Item 21 Attachment
Service Description

Service/ Functionality Description

The information included below describes the services to be offered as part of the E- Rate 2010 quote included in the NEVESEM's proposal. This document is a supplement to the quotations presented for Internet Access known as Attachment 21.

Internet Access

Maintenance Agreement

Basic Maintenance service is to be provided to Internet Access Service. Maintenance services are on demand for the services and/ or outage calls. It also includes the review of the Quality Services Logs for actions to prevent service interruptions. The maintenance service for the equipment relates to the Internet Access in quote under the Internal Connections Services.

On Premise Equipment (Router- Cisco 2801- Equivalent)

This router interfaces between the IPS telephone line (TI or fractional) and the school's network. Cisco 2801 router selects the path for traffic, may provide features such as load balancing and can provides trouble shooting diagnostic capabilities. VPN is not part of the schools infrastructure strategy. There is no remote access function considered either.

Basic Instruction Service

The Technology Coordinator and the Technology/Computer Teacher are the school first level of support of the Internet Service; as such they are instructed at the service setup time to perform a basic set of functions when there is a service outage or any other service request. When they report a service malfunction or a service outage, depending on the condition reported NEVESEM's Help Desk goes thru a set of questions and actions in order to re-establish the service or do the problem determination.

The Internet Service setup and initiation are NEVESEM's responsibilities, nevertheless we take the school resources (the Technology Coordinator and the Technology/Computer

Teacher) thru the service initiation process so they can perform the initial service availability check as follows:

Getting Internet Service up and running

They are instructed on the service set up process so they can identify all the Internet Service components and indicators

Doing problem determination and getting existing users back on line

They are instructed on conditions that may result in service outage so they can prevent services interruptions; also in determining if the condition reported is affected by conditions within the Internet Service or the school LAN, actions to identify if the Internet service is getting beyond the ISP demarcation point.

Detection and correction of Internet Service outage

They are instructed on identifying the on premises equipment and Internet Service components lights service indicators and resetting functions to be performed in case of service outage

Implementation of the Internet Usage Policy

It is re-minded to them the CIPA requirement and the implementation of a school usage policy. There is no training related with this item, just a remind to them on the requirement.

Administration of the Internet Service

The Internet Service administrative coordination set of functions as the school contact are explain; such as the person who reports service outage or conditions, the person who the NEVESEM's Help Desk will contact to initiate the service repair action, the person who receive the NEVESEM's technical service person, etc

Understanding and managing the ISP service level agreement

It is explained services included as part of the Internet Service, Internet Service support structure, school responsibilities and what to do in case of a service or information request.

Project Management

Project Management services are to coordinate the provision of the services with the school contact, to manage the, installation, setup and initial operation of the Internet product or service to be provided. Project management services are part of this proposal and the services agreement.

Setup Charge

The setup and installation charges are incidental with the Internet Access service initiation or changes to the existing bandwidth. These services are not related to the Internal Connections (network related) components. Once the school network components has being properly installed there are setup (ISP related) activities to be performed to enable the Internet Access service or to change the existing access bandwidth.

Internal Connections

Item 21 Attachment
Service Description

Service/ Functionality Description

The information included below describes the services to be offered as part of the E- Rate 2010 quote included in the Nevesem's proposal. This document is a supplement to the quotations presented for Internal Connections known as Attachment 21.

Internal Connections

Firewall Server

The server will works as a boundary between the school and the internal world, protecting the network against intruders or unauthorized access ensuring the operation of the network.

DHCP Server

This server functionality is to be able to connect a computer to a network, and have that machine request and receive the information necessary to participate on the network automatically.

DNS Server

This server translates domain names to or from IP addresses, which are the actual basis of addresses on the Internet.

Terminal Server

The terminal server does the work of answering the calls and passes the connections on to the appropriate node. This server connects many terminals to a LAN through one network connection.

Web Server

A computer file server used to provide information to users of the Internet and also be used to provide web-based software applications and other web-based functions.

Mail Server

The mail distributes files or information in response to requests sent via e-mail.

Three years on site warranty

Three years on site warranty to the servers is a standard offering included in the product price. There is not additional cost for such warranty.

Server Basic User Training

The Technology Coordinator and the Technology/ Computer Teacher are the schools first level of support of the NEVESEM's support structure; as such they are instructed at the equipment installation time to perform a basic set of functions when there is a service outage or any other service request. When they report an equipment malfunction or a service outage, depending on the condition reported NEVESEM's Help Desk goes thru a set of questions and actions in order to re-establish the service or do the problem determination.

The server installation service are NEVESEM responsibilities, nevertheless we take the school resources (the Technology Coordinator and the Technology/Computer Teachers) thru the installation process so they can perform the initial service availability check as follows:

a. Identifying server function lights indicators.

They are instructed on the server lights indicators status and meanings, also the actions to be taken when lights identify a sever malfunction.

b. Powering the server up and down

They are instructed on how to reset the equipment, to bring it up in case that the server is powered off. They are also instructed in how to shutdown the equipment and power it off when necessary.

c. Understanding and managing the service agreement

It explained the services included as part of the Network Maintenance Service, the Service Support structure, school responsibilities and what to do in case of a service or information request.

Switch- Cisco 2960- Equivalent

Design and Documentation-

The design and documentation services are coincident to the installation, initial configuration and setup of the switch into the network. These services are an integral part of the Internal Connections quote and contracts provide as part of NEVESEM's bid.

One Year on site warranty

One Year on site warranty to the switch is a standard offering and is included in the product price. There is no additional cost for such warranty.

Cabling Infrastructure

Smart/750VA UPS 3 yrs on site warranty

The on site term referres to the on site warranty for the UPS. The three years on site warranty is included in the product price as a standard manufacturer and reseller offering.

There is not additional cost for such warranty.

Smart/1500VA UPS 3 yrs on site warranty

The on site term referres to the on site warranty for the UPS. The three years on site warranty is included in the product price as a standard manufacturer and reseller offering.

There is not additional cost for such warranty.

Smart/3200VA UPS 3 yrs on site warranty

The on site term referrers to the on site warranty for the UPS. The three years on site warranty is included in the product price as a standard manufacturer and reseller offering.

There is not additional cost for such warranty.

Equipment Maintenance / Operating Software Maintenance

Maintenance services associated with the equipment operating software such as:

Operating system service packs and paches application

Preventive maintenance (Standard house keeping procedures)

Trouble-shooting and repair services

Project Management

Project Management services are to coordinate the provision of the services with the school contact to manage the installation, setup and initial operation of the UPS or service to be provided. Project management services are part of this proposal and the services agreement.

Company Profile

Company Profile

NEVESEM, Inc. – d/b/a Dreyfous & Associates is a company dedicated to offer materials, educational and technological services of excellence.

Since its beginning in 1994, Dreyfous & Associates turned out to be the pioneer in Puerto Rico's education as well as abroad. President and founder, Dr. Ricardo Dreyfous, holds four (4) patents on educational products actually used effectively in Puerto Rico, United States, the Caribbean, South America and Europe. Dr. Ricardo Dreyfous became the first Hispanic to obtain a patent in the Mathematical Educational field.

We are creators of various products addressed to the learning of Mathematics, Spanish writing, and information systems for the administration of schools and libraries, among others. All of our products are in Spanish language and because these products are used in other countries, some of these products are already translated or in the translation process to an English version. In addition, we are distributors of the worldwide known "Texas Instruments" educational products.

Dreyfous & Associates offers filtered Internet service to more than one hundred private schools through the E-Rate funding program, providing the students a tool to diversify their knowledge. By means of this project we also had the opportunity to create an educational network with a constructive educational approach in which educational services are offered to teachers, students and now to the public community. This is an excellent tool that helps the teacher or librarian to develop a highly creative environment to facilitate learning through the experimentation, creation of conjectures and knowledge validation in order to achieve an assertive and lifelong learning experience.

Our company continues to be forefront in the development of innovative educational and technological methods. Our vision is to become a company known worldwide. In addition, NEVESEM enjoys tax exemption in the manufacture of our own products, for exportation and for the investigation and development of new products.

Recently, we completed the development of one of our new products known as EduPlatform™. This program takes into consideration two needs of great magnitude in the technological classrooms; students' computers are controlled by the teacher and allow the creation and delivery of contents for all the subjects that are taught at the different school levels. We have named the first part of this innovative product EduPlatform™. Lesson Builder is the name of the second part which will place us as a

company that provides content for all the subjects at a local level as well as the international one.

Our business is composed of several segments. These segments are: EduPlatform™, E-Rate program, training and projects, manipulative and programs and reservation of our facilities for trainings or business meetings.
