RE: Accelerating Wireless Broadband Deployment by Removing Barriers To
Infrastructure Investment--WT Docket No. 17-79--Request for
Reconsideration and Stay

Dear Sir/Madam:

I hereby request reconsideration and a stay of the Federal Communications Commission's March 30, 2018 decision in the above-referenced matter. The Order dispenses with pre-deployment environmental and historic preservation reviews of many next generation wireless facilities.

These facilities will emit high frequency radiation directly into peoples' homes. Scientific studies indicate that the radiation from these facilities may cause cancer and have other harmful impacts, especially in infants and young children.

Notwithstanding this research, the Commission refused in its Order to evaluate health impacts of the emissions but relied on outdated regulations from 1996. The General Accountability Office issued a report in July 2012 recommending that the FCC update its radiofrequency exposure limits. To date, the Commission has not acted on GAO's recommendation and yet the FCC is moving forward without regard to the public welfare. This is unacceptable.

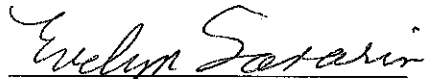

The next generation facilities also threaten the integrity of residential communities in other ways. For example, these next generation facilities may include towers up to 50 feet or more high with any number of antennas and associated equipment attached to the towers and on the adjacent ground. These facilities will have a direct impact on the aesthetics and property values of affected neighborhoods. Yet the Order does not consider these negative impacts.

Please reconsider the Order and issue a stay until the Commission completes its review of this and other requests for reconsideration. I also incorporate by reference the Request for Reconsideration and Stay submitted in this proceeding by Edward B. Myers on May 29, 2018.

5/31/18 E.S.

For the convenience of the Commission, I have submitted a copy of Mr. Myers' Request for Reconsideration and Stay with this filing.

Respectfully,

(signature) Evelyn Savarin

Addendum:

FCC order to Deploy 5G Cell network throughout the landscape proves the FCC has NO REGARD for PUBLIC HEALTH of this COUNTRY and the RF Health Science of last 60 years, including the latest NIH study showing clearly the Health Impacts of Cell phone radiation. Health statistics showing the Growing Mental disorders people at earlier age, its growth corresponding perfectly to the direct exposure growth of RF/Microwave Electromagnetic radiation, should be telling itself. **Couple this with the Industry's own admittance that Research shows the Effect of Wireless radiation on Brain Event potential and host of other Brain wave abnormalities,** should make us pause even more before in permeating every Living creatures habitat with more UNTESTED and STRONGER exposure TO A Frequency we have miniscule health Impact information on.

FCC's contention 5G deployment is in the Public Interest is totally unproven by fact. The public interest it can verify is totally Industry One Sided and has never been presented to an INFORMED Public at Large armed with ALL the compelling Scientific Information.

My personal life has been turned around by this Radiation. I have to continually move to reside in a RF quiet location just to get proper sleep and relaxation, otherwise I cannot function properly in everyday life. I know millions suffer similar complaints, but are Unaware of the Cause. To quell their Depression, Anxiety and Sleeplessness they have turned to an Opioid Addiction craze, or have become non-functioning, non-balanced human beings. This number is growing every day and will only get worse with unbridled deployment of 5G. The effect on Human and Animal Nervous system by RF/Microwave Wireless technology is abundant in the Science.

No One is clamoring for the 'Internet of Things'. All people want is Life, Liberty and Pursuit of Happiness. The 'Internet of Things' promises none of those.
Stop being a Schill for Industry and profiting from their monstrous Inventions.
