Lancaster, PA 17608-1599

As you are probably aware, PPL Electric Utilities' (PPLEU) periodically completes a survey of attachments to PPLEU owned poles. Attached are the results of the survey of your attachments to our poles in **Lancaster, Lancaster County**. If you are not the correct contact person, please note it on the Field Inventory Survey Report and pass it to that person. This letter contains an analysis of the survey results and a description of what is to be done next as a result of this survey.

Survey Results

There are three potential sections in this report: 1. Unconfirmed adds, 2. Unconfirmed removals and 3. Violations

1. The unconfirmed add section is sorted by attachment type and pole grid identification number. There may be billable and/or non-billable attachments listed on this report.

Billable attachments are those attachments located in the usable space of the pole (generally 18 feet or higher) and are cable attachments such as:

- Communication cable
- Alarm cable (fire, civil defense)
- Traffic control (interconnect cable)
- Power cable [Electrical wires are **NOT** allowed in the communication space on the pole. They must be at least 40" from any communication cable and meet other applicable codes.]

Unconfirmed adds will be added to the database per your review and are subject to an unauthorized fee of 5 times the annual attachment rate plus one year's rental in advance. Billable attachments are charged an annual fee. The current yearly attachment rate is \$12.00 per year. Please note that any unused cable must be removed promptly as it occupies space on the pole that could be used by other attachers. We reserve the right to charge for any unused cables immediately.

Non-billable attachments are those attachments restricted to the non-usable portion of the pole (generally below 18 feet) and are non-cable attachments such as:

- Signs (traffic, transportation)
- Flag holders
- Vertical banners
- Holiday decorations – unlit
- Surveillance (camera)
- Alarms (sirens, alarm box)
- Traffic control (signals, controller, mirror)
- Cross-street banner

These attachments listed above will be added to your record as non-billable attachments after confirmation.

2. The unconfirmed removal section is ordered by pole grid identification number. These represent attachments currently listed in our database, but not seen in the field by the attachment surveyor.

MAW000714

3. Forward the violation section to your appropriate engineering or construction office to insure that the required electrical clearance corrections will be made within six months of the report date.

What is to be done next?

In order to keep an accurate record of all attachments on PPLEU poles as required by law, you must complete the following two steps:

1. **Review the attachment discrepancy information. Indicate agreement by placing a 'Y' for yes in the confirm column. Indicate disagreement by placing a 'N' for no in the confirm column and provide the rejection details in the comments section. Maps are provided to help locate the discrepancies for field review.**
2. **Sign the company acceptance portion of the survey report summary page and return it along with the additions and/or removal sections of the report to PPLEU within 90 days of the report date (the signed report serves as the attachment application).**

PPLEU will process your returned report as follows:

- All disagreed items will be reviewed and deleted if the rejection details are found to be valid. A PPLEU representative will contact you to discuss the rejection details that are unclear. A field meeting may also be scheduled to help resolve the disagreed items.
- Upon finalization of the report, the confirmed additions and removals will be placed in the permanent record and an invoice will be issued for payment of the unauthorized attachment charges.

Reports not returned to PPLEU within 90 days may result in the survey additions being placed in the permanent record and an invoice being issued for the unauthorized attachment charges.

Please refer any questions on this process to me (610-774-6338).

PPLEU requires that an attachment application be submitted before making any type of attachments to poles owned by PPLEU. Contact Paulette Knisely (610-774-7145) for more details.

Sincerely,

Kristin Buchholz

Survey Results

There are three potential sections in this report: 1. Unconfirmed adds, 2. Unconfirmed removals and 3. Violations

1. The unconfirmed add section is sorted by attachment type and pole grid identification number. There may be billable and/or non-billable attachments listed on this report.

Billable attachments are those attachments located in the usable space of the pole (generally 18 feet or higher) and are cable attachments such as:

- Communication cable
- Alarm cable (fire, civil defense)
- Traffic control (interconnect cable)
- Power cable [Electrical wires are **NOT** allowed in the communication space on the pole. They must be at least 40" from any communication cable and meet other applicable codes.]

Unconfirmed adds will be added to the database per your review and are subject to an unauthorized fee of 5 times the annual attachment rate plus one year's rental in advance. Billable attachments are charged an annual fee. The current yearly attachment rate is \$12.00 per year. Please note that any unused cable must be removed promptly as it occupies space on the pole that could be used by other attachers. We reserve the right to charge for any unused cables immediately.

Non-billable attachments are those attachments restricted to the non-usable portion of the pole (generally below 18 feet) and are non-cable attachments such as:

- Signs (traffic, transportation)
- Flag holders
- Vertical banners
- Holiday decorations – unlit
- Surveillance (camera)
- Alarms (sirens, alarm box)
- Traffic control (signals, controller, mirror)
- Cross-street banner

These attachments listed above will be added to your record as non-billable attachments after confirmation.

2. The unconfirmed removal section is ordered by pole grid identification number. These represent attachments currently listed in our database, but not seen in the field by the attachment surveyor. MAW000717

POSITIONING TAGS ON WOOD LINE POLES

Location Of Stencils On Poles

Note

For street light pole, see DDI L-144.

1. Install at eye level — 5 to 7 feet above ground level. Adjust to permit easy reading when poles are located on slopes along highways.
2. Place on road side of pole or at most convenient access point for off-road locations.
3. On PP&L-owned poles, place PP&L stencil above all other stencils. On foreign-company poles, place PP&L stencil below all other stencils.
4. Place fuse-size stencil 3 feet above top grid or foreign utility stencil.

SUBJECT	Grid Coordinate Identification Of Distribution Facilities	DDI L-105
SECTION	Lines -- Operating & Maintenance	PAGE 1 of 6
RESPONSIBLE GROUP	Operations & Maintenance -- Lines	DATE 8-1-90

PP&L

Pennsylvania Power & Light Co.

DISTRIBUTION DEPARTMENT INSTRUCTIONS

SCOPE

Location and identification of distribution facilities using grid coordinate stencils.

GRID COORDINATE SYSTEM

PP&L uses the Pennsylvania State Grid Coordinate System Reference, a map system consisting of numbered, paralleled lines that run consecutively west to east and south to north to form grid squares covering the entire state.

The state is divided into east, west, south, and north zones. The zones are identified by an N (for North), S (for South), E (for East), and W (for West), as the first digit in the grid coordinate number.

Use of Grid Coordinates

Two 5-digit numbers identify a 10-foot grid coordinate square within which the pole or device is located.

The first 5-digit number indicates the horizontal, or west-east zone coordinate. Since the PP&L system is all in the east zone, there is no zone reference preceding this coordinate. This coordinate is the top stencil and is preceded by PP&L Co to indicate PP&L ownership, or ATTCH to indicate attachment to a foreign pole.

The second 5-digit number indicates the vertical or south-north zone coordinate. This coordinate is the bottom stencil and is preceded by N or S to indicate the north or south zone.

If two or more adjacent poles or devices are less than 10 feet apart, the numbers assigned should differ by 1 so that no identical numbers are assigned.

Figure 1. Pole Location By Grid Coordinate

POSITIONING TAGS ON WOOD LINE POLES

Location Of Stencils On Poles

Note

For street light pole, see DDI L-144.

1. Install at eye level — 5 to 7 feet above ground level. Adjust to permit easy reading when poles are located on slopes along highways.
2. Place on road side of pole or at most convenient access point for off-road locations.
3. On PP&L-owned poles, place PP&L stencil above all other stencils. On foreign-company poles, place PP&L stencil below all other stencils.
4. Place fuse-size stencil 3 feet above top grid or foreign utility stencil.

Unconfirmed Adds For Company 1129 , Lancaster City, Lancaster Co.
