RE: Accelerating Wireless Broadband Deployment by Removing Barriers To Infrastructure
Investment--WT Docket No. 17-79--Request for Reconsideration and Stay

Dear Sir/Madam:

I hereby request reconsideration and a stay of the Federal Communications Commission's March 30, 2018 decision in the above-referenced matter. The Order dispenses with pre-deployment environmental and historic preservation reviews of many next generation wireless facilities.

These facilities will emit high frequency radiation directly into peoples' homes. Scientific studies indicate that the radiation from these facilities may cause cancer and a range of other adverse health impacts, particularly in a vulnerable subgroup.

Indeed, it has been reported that persons in England are already experiencing health problems from 5G put into their neighborhoods. I will attach a report that discusses what is characterized as a humanitarian crisis. With this information in hand, it will be unconscionable if 5G is still imposed on people, placing them at risk of health problems.

Please reconsider the Order and issue a stay until the Commission completes its review of this and other requests for reconsideration. I also reference the Request for Reconsideration and Stay submitted in this proceeding by Edward B. Myers on May 29, 2018.

For the convenience of the Commission, I have submitted a copy of Mr. Myers' Request for Reconsideration and Stay with this filing, as well as the report indicating adverse health effects from 5G in England.

Respectfully,

(signature)
