

March 2018

Dear Sir/Madam,

I am writing to register my concern at the upcoming development of the 5G network, and to voice my support of the many scientists who are providing evidence of the harmful effects of these types of radiation on human health, such as:

1 EMFscientist.org

Which calls upon the United Nations, the WHO, UNEP and the UN Member States to address the global public health concerns related to cell phones, wireless devices exposure

2 Dr. Yael Stein MD. Hadassah Medical Center, Jerusalem

Who warns that "interactions of millimeter waves with living systems are believed to occur primarily on a subcellular or cellular level. Sub-THz and THz radiation may interact with cellular components at multiple levels, including chromosomes, DNA, genes and proteins."

3 Joel M. Moskowitz, Ph.D. Director, Center for Family and Community Health, UCLA

Who states "The FCC's RF standards were adopted 20 years ago. Many scientists believe these standards are obsolete because they do not protect the population from established, non-thermal risks from RF radiation exposure."

As someone who personally has been adversely affected by EMFs, I urge you to take seriously the growing body of research which shows the harmful effects of existing cellular networks on the human organism.

Regards,

Joel Malnick
