Re: Erratum to the Comments of Mobile
Telecommunication Technologies Corporation
Rulemaking No. RM-7986

Dear Ms. Searcy:

Mobile Telecommunication Technologies Corporation ("Mtel"), by its attorneys, hereby submits an erratum to its opening comments on the Petition for Rulemaking filed by the Association For Private Carrier Paging Section of the National Association of Business and Educational Radio, Inc. ("NABER"), Rulemaking No. RM-7986. In preparing a reply to comments on NABER's petition, a clerical error was discovered in Mtel's opening comments on page 3, where it states "Page Net would have exclusive rights to three frequencies (929.2875 MHz and 929.5625 MHz)." The word "three" should be deleted and replaced with "two." A corrected version of page 3 has been attached hereto that should be substituted for the page 3 originally provided.

If any questions should arise concerning this erratum, please contact the undersigned at (202) 828-3182.

Respectfully submitted,

Eric W. DeSilva

cc: Alan Tilles,
Counsel to NABER (by hand)
Judith St. Ledger-Roty,
Counsel to Paging Network, Inc. (by hand)

implications. A review of publicly available information, however, suggests the following effects.

A. Immediate and Future Conversion of 900 MHz Systems to National System

NABER's National System proposal would immediately convert at least six of the forty 900 MHz PCP channels into exclusive grants to a few established carriers. Specifically, the transmitter-based standard would set aside national spectrum rights to the following carriers:

- Page Net would have exclusive rights to two frequencies (929.2875 MHz and 929.5625 MHz).
- Pagemart would have exclusive rights to two frequencies (929.6625 MHz and 929.7125 MHz).
- PacTel Paging would have exclusive rights to one frequency (929.9375).
- Metagram America would have exclusive rights to one frequency (929.9875).

The National Systems accruing to Page Net would be the product of applications processed subsequent to the freeze.

The National System Proposal is certain to lead to conversion of additional 900 MHz PCP frequencies into exclusive National Systems. Through new applications, new entrants or merger of existing licensee interests, one can reasonably anticipate a significant movement to obtain national rights. The proposal, however, does not limit or address the potential effects of large scale conversion of frequencies into exclusive national grants.
