**Re: WT Docket No. 17-200
Ex Parte Letter**

Dear Ms. Dortch:

Chicago Communications, LLC was formed in October 2004 to provide sales, installation and maintenance of communications equipment throughout the Chicagoland area. Our principals, Cindy Glashagel and myself, as well as our business advisor Ken Hessler, have over 100 years of experience in the radio communications industry, primarily through our many years of valued service with Motorola Solutions, Inc. Our mission is to be the wireless communications integrator of voice and data solutions for our customers and our top priority is total customer satisfaction. We take seriously the responsibility that accompanies providing equipment and service that meet the standards and demands of all users, and we strive to provide the highest quality products, services, and support in the industry. We would like to add broadband solutions tailored to specific customers to the specialized industry solutions that we offer and the realignment of the 900 MHz band will be a step in the right direction to making this a reality.

Our products and services help the public contact first responders through our dispatched 911 and radio solutions. We improve operations and safety in businesses by getting vital information to those who need it when they need it, and as such, reliability, availability and clarity are essential to everyday operations. We also expand connectivity by enhancing cellular and Wi-Fi coverage within buildings, providing a service capability that extends the lifespan of typical equipment purchases. We know the benefits dedicated networks afford to our industry, and how valuable a realignment of the 900MHz band will be.

We work with Municipalities, School Districts, Public Safety Agencies and others to provide the mission critical services they need. Our customers are savvy and know that they need to keep up with the technological advances in the communications industry. There is a significant desire among these customers for broadband solutions today. The commercial networks often don't provide all the solutions these customers are looking for like control and security, but specialized broadband solutions will fit the bill. I hope the FCC can move quickly on this proceeding and am looking forward to offering technological advances to our customer base.

Sincerely,
Chicago Communications, LLC

Kurt Hessler
Principal
