EXHIBIT TE-1

DISCUSSION

1) PURPOSE OF APPLICATION

This Technical Exhibit has been prepared on behalf of Golden Corners Broadcasting, Inc., applicant for a new FM station on Channel 285A at Clemson, South Carolina. Channel 285A was allocated to Clemson as a result of MM Docket No. 86-32 (see *Memorandum Opinion and Order*, released July 5, 1988, FCC DA 88-199). As stated in Report No. FM RM-8 (*Window Notice For The Filing of FM Broadcast Applications*), released November 14, 1990, a filing window opening on November 14, 1990 and closing on December 19, 1990 was specified. Thus, this application is timely filed.

2) PROPOSED SITE

The proposed antenna site is located at 507 Harper Road, 4.8 kilometers east-northeast of La France, in Anderson County, South Carolina. The attached Exhibit TE-4 shows the proposed antenna site on a full-scale portion of a USGS 7.5-minute series topographic quadrangle map (Five Forks, South Carolina).

3) ALLOCATION CONSIDERATIONS

A Separation Study showing the distances to the pertinent co-channel and adjacent channel stations, outstanding construction permits, pending applications, vacant allotments and pending rule making proposals is attached. The distances were computed in accordance with Section 73.208 of the FCC Rules, using the coordinates specified in the FCC database. The only short-spacing noted in the Allocation Study is that of the vacant allocation for which this application is filed. Otherwise, the proposed site fully complies with the spacing requirements set forth in Section 73.213(c)(1), as an application for authorization under requirements equivalent to those of prior rules. A copy of the Separation Study is attached hereto as Exhibit TE-6.

4) FACILITIES PROPOSED

In accordance with Section 73.213(c)(1), the applicant proposes to operate as a "grandfathered short-spaced" Class A facility with an effective radiated power of 3 kw at 100 meters above average terrain. A 86 meter guyed tower will be constructed at the proposed site. A 4-bay FM antenna will be side-mounted near the top of the tower. The center of radiation will be 338 meters above mean sea level, 78 meters above ground.

5) TOPOGRAPHIC DATA

The average elevation data between 3 to 16 kilometers for each radial was computer generated in accordance with Section 73.312(d) of the FCC Rules and Regulations, using the National Geophysical Data Center (NGDC) linearly interpolated 30-second database. The site elevation was derived from a USGS 7.5-minute topographic map.

6) CONTOUR DATA

The distances to the 3.16 mV/m (70 dBu) and the 1 mV/m (60 dBu) contours were computer generated in accordance with Section 73.333, Figure 1, of the FCC Rules and Regulations. The contours are depicted on Exhibit TE-5.

7) AREA AND POPULATION DATA

The area and population within the 1.0 mV/m (60 dBu) contour was calculated using the Dataworld "Popcount" program. The population figures are based on 1986 revised population estimates released by the Bureau of Census.

8) CITY COVERAGE

The instant proposal is in substantial compliance with Section 73.315(a) of the Commission's Rules, inasmuch as the proposed 3.16 mV/m (70 dBu) contour will encompass at least 80% of the city of license. Only a small portion of extreme northwestern Clemson lies outside the predicted "city grade" contour. In accordance with Commission policy, a waiver of 47 C.F.R. Section 73.315(a) was not deemed necessary. See *John R. Hughes, Inc.*, 50 Fed Reg. 5679 (Feb. 11, 1985). See also *Southwest Communications, Inc.*, released July 16, 1986 (letter from Chief, FM Branch, reference 8920-HVT).

9) STUDIO LOCATION

The main studio of the proposed station will be located within the station's principal community contour (3.16 mV/m), in accordance with Section 73.1125 of the Commission's Rules.

10) BLANKETING CONTOUR

Based on an effective radiated power of 3 kw, the "blanketing" contour (115 dBu) extends 0.68 kilometers from the proposed site. The applicant accepts full responsibility for the elimination of any objectionable interference that may be caused by the proposed station and agrees that full compliance with the procedures and requirements of Section 73.318(b) and (d) will be attained. Steps will be taken to satisfy complaints of "blanketing" interference, including, but not limited to, the installation of filters, traps, or other devices.

11) OTHER RADIO STATIONS

There are no FM or TV stations located within 10 kilometers of the proposed site. Therefore, the proposed station would not cause any receiver-induced interference to any authorized broadcast station.

In the event of a problem to any non-broadcast facilities or radio-receivers, the applicant will take the necessary remedial steps to resolve the intermodulation interference.

12) ENVIRONMENTAL CONSIDERATIONS

The proposed construction is categorically excluded from environmental processing pursuant to Section 1.1306 of the Commission's Rules, because it does not involve a site location specified in Section 1.1307(a)(1)-(5); does not specify high-intensity obstruction lighting under Section 1.1307(a)(6); and will not result in human exposure to radiation in excess of the applicable standards specified in Section 1.1307(b) of the Commission's Rules.

Additionally, the proposed construction satisfies the requirements of OST Bulletin No. 65, (*"Evaluating Compliance With FCC-Specified Guidelines for Human Exposure to Radiofrequency Radiation"*), October 1985, and fully complies with the radio frequency protection guidelines contained in the ANSI C95.1-1982 standard (*American National Standard Safety Levels With Respect to Human Exposure to Radio Frequency Electromagnetic Fields, 300 KHz to 100 GHz*) with respect to all areas accessible to workers or the general public. In addition to the protection afforded by the proposed antenna height above ground, the facility will be properly marked with signs and entry to the facility will be restricted by means of locked fencing.

13) AUXILIARY POWER

The applicant proposes to install and maintain auxiliary power generators at the transmitter and main studio locations of the proposed station. The generators will be of sufficient capacity to provide power to the transmitter and the main studio in the event of a power failure at one or both locations.

14) CONCLUSION

It is believed this proposal conforms to all applicable FCC Rules and Regulations, and that all technical data has been prepared in accordance with standard FCC practices.
