West Virginia Telehealth Alliance, Inc.

Pilot Program Participants Quarterly Data Report
For March 31, 2010

1. Project Contact and Coordination Information

The West Virginia Telehealth Alliance, Inc. (FEIN 20-8962352) is a statewide non-profit organization that is the legally and financially responsible entity under the FCC Rural Health Care Pilot Project. The WVTA's FCC Registration Number is 0017474008.

The West Virginia Telehealth Alliance serves as a coordinating body that involves a consortium of health care entities and organizations from across the state. Participants in the alliance include hospitals, rural health care centers, medical schools (WVU, Marshall, CAMC, W.Va. School of Osteopathic Medicine), doctors, mental health centers, local health departments, senior groups, consumer groups as well as AFL-CIO and the West Virginia Chamber of Commerce, and major telecommunications companies.

Project leaders for the West Virginia Telehealth Alliance are:

Project Coordinator
Lawrence J. Malone
Chairman
West Virginia Telehealth Alliance Inc.
500 Corporate Centre Drive, Suite 510
Scott Depot, WV 25560
Phone: (304) 201-5707 or (304) 545-3052
lmalone@malonecs.com

(Note: Malone is a sole proprietor and owner of Malone Consulting Services, a communications consultancy based in Charleston, W.Va.)

Associate Project Coordinator
Christopher A Budig
Co-Owner
TC Telehealth and Education Services
235 High Street, Room 717
Morgantown, WV 26505
304-685-1191 (Phone)
cabudig@earthlink.net

(Note: Budig formerly was director of Medical Doctor Television at West Virginia University and now is co-owner of TC Telehealth and Education Services, a telehealth and education services consultancy based in Morgantown, W.Va.)

2. Identify all health care facilities included in the network

The West Virginia Telehealth Alliance is more than just a single network, but will work to develop and connect a number of rural health care networks and ultimately interconnect these into a statewide health care network focused on advancing telehealth use, enabling the transmission of electronic medical records and facilitating broader collection and analysis of rural health information.

Attached to this quarterly report is Appendix A, which lists the health care facilities that are eligible to be involved in the W.Va.Telehealth's activities, related to the FCC's Rural Health Care Pilot Program.

3. Network Narrative

Here is an overview of the major projects that the WVTA is undertaking as part of the Rural Health Care Pilot Project and development of our statewide health care network of networks.

<u>Metro Fiber Project</u>
On Sept. 17, 2009, the WVTA was issued a funding commitment letter from USAC for the Metro Fiber Build project. Since this time the vendor has been working to secure right of way and pole rights. The project will begin construction in the next month (May) with an estimated project completion date of late summer or early fall. If everything stays on schedule the project should be completed in September 2010

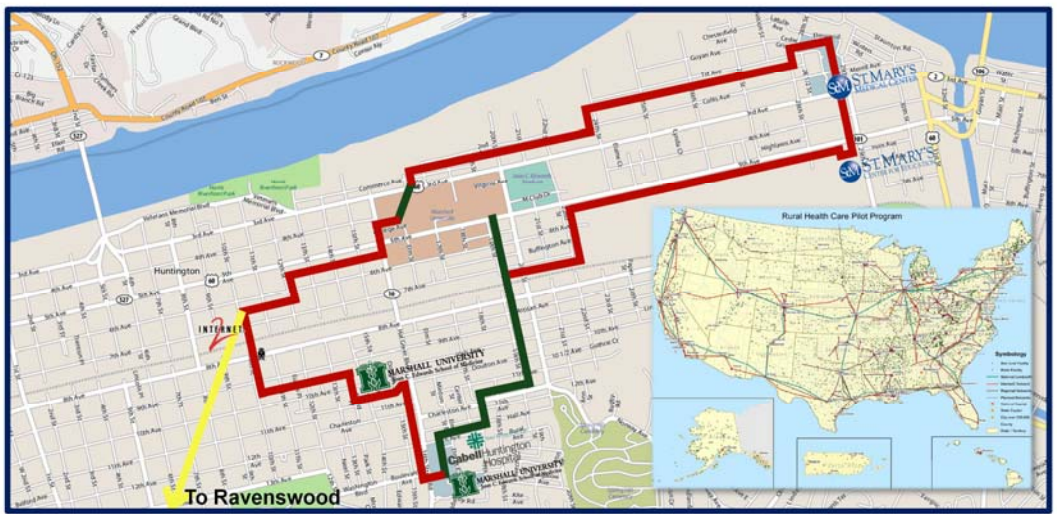
The alliance also prepared and posted an RFP (RFP #3) for the equipment needs related to the Metro Fiber Project. This RFP was posted by USAC on March 25, 2010.

Provided are more details about this project:

a) Brief description of the backbone network of the dedicated health care network, *e.g.*, MPLS network, carrier-provided VPN, a SONET ring;
   - Marshall University, acting as a coordinating agent and participant of the WVTA, is solicited proposals to provide the agents and participants of the WVTA with the design, installation, testing and acceptance of a fiber optic backbone serving key medical and medical research locations in Huntington, WV as listed herein.

West Virginia Telehealth Alliance

Huntington Metro Fiber Build Project Fiber Routes



– New Fiber – Existing MU Fiber – OSCNet/Internet2

1. Marshall University, serving as the procurement agent for the West Virginia Telehealth Alliance's Robert C. Byrd Biotechnology Science Center (Housing School of Medicine Faculty) to St. Mary's Medical Center
    - 24SM Fiber- Diverse Route
    - Diverse Entrance # 1 into St. Mary's Medical Center
    - 20th St., Huntington, WV
    - 2900 1st Ave, Huntington, WV
- St. Mary's Medical Center to St. Mary's Medical Education Center
    - 24SM Fiber- Diverse Route
    - Diverse Entrance # 2 into St. Mary's Medical Center
    - Diverse Entrance # 1 into St. Mary's Medical Education Center
    - 2900 1st Ave, Huntington, WV
    - 2825 Fifth Ave, Huntington, WV - Old Big Bear on 29th St. Huntington, WV
- Marshall University, serving as the procurement agent for the West Virginia Telehealth Alliance's Cabell Hall (Campus fiber connect site only) to St. Mary's Medical Education Center
    - 24SM Fiber- Diverse Route
    - Diverse Entrance # 2 into St. Mary's Medical Education Center
    - 20th St., Huntington, WV
    - 2825 Fifth Ave, Huntington, WV - Old Big Bear on 29th St. Huntington, WV
- Marshall University, serving as the procurement agent for the West Virginia Telehealth Alliance's Drinko Library (Campus fiber POP) to the Byrd Clinical Center via the AEP APCO AMP Site – 1122 Seventh Ave, Huntington, WV (this is the site of a number of CLEC co-locations and will optimize connectivity to a number of carriers). A service loop adequate to enter and leave this building must be supplied.

b) Explanation of how health care provider sites will connect to (or access) the network, including the access technologies/services and transmission speeds;
    - In future phases of the West Virginia Telehealth Alliance's RHCPP Project, rural clinics that have normal referral patterns or are remote locations to any of the three Huntington facilities (Cabell Huntington Hospital, Saint Mary's Medical Center and Marshall University Physicians and Surgeons) will have spoke Metropolitan Ethernet connections from these major health care facilities that are linked via fiber. These rural facilities have daily clinical, educational and business interactions with their associated major healthcare facilities. All locations are actively engaged in Electronic Medical Records, Medical Imaging and remote clinical education. The West Virginia Telehealth Alliance has developed a bold plan for the advancement of telehealth adoption and telemedicine utilization in West Virginia, particularly in areas that are rural and medically underserved and face significant rural economic and demographic obstacles. Greater use of a dedicated network of advanced telecommunication and information infrastructure is vital to enabling rural health care centers in our state to access and leverage telehealth applications, information systems and educational resources.

c) Explanation of how and where the network will connect to a national backbone such as NLR or Internet2;
    - The Huntington Metro Fiber Ring will provide a loop to the American Electric Power (AEP) APCO AMP Site – 1122 Seventh Ave, Huntington, WV. This is the site of a number of CLEC co-locations and will optimize connectivity to a number of carriers, including OSCNet (OARnet). A service loop adequate to enter and leave this building must be supplied. Internet2 access and subscription will be part of a future RFP.

d) Number of miles of fiber construction, and whether the fiber is buried or aerial;
    - Approximately 7 miles of a combination of both areal and buried fiber are defined for this portion of the WV Telehealth Alliance project.

e) Special systems or services for network management or maintenance (if applicable) and where such systems reside or are based.
    - A standard network equipment RFP will be issued in the next few months for the associated fiber locations. Network operating services will be provided by Marshall University Information Technology Office of Telecommunications. This will be provided to the Huntington Metro Fiber Build Project at no cost during the grant period.

Wide Area Network (WAN) Telecommunications services and Internet Enhancements

Finally, during the first quarter of 2010 the alliance finalized and posted a Request for Proposal (RFP #2) for Wide Area Network (WAN) telecommunications services and Internet access: http://www.usac.org/rhc-pilot-program/tools/search-postings-2009.aspx#WV. That RFP period closed on March 17, 2010. Following this, the alliance's RFP review team hosted meeting to hear oral presentations from the seven broadband/telecommunications providers that have provided contract proposals and pricing. The subcommittee is working to evaluate the responses and to present a contract (or contracts) for approval by the WVTA board by mid- to late May 2010. This RFP involves 167 eligible health care locations around the state, mostly associated with CAMC's Partners In Health, the Community Health Network of W.Va., Valley Health, West Virginia United Health System, University Health Associates, Minnie Hamilton Health System, Princeton Community Hospital, and Wheeling Hospital, Inc.

The WVTA's WAN-telco services enhancements will help to improve and establish inter-connected broadband health care networks. This improved broadband connectivity will provide a number of benefits:

1) Enable greater use of telehealth services and connections that will enable improved diagnostic capabilities and specialty treatment options;
2) Enable better group purchasing power and enhanced reliability and quality of service;
3) Foster tele-training and educational opportunities; and
4) Dedicated virtual private networks to ensure security, reliability and connectivity.

This project also will lay the foundation to begin to interconnect these networks into a seamless, interoperable statewide dedicated broadband health care network not only for telehealth, but also for future needs such as advanced electronic medical record transmission and use.
to finalize the first grouping (likely to be about 160 locations) of interested eligible health care locations to be part of the first of two RFPs for advanced broadband services under the RHCPP. The alliance was working with USAC on a preliminary review of this first RFP and plans to have it posted in January 2010.

4. List of Connected Health Care Providers

As of March 31, 2010, the West Virginia Telehealth Alliance had no eligible and noneligible health care provider sites connected as part of the alliance's RHCPP plan.

5. Non-recurring and recurring costs and budgets

Funds from the FCC's RHCPP will be used as part of a statewide effort to upgrade broadband connections to eligible hospitals and rural health centers across the state, to establish or bolster rural health care networks and to provide Internet2 access for health care and health education purposes. Attached to this is the W.Va. Telehealth Alliance's project plan and budget (Appendix B).

6. Cost Apportionment and Sources of Funds

The West Virginia Telehealth Alliance is using its FCC RHCPP funds for projects involving only eligible entities. Each eligible entity will be required to provide the necessary 15 percent match. The apportionment and allocation of these funds (roughly $9.7 million) are outlined in Appendix B.

Other sources of financial support and anticipated revenues that are paying for costs not covered by the fund and by Pilot Program participants include:

- In 2007 the West Virginia Telehealth Alliance received a $300,000 grant from The Claude Worthington Benedum Foundation that provided financial support for the alliance's initial administrative needs, both for the RHCPP and other alliance projects and activities.
- In addition, the West Virginia Health Care Authority (WVHCA) has provided a $550,000 grant to provide a source of funds to help reimburse rural health care centers with the project's 15 percent match requirement or address any financial match short-comings a center may experience during the pilot program.
- The W.Va. Telehealth Alliance has received two grant awards ($125,000 each) from the W.Va. Department of Health and Human Resources. Those funds are being provided to help with administrative and program implementation expenses.
- In late December 2009, the West Virginia Telehealth Alliance received a $200,000 grant from The Claude Worthington Benedum Foundation that will provide resources for a telehealth education and outreach project.

The remaining time for such assistance is as follows:

<u>Administrative Funds</u>

- The initial funds from the Benedum Foundation were expended throughout calendar years 2008 and 2009.
- Funds from the W.Va. DHHR grant will sustain the organization from late 2009 and for 2010.
    - As of March 31, 2010, the W.Va. Telehealth Alliance had $105,060.01in remaining available funds.
- The "telehealth outreach" grant funds from the Benedum Foundation will be expended in 2010 and 2011.
    - As of March 31, 2010, the W.Va. Telehealth Alliance had $200,000 in available funds.

Restricted Funds

- The funds from the WVHCA are in a "restricted" account and will be used over the duration of the RHCPP to help with RHCPP matching needs. To date, no WVHCA funds have been expended as of the time of this quarterly report.
    - As of March 31, 2010, the W.Va. Telehealth Alliance had $550,000 in available WVHCA funds

Each participant in the WVTA's RHCPP will be required to provide the necessary 15 percent match amount, which is designed to ensure that the participant has a direct financial connection and commitment to the project and helps to ensure that the health care center appreciates the need for ongoing sustainability.

7. Identify any technical or non-technical requirements or procedures necessary for ineligible entities to connect to the participant's network.

The W.Va. Telehealth Alliance's plan does not anticipate allowing ineligible entities to participate or connect.

8. Project Management

The project is managed by the board of directors of the West Virginia Telehealth Alliance, and day-to-day services and activities are being provided by contracted experts/staff – project coordinator, technical coordinator, USAC compliance coordinator, etc. An updated roster of the WVTA's board is attached (see attached Appendix C).

The WVTA's detailed project plan and schedule are included in attached Appendix D. The alliance worked during the period January 1, 2010 to March 31, 2010 on these key projects:

1) Continued work on procurement of poll rights needed for the metro fiber build project. The vendor also started gathering any and all information deemed necessary for obtaining permits for the underground sections of this project.
2) Prepared and posted an RFP for the equipment needs related to the Metro Fiber Project. This RFP was posted by USAC on March 25, 2010.
3) Completed and posted an RFP for advanced broadband services that includes 167 eligible locations (hospitals and rural health clinics) as part of the alliance's planned first advanced broadband services RFP. The RFP closed on March 17, 2010, and the WVTA's RFP review team began its formal evaluation of the responses, including hosting meetings with vendors.
4) Continued the collection of broadband and network data and interactions from the remaining 100+ eligible entities, which, depending upon interest and budget, may be aggregated into a future RFI/RFP.

The alliance also continued to spend time and energy to comply with procedures as outlined by USAC.

To complement the broadband enhancements being provided by the RHCPP, the alliance also is set to implement a statewide telehealth outreach and education project.

As the WVTA progresses in the implementation of its plan in 2010 and begins connecting eligible health care providers to respective networks, we will provide the required updates and information regarding connection dates, etc.

Project Benefits: Metro Fiber

Here is an outline of the benefits that will be provided from the alliance's Metro Fiber Build project:

This project will provide a metropolitan fiber connection environment (1 gig) to facilitate eligible health care services at and among these institutions:

- Marshall University (for its health education programs, courses)
- Marshall University Joan C. Edwards School of Medicine
- St. Mary's Medical Center
- Cabell-Huntington Hospital

The three medical facilities (MUSOM, St. Mary's and Cabell-Huntington) provide medical and health care services to rural populations living and working in a multi-county, tri-state geographic region. They also serve as specialty medical and treatment centers (cardiovascular, neuroscience/stroke, cancer treatment, etc.) for rural residents who are referred from rural health care clinics and physicians. Finally, the fiber build project not only will provide advanced broadband interconnection among these institutions for the exchange of health information and health education purposes, but it also will allow rural health centers to access remotely (via telehealth) the physicians and specialists at these interconnected organizations.

Specifically, two rural health care centers will benefit as part of the Metro Fiber Build project. These are Lincoln Primary Care (in Lincoln County) and Tug River Health Association (in McDowell County).

Historically, there has been an advanced telecommunications network already established between Tug River, The Community Health Network of West Virginia, and Marshall University. Once the Huntington metro-fiber ring is complete, Tug River will have the ability to use specialists at Cabell-Huntington Hospital and St. Mary's Medical Center as well as Marshall University all through this single connection point. Finally, both Lincoln Primary and Tug Valley Health will be seeking to expand their existing broadband connectivity to 10 megs as part of a second RFP that currently is being prepared by the WVTA. Both of these facilities have historically been used as demonstration sites for many rural health programs and have received numerous grants to promote and sustain their connectivity.

Project Benefits: Telco Service Enhancements

Using the FCC funds, the WVTA will work to develop more than just a single network, but will work to develop and connect a number of rural health care networks and ultimately interconnect these into a statewide health care network focused on advancing telehealth use and enabling the transmission of electronic medical records and broader collection and analysis of rural health information.

Benefits from improving broadband services and network interconnections from among eligible health care facilities will be to:

- Provide advanced broadband connectivity to facilitate enhanced healthcare delivery to rural medically underserved regions using telehealth/telemedicine technologies;
- Help rural locations have increased access to health care and supporting services while containing or decreasing healthcare costs;
- Aid in the dissemination of relevant information, training, and technical assistance to healthcare organizations and providers to assist them with the adoption, deployment and

utilization of new and emerging telehealth technologies for patient treatment and care coordination;
- Increase the use of distance learning in public health and medical care;
- Help to spur the use of electronic medical records; and
- Facilitate access to training for healthcare workers, medical professionals, and patient education in rural and medically underserved areas.
- Produce more effective group purchasing (lower costs) for advanced broadband services and improved quality of service and reliability.

Also, by aggregating "demand" from multiple health care entities under this pilot project, the purchasing power and economies of scale will result, overall, in lower on-time connection charges and monthly broadband fees charged for equivalent services. The WVTA intends to use a significant amount of the RHCPP funding on one-time connection charges that may be levied by the telecommunications carriers to build out the infrastructure contemplated as part of the planned upgrades. By paying the one-time charges using the RHCPP funds (and matching state agency provided funds), the ongoing broadband fees to these rural locations will be reduced through the up-front capital cost instead of financing these costs within the recurring cost structure.

In addition, many of the WVTA's eligible entities will benefit substantially from service level improvements, a more robust, scalable system and greater reliability and up-time.

9. Network Self-Sustainability

As stated earlier in this report, the efforts of West Virginia Telehealth Alliance will involve more than just a single network, but will involve a number of rural health care networks and ultimately interconnect these into a statewide health care network (being built by the West Virginia Health Information Network). The goals are to advance telehealth use, enable the transmission of electronic medical records, provide for a broader collection and analysis of rural health information and improve health outcomes across rural West Virginia.

The FCC's RHCPP funds are being deployed to facilitate the establishment of health care networks and telehealth relationships, particularly where rural centers or clinics may lack access to certain medical expertise or advanced medical technologies available in larger hospitals/facilities, by bolstering existing broadband connections generally from basic DSL or cable connections to advanced T1 or greater connections.

Through aggregation of demand and group purchasing power, the alliance will be seeking to procure telecom services and rates at favorable rates and terms that will negate or minimize any added broadband costs (MRCs) associated with the planned enhancement of broadband infrastructure among rural health care centers/clinics and rural hospitals. The alliance also will work to ensure that West Virginia participants, particularly rural hospitals and health care clinics, will gain an understanding of and interest in involvement in the regular USAC Rural Health Care Program, once the RHCPP ends. Finally, over the next several years the health care industry will progress in its migration toward electronic health records and telemedicine, which should facilitate greater and more widespread use of advanced broadband connectivity and telehealth services. This transformation should result in these centers viewing advanced broadband connectivity as a necessary and justifiable cost of business; thereby ensuring a high level of sustainability. Combined, this also should help these centers further improve health care delivery, services and outcomes in rural West Virginia.

A draft “sustainability plan,” developed by the West Virginia Telehealth Alliance, is included with this quarterly report as Appendix E. A complete sustainability plan will be prepared and provided at the appropriate time.

10. Advancing telemedicine benefits

Since the WVTA has not started any connections or improvement projects under the alliance’s RHCPP plan, we cannot provide updates on how this program has achieved goals and objects related to advancing telemedicine or its benefits. These details will be provided in subsequent quarterly reports.

11. HHS health IT initiatives

The WVTA will work to provide answers to these HHS health IT questions as the alliance’s RHCPP program advances. However, the WVTA already is working very closely with the West Virginia Health Information Network in the coordination of each entity’s efforts and in fulfilling the activities related to the Nationwide Health Information Network. Moreover, the West Virginia Health Information Network, whose executive director serves on the WVTA board, is one of the participants in the NHIN2 project.

12. HHS -- Centers for Disease Control and Prevention (CDC)

The WVTA will work to provide answers to these HHS health IT questions as the alliance’s RHCPP program advances.

List of Participating Entities - Appendix A

Facility / Description	Address				County	Phone	RUCA	Tract	Public	Eligible	Status	Class

Quarterly Report – March 31, 2010
APPENDIX D – Project Plan Timeline

RHCPP Implementation Timeline

Metro Fiber Build Project
Create a metropolitan fiber connection environment (1 gig) to facilitate eligible health care services at and among these institutions:

- Marshall University (for its health education programs, courses)
- Marshall University Joan C. Edwards School of Medicine
- St. Mary's Medical Center
- Cabell-Huntington Hospital

Not only will this project provide advanced broadband interconnection among these institutions for health care, the exchange of health information and health education purposes, but the project also will allow rural health centers better remote access (via telehealth systems and applications) to the physicians and specialists at these interconnected organizations.

Funding Commitment Letter Received - September 2009
Permitting work – Fall-Winter-Spring 2010
Construction is expected to begin in May 2010
Completion: September 2010

Equipment RFP for Metro Fiber Project
RFP posted: March 25, 2010

Internet2 Connection for Health Care
Completion: *undetermined at this time*

Telco Services Procurement #1
As part of the alliance's telecommunication services procurement project, nearly 167 health care locations in the state were aggregated into a RFP (Wide Area Network and Internet Service Request for Proposals).

RFP Posted: January 20, 2010 – March 17, 2010
Award Contract(s): anticipated to be June 2010
Connections: Summer 2010 *(connection upgrades begin)*

Telco Services Procurement #2
The WVTA will await the completion of the first RFP process and then determine whether a second telco services RFP may be in order.

Inter-carrier Metro/MPLS Hub Project
Completion: *To be determined (will be one of the last projects undertaken)*

Appendix E - Sustainability Plan Outline

March 31, 2010

The sustainability plan of the West Virginia Telehealth Alliance's RHCPP is built upon four primary components:

1) Sustainability Plan for Huntington Metro Fiber RFP

Response to Sustainability Questions

1. What is your projects source for 15% funding?
    a. Marshall University Information Technology, Marshall University School of Medicine, Cabell Huntington Hospital and St. Mary's Hospital have agreed to pay for the 15% of the build cost for the Huntington Metro Fiber Network.
2. Do you have any commitments from Network Members?
    a. I have submitted Letter's of Agency from each of the members listed in question 1. It included their financial commitment.
3. What is the length of your sustainability Period?
    a. Once the fiber is built, the only ongoing costs are @$5,000 a year for pole rights. The network Equipment RFP will have its own sustainability and replacement plan. Marshall University Information Technology will not be charging the partner hospitals and medical school for the technical support of the network.
4. Can you create a budget for your sustainability plan at this time? If so, please include it.
    a. Budget: $5,000 annually spilt and billed equally for each of the 4 participants. Additionally, Marshall University takes full financial liability for providing the cost of the pole rights if any issue should arise from the partners.
5. Will there be any use of the Network by Non-Eligible Entities?
    a. No
6. Who will be in charge of managing of the Network?
    a. Marshall University Information Technology/Telecommunications Division.
7. Are there any assumptions of Continued RHC Funding?
    a. No
8. Will you be using State and Federal funding to sustain your project?
    a. Yes
9. Does your project include any Prepaid Lease Options?
    a. No
10. Does your project plan to have any up Front Charges and/or Monthly Lease Charges?
    a. No.
11. Please discuss your Selected Options. Excess Bandwidth and Excess Capacity.
    a. The fiber being built is dedicated to the usage of the FCC Rural Telehealth Pilot project.

Excess Bandwidth /Capacity

The participant Owns 100% of Dedicated Network; No-Excess Bandwidth or Excess Capacity for Use by Other Network Members or Non-Network Members

The participant contracts with vendor to construct dedicated network capacity for current eligible HCP members, with the participant getting ownership of the fiber. The participant owns 100% of the fiber. The

DRAFT

universal service funds pay for not more than 85% of such eligible costs. Any capacity paid for by universal service funds belong to the participant. The price is based on construction costs and the participant is paying more than a fair share of construction costs. The participant has ownership of what is being constructed. The participant has certified selection of the most cost-effective bid and documents will be provided to USAC so they can verify that cost was a primary factor in selection.

Budget Breakdown for Future Costs

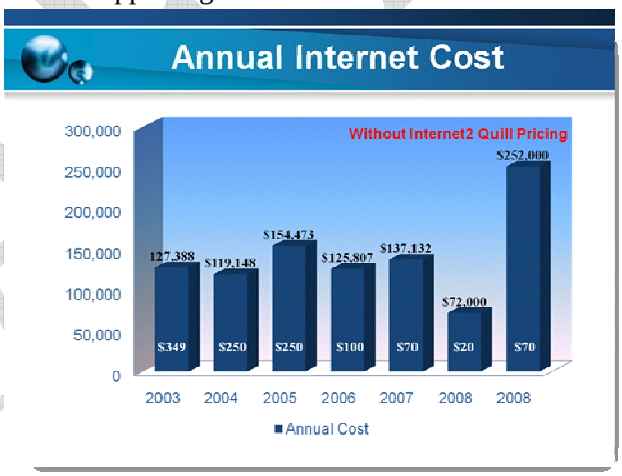
Item	Description	Life Span	Cost
Fiber Construction		20 Years	$273,100
Make Ready	Pole installation shall be in accordance with all Local, AEP, Verizon Communications and RUS requirements. Pre existing pole lines must be capable of supporting proposed cables. To determine the adequacy of an existing pole line inspect for loading capabilities. Verification should include the following: • Poles physical integrity (i.e. Poles bent or split) • Presence of guys or anchors • Existence of a ground system • Clearance from other utilities • Specifications of pole – height, class, age, composition • Ownership and Joint use issues It is the Contractors responsibility to supply all application documentation to and coordinate with the utility pole owners (AEP, Verizon Communications and/or other). This is a pass through cost from the utility company.	NA	@274,000
Pole Rights Cost	Utility pole fees are charged on an annual basis and will be split equally among the providers. Federal dollars are not being requested for this annual cost.	Annual	@$5,000
Network Equipment	This will be done as a separate RFP and a separated sustainability plan will be provided for that portion of the project	7 Years	To Be Bid
Network Operation	Marshall University Telecommunications cost will provide the ongoing technical network support for the project will not be charging the partner hospitals and medical school for the technical support of the network.	Annual	NA

DRAFT

<u>2) Internet2</u>

Marshall University will serve as the lead organization with a network of users and affiliated health care organizations in southern and central WV – collectively, these organizations will sustain the approximately $265K operating cost annually (this represents slightly less than 10% of the WVTA operational budget). Approximately 15% of the RHC funds will be allocated to build out the I2 connection and the organizations affiliated with Marshall have a continuing commitment to this portion of the project.

Funds from the FCC grant (or alternative source) will permit integration of the facilities of various disparate hospital and healthcare networks with Marshall University and other academic health care organizations and **Internet2**. Marshall University has historically provided the technical support and planning to our School of Medicine and our local community hospitals, including St. Mary's and Cabell Huntington Hospital for integration and infrastructure planning. A redundant fiber ring from the Marshall University to the School of Medicine, Cabell Hunting Hospital and Saint Mary's Medical Center will have a financial payback within two years. Several years ago, Marshall University provided a single fiber connection to the School of Medicine for Billing and Internet access. The project was paid for in a short eight months due to the historical monthly telecommunications costs that were traditionally being paid to telecommunication service providers were no longer necessary. This project completes the fiber loop and provides the required redundancy necessary for medical applications. Additionally, both Cabell Huntington Hospital and Saint Mary's Medical Center are supporting costs or Internet Access. These dollars will be redirected to support both Internet2 and commodity Internet that will be tunneled via the Internet2 connection. Internet2 Quill commodity Internet pricing is less than 1/4 the cost of their current pricing of their Internet Service provider. Marshall University will provide both **Internet2** interconnectivity as well as improved integration of existing networks to any participating healthcare partner.



Another goal of this project is to create a premier integrated clinical network that will enhance research, education, and economic development and will expand West Virginia's role and reputation in networking technology combined with our national reputation in rural health. The WV TeleHealth project is the infrastructure component of the West Virginia Health Information Network. This network design with provide both intrastate and interstate research and education capabilities that go far beyond the capabilities of even **Internet2**.

All partners will expand the delivery of interactive educational programming, such as grand rounds and continuing medical education, clinical information systems, library services, and consultation. Beneficiaries will be students, residents, health care professionals and, above all, the patients served by the institutions and facilities connected to this **Internet2** system.

Non-eligible Health Care Providers or Other Participants

We only anticipate eligible healthcare and education providers utilizing the system during the pilot project, but we do have plans for the extension and sustainability of Internet2 connection as a regional economic development. A cost structure will be created post pilot for long term sustainability and growth. If we do have non-medical faculty who would like to participate in Internet2 for education and research actives, we will be able to charge selected ports. We have the ability to control access to the Internet and Internet2 on a port by port basis within an networked facility. Marshall University faculties, including non-medical researchers, are submitting NSF and NIH grants that will include the financial support for

Internet2 connectivity and the expansion of a more robust cyberinfrastructure. This will help support the long-term sustainability of the Internet2 connections and subscription costs.

By utilizing the existing budgeted commodity Internet dollars, we will redirect these towards the Internet2 project and purchase commodity Internet via Quill pricing. Quill pricing is commodity Internet tunneled by Internet2 by a fraction of our current contract price. Those institutions connecting will absorb a percentage cost of the Internet2 connection based on their bandwidth requirements. Campus researchers will be including an Internet2 cost as part of their future grant requests.

3) Dedicated Broadband Health Care Network Connectivity

1. What is your projects source for 15% funding?
WVTA members have committed to provide the 15% matching dollars for their required share of RHCPP projects. The alliance also will be using $550,000 in state funds to help defray certain costs associated with non-recurring charges related to RHCPP projects.

2. Do you have any commitments from Network members?
Each participant has signed a LOA, has agreed to be listed on the 465 attachment and will be asked to sign a participation agreement and contract(s). (See more detailed explanation below.)

3. What is the length of your sustainability period?
After the 24 months of anticipated RHCPP support, each entity will have 3 years committed to their telecom contracts at RFP rates. After the 24-months of the RHCPP subsidy period, WVTA will work to transition each eligible rural site into the regular USAC rural health program. (See more detailed explanation below.)

4. Can you create a budget for your sustainability plan at this time?
Not until we have final numbers from the RFP process.

5. Will there be any use of the Network by Non-Eligible Entities?
Any non eligible entities will not receive federal dollars from the RHCPP. They may, however, purchase telecom services from the contract awarded by the RFP.

6. Who will be in charge of managing of the Network?
The WVTA's plan is to obtain Layer 3 support via the winning vendor(s) with ongoing overall management oversight by the WVTA.

7. Are there any assumptions of continued RHC funding?
Yes, via the regular USAC rural health program. (See more detailed explanation below.)

8. Will you be using State and Federal funding to sustain your project?
Yes, state and private funds will be used to sustain the project….as well as USAC rural health program funds. It also is anticipated that other federal funds may be used to help sustain this project and the alliance.

9. Does your project include any Prepaid Lease Options?
No.

10. Does your project plan to have any up front charges and/or monthly lease charges?
No

DRAFT

11. Please discuss your selected options.
Each participant will subscribe to the level of advanced broadband services for its specific applications based on an entity's eligible program needs. There will be no excess capacity.

Sustainability -- Dedicated Broadband Health Care Network Connectivity

Provided is more explanation regarding how sustainability will be addressed in an integrated approach:

1. The state of West Virginia is in the process of implementing a Statewide MPLS contract, and the WVTA plans to leverage this contract to reduce costs of services and enhance the level of broadband available to participating organizations. Implementation of the State's contract will cause significant upgrades to occur in areas where services overlap and are not coordinated; these upgrades and the economies of scale will result in lower overall non-recurring costs (NRCs) and monthly recurring costs (MRCs) charged for equivalent services. The WVTA intends to use a significant amount of the RHCPP funding on one-time NRCs levied by the telecommunications carriers to build out the infrastructure necessary in areas not covered by the Statewide MPLS contract. By paying the NRCs using the RHCPP funds (and matching state agency provided funds), the ongoing broadband costs to the WVTA plan's identified 290+ locations will be reduced through the up-front capital cost instead of financing these costs within the recurring cost structure.
2. In addition, many of the WVTA's eligible entities will benefit substantially from aggregating demand under multi-year telecommunications contracts. It is expected that average monthly costs projected under these aggregated telecommunications contracts for participating health care providers will be estimated to be approximately the same as the current cost for most of these providers (before application of any subsidy) – and with a substantial increase in broadband capacity. It is estimated that the costs could be reduced by 20% to 40% through aggregation by the WVTA (the State saved $32M over eight years – an estimated 30% savings). Based upon initial reports from participating locations, the average cost for these spoke services are between $300 to $800 per month, and it is estimated that nearly half of the participants only have access to DSL or cable (with insufficient speeds to support most advanced telehealth and HIT applications). Thus, the current aggregate cost of spoke connectivity is approximately slightly more than $2.0M. The estimated cost of the enhanced connectivity of 10 meg or better (100 meg at larger institutional providers) will be $2.5M before subsidy. The average cost after subsidy will average less than $500 per month, and the cost of participation over the project period will reflect these savings.
3. WVTA intends to deploy the network connectivity in a fashion that creates incentives for continued participation. By using the limited time higher subsidy that is available under the RHCPP, the WVTA will create a lower cost of telehealth connectivity cost during the first phase of the project and an overall lower average cost over the extended 5-year period to fully implement the plan.
4. The WVTA will seek that each participant to sign a participation agreement with the WVTA in addition to the required LOA. This participation agreement will outline that the health care provider is to continue the broadband connection(s) provided for in the RHCPP for a minimum of 5 years regardless of the subsidy period provided by the FCC/WVTA. This agreement also will contain language that the entity, where applicable, will intend to transition/migrate into the regular USAC rural health program if it enhances sustainability and is beneficial.
    a. Although the reimbursement rates will be less after the RHCPP period expires, the WVTA's plan is to roll as many eligible entities as possible into the regular USAC USF program after the RHCPP period expires. Of the 290 identified projected participants, 2/3rds appear to meet the conditions for participate in the current USF subsidy program but at the present time less than 50% are participating.
    b. The WVTA will act as an agent for those sites and will charge a nominal fee to cover administration of the USAC process and continue to educate participants on using the USF after the RHCPP period expires.

DRAFT

The WVTA deployment plan also focuses on members and participants that already have applications that require a higher level of broadband –

Community Health Network of West Virginia and WVPCA member health centers– ASP model EMR/Telehealth

WV Free Clinics – EMR/Telehealth

Partners In Health Network – Telehealth / peri-natal program / referrals

Inter-carrier Metro/MPLS Hub

This will be the last project to be undertaken as part of the WVTA's plan, and the exact parameters and costs will be determined once regional networks are upgraded and interconnected. However, WVTA plans to use non-recurring RHCPP funds to build the hub, and it is anticipated that a user fee system will be established to maintain and operate it. Based upon current user alignment and configuration, it is projected that approximately 100 members will use the hub to interconnect disparate telecommunications providers. This user fee (estimated to generate about $200K annually) will be levied upon institutional health care providers that will use the hub as a statewide interconnection point for specialty telehealth services and health information exchange. The hub's fee-based revenues are expected to increase over time as telehealth and EMR activities increase.

Other

A number of other external factors also will contribute to the long-term sustainability of the WVTA and its investment in regional health networks:

- The West Virginia Medicaid program has joined with the state's insurance program (PEIA) and Mountain State Blue Cross & Blue Shield to create the West Virginia Health Improvement Institute to promote accelerated adoption and use of HIT in coordination with the West Virginia Health Information Network (WVHIN). A collaborating legislative committee has established a goal of 60% adoption and use of EHRs by health care providers by 2010. This HIT use will depend upon the connectivity infrastructure established by the WVTA as part of this project. It is projected that this will increase use of the WVTA network for connectivity. The WVHIN is developing a model that is based upon a combination of subscription and transaction fees that will sustain the WVHIN, and the WVTA intends to coordinate a similar model and piggy-back on this fee structure for the connectivity. For the most recent reporting period for which complete information is available (2006) there were:
    - 293,093 hospital discharges;
    - 600,000 hospital outpatient encounters, 1.0 ER visits (twice the national average);
    - 6 million ambulatory care encounters, 2 million of which were primary care visits (half in practices of less than five providers);
    - 27 million filled prescriptions; and
    - 6.5 million laboratory tests.

  These transactions will increase use of the WVTA network and the corresponding subscription and transaction fees over time.

- The Centers for Medicare & Medicaid Services (CMS) is expanding incentives for e-prescribing and clinical information systems and creating penalties for lack of EHRs in 2009 which will also enhance use of the WVTA network for health information exchange.

DRAFT

- In 2008 the West Virginia Legislature created the Broadband Deployment Council to coordinate broadband development activities, including those of the WVTA, and to explore funding mechanisms to support on-going broadband enhance activities, such as those being undertaken by WVTA's deployment.
