it and giving more favors to the already enormous players.
—Andrew Leroy, Greenwich, CT

I don't want to have to pay extra fee's to enjoy the services that I currently enjoy on an open internet. We all know why the ISP's are supporting this, for profit. I believe that it is unfair to charge different fee's for different internet websites/services.
—Loammi Girardello, Boca Raton, FL

Please preserve the internet as an open and equal platform for all to use, now and into the future.
—Sara Wallfisch, portland, OR

We can't have internet gate keepers. Keep the internet open.
—Pablo Felipe Pena, Boston, MA

The more choices and information people have, the more likely they can fulfill their interests. That's why Net Neutrality is important.
—Ron Summey, Evergreen, CO

Net neutrality is absolutely vital! FCC throw out your rules & reclassify ISPs as common carriers. Is this a plan to destroy freedom of speech?
—Susan Dever, newport news, VA

The internet is a communication company not infomation
—jo Ann becktold, stroux, OK

We depend on Net Neutrality, the FCC needs to protect the public and keep the open Internet by reclassifying ISP's as common carriers.
—Peggy Gheta, Avon, OH

The entire Western consumer economy of the 21st century was brought into existence precisely because of Net Neutrality, without it, that's far less consumers! Reclassify Internet service providers as common carriers and protect Net Neutrality.
—Gary Tregoning, Swansea,

An Internet with open, equal access for all is essential to American free speech and innovation. The worldwide web as we know it has grown and flourished ONLY because it's been fairly unfettered by capitalistic concerns up to now. Chairman Wheeler, please, abandon your new proposed rules and instead reclassify ISPs as common carriers to help maintain Net Neutrality now and forever. Thank you.
—Scott Benjaminson, Evanston, IL

The internet is an amazing tool to provide people all over the world with education, communication with friends and family, sharing of ideas - I could go on. The point is, making people pay for this would kill the open internet and take away this tool that is needed BY THE PEOPLE WHO CAN AFFORD IT LEAST. Please, please, please keep the internet open and neutral. You would literally be killing communities and limiting education and opportunities, especially to those who need them most.
—Kirstin, Dorking,

Freedom for all
—Steve P, Oakland, CA

The internet was built around the idea of openness, to allow people to connect and share knowledge and information freely. Having tiers impedes that goal, hinders innovation, and gives unfair advantage to the 'big guys'. Big guy Amazon wouldn't get where they are now if when starting out they couldn't afford to pay for a higher tier!
—Dan Horgan, millis, MA

As a retired at&t employee I'm well versed in the actions of a company which places the customers last and profit last. I have an "unlimited data plan" for my iPhone, and at about 5gig at&t slows my service to where its worthless. I'm pressured to leave this plan if I want features like Facetime, which uses more data. So the internet companies need regulation, left to their own devices the public looses and our future internet will be worse than many countries who have no democracy.
—Michael Turner, Gridley, CA

Dear, Mr Chairman Wheeler Please think about other people couldn't to give more pay high cost of ISP now, even we are pay more right now. We do need freedom to chose to have a open internet! And most other people using internet don't used own computers at all. Please drop your bad ideas, and keep this Net Neutrality open for everyone can use it!!! Sign Melissa Maddox
—Melissa Maddox, Frankfort, KY

Because I'm one of the underemployed working poor that was told by older generations that I'd get a fair shake at life if I worked for it.
—Jennifer Trevisan, Mount Vernon, NY

The Net Neutrality really matters to me. Is about freedom, about free thinking, about us. Don't let a small group do what is better to them. Equality for all.
—Bautista Aramendía, Gualeguay,

Our democracy was founded with the premise that education, communication, and equality were necessary for a democracy to survive. I think this is correct. Without Net Neutrality, those three requirements for democracy are compromised, if not thrown by the wayside. This is done in the interests of money. I am really weary of money being equated to virtue in this country. It is often the enemy of virtue. If democracy is a virtue, than the internet, developed with government money, and using the conduits that have long been assigned to the public ownership, the common good, as it can be called, needs to be kept open and available to all. Giving access to information and communication (the internet) away to be used to further the interests of those with the most money and influence, to be used to increase that money and influence, is antithetical to the intent of the founders of this democracy. Please keep the internet 'neutral.' Thank you.
—Susan Herndon, Boise, ID

In the past few years since I have been an employee of the most valuable computer company I have learned a great deal about technology and the way we interact with it. I am very blessed to work with an innovative and caring company. Being part of said company, I am all but required to have an active internet life to stay current with world affairs and the development of new technology. The internet as it is has become an integral part of my life, the lives of my peers and the lives of our customers. The freedom of expression is literally what helped me land the awesome job I have now. It has helped my friends and my customers start their own businesses, has let my sister share photos of my nephew, and has spread knowledge that has saved lives. The internet has it's dark side too, but like all things, freedom breeds creativity. Imagine a world where all things were ordered off of a menu, just like at your favorite restaurant. Imagine logging on to your computer and being able to pick from only a select few websites to visit, some being fast, some being near dial-up. Those that could not afford the premiums would just become dust metaphorical dust on the internet prairie. freedom is what this country was born of, and allowing companies like Time Warner and Comcast govern what I see and when I see it is a bastardization of this country's very foundation. Freedom is what has made this country great and is what has allowed so many to become so much more with a tool as open as the internet, and now it is under threat of being destroyed by companies that are trying to scam even more money from their consumers now that their sub-par, over priced internet service has been forced down the throat of so many Americans. I implore whomever is reading this, if there is anyone hearing our voice; Stop what you are doing now and say No to the companies trying to eliminate our freedom.
—Cameron Henry, san antonio, TX

I'm sick and tired of big business dominating and the stifling American economy. I will also make these wished know to all of my elected representatives.
—Edward Stear, Stamford, CT

Because our economy is already hurting, we don't need another expense.
—Gsry Ryan, meridiam, ID

I believe that the Internet should be classified under Title II as a common-carrier telecommunications service and without any further attempts to undermine this with ambiguous terms like "commercially reasonable" that create loopholes that can be exploited. The Internet should not operate with fast and slow lanes and nor should companies like Comcast extort companies like Netflix for money to deliver their customers what they've already paid for. It is no business of an ISP what a customer does with the data that they purchase from them -- it is only their duty to make sure that that data is delivered. Data is data and should not ever be discriminated against. In fact, it's already being discriminated against now according to Level 3 Communications. (source: http://blog.level3.com/global- connectivity/observations-inte rnet-middleman/) In our society, the Internet is required to participate, function, and thrive. It is needed to pay bills as well as for education, communication, commerce, and culture. To destroy this public utility would be a major crime. ISPs have already robbed Americans of more than $200 billion from the Internet Telecommunications Act of 1996 which made ISPs promise that they would invest in their networks. They haven't (source: http://www.pbs.org/cringely/pu lpit/2007/pulpit_20070810_0026 83.html). Now instead of upgrading (America is woefully behind), companies like Comcast and Verizon hoard their money only so that they may purchase other companies to become even bigger oligopolies all while netting over 90% profit from their customers who have no choice but to pay their outrageous prices. Furthermore, I also believe that Tom Wheeler should resign from the FCC. As a former cable lobbyist, he has no business deciding against the American people in favor of corporations that wield far too much power with their money. With the revolving door system, he'll probably end up working for Comcast or CTIA like former shameful FCC commissioner Meredith Attwell Baker anyway. It was a giant mistake for President Obama to elect such an obvious snake into power instead of somebody who would respect the will of the people like Susan Crawford. The American people will not stand for this disgusting plutocracy.
—Nick Scott, Loveland, CO

A fast lane for companies who pay means that the rest of us are in the slow lane. Broadband companies should improve their infrastructure with the cost shared by all so that everyone benefits.
—Jim Pinckney, Monterey, CA

Wheeler’s plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. These companies would have the power to pick winners and losers online and discriminate against online content and applications. And no one would be able to do anything about it.
—Daniel Kosowski, Machias, NY

Having observed two carriers who doesn't respect net neutrality already operating in my country, MEO and NOS, by giving unlimited tariff to certain apps and not to others, I have witnessed the devastating effects it had on my friends at that network. One example, recently I have invited a friend for a new great app I found for chatting, and my friend even got interested but just for the mere fact that that app didn't include free traffic that friend immediately excluded it. Imagine if everyone done this and excluded the other apps in favour of the ones who had free data only. It would be a disaster, app development would greatly decrease and our choices would be much less. It would be a much more sad internet. Please don't allow this disaster to happen! Stop it now!
—Pedro Paheco, Ponta Delgada,

Broadband internet is vital for our personal lives and for economic activity and should be regulated like other vital utilities such as telephones and electricity. Please reclassify internet service providers as common carriers.
—Ethan Perry, Duluth, MN

Where does the gap between the rich and poor end?
—Gillian Pardesi, NY, NY

Net neutrality is the most important good in a real democracy. I expect you to appreciate that and please kick your rules and classify ISPs as common carrieres. Thank you for proofing that we dont do not behave like Russia.
—Harry Schneider, San Jose, CA

Net Neutrality is extremely important, private companies should not have this amount of power over who can view what or how well it works.
—Tyler Broeker, Miami, FL

My husband and I run a small Internet based business which currently sells one online-accessed sales training product. Fast, reliable and affordable Internet service is critical for us to survive, let alone achieve success. Please rethink your committee's decision and reclassify ISPs as common carriers. We can't (and don't want to) compete with AT&T or Comcast or any of those huge service providers. The biggest advantage we have now is the level playing field of the Internet: don't take it away from us and all small businesses. Thank you, Linda Willis for Peter and Linda Willis http://www.mygoforthegreen.com
—Linda Willis, Naples, FL

We have an opportunity to evolve and I am curious. Don't be evil.
—Devyn Waitt, oldsmar, FL

A free and open internet is the single greatest technology of our time, and control should not be at the mercy of corporations. Furthermore I do not want to be forced to pay for what is currently free, as an avid lover of the internet I think that this new law would be an absolute disgrace.
—Alex Hall, Southampton,

YOU'RE SUPPOSED TO PROTECT OUR ACCESS TO THE INTERNET, NOT SELL IT AWAY TO CORP THAT ALREADY RIP US OFF FOR POOR SERVICE.
—Darryl Figueroa, Maitland, FL

There is no justice to be had from a corporate exec turned "public" servant. ISPs should be common carriers, it's an issue about democratic governance and should not be based on corporate profit.
—Cindy Marsh, Cambridge, MA

We need free and open internet, not a toll road that thoose with the most money can buy.
—Perry Williams, Tacoma, WA

The internet today is one of the last free markets for information. Do not let corporations take another free market in order to make big dollars. Corporations in America are our of control and need to be told where the limit is.
—Micki Fortune, Commerce City, CO

Please reclassify broadband internet as a telecommunications service. Otherwise, we may end up with a very unfair situation where libraries, schools, students, small businesses, etc. will not get the same access to broadband internet.
—Ashley Hinson, Sherman Oaks, CA

reclassify broadband internet as a telecommunications (or "Common carrier") service. Right now broadband is regulated like TV or radio, which doesn't make sense.
—Alberto De Armas, Riverview, FL

I do not support a two-tiered internet which allows company's like Comcast - who are already a monopoly in most markets - to control who can afford to receive certain internet content in a fast or slow way, further separately out the have and have nots in the tech world to those who can afford it and those who cant. this is deplorable and you are sticking it to the average person while back slapping your corporate cronies.
—Farrah Lamoreaux, Denver, CO

The Internet must be classified as a common carrier. And the reality is – the Internet currently is a common carrier – the law should be consistent with reality. Net Neautrality must be just that neutral, unbiased and impartial. The proposed rule says it would “permit broadband providers to serve customers and carry traffic on an individually negotiated basis.” Translated this means tiered "fast lane" vs "slow lane" service. This is not neautrality is any sense of the word. This tiered Internet with different levels of service in essence would authorize cable and phone companies to discriminate among websites and charge Web giants for “fast lanes” while keeping the rest of us in a “slow lane.” President Obama repaetedly stated that he supports an open Internet that functions without discrimination. The FCC should take his lead and implement rules that enforce open internet and equal access for all.
—J Zuk, Piscataway, NJ

The Internet was built on the idea of free exchange of information and ideas. By allowing the ISPs to control what information get's priority, the ISPs can then decide to prioritize information that they find favorable. Likewise, the ISPs can use their large size and near ubiquity in their service areas to cripple websites that try to compete with their own. This is completely contrary to what has always made the internet great. It is imperative that you keep the internet great and strike down the idea of "Tiered Priority".
—David Knipe, White Bera Lake, MN

I run a small startup technology firm in Baltimore. Starting a technology business is a substantial risk filled with considerable challenges. These risk have only become greater with time. Every day you hear about established market players using their considerable resources to branch out and take over markets innovated by smaller companies. Most of the time these companies don't have the funds to compete in the very markets they created. Giving broadband providers the right to sell preferential access to larger companies who have the ability to pay would only accelerate this trend making the risk inherent in starting a technology business too great. Our economy is built on the backs of innovators, many of whom started in a garage with nothing but a dollar and a dream. Allowing telecommunication conglomerates to place these trailblazers in the internet equivalent of a slow lane is just about the best thing the FCC can do to disincentivize innovation and harm our country's status as a world leader of technology. The FCC claims it’s role is to maintain a balanced market where innovation can thrive. If this is indeed true, the clear choice in this matter would be to classify broadband internet providers as a title II utility.
—Stephen Constantinides, Baltimore, MD

Leave the internet alone! It deserves to be neutral and open to everyone equally! Let people decide what they want to use the bandwidth they pay for...whether it is using the internet for school research or watching all the seasons of their favorite TV show. You get paid enough from us...
—Lisa C Clark, Yucca Valley, CA

Net neutrality is paramount in preserving the equity in internet all together.
—Shane Hohenstein, Minneapolis, MN

Removing net neutrality will greatly hurt small businesses and tech start-ups. As someone that works closely with these sort of companies it greatly worries me that would risk their survival, and it doing so potentially cripple the us economy and innovation, just to pad the pockets of companies like comcast and AT&T. Seriously, you are supposed to be for the people, please act in OUR interests.
—Peter Stocke, boulder, CO

This internet is the worlds library, without open neutrality our future will be chaotic and unorganized.. This world is getting smaller and smaller, and our problems are getting bigger and bigger. We need human unity.
—Caleb Colpitts, Battleground, WA

The internet as it exists today is essential to enable African-Americans to take advantage of this new technology. We are already disadvantaged economically and this would discriminate against those unable to afford any higher fees.
—Rick Goode, Chicago, IL

Tom Wheeler is dooming future generations to live in a stupid parody of a dystopia where cable companies rule the world. It's almost too stupid to actually be happening. So don't. Let. It. Happen.
—Jonty Levine, Saffron Walden, MN

I do not want "tiers" of internet. It is extremely important that we remain a leading force in the economics of technology, and we will not be able to do so if we allow the internet to be destroyed by those large companies who are simply hoping to make more money now, at the expense of the innovative future of our country.
—Rebecca Masur, San Francisco, CA

I can not do my job if you kill Net Neutrality. Please Mr. Wheeler reclassify ISPs as common carriers. Don't hurt America.
—Rae Griest, Clovis, NM

The SmartAmerica Challenge, in which I'm currently participating, is about advancing America's technological status into the 21st century, when we think the Internet of Things will become a reality as we embrace cyber-physical systems more and more. As a young researcher in this field excited about the possible applications of networked sensing and actuation devices providing the data we need to improve our quality of life, safety, and shape the future our children's educations, I am appalled by this short-sighted attempt to allow ISPs to segregate the Internet. If allowed to pass, not only will my community's current research fail to deliver its promises because of possibly diminished network connectivity, but the hope of my, and others like me, future business will be jeopardized. If the major ISPs are allowed to throttle my home automation and CPS safety-related devices' network connections, I will be forced to pay them off in order to make my business a reality. This will either result in my company never existing in the first place (loss in high-paying skilled jobs as well as quality of life diminishment), or I will be forced to increase my products' cost, thereby driving it out of the price range of hundreds of thousands of Americans who might otherwise enjoy a healthier, safer, and more environmentally friendly life. So I ask you, Chairman Wheeler, is the future of my company and my career as a whole worth sacrificing to appease the telecom giants who have not delivered on their promises of high-speed connectivity to every American so rightfully deserving of it?
—Kyle Benson, Hockessin, DE

We did livein the land of the free, but now I'm not so sure anymore, not only its it a monopoly on food and healthcare, now it's on cable AND internet! Please let me tell my children that this IS the land of the free!
—Elizabeth Samson, turnersville, NJ

Net neutrality saves the internet for those that wish to develop for the future. It saves it for our children when some parents cannot afford to pay for super fast speeds. Its saves our pockets so that smaller companies like netflix do not have to pay to have their movies streamed out to our homes when they really shouldnt have too. Fast lanes on the internet should not exist. As the way of the data went on the phones if net neutrality is not upheld we still eventually have the internet blocked like cell phone data. We will have to pay to even access the data that should be rightfully free to access. So please defend the net neutrality. Defend the freedom of the internet. Fight back against big business trying to make every aspect of our life a pay to do.
—Shawn Yeatman, Lindenwold, NJ

Without Net Neutrality we undermine the ability of the common person in America to have equal access to vital information that will be able to make or break the future of every man, woman and child in this country and probably THE PLANET! If corporations who operate on the internet can use their power to limit information that only the wealthy will have access to, the wealthy are given power that further enriches themselves by denying access to everyone else. This to me will put in place a second phenomenon that will allow winners or losers in the market place of ideas and information that will make the wealthy more and more powerful, giving them rights while denying everyone else. It will destroy equality in this country to higher and higher levels. We already have destroyed the ability of those without power to advance into better living and learning situations by the extreme inequality of the bail out. This would be another equally disenfranchising phenomenon that will push the 99% further and further behind the 1% Oligarchs who will continue to accrue more and more power based on a wealth divide that gets worse and worse over time. Another HUGE blow to 99% of the population. I am totally against this. And I will NOT support it. EVER!
—Wilma E Ralls, Rohnert Park, CA

I don't want large corporations to control Internet traffic. I think the system we have now works well.
—Gene Naden, Chicago, IL

Net neutrality is important to me because I don't know who will create the next big thing. I do know that companies like Google, Twitter, Facebook, Instagram, and so on, could not have been created without fair and open access to the internet. The cable and telephone companies have no competition in any given market and these rules would allow them to get paid twice. Every bit is created equal.
—Keith Gray, St. Charles, MO

LEAVE THE GODDAMN INTERNET ALONE!
—Ariel Kelly, York, PA

The internet is for everyone and it needs to be free and open. Please don't do this. Comcast and other telecommunication companies make plenty of money and charge a lot. Take a stance and honor net neutrality and people will love you for this.
—Robert Distefano, White Plains, NY

No one or two companies own the internet!
—Sherry Owens, memphis, TN

Please maintain net neutrality. It is the only shield for common people against corporate abuse of power from ISPs.
—John Bell, New Bedford, MA

The internet is opening up a whole new world of ubiquity and collaboration. To compromise this by removing Net Neutrality would be a blow to innovation and progress.
—Greg Leonard, Boston, MA

Net Neutrality means access to information which I need for my work. It also means the ability to shop freely and not be limited by the choice an ISP feels that it should make for me. Net Neutrality also means that I would keep my current ISP. I would leave my ISP if it did not offer this to me.
—Darlene Elkins, West Richland, WA

The robber barons of corporatocracy must not be allowed to stifle our freedom of speech!!!
—Joseph R Martin, VANCOUVER, WA

Giving up net neutrality is giving up the most defining characteristic of the web as we know it; open-access. The internet service providers (ISPs) do not own the network of networks, links, or interconnected leased lines across the world that make up the internet. The contributing organizations of people around the world openly participate in the creation and management of the web's content and resources, not the ISPs. Your device specifications and local network equipment should be the only bottlenecks in internet access speeds. These companies (ISPs) are meant to connect us to the internet as a whole, not to interfere with the process using biased priorities and bandwidth throttling to network resources (that's not their own). We already pay to be connected to the internet, the ISPs should not be involved or paid for anything more than that. To also pay for fair presence on the internet would be unnecessary, redundant, and criminal. Throw out your agenda and reclassify ISPs as common carriers. As of now, no one has the right to regulate the internet considering it's intangible common ownership across the globe. Unless this is China, or the FCC unjustly ends net neutrality, it should remain that way.
—Eric Weston, Philadelphia, PA

The internet has democratized knowledge worldwide. Without Net Neutrality, high speed access to to the web is at risk of being divide into the "haves" and "have nots". Thanks... - Brad
—Brad Davies, Los Angeles, CA

Please, don't do *anything* that allows broadband providers to offer preferential access to those with more money. Keep the internet FREE, and be honest with yourselves about it! Sincerely, John
—John I. Clark, Ridgway, CO

The internet is the place where all people have equal and fair opportunity to begin businesses, create new ideas, and share your thoughts through the one and zero flowing through the cables. However, when internet service providers begin segregating people into different "lanes" of internet traffic it just isn't fair! It's as if all roads had a fast road and a slow road; only the rich people can use the fast road while the not as fortunate people need to use the other slower roads. This control over the flow of data just isn't fair, it's clearly a marketing move that doesn't create competition and discourage new internet providers as-well.
—David Kang, Northbrook, IL

FCC throw out your rules and instead reclassify ISPs as common carriers.
—Janet, Beaverton, OR

I do not want somebody I don't know determining what information I am able to access on the World Wide Web. Come on. Anybody worth their salt already knows that the news in the U.S. Is filtered and diluted. Watch what is happening in the news around the world as opposed to the crap we are fed on TV. We are shielded from what is really going on. The internet allows us to choose for ourselves the news that matters.
—Jon-Paul Wolfe, San Jose, CA

I want equal access to content. The FCC's mandate should be to maintain a level paying field...
—Jeremiah David Revitch, Mill Valley, CA

ISP's are common carriers, and should be classified as such.
—John Haley, GROSSE POINTE, MI

free and equal access to all information is essential if we hope to someday achieve the goal of a free and equal society
—David L. Bishop, Cape Girardeau, MO

Free and neutral internet is crucial for free and open society.
—Gary davis, morgantown, WV

Taxpayer dollars went towards building the Internet either directly or through subsidies. It is in the public domain and should stay that way.
—Kenny Sabarese, South Orange, NJ

I am a pediatric physical therapist. I live and work in a rural area that already has difficulties with internet access. Our company relies on cloud-based programs for documenting, scheduling, and billing. The proposed rules would likely make it difficult if not impossible for small businesses such as ours to perform our jobs in a timely, professional manner and may cause some to fold. One of the premises of the internet is that it offers similar opportunities to all, regardless of location. The propsed rules would kill that premise. As a citizen, I want the FCC to accept that technology has changed and reclassify the ISPs as common carriers so that everyone has equal access.
—Laura Knight, Penrose, NC

Special interests, corporations, and wealthy people are always more equal than anyone else in America. At least keep the internet as one of the last vestiges of real democracy.
—Stephen Feiner, Sea Cliff, NY

The large telecommunications corporations already have many advantages in the form of exclusive franchises. To give them more advantages, while depriving the American people of a present common resource, can only lead to more economic polarization.
—Mr. John P. Shea, Houston, TX

The internet provides vital information to those of us unable to research issues in person. It connects those of us who feel isolated by age or illness and should remain an open highway, available to anyone regardless of financial means. the internet is a utility, vital to modern life. It should not have fast lanes for some.
—Sandra J. Carrubba, Buffalo, NY

I support online teaching and learning. As more and more students rely on this modality for thei education and we strive to provide a rich media experience for that learming, having an open internet is the only way to provide a level olaying field for access to education. Thank you.
—Audrey J Williams, Knoxville, TN

Net neutrality = free speech!
—Adam Huard, BENSALEM, PA

My profession of working in the music industry requires that I have access to the internet at all tubes to see what's new, what's moving, to gather new ideas and inspiration. To be able to share and evolve. The internet shouldn't be used as a playground from companies to bid over. It should be used as a tool, to further ideas, further education, to help develop, without feeding companies millions to be able to learn.
—Jeffery Allen, Cleveland, OH

Because all people are created equal. We don´t need a two-class society!
—Leif Hosius, Weinsheim,

Internet is a free and open forum for independent communication. It needs to stay that way
—Carina Hizliok, Malden, MA

Even we small people and businesses need the Internet to treat us fairly! If you give more priority to big corporations, then we ordinary people will always beholden to them, and controlled by them, and that is not the society Americans want. Save our Internet Equality, please!!
—Kaye Windham, Cherryfield, ME

Polls suggest that the vast majority of Americans, as so does the majority in the rest of the countries, want change. They want less greedy people in charge, they want a world that is less about money and more about a healthy, peaceful, and happy place for all. A place where we can all battle for a common goal, like reaching new worlds out there in the cosmos, ridding humanity of ailments like cancer, AIDS, and malaria, and reversing climate change for a fresh air, green planet. The internet is the greatest tool ever created to connect the people accross countries that with their visions fight for these common goals of humanity. Please, reclassify ISPs as common carriers, please think less about money and more about the world that we are building. Think of the people, and of all the suffering that the Internet helps mitigate. Thank you.
—Cristopher Adorno Rodríguez, San Antonio, TX

Big corporations have enough power. Let the smaller business at least compete. That's how everything starts, right? Smaller businesses, at least give them a chance to continue to improve this country. Don't let this snowball into something awful.
—Taylor Pline, Lansing, MI, MI

Net Neutrality is important to me because it fosters growth and development without unfair advantages and exclusions. It provides unaltered access to information without the intrusion of middlemen wanting more profit for this or that quarter.
—Sarah Durrant, Toronto,

As an author who publishes his work online, net discrimination would seriously inhibit, if not utterly destroy my ability to provide my audience with my work, as I lack the funds to pay for the necessary bandwith that such a discrimination would make exclusive to wealthy people.
—Georgios Michailidis, Schwalmtal,

This isn't what we pay you to do! The internet is supposed to be an open and free item. The internet is meant for learning, growing and sharing ideas. How dare you allow these already multi-billion dollar companies make more money off of the middle class. This is just another step closer to enslavement.
—James, Westbabylon, NY

It's essential to the free exercise of speech, association, and the innovation that comes from both that net neutrality be preserved. For-profit corporations determining who gets heard versus who does not is fundamentally anti-democratic. Further institutionalizing inequality of opportunity in expression will not only harm the dynamic character of the internet, it will create an unfortunate "new normal" where Americans take for granted the principle that the more wealthy are more worthy of fundamental rights of expression. They're not. Preserve net neutrality.
—Samuel John, Houston, TX

Net nuetrality is essential to provide equal access to information for all people, and therefore essential to maintaining our democratic process. With out it only those with the most money will have access AND control of information provided. Loss of net nuetrality will contribute to the continued stratification of socioeconomic classes, and the ever increasing economic gap. Information is power, and should be equally available to all of us.
—Tery L Eaton, Brush Prairie, WA

I demand that fcc protects the open internet and dont let monopolizing of att or for that matter any other company who wants to do this
—My Info, san antonio, TX

FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Neill Barrett, Portland, OR

I want to continue to see a neutral playing-field for all constituencies currently using the internet now, and for those who will in the future. Please make that happen!
—Kara Humphrey, Kirksville, MO

I want the TRUTH, not LIES paid for by a few billionaires.
—Richard A. Johnson, Eugene, OR

If our country represents the idea of Equal Opportunity for All, then we must ensure internet access speeds remain the same for All.
—Genevieve Shiffrar, Oakland, CA

This plan is discriminatory, pure and simple, and allows big money to ultimately censor free speech through control of content and applications. True net neutrality is imperative to maintain. Big money cannot be allowed to take over the internet, fascism is unacceptable--support American values of fairness and openness.
—Candyce Reynolds, Columbus, WI

I try to look at the bigger picture of life. I believe net neutrality is something that will benefit millions of people across the country.the service providers will abuse their power and purposely give people who cannot pay high prices slow internet and discriminate. this will be a hindrance in society that could easily be avoided
—Austin Galea, cfescent city, CA

Net Neutrality is needed to ensure that all online content is treated equally and ISPs aren't able to discriminate against certain content sites to favor their own.
—Brian Tracy, San Marcos, TX

The internet was founded upon the principal of freely accessible information and the free flow of said information. By allowing random businesses (read ISP Monopolies) the freedom to restrict the internet at their own leisure for their already massive profit is against not only the principals of what the internet has come to be, but free market practice.
—Caleb Brooks, Coppell, TX

Net Neutrality is important not only to me but to everyone in the world. The whole concept of the internet is for the free flow of information and to take that away would change the way America is drastically. Take a look at all the innovation's and ideas that have come from the internet in say the last 10 years or so. The ability to have access to any information we want 24/7 is paramount to this country's continued success. Some countries view access to the internet as essential and this access is protected by their governments. Please don't limit our freedoms.
—Christopher Mercon, Morrisville, VT

To build my business as a self employed innovating person. The open internet is a lifeline to health , well being and balance on many levels! I implore you to reclassify ISP'S as common carriers! Thank-you for your kind consideration! Signed, Ms. Pamela Joy Eisman
—Pamela Joy, New York, NY

The Internet is one of the most complex machines we have ever built. It is difficult enough to keep it running when its rules for connectivity are simple and known. Adding a hidden layer of "paid peering" is an excellent way to create something that absolutely nobody understands or can fix. Please classify ISPs as "common carriers," because they are, in many ways, *more* of a common carrier than telephone networks are.
—Kyle Bresin, Hopkins, MN

An open and neutral internet will allow small business to compete on a level playing field with the huge companies, which encourages innovation.
—Mr. Bill Krzyzanowski, Kansas City, MO

Safeguarding fair and open internet access is the only way to ensure that profit-driven corporations do not skew our democracy by inhibiting at will and with financial penalty individuals' access to telecommunications channels -- we need internet services re-classified as common carriers to preclude this kind of profiteering at the expense of access.
—James Sharp, San Antonio, TX

As a library professional and a citizen, I feel very strongly that Internet should be equally accessible to all. A tiered approach to Internet access will severely inhibit the level of access that libraries will be able to provide for patrons, as public libraries' budgets are tight and certainly are not at the level of large corporations with money to burn. People should not be punished with less access to information. Information should be equally accessible to all people and to all organizations.
—Jill W, Chicago, IL

internet is my life dont take that away from me noobs
—Pedro, AVEIRO,

ISPs are already de facto a common carrier. Why not make them a de jure common carrier as well?
—Lin Barrett, Portland, OR

AT&T & Comcast have already raised my bills for Internet services!
—Robert J. Miller, Fremont, CA

Public knowledge, whether text/audio/video, is always a public resource and should not be gated behind time lapse by a common carrier.
—Brian Wells, Colorado Springs, CO

Once this barrier is breakable it wont stop, please keep the internet and fair and open place.
—Darran Hurlbut, Kirkland, WA

Please protect the rights of everyone to easily access the Internet, not just those with large sums of financial clout. The Net requires your protection, now more than ever.
—Christine Rosenbalm, Dryden, MI

ISPs are common carriers. There is so little competition that it's ridiculous to pretend they're in the same ballpark as other platforms.
—A Waldschmidt, Denver, CO

We deserve to get what we paid for. We the taxpayers paid for the internet, not COMCAST.
—Laurinda Conyers, Fair Oaks, CA

Free Communication with Others!
—Ben Miller, RioRancho, NM

BECAUSE THIS IS NOT RUSSIA!
—Karen T. Davis, Philadelphia, PA

ISP's should not be allowed to bottleneck access to any other site on the internet. The net needs to continue to be free and neutral.
—Tim Frentz, Lincoln, NE

WE THE PEOPLE are coming! Beware Banksters and all of your elite ilk. Your power over us will be removed and true sovereignty and freedom will be restored to the People and their Nations. Planet Earth shall be free and governed by us NOT YOU!
—Jeffrey Wilkins, Harvard, MA

Privacy is muy importante!
—Gail Mazyck, Raleigh, NC

FREEDOM OF SPEECH THROUGH THE OPEN INTERNET EQUAL FAIR ACCESS FOR ALL PEOPLE
—Kyle Cannon, HARLINGEN, TX

The internet has allowed for a massive economical and intellectual expansion over the last decade, made possible by net neutrality. To threaten Net Neutrality is to threaten the flow of information and the wealth of most individuals
—Jesse Alan Krug, Tucson, AZ

I want to learn and the internet makes that easy. Imagine if someone controlled your knowledge.
—Kimberly Lawrence, Spokane, WA

The Internet is an information highway. No public highway currently allows businesses to travel faster; nor should the Internet.
—Kimberly La Liberte, Spokane, WA

To be a successful economy in the 21st century, we must have the tools, such as an open, unbiased, internet. Please do not hinder our economy that it already is.
—Samir Sheth, Blacklick, OH

All persons should have equal access! The internet is the only equality in the world for people who are not rich! Useage should not be limited for those who can't afford fast speeds! This should be viewed as a freedom of speech issue, and should be impossible to infringe upon the constitutional rights of the American People!
—Sarah Byrd, Inglewood, CA

free exchange in a reciprocal flow venue is what the modern world, post-occupy is all about!
—Al B Chazin, kew gardens hills, NY

As a worker in the silicon valley, I fear for the impact of this ruling on the ability for young startups to compete with established companies such as netflix that can afford a fast track. Please treat the internet as a common carrier.
—Katherine Richert, San Francisco, CA

Dear FCC, The free and open Internet is critical to our ability to access and share information without a corporate filter, and to effectively organize for social justice. As the FCC's National Broadband Plan acknowledges, high-speed Internet is an essential service that all Americans need in order to perform basic tasks, from applying for a job to doing schoolwork to finding a home or to run a business. With the dismantling of the FCC's 2010 Open Internet Order, which provided vital (if imperfect)protections for Internet users against discrimination by our Internet service providers (ISPs), it is urgent that the FCC take immediate and decisive action to protect the public from these corporations' predatory business practices. The FCC exists to serve the public, not the corporate bottom line. The Court in Verizon v. FCC made clear that your agency has the authority to regulate interstate communications. I urge you to act on that authority now to reverse the flawed decision to deregulate cable broadband, which made the Open Internet Order unsustainable from the start and paves the way for the privatization of the Internet. The ball is squarely in the FCC's court: please take action to reclassify broadband as a telecommunications service now. Sincerely, Nathan Park
—Nathan Park, Charlestown, IN

Dear Chairman Wheeler of the FCC, Net neutrality is very crucial in paving this current era where the Internet is a huge driving force for activists such as many YouTubers, such as "AtheneWins" to do charities through his livestreams such as Twitch as well. This individual has raised more than US$11 million in the past two years. If the new rules set out by the FCC do indeed take on in reality, this would mean many activists or people who earn their income through the field of entertainment on platforms such as YouTube, Twitch and so on will fade out drastically. They won`t be any of such new YouTube or Google for the individuals to earn their income off their hard work and even charities to help the poor. Therefore, I urge the FCC strongly to reclassify ISPs as common carries. Yours sincerely, Timothy Soh
—Timothy Soh Jun Hao, Woodlands,

If I get a back seat to corporate america regarding network access I will build my own ad free no cost, and no profit internet for only individual human beings to use via their own devices. No profit in that at all.
—Eric Wright, Winona, MN

We all deserve the same internet no matter how rich we are or aren't! Please don't segregate our country into classes like this.
—Stephanie Unick, Kearney, NE

The net belongs to everyone!!! I worked on it in it's infancy.
—Tom and Helen Sager, Rolla, MO, MO

Net neutrality is important to everyone because it allows everyone equal access to the internet
—MaryJane Peace, Centennial, CO

Removing net neutrality is in violation of my first amendment rights!
—Heather Stephenson, San Jose, CA

The internet should be treated as a utility in our modern age of convenience. Fair service for all.
—Ashley C Mullen, Essex Junction, VT

We shouldn't let big corporations run our communications and slow it down.
—Sura Halote, RPV, CA

It's free speech. Free speech is a constitutionally guaranteed right.
—Miquel Ferrandiz, Palo Alto, CA

No to corporation on buying the open and free internet. They shouldn't be telling people how much it's going to cost them, cause you know as well as corporation know they will be ripping people off, bumping up the price of their internet.
—Molly Noone, Chandler, AZ

Net neutrality matters to me because I cannot afford any extra fees. As a college student, I depend on net neutrality to ensure that I get my homework done on time, that my projects saved on the cloud are easy to access, and to ensure that I am able to relax at home to save expenses on going out. Net neutrality matters to me as a freelancer as well. I am attempting to establish myself through online networking, maintaining my website, and communicating with employers across the world.
—Stephani Wilkes, Cheney, WA

Keep internet free and open!
—Michael P Gallegos, Portland, OR

No democracy without Net Neutrality!
—Mikel Sola, ,

Net Neutrality cannot be dismissed, it is integral to freedom of speech.
—Ellen Conroy, Sydney,

Sister of New training, female veterans, low income women, and women on welfare in construction. 501 (C) (3) ORGANIZATION SISTER OF N.E.W will uniquely positioned to help unions, contractor and Developer's employ more trades women. So N.E.W. will improve Florida's Construction industry workforce by, preparing reliable, motivated individuals for the skilled trades. So N.E.W. women will understand the specialized nature of the construction industry and will be familiar with the demands of a career in construction. All So N.E.W. graduates will be evaluated and approved as trades- ready by journey-level trade's person. SISTER OF N.E.W. will provide placement service to all women who graduate's from training. During training, students will be evaluated by journey-level trade's person and women to determine their suitability for the trades. At the end of training each women decides which trade she would like to pursue. So N.E.W. will guide the graduate through every step of application. Trades and Employer's may require interviewing, testing, or additional training before accepting candidate. Sister of NEW main goal is to get low income women off of government assistance and place them in workforce. Website: www.sisterofnew.org We are the ONLY training program of this kind in the State of Florida for women in low income brackets, including female veterans, single mothers, and women on welfare.
—Luisa I Ortiz, Miami Beach, FL

Net neutrality is one of the founding principles of the internet. The internet is the greatest tool for an individual to be heard and disrupting net neutrality would create vast inequalities as we go deeper into the information age.
—Markese Dixon, Capitol Heights, MD

Net Neutrality and a FREE PRESS is important to the survival of our Democracy! OUR Internet must be classified as a PUBLIC right/utility and NOT privatized to the corporations!
—Mary Loney Bichell, Dubuque, IA

It would be silly to impose rules like this on phone where voice is delivered at different speeds, or electricity changed flow unless you were watching pay per view. The internet should be regulated like a utility and the companies that provide the service should bill as such. This act would cause damage to the structure of the internet and to the many valuable services that could not afford to pay for access.
—Randall Coleman, Redondo Beach, CA

As a professor, researcher and citizen, I believe that Net Neutrality is an important part of our national life. Use your authority at the FCC to reclassify ISP's as common carriers. Think about what the loss of internet neutrality would mean to whole generations of students and their teachers. Do not let the power of corporations overpower common sense. Thank you. Dr. Margaret Cullen
—Margaret Cullen, Ada, OH

The internet is not meant to be cordoned off to the highest bidder. It is disgusting monetary discrimination, and favors the companies with the fullest pockets to provide the information that best suits them. It is necessary that information on the internet remain free and unbiased. The monopolization of the internet and censorship of what reaches the public can only harm the heart of America until no voices are left but those that are worth their weight in gold. It is events like this and ideas like this to exploit the American people that make me ashamed of my country and the people that run it. American politics now are centered around the wants and greeds of the richest and most powerful people. It's too late to beg that America be the free democratic oasis that it purports itself to be, but the internet is the last semblance of 'freedom' left. Or it was, before the destruction of net neutrality. With the destruction of net neutrality, the bigger companies decide on behalf of the people what information is important and what is not. The internet is of immense importance to me. It is an extremely important tool for creative expression and collaboration, where ideas have a platform to swim freely in the open air for others to discuss and expand. It is an extremely important tool for education, where knowledge is offered freely for those who cannot find it elsewhere or cannot afford it-- for instance, I currently am studying the Italian language via the free language website duolingo.com. It is an indispensable social tool that has become a necessary part of society. Enclosing the internet with monetary barriers is the destruction of America.
—Richard Pannullo, North Caldwell, NJ

The internet that we have now has made this world a better place 100 fold. Limiting the spread of information is cowardly. It only serves the purpose in the absolute end to hide the cowardly acts of the people trying to limit its spread. If the FCC strikes down Net Neutrality, people will see right through what is happening and the truth will rise to the surface, it always does. Please don't halt this world from becoming a better place.
—Devin J Gilmer, Centennial, CO

America already has slow internet access compared to our Western European cousins. The FCC should RECLASSIFY INTERNET SERVICE PROVIDERS AS COMMON CARRIERS. The only reason that the FCC would want the American people to be second-class Internet citizens is because you are in the pockets of cable and phone companies. DO YOUR JOB ON BEHALF OF AMERICA'S INTERNET USERS, NOT THESE MEGA CORPORATIONS!
—Channah Abraham, Woodstock, NY

Because the internet is important to us all, why should it benefit the few over the many? That doesn't sound very "American."
—Clyde Engle, Lake Forest, IL

If ain't broke, don't fix it...
—Mr. Pedro Estrada, Cochabamba,

if companies can speed up or slow down information as necessary for their bottom line, they will be able to control what information people can access. If our freedom to access information is limited we will struggle to teach, learn, and make researched based decisions which in turn limits our ability to be a full member of society no matter our economic level.
—Christophe Huestis, Enfield, CT

The internet should be an open platform for the flow of information. Large corporations should never be allowed to control what information I see on the internet.
—Mark Sauter, Palatine, IL

I rely on an open internet to have a leg to stand on in the future. There is no clear economic future, the last bubble has popped, but allowing a two-tiered internet to exist creates a bubble in which I can't contribute, but a bubble that we are forced to be a part of with no fair standing.
—David Charles Johnson Jr., Palm Coast, FL

This is important because i don't believe companies should get preferential treatment if they pay a fee to ISP's. Keep the internet NET NEUTRAL!!!!
—Fred Gomez, Encino, CA

Dear FCC Letting big corporations take over the internet is against anti trust laws. If we give them permission they will become monopoly. Getting rid of net neutrality means lack of information for people. When internet is regulated, we will not have enough materials to learn thing and it will make things much harder for everyone. So please do not let big corporations take over the internet.
—Temur Amriev, Brooklyn, NY

The Internet began as a free information exchange highway literally for the betterment of the human race. Physicist and students and professors coming together to unlock the secrets of the universe in an open dialog, non-profit environment. As it becomes clearer to the general public that our economic policies and practices, tax and legislative institutions, and their resulting rules and rulings have created an environment that heavily favors major corporations and the wealthy, certainly in terms of their economic ability to build capital and accumulate accelerated wealth, isn’t it time that the government simply say “no” to the only real and fundamental reason the carriers wish to squash the Open Internet Ruling as a Public Utility? That is, it *might* have a detrimental effect on the rate at which profits can be generated. Please represent WE THE PEOPLE. Contrary to whatever you may be hearing from lobbyists, helping corporate profits does NOT translate to helping me and the rest of us common folk. The fat cats are fat enough. Save the internet. Save neutrality. Restore the people’s faith in the legislature. Restore mine.
—Bradley LaChance, Euless, TX

because it the same fascism our grandfathers fought and died to destroy only with a new face and form of a multinational corporate aristocracy!!!!!
—Jon Zimmermann, madison, WI

OWER LAND IS FREE THE NET SHOULD BE TO
—Glenn Robert Slingluff, Hammonton, NJ

"Corporations don't want thinkers, they want workers." They want workers so the people can earn more money and buy more useless junk. The ability to access open information is EVERYTHING. If you control our capability to learn, you will destroy all hope of creativity. If you remove our ability to access open information, I promise I'll be revoking my American citizenship.
—Randal Ackerman, Lakewood, WA

The future of the IT industry in America depends on Net Neutrality. Millions of jobs will be compromised.
—Gordon Barr, Alameda, CA

Dear FCC, I am writing to ask you to please allow 100% net neutrality. Please do not reduce the internet into an economic apartheid between the rich and the poor. Already, we are seeing all over the world a divide occurring between the governments and the citizens. Governments should be representing the best interests of the citizens but, only too often, we are seeing governments favouring rich corporations to the sheer detriment of our society. Please rule in favour of net neutrality and start supporting the people for whom you are suppose to be serving. Best regards, Mr Herbert
—Mr Herbert, Bristol,

No current, popular internet company would exist today if not for net neutrality. Please, don't allow greed to destroy the future of our most important form of communication.
—John Patton, Columbus, OH

The internet is one of if not the most important technology man has every created. As of now almost anyone in the world can get into contact with each other in seconds. As well as read, write and engage each through an unbelievable amount of different websites. Please don't throttle connections, don't make it so that people connecting to smaller blogs have a slower speed compared to going to some major site. The internet needs to stay neutral. This is for the betterment of everyone. Please throw out your rules and reclassify ISPs as common carriers. Please, keep the internet free. Thank you for your time.
—Patrick C., Columbus, OH

don't want to risk a society of have-nets and had-nets
—Tom Bakker, san jose, CA

The Internet Service Provider market is nowhere near the ideal state of perfect competition. With the heavy use of public lands & public permissions to build its massive infrastructure, the country has every right to regulate its operations. The computer Internet is essentially an advanced telephone system which can communicate through voice, writing, and vision. Thus employing the same regulations as a telephone network simply makes sense. Not only that, but the websites and applications we use within the Internet exist in one of the nearest perfectly-competitive markets in history! Once connected to the Internet, anyone can publish their content with remarkably little expense! It is this freedom of competition, freedom of ideas, and freedom of communication which we seek to preserve by making ISPs carry all requested traffic equally. If these same ISPs complain that Netflix is consuming so much bandwidth, they should remember that *their own customers* requested those messages from Netflix & are already paying them for the access.
—Christopher Guinnup, Newark, DE

Chairman Wheeler, Your proposal to abandon net neutrality is the wrong decision. This policy would lead to content being treated differently based on the preferences of the largest corporations in America. In addition, the "pay to play" environment you are encouraging will only force the consumer to pay more in the end, while enriching ISPs, which have some of the lowest customer service ratings of any industry. I strongly encourage you to look out the average American and classify ISPs as common carriers, so that the FCC can regulate the ISPs and promote fairness and opportunity for all Americans. Please abandon your proposed rules and support net neutrality.
—Tyler Vander Schaaf, Three Rivers, MI

Net Neutrality is important because the Internet is not something to have discrimination put upon it.
—Alicia Axon, Round Rock, TX

With the proposed rules, the free, open, competitive Internet we've all grown to know and love would at an end, and will become just another advertisement-laden source of junk news and content that nobody desires to utilize. In my line of work, free (as in freedom) software has become of utmost importance. The proposed two-tiered Internet, would likely mean many resources we, in the free software community, have flourished by and need to function would disappear. Please put an end to this madness and reclassify Internet service providers as common carriers to keep the Internet in the hands of the people and those who value intellectual freedom. I think it's horrible that these companies think they can censor information even more than they currently do, and very likely, this is in order to pad their pockets further. The Internet is one of the last bastions of true journalistic integrity and open discussion, and will only continue to be so, if we oppose these proposed rules and continue to embrace network-neutrality. Thank you for allowing our comments and your reconsideration of these devastating missteps, Lucas
—Lucas Endres, Chippewa Falls, WI

Mr. Wheeler: The internet belongs to we the people. It does not belong to the ISPs. Your plan to turn the internet over to the ISPs is anti-American. We are a free people. And a free, open internet is one of the things that makes us free. I am outraged that you would even consider allowing the moneyed interests to establish dominion over a supposedly free people. The internet is an effective monopoly, and as such, it should be reclassified as a common carrier like an electric company or a telephone company. As Chairman of the FCC, you are now an employee of the people. You owe your allegiance to the people, not to your former employers. Show some integrity; show some guts; be a man; be an American; be one of we the people. Give us our Net Neutrality!
—Dennis P Kelly, Aurora, IL

Because I am starting a start-up that we have been working on the code for the last 4 years. JustOutThere.com. We plan to have a new revolutionary way to support business tools on the internet. We are working really hard and when our company gets momentum, I do not want to be told we are using too much band with and have to pay. After all Do I have to pay the power company for more electricity and subscribe to a bright bulb service? The truth is these ISP need to develop their infrastructure and giving them control of the data will stifle innovation. Basically the ISP will get to choose what they feel is acceptable. If a heavily christian man takes over Comcast as CEO and says we will no longer braodcast or allow any data that goes against christian beliefs, what is stopping him? In the modern age, if information is power, allowing an ISP to control the information is placing too much power in their hands. I am tired of also being raped over the coals for sub par service from a communications company. They want to hold onto everything and force you to pay more money. If you do this, other countries in Europe or elsewhere will exceed the innovation that has kept this country on top for 200 years. The big companies do things in the name of money way too often and in the end it damages the country. Offshore manufacturing is a perfect example of this. We have lost our manufacturing base in America to cheaper offshore labor. If you do this, the big companies will do things in the name of money for no other reason than more money into the corporate coffers. It will have a ripple effect that will kill the spirit upon which it was founded.
—Aaron Wantuck, Albuquerque, NM

I want my children to grow up in a culture where we dont place pay/profit before cheap access to the internet - we cannot be competitive with other nations if pay-toll our internet
—Dylan Nelson, Universal City, TX

Having the Internet be a fair and equal playing ground for everyone who wishes to utilize its funuctionality is crucial! Right now we are defining how generations of people to come will be able to use this service and how it is distributed to the masses. Access to the Internet should be a human write. Giving the ability for large corporate entities to throttle it as they see fit would be a violation of the core principles the Internet was founded on.
—Thomas Molloy, Middletown, NJ

Net Neutrality really matters to me, because it is a gross double standard, if I stood in the street and only let certain people park, then had restaurants pay me to let their customers park, I'd be arrested for extortion. Not only this but it is truly wrong, allowing companies to take control of something as large as the internet, slowing down sites that millions visit every day.
—Patrick Jordan, Brooklyn, NY

If it ain't broke, don't fix it.
—Erin Moore, Sequim, WA

Don't fix what isn't broken! This could mess up everything we know and love!
—Michael R Ventura, Miami, FL

Allowing major corporations to throttle connection for goods and services that we as consumers have already payed for will only lead not only the steady rise of a monopoly, but will also put a strain on smaller companies that are trying new ideas that could possibly be the next major innovation in the progression of our technology and society. Everything about this is wrong, and in simple terms is down right unjust. Everyone should have an equal playing ground for their ideas, and by allowing major corporations to practically strangle smaller companies, you are not only being unjust, but you are also holding back the progression of our technological world.
—Greg Burns, Clayton, CA

ISPs are common carriers. It should be available to everyone equally. No pay to play!
—Gary Pierson, auburn, WA

Net Neutrality is everything all the current bill does it give ISPs more power then they need. It also classifies ISPs as information providers which is just not true. This has to be changed or forever will kill the internet as it is too date.
—Cody Bryce Kunick, Edgewood, TX

hese companies would have the power to pick winners and losers online and discriminate against online content and applications. And no one would be able to do anything about it.
—Derek Fuller, Davenport, IA

Internet service is a necessity. Do not allow the providers to control our access to information.
—Chaiya Laoteppitaks, Moorestown, NJ

The Internet is just that. An interconnection of networks. If the carriers are allowed to discriminate against networks who can't/won't pay an additional fee, then we will no longer have "The Internet." We will have a "Divided-net" The power/value of a network is a function of the number of computers connected to it. Without net neutrality, the power/value of what we once called The Internet will be tragically diminished.
—jim Young, Deerfield, WI

Not only did Obama lie if this is the case, but it makes it completely unfair for those who aren't massive companies who make millions of dollars often by being cheap assholes, and your trusting THOSE bastards to regulate themselves and be 'fair'? What is wrong with you? The poor get poorer, and the rich get richer.
—Tristin Meholick, Reynoldsville, PA

The internet is owned by no-one, yet all of us. Let's keep it that way shall we?
—Kev, Liverpool,

Its about freedom!
—Calum Jones, Wallasey,

In my view the internet is a FREE and OPEN resource which allows for the healthy distribution and open competitition of ideas. Never before in the history of man has there been such a forum. ANY attempt to throttle access by anyone, unequally in favor of anyone else, for any purpose, flirts dangerously with the survival of open and equal access.
—Daniel A Pratte, Anchorage, KY

Because I like to make my own opinion
—Robbie Quinn, Wallasey,

The internet as it exists is an invaluable tool for education and information that should be privileged to everyone equally. People who log into the internet are suddenly provided the ability to casually study ancient history, or look at the photographs taken by the Hubble telescope, even learn a new language, just to name a few activities. A plethora of valuable enrichment right at their fingertips. To stifle the internet is to propose that the right to explore and satisfy a human's curiosity is exclusive to those who can satisfy the cost of browsing. Freedom of information is a precious thing, one that I wholeheartedly support!
—Rachael Ferland, Seattle, WA

The foundation of americas online economy didnt come from nowhere. It came from every online users contribution to it. We made it. The ISP's simply provided a way for us to easily and affordable access it. IT belongs to us, and not them. And they should NOT be the ones to make a enormous profit on an already over-priced service.
—Trevor Demelo, D'iberville, MS

Net Neutrality is important to me, because it prevents discrimination. Many countries have recognized the internet as a right. The internet is critical to the education (recognized as a human right) and development of everyone. Compromising Net Neutrality compromises the rights of those who cannot afford to pay more - clear discrimination. Please protect Net Neutrality, uphold the rights of education and development.
—Holly Michaelson, Phoenix, AZ

We do not want this to happen ..end of.
—Rachel Edwards, Wirral,

its just a different form of racism, we as a country cater to the wealthy. At this rate, this opens the door to reinvented racism where the wealthy who can afford these charges get them for practically nothing while the rest figure it out. Oh, wait.... We are already living in a society where that is the way. To start having to pay for sites i have been visiting for years is not fair to anyone. Your discrimination and racism will not go unpunished in God's. You want charge everyone (the poor) money they don't have for something that is free (water) to make your already fat pockets fatter. People use the internet for whatever they use it for. But what about the people what about the people who use these apps to better their lives who don't even have an account with these providers, or the people who are already struggling trying to figure out where they can get access to the internet for jobs, medical info, school, etc. We live in the best and the worst place to live.
—Willie Edwards, north charleston, SC

Net neutrality really does matter, so many people use the internet, you are literally taking something away from billions of people. If you've learned anything from history you should know that people don't react very well when you take something from them.
—Cesar Lopez, El Paso, TX

The internet is an important tool now a days for education and the like. Why do the rich always have the world catered to them?
—Katelyn A. Croom, Alvord, TX

This is one of the most important ruling's in history we have a chance to see the first generation that's had the chance to grow up with limitless, unfiltered information. A generation that could be more well informed then any before. We already pay more for the net then any other democracy on the planet. its all theft and the people sharing freely is what made the net what it is today. this is not something you can leave to the free market and in the hands of greedy monopoly's I know the net is still the wild west but you cant hand over the key to people that only see profit and had nothing to do with making it what it is today. if I've ever seen free speech its the net. money is not speech!
—Josh CHisum, Tacoma, WA

Really? Another chance to widen the divide between the haves and the have nots? Whatever happened to the American dream? Continuing to make it harder to have an even semi-level playing field is disgusting.
—Loretta Workman, Cincinnati, OH

There is absolutely no reason in our country for our internet access to be tied to our ability to overpay for it. The argument that data is expensive to transmit back in forth is silliness, especially when these same companies work over both the state and local governments for tax breaks to build the lines and then overcharge the customers to "maintain" them once built. The internet is a utility in 2014, and treating it as anything less, is irresponsible and reprehensible. History will remember this decision as well as those who make it. The internet does not need tiers of fast and slow lanes. It does not need the option of fastpass lanes to leave the majority of people waiting behind because of their lack of wealth. Please do what is best for all people in our country as your agency is supposed to, not what is obviously best for big corporations who care nothing for any country or any people, only profits.
—Mr. Eric Carter, Lavonia, GA

Capitalism is against the things that we say we believe in - democracy, freedom of choice, fairness. It's not about any of those things now. It's about protecting the wealthy and legalizing greed. Michael Moore This couldn't be more true. Please keep the net neutral and open for all.
—Katie McCormick, Cedar Rapids, IA

Getting rid of net neutrality is just another way for the more fortunate to have more privilege and the less fortunate to have less. The socioeconomic gap has to get smaller not bigger. Are really going to let this make it harder for people to find a way up?
—Amanda Fins, Union, NJ

It's vital and critical to keep internet access free for all ordinary citizens who can't afford to subscribe to big cable company service
—Dach Mou, frederick, MD

Keep the internet free for all
—Theodore Hanold, modena, NY

I believe that allowing service providers to control content will devalue the free and open nature of the Internet. Today's Internet is a robust platform for innovation, free speech, and information which should be protected against the controlling influence of natural monopoly Telecom companies who already have little incentive to act in the interest of consumers.
—Vincent Matrisciano, Redondo beach, CA

Net Neutrality is important to me because it represents the equal expression of thought and ideas. It allows me to research topics and information that I decide is important. It allows me to connect with people that I choose for the reasons that I choose. Net Neutrality is important because the internet only works as an open environment. Corporate America has enough mediums through which to work. They do not need, nor should the have, a monopoly on bandwidth.
—Bart Schidecker, Dayton, OH

The internet is not a luxury, It is a necessity. I needed the internet for college, and now I need it for work. This proposal which will create two lanes will end net neutrality. Many of the great innovations and inventions that have been born on the internet may not have happened. Recently a plan to allow cell phone companies to charge app makers for data instead the users of the apps was struck down because it would hinder competition. Do not let innovation be a word that used to be associated with America. Protect net neutrality, protect competition, and protect America innovation.
—Matthew Kempa, Edison, NJ

The FCC needs to throw out its rules and instead reclassify ISPs as common carriers. THIS IS THE ONLY WAY TO PROTECT REAL NET NEUTRALITY!!!
—Aggie Monfette, Royal Oak, MI

All people should have the opportunity to have equal access to internet services and not be held hostage to the big companies feeding us a diet of what they think we should know. Keep the internet equal for all, irrelevant of ability to afford top-up fees.
—Allison Bentley Jones, Wallasey,

As an independent musician I am reliant on a neutral internet to allow my art to reach people at the same speed as artists backed by a major label without having to pay for a fast lane. I have no capacity to compete with the vast wealth of a major label, and the world of musicians who are also independent would suffer. This stifles the growth of music more than major labels have already done. A neutral internet allows consumers to choose the music and content from the people and businesses that they support without a penalty. People should have the right to access whatever site they desire without compromise. It is a resource that impacts the education of humanity, and should be treated as such. It is not worth sacrificing this potential in order to allow a select few to profit by selling faster "lanes." Let the country's interests (eg every person using the internet) be in front of corporations for once. Politicians that cannot recognize the importance of an open neutral internet have lost touch with modern reality, and are not the capable leaders we need for a healthy and thriving future.
—Sean Machak, Mountlake Terrace, WA

The smaller internet providers need the ability to operate on a level playing field. Their innovation also helps keep competition and fair rates based on the price the markety will bear and not a monopoly-driven rate. Don't take away our options!
—Diana Martin, Marietta, GA

We are behind Lativia in internet speed...you make Americans ashamed of their country
—Adam, auburn, AL

Wheeler’s plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. These companies would have the power to pick winners and losers online and discriminate against online content and applications. And no one would be able to do anything about it. The internet should not be able to be controlled.
—Cynthia Roberts, Yorktown, VA

The fundamental right of free speech have to be preserved for everyone. This proposal would clear the way for some less major players/companies to dictate the content of the net (like in countries like China). The Internet should not be controlled by a few and must remain free for the opinions of each. Worldwide
—Michael Schimek, Pettendorf,

The Internet was created with public tax dollars to develop DARPA. The tax payers have paid for it so don't turn it over to private corporations.
—Matt Markert, Marietta, GA

Everyone should get the same speed and type of internet, no one should be restricted, this is ridiculous.
—Shaun Johnson, Frankfort, IL

I don't want an internet filled with 'fast lanes' for those content providers who are willing to pay more. I want a neutral, Title II internet.
—Samuel Ciocco, Walkersville, MD

Information is power, and all citizens should have equal access.
—Shirley R. Vitela, Colorado Springs, CO

I smell crony capitalism
—Shawn L Johnson, Norfolk, NE

To whom it may concern, If the FCC allows companies Like AT&T, Comcast and Verizon to potentially make a two-type Internet system, it will RUIN the internet. Not only would it cost more for the average person, but imagine what impact it may cause schools, companies and business that rely solely on the internet. Stop ruining the future of communication and the internet!
—Jose hernandez, Phoenix, AZ

Net neutrality should be preserved at all costs. If the cable companies have their way, you'll be handing them even more power. This is not just about money. This is about the telecommunications companies being able to control how and when and what kind of information we have access to. It is not right for governments to have this kind of power let alone these corporations.
—Russell Gallatin, haines city, FL

All sites should operate at the same, neutral speed regardless of how rich or poor
—Scott Bonner, Mechanicsburg, PA

because it's mine and my mates around the world's right. And as I own a website I don't want my visitors to suffer slow speeds because of greed. I pay for bandwidth at my provider I don't expect people to have priority for paying more.
—Michael Dance, Alcester,

i want the internet to continue to inspire innovators. ending net neutrality would allow big business to take over the internet.
—Aaron Nedd, Fort Wayne, IN

Killing net neutrality goes against the opportunity and dream that America represents in living the American dream and giving all power to mega corporations who don't deserve it.
—James white, Dublin, CA

We are a democracy, not an oligarchy--or have we become an oligarchy with trends such as your proposal to end net neutrality? And discriminating against online content and application? Your proposal allows censorship of a high order, which would mean even greater corporate control over public access to information.
—Ms. Lonni Ann Fredman, Albuquerque, NM

Being able to access any website equally is critical to me both as a consumer and a creator. Fracturing the access disrupts access and competition negatively. Thank You.
—Edward Juarez, Portsmouth, NH

Mr. Wheeler: The current plan the FCC is proposing is one that will rupture a great platform that is an open Internet. Please do not kill the Open Internet.
—Ricardo Guzman, Lauderdale Lakes, FL

Serve people, not corporations. Do what is right for all.
—Jacob Gengenbach, Austin, TX

Hello, I would like to voice my support for Net Neutrality and emphasize its importance to the people of America. It is my fear that access to the internet and all of its possibilities for knowledge, opportunity and growth will be limited due to this proposed law. It is important to keep an open internet free from discriminating business practices that would allow the content providers who pay the most money to broadband providers to be at the forefront of internet activity, searches and access. Not only will that leave the consumers of content susceptible to more fees but less wealthy content providers may end up disappearing from the internet all together. As a Democratic society and one that champions the notion to let markets decide what content, services and products are the best, these principles are threatened by giving an unfair advantage exclusively to those who can pay for it while neglecting the markets (the internet consumers.) The internet is what connects us, informs us and makes us so much more free than many other nations. Thank you for your time.
—Sonny Torres, Denton, TX

The FCC needs to reclassify broadband Internet access as a telecommunications service. Not doing so would take away the freedom that this country and the internet was built on. Please do not enable discriminatory practices that will impact all Americans.
—Diane Lee, san francisco, CA

What happenes when we can't afford all the terrible price hikes, is it ok for us to fall behind?
—Abby, Fowler, CA

Net neutrality is important to me I dont my lack of funding to affect my my ability to have a affect on my equality online! Be aware of corporate agendas! Save the Internet!
—Anonymous, austell, MI

The agency needs to reclassify broadband Internet access as a telecommunications service, which would pave the way to long-lasting Net Neutrality rules!
—Scott Hayes, West Chester, PA

Access to the same internet should not be tiered or censored.
—Wes Previant, Pasadena, CA

Democracy depends on the free flow of information, and the internet is the only form of media remaining where citizens can communicate information, ideas, and opinions without the heavy hand of financial and political interests interceding. Telecoms are now trying to turn the internet into yet another money and power-dominated environment. The fix is simple: reclassify ISPs as telecommunications utilities, like landline providers, so they would be subject to common carrier rules. If the Obama Administration's FCC resists this course, I would have to doubt that they're actually in favor of promoting a well-informed citizenry.
—Katherine Showalter, Portland, OR

We need less restrictions on the Internet as our scooter moves forward. Limiting access to any sites limits the growth of our youth that use the internet as the gigantic source of knowledge that it is! Please don't limit our potential as a society to use the internet for what it's capable of. Knowledge is power.
—Yamil Narvaez, Sanford, FL

Something that is Designed to benefit some will Always just benefit some.
—Christopher O. Nash, Maryville, TN

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Michael, El Cajon, CA

Because it is what allow us all to learn and share as we need to.
—Eduardo Thomas Perez del Postigo, Madrid,

Consider that the open internet is freedom of speech - if you take it away you will destroy freedom of speech!
—Bryce alexander, San Antonio, TX

The Internet has flourished commercially and culturally because of its inherent freedom. Products and businesses that have revolutionized everyday life have depended on an open environment and low startup costs. Reclassifying ISPs is the surest way to ensure that this vibrant ecosystem of producers, consumers, communities, and cultures can continue to thrive and ensure that all forms of communication are not only respected but protected.
—Will McCain, Columbia, SC

The internet IS a public utility and it is time it's recognized as such.
—Linda Kade, Berkeley, CA

An open internet is now a basic necessity for the US, and like water or electricity pipelines, and it should be regulated like a public utility. It must stay evenly accessible for all, or this nation's growth, function and innovation will cease.
—Mary Ziegler, Brooklyn, NY

The Internet is the greatest tool the human race has ever had. It allows for instantaneous exchange of information which is essential for true freedom. Allowing companies to decide who gets to exchange that information is a tragedy and should not be allowed. Please change the Internet to be under telecommunications services allowing it to be protected in the manner it should. Thank you for supporting freedom and liberty.
—Steven Cheal, Logan, UT

Keep the internet neutral.
—Ethan Raible Rendlen, Chicago, IL

Will kill all internet growth.
—James Floyd, Dunkirk, IN

As an entrepreneur of 20+ years, I firmly believe the destruction of net neutrality will take tremendous opportunities out of the hands of everyday citizens desperately in need of economic hope. This is both short sighted and un-American. If you proceed on your current path, you will most certainly cripple an already struggling middle class, and assure that we continue to fall behind other countries in both prosperity and innovation. I ask you, with urgency, to stop this course of action or your only legacy will be the irreparable damage you have done to our great nation. In favor of democracy and our people, stop what you're doing before its too late. Sincerely, Bob Williams
—Bob Williams, Naperville, IL

The FCC negating Net Neutrality would be an egregious and tragic mistake for the U.S.A.
—Harold Yen, New York, NY

It is the responsibility of the government to protect individual citizens from exploitation by large corporations who greatly outweigh us in terms of money and other resources. Keeping net neutrality is a primary and necessary way to keep our democracy strong and allow individual citizens to voice our concerns. Internet providers are utilities like any other, and should be regulated as such. They should not be allowed free reign with an entity (the INTERNET) which was largely created with government money in the first place. Moreover, small businesses currently have just as much ability to operate on the internet as those businesses with deeper pockets, but that could stop if net neutrality is lost. As a small business owner myself, that will greatly impact me and could cause my business to close its doors. I urge you to stand up for your fellow citizens and protect us from the corporations that want to make money from resources they have no right to. Declare internet providers utilities and require net neutrality as part of regulating them!!
—Daphne Riordan, Eagan, MN

In my opinion, basic internet service (5 mg or slower) is currently as necessary to the normal American household as the standard telephone was 40 years ago when I was a kid. Every family that is not dirt poor has this, and even dirt poor families aspire to have this as soon as possible. Software is no longer sold in brick and mortor stores, it is sold over the internet and delivered the same way. Information is found first on the internet, and then also in libraries, where the books are reserved via the internet in advance. More commerce occurs on the internet than in shopping malls. Access speed requirements are increasing right along with use of the internet services. Back in 1985 56 kilobaud was fast. Now 5meg is average and becoming slow. If you do not ensure at least this minimum deliverable speed as a public commodity regulated much as access to the telephone and the postal service you guarantee that access to information becomes a right of the privleged. Do not allow pay to play, and speed privileges for those "who can afford them" over every user. Today's argument is about Netflix vs Comcast (a company I loathe with customer service that lies and defrauds its customers). But tomorrow's is about schools and work, all of which will also be performed over the internet. Ignore your lobbyist past and be mindful that the public future of this ever more connected country is enhanced by equal access for all uses, those in vogue today and those not yet imagined that will matter in a decade. Elena Schott
—Elena Schott, Brisbane, CA

I need the internet as it is because I am a disabled shut in and the internet is my key to the outside world. I talk to others that are afflicted like me with a disability. And I learn about the world and how I fit in it. Please keep the internet free.
—Mr. Edward Korstanje, Grayslake, IL

Net Neutrality is important to me because I use the Internet constantly, and I do not want my content such as YouTube, online gaming, and social media sites to be slower. The Internet is a big part of my life and my future career, and I do not want to have to spend more for something I already have! FCC, I beg you to preserve Net Neutrality for all. -Doug Winning
—Doug Winning, Red Bank, NJ

To allow such discrimination by ISPs is wildly unfair and degrading to the common US citizen. How are we, barely surviving in the middle class, to compete when our government is controlled by corporations who have the "highest bid"? I am aware Comcast is one of the top paying lobbyist in Congress, which unfortunately for someone like me, is deemed legal bribery. This does not protect American's, and only reiterates the fact our government is controlled by money, power and greed. Internet Neutrality was designed to protect us by preventing a monopoly of ISPs, and to preserve the First Amendment. I rely on the internet for my work, entertainment, and connection to society and world news. I am paying $85 a month for my internet connection from Comcast. I can't afford to pay for the $80.00 Comcast cable television also, so I pay another $8.00 a month for my Netflix subscription that I can't watch without paying Comcast for the broadband access. This is insanity! American's pay more for internet access than almost any other country, and now without Net Neutrality, we may be paying even more, or loosing access to the sites we are already paying for and rely on. Everyone who is not benefiting financially from the outrageous broadband fees agrees the internet has become a necessity, not a privileged commodity. We use the internet to communicate, educate, find employment and be a part of society. The internet has replaced phone books, telephones, community bulletin boards, newspapers, bills, classifieds, etc. By continuing to classify the internet as a commodity, you are further discriminating against the poor, and hard working middle class. I implore you to stand up for us as we no longer seem to have a voice. I would not even have known about Net Neutrality had it not been for my access to the internet. Since this petition is not in Comcast's favor, does that mean they would be able to block this website in the future if they did not pony up enough money to be in the "fast lane"?? How much power are we allowing one corporation to have? How far do we let it go? I'm afraid of what our future holds.
—Megan Johnson, Columbia Heights, MN

I lived in Louisiana. Only have one internet provider. The prices were close to 30 bucks a megabit for internet access. Absolutely horrendous charges. Further, they would regularly throttle my internet speeds if I used too much bandwidth. Bandwidth isn't a finite resource. This attack on net neutrality is killing the consumer's ability to access information.
—Sam Johnston, Kansas City, KS

I'm a mom, a full time worker, and I go to college, too. I can BARELY afford bills and internet right now! I'm working toward a better life for myself, my husband-to-be and our daughter but how am I supposed to do that without access to all the things that make my life run SMOOTHER like streaming Spongebob for my daughter, or being able to do my homework on my phone between shifts of my two jobs? It's not fair to those of us who weren't born into money, we struggle to make it and earn it and it is absolutely ridiculous to take away that freedom of the internet. Big business needs to bite it and America needs to get away from being COMPLETELY RUN BY BIG BUSINESS!! We are heading back to the old days where big business bought EVERYTHING and individuals had no say. NO!! It needs to stop!
—Crystal Lubick, Lapeer, MI

Why do you want to change something that is working for the majority?
—Virginia Loop, Wytheville, VA

Please throw out your rules and instead reclassify ISPs as common carriers. Protect Net Neutrality! IT'S THE RIGHT THING TO DO, so please...do the right thing!
—Anne Lambert, Charlotte, NC

I understand we are a market economy, but to remove net neutrality would be to encourage monopolies. As of right now, anyone can become something on the internet. Without net neutrality, only those who can afford it can do so. This will discriminate against the poor in terms of information availability and creativity.
—Samantha Bustos, Collierville, TN

It's not fair to charge extreme amounts of money regardless if you have money or not. Stop killing the middle class.
—Barb Lubick, lapeer, MI

The internet does not need regulation by the FCC. Creating various levels of service negates the ability for new companies to compete fairly and could squash innovation by forcing these companies out of the competition.
—Lori Hutchek, Union City, NJ

Please do not pass this rule. This will put all Americans at the whim of large internet providers. This will hinder small Internet start-ups and end innovation in America.
—Ruben Perez, Mt. Juliet, TN

It is ridiculous that we even have to take action on this matter. Do not change our internet!!!!!!! We as human beings deserve a free and open internet. We will win this, just like we won last time. You will not take this away from us. You must through out these absolutely insane rules and reclassify ISP's as common carriers.
—Johnathan Campbell, Lyman, SC

I depend on an unfiltered internet experience to build advanced technology solutions. If the local monopoly I.E. Cable provider where to govern my internet access my ability to work efficiently would be greatly diminished. This would force me to work only from my office where we would have a leased fiber line with our own arrin number. Please allow our internet to continue to be free off third party filtering and regulation of services. Legally speaking keeping the internet network neutral is no different than the pacific telegraph act of 1860.
—James E. Hoffman, Morganville, NJ

For years, net neutrality has prohibited big Internet corporations from favoring or blocking certain viewpoints or websites. Our free and open Internet has made invaluable contributions to democracy both here in the United States and around the world. Whether you are rich, poor, young or old, the Internet allows all people to seek out information and communicate globally. Federal Communications Commissioner Tom Wheeler reportedly plans to vote on a rule change that would undermine the principles of net neutrality and let companies like Comcast and Verizon divide the Internet into fast and slow lanes. Under this terribly misguided proposal, the Internet as we have come to know it would cease to exist and the average American would be the big loser. We must not let private corporations turn bigger and bigger profits by putting a price tag on the free flow of ideas. Peter Zink
—Peter Zink, Lynnwood, WA

We already pay dearly for the internet and the content that we pay should not controlled via speed by the cable providers. All content should have have a level playing field. These cable companies look to be end net neutrality which result in discrimination against certain website, double-dipping by charging the customers and providers, and by stifling innovation.
—Lisa Rodriguez, Greenlawn, NY

Dear FCC, please do not allow for this two-tiered Internet to manifest. You and I know that this unacceptable as it will only create bigger monsters. What more do these monopolies want from us? Let the Internet stand as a neutral place for all. Once again, I know that you know deep down inside that this is not a good move. Please be for the people!!
—Michelle Dumit, Jersey City, NJ

Please do not implement two tier model, it will destroy internet
—Sergey Katalichenka, Ashland, MA

PLEASE KEEP THE INTERNET FREE AND NEUTRAL! this is IMPERATIVE to our future and continuing to progress. please do not sacrifice our ability to advance as a technological society and not allow corporate monopolies to put hinder us in the name of profit. access to the internet needs to be a fair and free utility and is as essential to our society now as electric, water, and transportation.
—Kevin Deng, San Francisco, CA

We need to keep net neutrality in order to preserve the rights of all americans, rich or poor, to compete in a fair and equal place. Large companies should not have the right to restrict how fast I receive information from the places I chose, just to make more money in the process. Net Neutrality gives anyone with a good idea the freedom to get that idea out to people just as fast as the people with bad ideas but money to back them. Ending net neutrality would truly be un-American.
—Richard Bullard, Cincinnati, OH

Net neutrality makes the internet fair, as in everyone using it is equal. It is central to how the internet works.
—Gary Austin, Lilburn, GA

ISPs should be classified as common carriers.
—Matthew Collins, Reston, VA

Keep the net neutral. This change only helps oligopolies and harms all others.
—Robin Linklater, Frankfort, IL

Maintain net neutrality.
—Cortney Donovan, San Bruno, CA

Net Neutrality is crucial for economic growth and stability in America. I implore you to keep the internet an open source of information for the people of this country.
—Lisa Rocchetti, Venice, CA

We have current internet speed that are comparable to Estonia and prices that are the hugest around the world, were already falling behind. The cable and ISP industry in America is already far too limited, this will provide too much power to entities who do not have the citizens interests as their primary goal, as proven by the $78 internet fee I pay for 50mbps that's $44 is a rinky dink country like Finland.
—Glen Hart, Lake Worth, FL

The internet was made to pass along ideas and to share information to allow the spread of people's view points and to learn and explore our world to bring people closer togather and to build upon knowledge we have!!!! It should be use to build people up not to stop the growth of one just because they lack funds to do so. Every one deserves to be heard at the same volume. The internet is a place all can be heard at the same volume. By takeing that away you will be silencing some and that is unfair. Plaine and simple this would be unfair and they only reason it is consider is because it will make the greedy richer!!!
—Steven Roldan, Rock hill, SC

equality for all
—Jackie Bullard, Cincinnati, OH

Please reclassify broadband internet as a title II common carrier telecommunications service
—Fernando Lim, La Crescenta, CA

I don't think there's anything I need to say in this matter besides that this plan will annihilate any good faith people have with these companies. It's downright sickening to see corporations like these enforcing evil tactics like this.
—Patrick Strouse, Wilmington, NC

My online business depends on net neutrality.
—Jeremy Clifford, West Linn, OR

My family is comprised of those who started as small entrepreneurs. Giving others (with bigger pockets) a faster bandwidth because they have more money is the equivalent to disallowing them commercials or a voice at the local business meetings. The internet is for all to experience. If one pays for a rate to receive and download info it should be for any site I choose to visit. If I visit site frequently that doesn't PAY for that faster rate, it shouldn't be afforded upon me. If there's a faster rate available, it should be provided (at the ISP's competitive rate) for any site I visit.
—Brooke Kelly, Canton, OH

Protect Net Neutrality and DO NOT create a two-tiered Internet, with fast lanes for those who can afford it and dirt roads for the rest of us. FCC Chairman Tom Wheeler is a shill for the telecommunications association and the fox in the hen house looking out for the interests of telecom giants like AT&T, Comcast and Verizon. These companies would have the power to pick winners and losers online and discriminate against online content and applications. Please Stand Up for the MILLIONS of Americans demanding you throw out these misguided corrupt rules and instead reclassify ISPs as common carriers.
—Rick Piper, cocoa beach, FL

I love the way the internet is now
—Jamie Ehling, Mill creek, WA

For our public schools, students, and teachers who relay on the internet, please keep it free.
—Danielle, El Paso, TX

FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Osibisa Peart, Phoenix, AZ

I use the internet for a lot of things, and I already pay for internet service. The internet service's just about everyone, so why does wall street have to have another way to rip us off? We all ready pay for internet service and it works very well. Ending net neutrality is a bad idea.
—Leonare Allen, Spokane, WA

I don't want my online education to be hampered.
—Anthony Eppard, Decatur, IL

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Justin Howard, Kokomo, IN

Because I've paid my ISP to access the internet at a certain speed. The sites I visit have paid their ISP's to access the internet at certain speeds. Everyone has been paid for the services they provide. This is nothing more than blackmail. If I were a landlord, and I leased a property out to someone, should I also be able to charge rent to anyone that visits my property, or if I lease a property to a business, should I be able to also charge their customers that visit my building? No, because that's stupid. So is this.
—Jonathan Hibberd, Spokane, WA

Like most things in the US, things have turned against the common man, making it more difficult for any man or woman to pursue their passion whether through business or communication. The government has given power to few rather than to many. An open internet is one of the last outlets that remains innocent from the giant conglomerates. Please don't allow greed and power change the Internet. Keep the internet open and free, democratic and capitalistic. Thank you
—John Ramirez, Chicago, IL, IL

Everyone deserves equal access.
—Jessica Acuna, Las Vegas, NV

Please don't let telecom companies monopolize. I for one do not wish to be ramshackled any further for services that are necessary for success in today's arena. They already don't compete, allowing them to hike prices up without providing decent tech to the people. Now they are allowed to gang up and extort content providers, which will result in higher prices for the consumer. How can we be a nation of progress if we can't give our citizens the best tools for change and mind expansion?
—Brandon Martin, Birmingham, AL

Business to business communications will prompt and efficient
—Nadia Plante, West Kirby,

I love the Internet for what it is: vast, uncensored, and (at least mostly) unregulated. I'm 16 and I'm in love with web development and other types of programming. I can't imagine being anything else. It's possible I won't be able to get a job unless I'm lucky enough to get hired by a huge company who can afford any fees ISPs throw at them. If I were to make a website with this proposed bill in affect, my website might be great, but if it takes more than 10 seconds to load because it's a second tier website, many impatient consumers would just go somewhere else, which would be the tiny fraction of the internet that could afford the fast lane fees. I, as well as most web developers out there, rely on an neutral, uncontrolled internet.
—Camron Abner, Brownstown, IN

The internet does not belong to the US or corporations and neither have the right to create a caste system manipulated by either party! Abandon this incredibly misguided policy before it's too late and the net is forever changed for the worse.
—Lauren Lazerus, Mount Sinai, NY

Do not try to fix what is not broke. Big Business does not need more power. We have seen how this has hurt us in the past. Please throw out its rules and instead reclassify ISPs as common carriers.
—Adele, Parma, OH

Destroying net neutrality is only going to enable the large telecommunication companies to monopolize the availability and cost of internet service. Which I feel is a violation of our rights as an American.
—Robert Walsh, Chandler, AZ

Independant websites have rights too!
—Jamie Michael, greensboro, NC

The internet provides the planet with a level platform to be able to communicate and access unadulterated information. This is not a case of attempting to make more money out of people but instead ensuring that the best quality of information is available regardless of the medium through which it is received. I am so sick and tied of large cooperations shooting down or buying out the underdog when they get to close to overtaking them, it is having a devastating effect upon human development simply for the sake of economic gain. The internet has been revolutionary for a reason because by it's nature it is boundless and yet also equal. These are the principles which govern the universe to ensure that the survival of the fittest.
—Jack Roberts, Birmingham,

As a software engineer, I've worked at many tech startups who depended on being able to send data to customers at the same speed as bigger companies. A two tiered system would mean the end to that and create Internet monopolies.
—David Davis, Durham, NC

As a graduate level student, access is vital for my studies and capacity to engage in many of my courses. Net neutrality allows me speedy access to information I need at a moment's notice. Being a student also means that I do not have the finances currently to pay additional fees for the proposed restricted access. Additionally, I have many a friend and family member who use sites such as Etsy, Pintrest, and Facebook to advertise their crafting businesses. Placing restrictions on access would very likely kill their livelihood, yielding to a probable result of them seeking social assistance they didn't require before. Please think about this!
—Elissa Elliott, Manchester, NH

These huge companies are overshadowing our freedoms. The vision of the internet was about communication of information as a freedom, and thereby a "right" for ALL the world. A way to share our Being with one another. There are dozens of "reasons" to keep the internet open, but the best one defies explanation. It is an outrage that this 'buying-up' of something that is free to all is even in question.
—Alice Wilcox, Deerfield, NH

Small businesses and entrepreneurs need net neutrality to compete on the internet; keep the internet a level playing field.
—Takezo Murasaki, Miami, FL

i will NOT be discriminated because of big power hungry corporations, information IS and will ALWAYS be FREE
—Rafael Pabon, aguada,

Stop acting like a lobbyist and do your job.
—Jeremy Schlosky, Arvada, CO

This is important!
—Paul Swetik, Deary, ID

The risks simply outweigh the potential gains. Cable companies can't pick winners and losers. "Net neutrality" must remain. This is the job the FCC was created for. Thank you for this consideration.
—Sam Phillips, Raleigh, NC

As a software developer (for 20 years), Net Neutrality is essential for me to earn a living. Giving deep-pocketed corporations the ability to throttle access to my software or software for my clients is one of the worst possible intrusions into the very concept of what was once a non-commercial entity. Allowing large corporations to effectively reduce access to any software, websites or content (in favor of their own) is akin to legalizing censorship and limiting free speech, something that the US government should never support.
—Marc Johnson, Birdsboro, PA

I expect the FCC to reclassify ISPs as common carriers and stop this rule change allowing for a two-tiered Internet. As an entrepreneur, I value an open and equal Internet far ahead of any stated need by ISPs to manage their own networks. Rather, the ISPs are relying on the public infrastructure and wave lengths. They belong to the public and the public expects an open internet in return.
—Brian Saab, Seattle, WA

This is insane that it's even gotten this far. ISPs already get to double dip into the pot just like phone providers in that both the "shipper" and the "receiver" have to pay to send packages. This new plan would harm the "biggest shippers" by charging them more on TOP of the double dipping. It is highly unlikely that Amazon pays more to UPS for shipping more product. In fact, they probably pay less.
—Mike Hamilton, Spring Lake Park, MN

I am especially put off by bullying techniques of Verizon and others.
—John Marchant, walnut creek,, CA

We need free internet service for everybody , not just for rich people. Not many people can afford of paied internet service. Internet provide company already make such money from us, they want more? Internet is a service, not for making money purpose.
—Sherry Mou, Frederick, MD

Without net neutrality small businesses will not have a chance at competing with large corporations over the web. They will also control the speed of my internet connection allowing my ISP to completely control my connection speed without any competition.
—Clark, New Orleans, LA

The best ideas will lose to the deepest pockets if this plan is approved. The internet's role as a societal equalizer is firmly at stake here.
—Paul Minear, Lemont, PA

I want my government to work for the people, not cable companies and that's not happening. Save the internet, and do your job and regulate cable companies.
—Melissa Nurczynski, Philadelphia, PA

equal internet equal opportunities, avoid discrimination online
—Luis Falaschi, weston, FL

There should not be a two-tiered internet, everything should stay as is. Keeping everything on the same level playing field.
—Jamie, Livonia, MI

Net neutrality is the cornerstone of the internet, the most important invention of my generation. Please don't destroy this valuable tool for free speech, information and expression.
—Alex Rehm, Brooklyn, NY

I would like to search the web when and freely as I want. I would like for the things that I search for tho still be available when I search again.
—Bianca Wagner, Cincinnati, OH

Net neutrality is vitally important to the growth and use of the internet. We are already paying our ISP's to provide a service/product, just like the water company. The water company doesn't charge different prices to flush the toilet vs take a shower, they simply provide the pipe and the water. How we use that service is up to us.
—Christopher Wilke, Windsor, CT

Net neutrality is important to me because my family cannot afford a higher internet bill.
—K H, N/a, NC

My job title is "Senior Network Engineer" my primary responsibility is to provide internet services to my clients and ensure resiliency and transparency to their internet destinations. I expect the same from carriers. Their roles is to provide an infrastructure and ensure that traffic delivery is met. An ISP is not strictly a media services provider, nor should we treat certain traffic with higher priority than others. This is not a matter of profit nor is it the next cable TV company. The internet is a medium of international communications regardless of media. The internet does not discriminate, the internet does not care, the internet allows our voices to be heard around the world. Do not compromise our voices for a dollar.
—David Pita, Miami, FL

Keep the Internet open! The internet has worked wonderfully over the past 15+ years. Whether you are rich, poor, young or old, the Internet allows all people to seek out information and communicate globally.. To allow companies like Comast, TWC, and Verizon to charge for a fast lane would deteriote the internet and the chance for competition for many startups and individuals who do not necessarily have the funds to pay for a "fast lane." This also gives even more power to ISPs that already have enough power and control. Let's throw out the rules that Tom Wheeler has proposed and reclassify the ISPs as common carriers.
—Vance Lyles, Hallandale Beach, FL, FL

Internet providers like AT&T, Comcast, and Time Warner hold monopolies based on the available service in certain states and areas. For my apartment building, we are only able to use Time Warner. With majority ownership of the NYC market, Time Warner has been allowed to provide terrible service at a premium price. Despite huge prices and horrible service, consumers are left with no choice but to stay with their internet providers. We cannot allow big companies to decide who deserves the right to access information.
—Bari, New York, NY

I use the internet to go to school, and communicate with loved ones.
—Shasta Lightfoot, Pueblo, CO

FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Michael Rothberg, Oakland, CA

Net neutrality is important to me and my family. The Internet needs to be accountable to all people not just some corporation's shareholders. The Internet must not discriminate. A free and open Internet promotes innovation and entrepreneurship, and the spread of ideas, protects freedom of speech and prevents unfair pricing. Furthermore it promotes openness, decentralization and transparency. The success of the Internet up to this point is a direct consequence of this transparency and openness. Reclassify ISPs as common carriers and protect true Net Neutrality! Thank you.
—Susan York Clark, Lighthouse Point, FL

Net Neutrality is critical to my business. I have a digital advertising business and with some companies having the advantage of higher speeds or special treatment, it will make it impossible for smaller companies to compete.. Cable companies already have an unfair advantage and a monopoly in different areas of the country. Internet speeds should be a level playing ground for all businesses.
—Chris Ozanian, Astoria, NY

I depend on net neutrality for myself and my one year old daughter. I want the internet free for all. We already pay for cable network service, we WILL NOT pay more.
—Sarah Beth Cushing, Richmond, VA

There is no such thing as 2 tier faster and fastest internet. One is slower by definition and only those orgs with enough money to buy more bandwidth will get it. The rest will suffer. The public will suffer. This is not in the best interest of the people or our country.
—Jerry Schneiderman, New York City, NY

Anything else is discriminatory. Net neutrality levels the playing field and gives every one a fair chance. That is the American way. What Mr Wheeler and his pals are suggesting is just wrong.
—Munira Wells, Moorestown, NJ

The internet should be unbiased, the place where everyone is equal. By adopting the new idea your basically giving large companies the advantage over small companies.
—Thomas Shoemaker, Jacksonville, FL

Please keep the internet equal, and a fair playing ground for all. This was the reason for Net Neutrality in the first place.
—Kyle, Wichita, KS

If there is no Net Neutrality, many small businesses would not be able to stay in business because they may not have the financial resources to be part of top results of search engines. Also, if the ISP's are given this power, they will restrict websites which will also hurt small businesses as they might not be part of the website Internet package for most users. This would be similar to having HBO and Cinemax as a package as compared to just having the basic channels.
—Vince Sanchez, Miami, FL

the internet was built to be free
—Paul Puzio, nutley, NJ

Please do not break a perfectly working system. If it is not broken do not fix it. as it is we pay one of the highest rates for the internet..
—Farjad Zaghi, Great Neck, NY

This is the future of America. What media do you want your children viewing? PLEASE DO THE RIGHT THING
—Esteban Gast, Naperville, IL

Because it's not fair, it's not democratic, and it's not humane to continually divide people between the 'haves' and the 'have nots'. People are already losing their jobs, their homes, they do not need to lose a vital sense of connection with the rest of the world, to feel their voice can still inspire, can still matter. Such an aggressive act implies a total lack of faith, of trust, in the people, thus further perpetuating the growing animosity between the people and their leaders. If you continue to blatantly disregard your citizens as disobedient, less deserving children, how will you ever expect them to have faith and respect for you? This would, sadly, be another blow to the consciousness of the majority and I implore the FCC to reconsider and think seriously the long-term ramifications of such a measure. People need help now, not another carrot on a stick.
—Heather Rocco, Brooklyn, NY

My main question to you is, what is driving this? Is it because people are losing money and complaining about it? Some big rich snob is demanding they get a bigger piece of the pie because more and more people don't need them because of the internet? Sure is and it's a joke. Don't do this! YOu couldn't be more wrong in your attempts.
—Kris, North Logan, UT

Net Neutrality means an open internet where competition between large corporations and startups is possible. Our entire economic system is based on competition. Why in the world would the FCC attempt to curtail competition by creating a two tiered system in an open platform? That makes literally zero sense. Net Neutrality should be protected.
—Melanie Waddell, LYMAN, SC

Please don't put this into act, it just another way America will hold down the average citizen. This is just about making the rich richer. There's no need for fixing something that everyone is already happy with.
—Jacob Magazine, las vegas, NV

The Internet is becoming more and more important. If we do not ensure net neutrality, we will depedend on very few, yet very powerful corporations.
—Fabian Boge, Augsburg,

Deregulation and giving in to lobbying is how monopolies are encouraged and grown.
—Drema Montgomery, athens, AL

Without net neutrality, we create information deserts and deprive the people to equal access to the internet. Don't let greed become a gate keeper of knowlegde.
—May Acevedo, Rancho Cucamonga, CA

More and average people rely on the Internet for daily communications regarding all aspects of life from medical concerns to product research, from vacation planning to investment trend and the list goes on and on. A two tiered Internet will create a second class user populace. It will limit freedom of speech and communication. Please do not allow a few servers to corrupt the use of the internet.
—Terry nardiello, Lindsay, CA

We, the users, depend on internet as it was another utility. Everything is done online including paying bills and entertainment. It is wrong for companies like Comcast to charge for how much of their bandwidth we use compared. Our original deal was that we had a stated amount of internet of bandwidth to get videos we like online.
—Isaac Altamirano, Greensboro, FL

FCC is a regulatory body that is essential to a keeping a free-market possible. Regulation of the free-market punishes businesses who cheat while making innovations continue to be prosper. I urge the FCC to throw out the rules that will end net neutrality and reclassify ISPs as common carriers as they should be.
—Kevin Keeney, Cuyahoga Falls, OH

Because I am an entrepreneur. Because the internet has been a leveler of the field. Because the rest of the world doesn't seem to thinking too much about keeping the internet open. Because, if the net neutrality goes away it will be just one more example of how "We the People" have become a pesky distraction to those that run this country who seek to amass fortunes for the few and further reduce the benefits and pride of being American.
—Keith, Salinas, CA

Information is one of the most powerful concepts that has shaped and defined human history. Information has the power to change any aspect of our lives at any minute. Due to recent technology having quick and effortless access to that information has become even more of a necessity. What you are currently proposing is essentially a prioritization of information to the highest bidder. This is not only a dangerous concept, but it goes against many of the values and freedoms we believe to define us as a nation. In this country information has and should continue to be easily accessible to anyone who searches for it. It should not be up to you or the service providers to determine how that information is passed on to me.
—Christian Blythe, Winter Park, FL

This isn't about Net Neutrality or protecting a free and open internet, it's really and Anti-Trust issue. It's about preventing cable and internet providers from further becoming gatekeepers and cartels. Already, there is so little competition that ISPs shakedown their customers when comparing prices with other developed nations. Allowing them to charge companies for bandwidth will only solidify their monopolies and allow them to extort both ends of the spectrum - the users and the content providers. It will also stifle the chances of any new service to really compete with established ones. The most outrageous thing in all this is that the government and the people seem to have forgotten that tax dollars account for ~1/3 of the cost of building the Internet backbone in the US. Thus the network itself and by extension the companies that operate it should face oversight and regulations BY the people, FOR the people - because the investment was public.
—Mr. Francois Cadieux, Los Angeles, CA

The internet should be treated the same as phone lines and the speed should be the same for everything regardless of the destination.
—Seth Croft, Richmond, VA

Broadband in America today is not equally accessible: Users are predominantly middle- or upper-class and live in urban or suburban areas. Poorer communities and communities of color, as well as communities in rural areas, have been largely left off the grid. Imagine what it would mean, then, to provide a connection to disadvantaged areas without also extending to them Net Neutrality's guarantee of openness. Dominant ISPs have argued for this exception, saying Net Neutrality prevents them from connecting more people. But it's a false choice and far too high a cost to give network owners the power to shunt ideas percolating up from these communities to a digital backwater. The Internet Freedom Preservation Act guarantees equal and unbridled access to the Internet's engine of opportunity, leveling the playing field so that we all have a chance to be heard.
—Brian, Greenville, NH

Without Net Neutrality the free market system is at risk. The monopoly that already exists in this industry would just become greater. Without Net Neutrality innovation is in danger. The Internet is the backbone of the future we aspire towards. To give these huge corporations this much control over it at this time would be shooting ourselves in the foot. America will lag behind other countries when it comes to new ideas. The next Mark Zuckerberg will take his fledgling Facebook overseas. But Comcast will make even more money to spend on lobbying. Who will speak for a free Internet? The people who depend upon the Web every day. The people who aren't satisfied with things as they are and who dream of a future of progress and ingenuity. Net Neutrality is important to all of us. It's important to America. It's important to our children and their children too. Please protect Net Neutrality.
—Mr. Gary Raugust, spokane valley, WA

An oligopoly is a market form in which a market or industry is dominated by a small number of sellers (oligopolists). Oligopolies can result from various forms of collusion which reduce competition and lead to higher prices for consumers.[1] With few sellers, each oligopolist is likely to be aware of the actions of the others. The decisions of one firm therefore influence and are influenced by the decisions of other firms.[citation needed] Strategic planning by oligopolists needs to take into account the likely responses of the other market participants. Please do not allow this to happen!!!!!!
—Joel Storin, Aurora,, CO

A free and open internet is essential to the continued prosperity of the United States. It promotes the spread of ideas and should not be at the mercy of a few large corporations.
—Matthew Cohen, Yardley, PA

HELP STOP DISCRIMINATION!
—Jordana Fischer, milford, CT

because we should all have equal services and the privatization of our communication systems is a dangerous thing
—Jane Baxter, boynton beach, FL

Monopolies are illegal but abundant in today's markets this will do nothing but increase the power of these monopolies. Please keep the bandwidth free for people to chose what they want to consume. The providers should simply charge more for services if the customers are using more bandwidth.
—Matt Dawson, Minetto, NY

Please protect net neutrality by not allowing internet service providers to create a two-tiered internet. Without net neutrality (and without ISPs being classified as common carriers), ISPs are given too much power to decide what content is delivered quickly and what content will be delivered slowly. The two-tiered system opens the door for ISPs to "penalize" content providers by slowing the delivery of their content. The two tier system also creates an incentive for ISPs to demand money in order for content providers to be awarded a faster deliver system. This is not in the best interest of the public at large, and I hope the FCC will decide to protect Net Neutrality and reclassify ISPs as common carriers. Thank you for considering my comments.
—Erin Hamilton, Henderson, NV

The proposed plan by Mr Wheeler will create two internets: one for the financial elite and a lesser, hobbled internet for the rest of us. The fair and decent move is to leave it as is.
—Jill Brown, Columbus, OH

Ending net neutrality will only lead to cable companies being able to bully every other company, start up or well established cooperation, to pay them more money or risk failing. I am appalled by the fact that our government has even thought of proposing legislation allowing this to happen. We cannot as a society allow this to happen. We need to voice our opposition to a legalized monopoly and censorship. We cannot allow net neutrality to end and cable companies to essentially take control of all information allowed to be on the internet. It is a violation of our first amendment right and the cable company monopolies should not be allowed to get away with essentially buying their way into control over regulating the internet. We are not a fascist regime censoring all, and only allowing what we deem fit or by paying enough money to the cable conglomerates. Are we going to allow our government to be bought and paid for by cable companies, who as it seems to my eyes, to enslave us and only allow us to do what they desire of us? We need to stand strong and oppose net neutrality. The fact that our government is even considering allowing ending net neutrality is a slap in the face that cannot go on. Please I beg of everyone out there to voice opposition to the criminal acts being lobbied for and supported by the cable companies. Net neutrality cannot end. We cannot let cable companies bully and break the law as they see fit.
—Jon Phillips, Cincinnati, OH

Dear FCC Commissioner: I recently read that the FCC plans to allow "fast lanes" within the internet, allowing certain companies to pay to receive additional speed. This is a gateway to destroying the freedom of the internet, and it is disgusting to allow large corporate entities to control what was until now the ultimate vehicle for free market capitalism. By voting for the end of net neutrality you would be doing irrevocable harm to our nation. For a nation that claims to be all about opportunity for the poor we will be rendered hypocrites, taking away the chance for people to start up their own businesses online. The internet will load so much more slowly for any site that isn't paying cable companies that consumers will be less likely to visit any site that isn't being paid for. It is inconceivable to believe that ending net neutrality would be a positive change for anyone besides major corporations. Once net neutrality is ended by the FCC, it will be nigh impossible to revisit the issue. Your actions will have huge repercussions for decades. I doubt what I'm saying will have much impact on you, but I strongly urge you to vote for net neutrality and against corporate control of the internet. Sincerely, Jonathan Saunders
—Jonathan Saunders, Seattle, WA

Firstly, the fact that the former lobbying head of the cable companies is now the head of the Federal Communication Commission is an absolute JOKE, and President Obama should be ashamed of himself for his absolute FAIL in this regard! Conflict of interest, much? Secondly, we saw with the Great Recession what corporations will do when given free reign & no government regulation. The banking industry brought the global economy to its knees! So, does FCC Chairman Wheeler honestly believe that cable companies will do the right thing if empowered to create & charge for an Internet "fast lane"?!?! Here, Chairman Wheeler, if I turn this direction, is it easier to blow smoke up my arse? Give us all a break! Net Neutrality is ESSENTIAL to a free & open global Internet, and in NO WAY should nationally dominant, anti-competitive, cable companies be given the freedom to monetize the Internet as they see fit & line the pockets of their executives & shareholders at the expense of the US citizenry's freedom of Internet choice & access! Period. End of discussion!
—Vaughn Varley, Scottsdale, AZ

As a middle-class consumer and employed as an application developer, I rely on my internet connection to be of high quality (fast), consistent; and most importantly, affordable. Do your job and protect the Internet's openness and the free flow of all traffic, no matter it's origin or destination.
—Curtis G Hanson, Portland, OR

Imagine if Netflix had to start in a slow lane. Do not fix what is not broken.
—Chevy Hungerford, Shepherd, MI

Dear Federal Communications Commission: FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us. This proposal would kill the open Internet. I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—nope and I because its the don't have to say a damn thing about internet myself, Beverly hills, CA

These companies are robber barons, their fees are out of control for services that are less than acceptable. We should be able to afford good service without being discriminated against by the size of our wallets
—Dean Shannon, Lindenhurst, NY

We know you don't care. We know you only care about the money. That's what this is all about right? Big business has bought you off and now you are willing to strangle small businesses and entreprenuers to death for it. What will happen to America now? Well it will be totally owned by corporations. And so will we. The internet is a level playing field no matter how rich or influencial you are. A poor man can jumpstart a business with little to no money and make his way out of poverty but if you take Net Neutrality...he wil be stuck without a means to get out of his situation. Your going to strangle small biz ownership and no one will be able to make their way out.
—Vladimir Wadegreene, Bakersfield, CA

Seriously, why is this happening? :(Something this terrible should be open for a referendum instead of just being snuck by the American people without them knowing. Remember, you were put in office to serve the people who elected you. Do not forget this!!!!
—Conner Corwin, Lenoir City, TN

Net Neutrality, and not the FCC's proposed Open Internet rules, is the type of communication and information freedom that this country was built on and must move forward with. I do NOT support any sort of tiered system. I do support classifying ISP's as common carriers, and the continuation of Net Neutrality. The system isn't broken and does not need the FCC to add rules and guidelines. The Chairman's current proposal opens the door to inequality, bias, and discrimination; I don't trust Tom Wheeler, and I don't trust ISP companies like AT&T and ComCast which in my opinion have become legalized monopolies. Reclassify broadband as a telecommunication service and preserve net neutrality.
—Heidi J Maroun, Matthews, NC

Because it makes sense.
—Mark Jardim, windsor, CT

I have seen a steady erosion of full access to information over the past two decades, and I believe that net neutrality is essential to maintaining a free and democratic society.
—Kelly Stack, Monterey, CA

Net Neutrality is the only thing stopping the monopoly of the cable companies from becoming total, and it ensures competition (required for capitalism to function), and also keeps the internet as an INTERNATIONAL level playing field. It's mandatory. Getting rid of it shouldn't even be on the table, it's blatant favoritism for cable companies.
—Aimee Flec, Ridgewood, NY

A tiered internet will make America less competitive and severely hurt one of the strongest sectors in the economy. I don't give a good part of my paycheck twice a month for you to give me a lower quality of life. A tiered internet is raising the cost of living for something that isn't broken. This can only benefit an extreme minority of people while hurting the majority of people who already have limited access to services. We already pay a tiered system for internet speeds that is way behind most of the developed world including South Korea and Japan, whom we are competing against. It greatly bothers me and is very revealing that the current FCC chairman was once the head lobbyist for the cable company!
—Dennis O'Connell, Chicago, IL

A free and open internet is vital to our future. The backbone of the internet in this county and it's roots with ARPANET were researched and built with our tax dollars, we as American citizens deserve to have unhindered access to this public good. The FCC sat idly by as giant telecom corporations merged and cornered the Cable television markets and now they seek to do it again with out web traffic. The current legislation allows them to gouge their prices and doesn't allow for any new competition to rise against them. We need a competitive market for internet, we are quickly becoming one of the worst countries for internet speeds and it will affect our industries here and abroad. I urge you to not let Verizon and other large monopolies influence you and destroy the free and open internet as we know it. Classify these companies as common carriers. I hope Tom Wheeler can uphold his duty and do what is best for the vox populi and not his corporate benefactors.
—Nicholas A Seemann, Bettendorf, IA

The United States has a long history of rewarding competition and protecting against monopoly. Net neutrality is one more new impediment to free market competition and ensures additional protections for large corporations over individuals. We've already seen what protecting large corporate interests in the banking industry will do for us. Don't let the FCC create another situation that damages the rights and possibilities of individuals and small businesses. There's no place for regulations that simply inhibit competition and protect the status quo.
—Jason Cohen, Washington, DC

I support the FCC ruling ISPs are Title II Common Carriers. I support them being required to process all information equally. I support Congressional action to regulate ISPs as Title II Common Carriers. I do not support the idea of a "fast lane" in which larger companies can pay to have their website's data move faster. Smaller companies will be unable to compete, and innovation on the internet will slow and potentially come to a halt.
—Craig Herrington, Akron, OH

The FCC needs to get rid of the rules, and reclassify ISPs as common carriers.
—Josh Reeves, Indianapolis, IN

I run a small software development company and we build apps for other businesses. My clients rely on equal footing for the content delivery of their sites. I host over 200 websites for various clients and very few have the kind of budget to pay any more for hosting costs than they already do. When I take a close look at my clients, I can honestly say that I feel that Tom Wheeler's plan would have a negative impact on almost all of them.
—W McAuley, CAMBRIDGE, MA

This is important to me because I myself have limited options for internet providers and the speeds currently are slow and expensive. Companies should not have to pay more to get special access so that I can access the services I already pay for. That cost will just end up back at the customers who are already paying to much for crapping internet access. There has already been an example of this happening with Netflix and Comcast. Quality of connection was reduced forcing Netflix to pay Comcast and magically it was fixed. Now Netflix is raising costs to paying customers. Tom Wheeler needs to go. Mr previously head of the cable lobby. I will make sure my vote goes to someone that will remove him from office.
—Terry Patrick, Tucson, AZ

Net neutrality is important to the everyday voter. It enables the common man to access the internet equally. The mere fact that this topic is up for debate is despicable.
—Michael Underwood, Baton Rouge, LA

Freedom of speech for all
—Tara Graviss, San Diego, CA

Ending Net Neutrality would allow big companies to overshadow small businesses which are having enough trouble in this economy.
—Christine Byrnes, Kissimmee, FL

Net Neutrality is the only way to ensure fair competition, for small companies and huge corporations alike, as well as to ensure the American people can continue to access the information from different sources that is necessary to understand the national and world issues. Big business has too much say in our lives as it is. Please leave our access to information and a livelihood alone. Enough is enough.
—Angela Crout-Mitchell, Erlanger, KY

A monopoly must not be created. Removing Net Neutrality will allow the worst company's in the US have even more power to make money and rip off the american people. Their Monopoly were they split the country into their own service areas in bad enough but allowing them more power may result in dire consequences. To the point in which forms of terrorism would be believable, do not allow this, some people may take this to the extreme, and any blood would be on your hands.
—Robert Harris, Rochester, NY

All of the resources for my education come from the internet. Should these rules go into effect, we will not be able to pay for those resources, and I will be unable to access such a large wealth of knowledge, nor would many others.
—Ashe Seely, Hendersonville, TN

sdfs
—Dsfs, sdfsd, CA

The internet is the last truly open form of media, and as it grows in importance in the lives and even the livelihoods of Americans it is crucial that we maintain our position as a world leader in freedom of speech and expression and protect our open internet.
—Aidan McBride, Gurnee, IL

There seems to be no apparent reason to create these rules. They will ONLY work to benefit profits for large communication companies.
—Craig Stelzenmuller, ASTORIA, NY

Do not do away with net neutrality. A tiered internet is not the way to go. It is not broken as it is. Creating this two tiered internet is just another way the internet providers are getting richer and everyone's dollar is streatched a bit more. Do not do away with net neutrality.
—Tanya Walls, denver, CO

We citizens view our government as corrupted by big business. Proof is how simple entertainment like cable TV can cost 200+ per month for a basic plan! Now that the recession/depression has made everything go up in price, people cannot afford TV set vice. We are choosing non-contract service like Netflix, Hulu,etc which is more affordable. So, because the cable providers are feeling the pain of losing thousands of customers, they want to stick their nose into the internet arena and get a piece of the pie there by making streaming content slower for those not choosing to pay for their service. Service?! That word should be removed from their vocabulary because they don't know the meaning of the word! It is government sanctioned extortion and it should not be allowed to happen. Let the financially stressed public get their entertainment, video, internet,etc wherever they want to get it and let it be equally good for all!
—Candy Smith, Kansas City, MO

It's a bold face LIE that this won't slow down traffic. There was a NOTICEABLE difference in MY house AFTER Netflix signed their deal with Comcast. It's naive (at best) to think the average American won't be adversely impacted by changing/removing the current net neutrality rules in place.
—N T. Murphy, Hayward, CA

Net Neutrality is important because the internet is a valuable asset to small businesses, NGOs, and industries-- not just the corporations. By protecting net neutrality, we protect market freedom and equality.
—Lisa Carlson, South Bend, IN

Net Neutrality is crucial to the technology industry. All businesses with an online component rely on net neutrality to create a shared benefit among all technology companies. Allowing ISPs to discriminate among sources of information eliminates the ability for technology companies to compete and succeed on merit and create additional barriers to entry for new companies. It hurts small and big business and individuals helping only the mega-cap ISPs that already face the least amount of competition of nearly any industry.
—David Sover, Snellville, GA

If you truly believe in free market how can you put restraints on it over the internet? By allowing each website the same speed as the next you allow people to choose based on content rather than frustration of accessing a site.
—Shaun Mockoski, Glendale, AZ

Net Neutrality really matters to me because without it most people I know would not be able to afford the level playing field that is the internet as we know it today.
—Emmanuel Souri, Philadelphia, PA

A two-tiered Internet would disrupt my ability as a university faculty member to conduct my research and teaching efficiently and effectively. Preserve a one-tier Internet.
—Ronald Kalil, Madison, WI

The Internet has become vital to commerce including medical and emergency communications. Without vital common-carrier protection, we will lose the promise of the Internet and have to fall back to 20th century communications for vital functions. People should not die waiting for help so that someone else can finish their movie first.
—Steve Goldhaber, Boulder, CO

The Internet should be open and available to all of America. No few companies or providers should be able to dictate content and applications. Eliminate your rules and regulations and reclassify ISP's as common carriers. This is the only way to protect Net Neutrality for our nation. Sincerely, Mary O. Magazine, Esquire 780
—Mary Magazine, Miami, FL

Net neutrality matters. I don't care if it's important to me, it should be important to YOU. How dare the government get in so deep with cable companies that we even have to write letters like this. Im disgusted. But that is another letter and another day. Net neutrality is important to me because, unlike almost all the rest of the media the internet is the last bastion anyone has left for anything like actual free will in this country and Im not going to let people that supposedly I should trust take it away from me or anyone else. Im sure you guys don't read these things anyway, but maybe, hopefully I've done at least a little something. It blows my mind, the gravity of the situation we're facing here. Please, throw out this terrible rule change and reclassify ISPs. Please listen to us.
—Alexa Pantuso, New Brunswick, NJ

They should remain neutral. Cable companies are turning to monopolies as it is
—Trisha Upton, Independence, KY

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Daniel Braedel, Marietta, GA

We need to protect our right to the Internet.
—Anne Katz, Miami, FL

I'm worried that sites with the least monetary value and most social value would see a decline in readership as a result of two-tiered service.
—Madeleine Moore, Portland, OR

As stewards, instructors and sages to the second installment of a globalized generation, we live in a society where the availability and use of the Internet is a keystone to efficient living. Given that today's times and motions are, for the most part, based on agreed upon standards to which the internet is crucial. Thus. it would only make sense to exclude market incentives from effecting such essential aspects of peoples everyday lives. Our social standards of communal development and progress will reached a functional depth with the application of such legislation, after which we will reach a corrupt and disparaging end to such a resilient tool for progress.
—Ismael Ba, Camden, NJ

Please protect Net Neutrality, it's insane and very corrupt to mess with it.
—James Huddleston, Noosa,

A two tired internet is a rediculous idea and goes against everything the founding of the internet and technology stands for. All data is equal! Please classify cable companies as common carriers. Don't do it because I said so. Do it because this is the only way to keep America in pace with the rest of the world.
—Matthew Johnston, Elmira, NY

The internet is working fine the way it is. Why in the world would you allow big companies to monopolize and take it over?? PLEASE, don't let those with more money always have the control because that's what this would do. KEEP NET NEUTRALITY!!
—Catherine Del Buono, Brooklyn, NY

I can find virtually any info that I want on the internet reasonably fast. I want to keep it that way to make informed decisions of whatever my concerns are at the moment in addition to simply being interested in many things. I also read several languages and have an M.A. in Russian. A version of my thesis (a translation) is on the internet: http://lib.misto.kiev.ua/KOLUP AEW/fatman_engl.txt . I'd like to continue to be able to access it. There are many others like me that have much to offer but limited resources with which to do it. The Middle Class is a very large portion of the American public.
—Bill Kuntz, New Egypt, NJ

How do you want to be remembered? What would you make of your legacy? When future generations read about you in the history books, do you want to be counted as one who helped do something truly good and truly important?
—Shane, Boulder, CO

Net neutrality is important to the fabric of our great country. We cannot willing give up the freedom that so many have sacrificed to the soul hungry corporations. They seek only to control all facets of our lives until they have use completely under their thumbs. Please help support our freedom for creativity and independence.
—Dan, Brentwood, TN

Corporate Greed inserted into the World Wide Web, Really? Are you Nuts???
—Mr. David Webster, Lake Zurich, IL

Please reclassify ISPs as common carriers. Per an article by S. Derek Turner: "There’s no room for debate: Broadband is a Title II common-carrier service, and broadband providers are legally barred from 'unjust or unreasonable discrimination' and cannot 'give any undue or unreasonable preference or advantage to any particular person or classes of persons ....' ”
—David Tilton, Los Angeles, CA

The government is restricting our freedoms more and more in favor of large corporations. Already those of us who can't afford expensive services are SOL in so many ways. Please climb out of the pockets of corporate interests, and help us keep the Internet open.
—Kathleen Churay, Chicago, IL

The internet should remain open and free for all to use equally. Without net neutrality, only giant corporations will prosper.
—Ashley Goodson, metairie, LA

I believe Internet service providers like Comcast and Verizon should not be allowed to charge content providers like Netflix or Facebook more.
—Richard Patrick White, Forest Park, IL

The internet should be the same for everyone. We pay enough , we don't need to be charged extra. These providers have enough. This Greediness has to stop. Everyone should have the opportunity to have the same speed, but these companies still charge extra for higher speeds. This rampant discrimination online has to STOP!! To me it seems that this is just about one thing, more MONEY in the PROVIDERS POCKET!!!! The internet is a good thing for everyone, not just for people that can afford higher prices for a two-tiered Internet. Providers already gouge consumers for different speeds. Throw out the rules and reclassify ISPs as common carriers.
—Pamela Jean Pluta, Cihcago, IL

I oppose any legislature that affects Net neutrality negatively. This includes the proposal for a two tear system.
—Connor James Fitzgerrell, Oakland, CA

The communications corporations and media corporations are already bleeding us dry with their fees. NO to their charging extra for the internet.
—Eleanor J Schwank, Matagorda, TX

As a small business owner I rely on a free open Internet. Where I promote my business all around my area, from facebook to twitter and instagram. This has improved my business a lot! Not only my business but also myself, I've learned to use the Internet and the Internet has taught me better than any teacher! Thanks
—Abraham, victoria, TX

ISPs are common carriers.
—Frances Dunham, Gulf Breeze, FL

Please keep the internet a fair and open place. Don't let wealth corporations discriminate against their customers by creating fast lanes that many could not afford.
—Christian Dawson, Greeneville, TN

It will allow me to ensure that my children are able to get any information or entertainment that they want and not have what is important determined by someone else.
—Michael Bozile, Phoenix, AZ

So many aspects of our government have simply become auctions... those with the most money, get their way. Theoretically, we are still a government by, for, and of the people But the proposed changes to rules governing the internet, make a mockery of that. Please enact rules that benefit the people of this country, not the businesses that seek to profit from them. Support Net Neutrality.
—Gregory Wood, Wilmore, KY

Internet Service Providers already charge for the bandwidth their customers use. As a customer of an ISP, is it fair that I pay twice for that same bandwidth? Is it fair then, that I have to charge my readers money or more money to pay for my double bandwidth bill? No it is not. Reclassify ISPs as common carriers so that all Americans have access to information and all businesses have access to communication with their customers. The internet is a utility. It should be regulated like one. So please keep our internet neutral, and for the people.
—Laura Allen, Wilmington, NC

Why do we think that the concept of double-charging for internet is okay when we wouldn't accept it from any other business! Net Neutrality is highly important! Don't just throw it out the window!
—Megan Saunders, Waynesboro, VA

Keep the internet open!
—Samantha Braun, Langhorne, PA

People over profit :)
—Carlos Townsend, Fountain Valley, CA

Equality for all, every business owner, every family, every entrepreneur. Lets go back to a moral lifestyle and not selfish agendas that benefit only a few.
—Michael Gallardo, Wellington, FL

When I search the Worldwide Web, I don't want an artificial advantage given to those sites among the search results whose owners have paid more for faster service.
—Susan E. Snyder, Broadview Heights, OH

Without a free and open internet, I would be unable to access information and research vital to my career, education, and overall knowledge of happenings in the world. To restrict that will not only impact my life, but it will cripple our nation. We live in a time where even the notion of such restrictions should not be entertained.
—Audrey Seningen, newark, DE

Those who can least afford to pay high internet costs to mega-billion dollar corporations, need the internet the most. Poor children use the internet to access school sites, Kahn Academy, access views, opions, articles and research that is not available in their neighborhoods and opens up the whole world to them. Senior citizens use the internet to stay in touch with the outside world. Senior citizens use the Internet to access and research resources. The unemployed use the Internet to find jobs and resources to make them more employable. Veterans use the Internet to stay in touch with former shipmates and to access resources to improve their lives. None of these demographics are exceptionally wealthy, they do not have the funds to spend on accessing Internet through expensive channels. Everyone needs access to the Internet so that they can become informed citizens, especially in their political process. The groups that can least afford to support multibillion dollar corporations need Internet access the most. Also, these mega billion-dollar corporations often support the Tea Party, the political group that is most detrimental to the least among us. Removing the voice of opposing political parties to ensure that only one party is heard, is anti-American and threatens democracy.
—Celeste Vaughn Brown, North Las Vegas, NV

I don't want the corporations to tell me what websites are for me. I demand net neutrality so I can choose for myself
—L E Payne, Epsom, NH

I want the small guy to be able to compete with the big business. This is a job killer.
—David Kalili, Newport Coast, CA

In my opinion, net neutrality is just as important as the right to free press! The internet is one of the main platforms that adults and young people alike can express themselves, and it's just plain wrong to take away that right from somebody.
—Callum McAfee, York,

this is one area where there is somewhat of a even playing field, where internet users can find information to make decisions about things that impact their and those around them's lives. other forms of media have been taken over by special interests and the american people are geting only one side of any issue. the internet, to date allows anyone access to varying voices and it should stay this way. this is why the internet should be treated as an utility; to keep information for anyone (rich or poor) free flowing.
—Jae maior, long beach, CA

FCC Chairman Tom Wheeler's plan would let Internet service providers like AT&T, Comcast and Verizon create a two-tiered Internet, with fast lanes for those who can afford the extra fees and a slow dirt road for the rest of us.
—Deborah summa, Newark, DE

Imagine if we had allowed telecom companies to stymie the growth of companies like Google, Facebook and Amazon.com in the early days of the Internet. Imagine if Google or Facebook never became the heavyweights they are today because they were unable to pay for a "fast lane" channel to the public. Imagine how many trillions of dollars in those companies and their satellite / feeder companies and individuals would be lost... how many American jobs lost. Imagine losing America's technological edge over the world. That is exactly what we're setting ourselves up for in the future. It is an issue of freedom of speech, an issue of free markets, an issue of jobs, and an issue of technological advancement. We lose on all fronts if we allow common carriers like Verizon and Comcast to mediate the bandwidth on the Internet for profit.
—Michael Cowden, Washington, DC

We pay more for internet than other countries & our service is slower than most. Cable service providers are a complete rip off in terms of cost vs quality of service. These monopolies are garbage & this entire movement is driven by their former head lobbyist who is now head of the fcc. This is a scam for corporate wealth to take more undeserved & unearned money from hard working people so they can increase their profits. Enough is enough. Neutrality is core for free market business, start ups, competition & these corporate discgraces want to control all competition. They have no right to do so & this cannot go through.
—Kelly kugler, Venice, CA

I have a need to use the internet for my studies. If and when I need to pay more to access certain information, doesn't that impede on my ability to educate myself? And wouldn't it impede the ability of lower-income students to do the same?
—Leah Boll, Herndon, VA

Not everyone can afford the extra fees for the "fast lanes" and this will only allow the big guys to get bigger and "snuff out" the little guys who are trying to build.
—Beth Ahmad, Monrovia, IN

Except for Big Media (AT&T, Verizon, Comcast, Sprint, and Charter), everyone (that being the general public for those of you at the FCC that are not beholding to Big Media)wants the internet reclassified as a common carrier/public utility. How hard is it for you bureaucratic jackasses to understand that? William Shirey
—William Shirey, Decatur, AL

Net Neutrality ensures equality on the Internet for everyone. If you change that or allow it to be changed then the Internets' equality of access will be corrupted becoming unequal and unfair allowing a small group of people to control the internet access of millions of people who never consented to having their internet access controlled and manipulated.
—Nelson Rosa, Philadelphia, PA

Discrimination is never right -- online or off
—Jane H Beattie, Ketchum, ID

The Internet has become a primary source of news and information in our country. It has become part of the Fourth Estate. It is critical for the maintenance of our Democracy as without a free and fair press, it won't be possible for citizens to make a fair and honest decision in the ballot box.
—Dave Wiig, Morris, CT

This country was founded on freedom. The greed and corruption is slowly eroding that freedom away. But The U.S. was also founded on the very fresh blood of those who would rather die than give up that freedom. The government will never be to powerful that the people will not rise up and fight greed and tyranny again, no matter how ignorant you think us. Stop now before it's too late.
—Twila Murasaki, Miami, FL

It enables positive change
—Tony, jarrow,

Freedom of information for all at equal speed is very important to me
—Dee Maffia, Warwick NY, NY

these rules are bad for an open internet. Keep ISPs as common carriers
—Bari McDaniel, El Dorado, CA

Now the 1% get better internet too? That is ridiculous. Next we will have a firewall like China blocking us from certain websites. I thought the FCC was supposed to protect us from this type of thing. Now they work for them?
—Amy Brennan, Pittsboro, NC

The internet it the current form of free speech. Don't mess it up!
—Barbara (Barb) M. Newman, Toledo, OH

I already pay to have access....i depend on getting good severe from a variety of sites.....i don't want to have to pay more than I already do.....or have my sites blocked cause they are a small business that can't afford to pay the cable or telecommunications company for the fast lane.....i don't want the big mega companies in control of what I look at or where I do my business.....and that is exactly what will happen. It would be like making all of our highways toll roads...and that will drive up costs...stifle small business....and lock other out of the net entirely.
—Penny melson, murfreesboro, TN

You claim to support net neutrality, but by approving an Internet fast lane, you obviously speak with a forked tongue.
—Joe Landwehr, Mountain View, MO

Destroying Net Neutrality will destroy innovation and make it more difficult and needlessly costly to start a small business online. It also raises troubling implications about a company's ability to censor whatever they don't like (or anything that isn't commercial garbage) with an incredibly slow loading speed, or to shake down customers and content providers for 'fast lane' access.
—Nate, Rochester, NY

I am outraged and horrified at the notion that the majority of us would be forced to pay extra fees for our normal internet connections. More chilling is the possibility that our online content might be monitored or censured by some government authority. This would be the stuff of facism. Slippery slopes start with small infractions of our freedoms.
—Joan T. Basson, Indianapolis, IN

The internet should not be controlled by governments or commercial enterprises. Access to the internet should certainly not be charged depending on the type of traffic you are requesting. This is the easiest way to may the poor, poorer; the rich, richer and expand the disparity. bBut of course America is a giant capitalist machine and only cares about the rich and how they can become richer and more powerful. So even if we stop this now, I guess you'll just find another way to solve this "problem" hat doesn't really exist...
—Jim Hunter, Norwich,

I, and many others, can not afford to be bullied around by internet providers who wish to monopolize the internet.
—Austin, Kenner, LA

I believe Internet should be classified as a utility and not a luxury service.
—Benjamin P Swem, Bothell, WA

The internet is TOO Important to Everyone and an absolute Necessity to the now NOT "Middle Class" to get access to various news sources and resources and the ISP are already charging SO MUCH that those living on a paltry fixed income can barely afford Comcast's outrageous cost of $40 of a measly 3GB speed which will not even give them MOST videos/webinars/classes w/o "Buffering." Many people are struggling to start small businesses using the internet to have a website, OR to even a private citizen take classes via videos, or to stay in touch with the world cuz they can't even afford to have a TV with cable access so the internet IS their MAIN contact with the Outside World. Thus creating a 2 Tier cost system is PROOF that Tom Wheeler is STILL working as a Lobbyist for the Cable Companies and NOT "in the Best interest of the Public Air Waves" for which he is charged as Head of the FCC.. I hereby Officially Request that the ISP then through out it's current rules and instead reClassify the ISPs as "Common Carriers." The internet should be a flat neutral playing field that is protected for EVERYONE and not 2-tiered for those that can pay more. That's like saying ONLY the Rich can get Quality phone service or consistent electricity or water. The internet was created using the Public Air Waves and should remain for the benefit of the Public and it's providers a public utility~ NOT in charge of "delegating out various qualities of service" by those that can pay MORE. *Equal Service for the Public Internet* which should remain accessible "equally FOR ALL", ~ NOT a "pay high and higher" private out of reach luxury. This is the ONLY way to protect real Net Neutrality. Thank You.
—Nelcha Cross, Sacramento, CA

because upcoming websites will never be able to take off if they're being slowed down like that
—Lilly Sandquist, Pass Christian, MS

This is ridiculous! Some rich high and mighty prick can opt to pay the extra fees in order for him to watch porn at a faster speed? The economy isn't getting better, thus making the job market as crappy as can be, therefore leading the common people to not be able to afford many of the basic things: Food, decent internet to partake in school -funny thing, really, with technology advancing and pushing everything to obsolescence, it's making it hard for people to obtain a higher education.- I mean seriously, just because the upper-serfs (formerly, middle class) can no longer afford the american dream. NOW you fucking morons want to allow a Tiered internet service that allows the rich to have yet another edge over the poor? You fucking idiots want to better america, yet you do EVERY BLOODY THING TO PREVENT THAT FROM HAPPENING. Tell me, is contacting your mistress at 100gbps that much more important to you? Is watching lesbian action on the pornotube that big of a deal?? I am not sorry for my vulgar language, you need to put your big boy pull-ups on and deal with the enraged public. A decision to allow for a tiered service, to me, denotes that you're nothing but a greedy company after nothing but power and money. Will you stop at nothing? Do you want to create a two tiered TV Service? those who can afford heroin, could now afford to have HBO without commercials? While we're at it, why don't you include a promotion with radio purchases as well: those who are dressed in raggy clothing and talk from the ghetto, deserve a crappy radio station access; Static fuzz and an annoying ringing sound, and for those who are dressed in mink scarves and what not deserve the best of the best quality radio station access: Meaning, the band is right there in front of your pathetic ritzy American fatass. Good god, bad good.. Fuck all! Good grief!! It's idiotic attempt like this that is going to be the downfall of america. Honestly, I am surprised that Germany, England, or fucking north Korea hasn't attempted a takeover plan. This country is full of incapable morons who are controlled by the rich to do the will of the rich. Why else is it so expensive to „eat healthy?" well duh! they want all the crappy ass tofu and cream of veggie shit. Why is post-secondary education so expensive? If you're smart, you can recognize what is going on and refuse to cooperate with that the government wants. This is another one of those attempts. If this goes through, I can only hope the Arabs decide to bomb the bloody infidels again (preferably those up in the washington D.C area. Making sure the FCC is taken out.. OH and those parents who are too god damn lazy to raise their kids properly and bitch and moan because TV said the F word.. oh dear god, my son said Fuck, while watching TV because I decided to have a kid that I hadn't really intended on having.) You want „Value" my opinion, then make sure this shitty attempt at segregation between the rich and poor DOES NOT go through.
—Michael, Gilbert, AZ

Once again, the interest of the common people, and the right to continue using a service created for all, is being hand delivered to the greed of corporations. Creating a new kind of social class inequality and intellectual disadvantage. Leaving the future generations the legacy of virtual discrimination, and limited access to knowledge, entertainment, and free expression.
—Sandra Santiago, San Antonio, TX

I depend on Net Neutrality and demand that the FCC protect the open Internet by reclassifying ISPs as common carriers.
—Kate, St Louis Park, MN

The one thing that anyone, who can get an internet connection, in the world has equal access to as any other person, is the access to information a free internet provides us. Please keep it this way.
—Imrosebir Singh Baga, Surrey,

Net Neutrality is important because the First Amendment is important.
—George Martz, San Jose, CA

The Internet has revolutionized the world as we know it. Small businesses have started, social change like #YesAllWomen has spread, and information is made readily available to people who otherwise would not be able to learn. Adding classism by way of a price differential goes against everything that the Internet has helped to create.
—Ashley Flakus, Naperville, IL

I also get a lot of my news from the internet. Cutting back this access for people and families would make our society more like a caste system. No longer a democracy.
—Mary Pat Larsen, Concrete, WA

Fast-lanes imply S-L-O-W-lanes...pretty sure it will penalize the "light-weights" while favoring the big-boy "heavy-weights"
—Ronald Krinock, Landenberg, PA

The internet is a tool that could change peoples lives. It can provide ducational opportunities for those who can't afford it and provides a medium for people across the world to communicate. Lets keep the internet neutral.
—Jason Neff, mason, OH

To keep the internet free.
—Oskar Edvinsson, Karlstad,

Because that would be a monopoly. Don't let us become slaves to corporations. Keep capitalism alive. Give the little guy a chance.
—Kelly Wavra, Arlington Heights, IL

the first amendment is not something that can be bought or manipulated by any entity, or something that can become an endowment to a special-interest group.
—Robert Petruskevicius, canton, CT

Telecom companies should not be allowed to exploit infrastructure that was built, in many cases, with extensive subsidies from the public, to control (if only indirectly) what Americans can access on the internet. Nobody but the big ISP's themselves would be opposed to them being declared common carriers. The internet has become an essential public utility, and must be treated as such.
—William Leight, Cambridge, MA

I could easily go on for hours about why net neutrality matters to me, but I won't. Instead let me tell you why net neutrality matters in general. First: People already pay for internet service, as stated by Chairman Wheeler, "The consumer accesses the Internet using connectivity provided by an Internet service provider. That connectivity should be open and inviolate; it is the simple purchase of a pathway. I believe it would be commercially unreasonable — and therefore not permitted — for the ISP not to deliver the contracted-for open pathway." if this is his and your belief, then realistically there would be no need to second guess the idea of net neutrality. Second: The internet is one of the safest places to speak freely, and I'm not just referring to the constitutional right. We can exchange opinions and information with one another, whether they are in California or Iowa, America or Japan we can communicate knowledge and ideas. Third: When the easiest and fastest way of getting information from the government, big companies, or even you the FCC is the internet, why slow down the speed for many users? The internet is a safety measure as well as a hub for information, if there is a storm coming that may lead to a tornado or typhoon etc. the internet would be a fast way of knowing. Now, you may say the news is faster or just as fast, BUT that actually strengthens the defense of net neutrality, let me explain. If I go with Dish or Time Warner Cable what package makes me pay extra to have access to a news station? When cable first came out people regardless of company had several channels, that always consisted of a news station. Why? To relay information quickly and effectively at NO EXTRA COST. The internet shouldn't become a infomercial, where phone companies try to sell us something we already have or don't need. We have internet now, no one is complaining, no one is asking for more. All that is being asked is to keep things how they are without extra fees that take from people who already pay money for the pathway provided. In other words, "please don't make the highway one continuous toll road." Sincerely, -Zackary Baker
—Zackary, Akron, OH

For so many, the internet is the only safe place left for true self-expression; without fear, for example, of being fired from a job at an anti-queer company. Removing net neutrality threatens this.
—Jenna Belding, Birch Hills,

Net Neutrality is important because if we continue to allow a Southern Bell formation to be created we will see poor prices and poor service. There will be no competition for cable companies if they are allowed to control their direct competitors price point through absurd toll booths on speed. My Uncle George already pays $80 a month for basic cable with Xfinty internet from Comcast at 50mbs and now Comcast wants to make up for it's loses by charging Netflix to reach their internet customers. Why doesn't Comcast get back it's customers by offering Netflix like services for Netflix like prices or team up with Netflix like they did with Verizon wireless?
—Michael Bass, Dallas, GA

A free and open internet, means everything in my daily life. It brings me unending value. The United States are already far behind other nations in the world for both internet speeds and access. (Price)
—Allen M Regal, Altamonte Springs, FL

It's important for the free use
—Michael McCoy, Woodland Hills, CA

Without it we will lose an open and free internet. We must protect it how and when we can when it is in real danger, as it is with out Net Neutrality.
—Christopher S. Reddick, Indianapolis, IN

True net neutrality is important to free speech rights and for real freedom of information. Please protect a truly open internet and do not go with what will only be good for the already powerful telecom companies. Your job should be to do what's best for the people. Thank you.
—Marion McMahon, Charlotte, NC

USA developed the internet. How dare they try to give it away at least sell it erase our National debt.
—Diane Brosius, Frackville, PA

We can only have free speech and scientific progress if Net Neutrality is preserved
—Pauline JULLIEN, Voisins-le-Bretonneux,

BECAUSE WE HAVE A RIGHT TO THIS, OUR VOICE NEEDS TO BE HEARD AND NOT STOPPED OF THAT
—Jerry Woodman, SPRINGFIELD, MI

Just because you can make up new rules, doesn't mean you should. It seems to me everything has been working just fine so far. If you must do something, protect real Net Neutrality and reclassify ISPs as common carriers.
—Pamella Blakeney, Woodville, TX

Reclassify ISPs as common carriers. This is the ONLY way to protect real Net Neutrality.
—Gregory S. Shaw, Sarasota, FL

Dear Sir Mantaining net neutraility ios importtant , to maintian the democratization of the internet keep from those the power concentrate powerinto the hands of few power. It is does not serve the countryp to have such concentration in the hands of few, it is totally contrary to waht the internet has been and should reamain to be. A place of idea's unfettered by those who want to create winners and losers in the realm of cyberspace, by giving the few and powerful, advantage over the many..
—Jerald Hayes, Houston, TX

The open internet has and continues to be a source of ingenuity and new technology.
—Benjamin Paul Lascelle, Manchester, NH

I do not support a "toll road" for the internet. Internet service providers (ISPs) should not be allowed to use their monopolistic power to make more money off the public by support of elitist two-tiered speeds on the internet. Everyone on the internet should have access to the same speeds without having to pay more. I support "net neutrality" as an egaliterian right for the American People.
—Brandt Mannchen, Houston, TX

I am a librarian assistant-the idea of libraries is that information is for everyone in order to be informed citizens. Much information is on the web and this needs to be free to everyone so we can have reasoned debate among us. Internet freedom helps the country be stronger -we are as strong as our citizens' ideas.
—Jean Foy Doelger, st. louis, MO

I can research the drugs my doctor prescribes. I can receive real and complete news service. I can help educate my children. I can shop where I choose. I can try to make a living with my own web-site. I can exercise my ability to think and learn and shop and be entertained as I choose.
—Beverly Jaeger, Santa Fe, NM

We shouldn't have to pay for what we are already getting now. Stop trying to control the internet. We need more competitors not less. You've already taken enough from us people.
—Zachary Tyler Brown-Garcia, Paramount, CA

of by and for the people, not the corporations
—Robert Swiatek, Buffalo, NY

This is truly and No-Brainer!
—Paul Webster, Ojai, CA

FCC takes away our Freedom by creating debt with ignorant fees. It's the worst form of discrimination!
—Andria May, Fairview Heights, IL

Not right, fair, reasonable. Net neutrality is the only way to support smaller businesses into their growth. Otherwise, you are just creating a monopoly for the large corps to take over and that is not what this country is supposed to be about. How are small businesses ever going to grow large if they are discounted and dismissed those companies with larger wallets? It is unethical.
—Stacie Turk, Santa Monica, CA

Please keep the internet neutral!
—Mr. Craig Matthews, Austin, TX

Net neutrality is one of the truly democratic principles that we have left. Surrendering to the corporate profiteers would be a monumental step backwards.
—Simon Mueller, Henrico, VA

As an scientist participating in a worldwide research community that depends upon access to large volumes of data accessed from archives via the Internet, I strongly urge the FCC to reclassify broadband Internet access as a telecommunications service, and preserve Net Neutrality. In addition, the FCC should reject the proposed rules that would allow Internet service providers to divide the Internet into fast lanes for wealthy corporations and slow lanes for the rest of us. Universities and research facilities do not have the funds to pay for preferred 'fast lane' access to the Internet and being relegated to 'slow lanes' would have a huge negative impact on all types of groundbreaking scientific research worldwide.
—Reba B., Gainesville, FL

end the corporate take over of government
—Dan Sabatinelli, mendon, MA

We can only be free if information is free.
—Pol Rodriguez Rodriguez, san Francisco, CA

This is so urgent because Net Neutrality is the basis of our freedom, our freedom of speech. We should be moving towards a free wireless high speed internet with out ANY restrictions.
—Bob Wolfe, San Diego, CA

So goes the Internet goes this Country!
—Rich Bornfreund, Cape Coral, FL

The net has become a commodity not to be ruled by telecommunications corporation. You work for us, not them. Earn your salary and keep the net neutral. skg
—Sharon Gannon, Sioux Falls, SD

For David, playing a 10 year old boy is actually an adventure all of its own. 43401 [url=http://www.adenfree.com/4 3401]43401[/url]
