

The internet and access to it should and are a fundamental right. I'll be graduating from The Ohio State University in May and my degree in Computer Science is only possible because I was granted access to the internet. Access should be expanded whenever and wherever possible to allow individuals to learn, grow and communicate in the largest educational space the world has ever had. I reiterate, my degree would not be possible without it. If Mr. Trump's mission is to enable and create jobs I can think of no better opportunity for Americans to get ahead than with access to the web. Please help all Americans get access, enabling every person to fundamentally change their lives!
