

Regarding the proposal to add a Class C4, I am a broadcast engineer with over 50 continuous experience who wishes to endorse the above mentioned proposal with the request that it be made effective in the entire United States, not just the Class C areas. I understand that it would not be as useful in the Northeast as in the western areas but it is vital that it be available to those Class B region stations that would technically qualify. There is simply no downside to this proposal and I respectfully request that it be approved nationally in an expedient manner. For the record, I am the tower landlord for WYGB, 100.3, Edinburgh, IN, a station in the Class B region which I believe would qualify for upgrade under this proposal.
