Regarding MB-184

My name is Louis Coco, Jr. I am owner of KZLG 95.9 in Mansura, Louisiana.

I fully support the FM Class C4/73.215 petition filed by MMTC and SSR Communications and urge the Commission to adopt the complete proposal.

KZLG is located in rural Louisiana. We are affected by floods and many other natural disasters. Our economy is supported by agriculture. We broadcast information relating to these and many other local issues. Since we are surrounded by many other small communities, we try to get as much information out as possible. The stations in the city don't always address these problems because we are in a small less populated area. We need this power increase to reach as many people as possible. Some days, our signal does not cover the areas that need this information. We've been asked many times by listeners why can't we increase our power to help them get the local news and information they need. I think this power increase will help. Even though we will probably not get any extra revenue from this, we are more than willing to spend the money to get it. I am really interested in helping our local communities. I was born and raised here.

I would like to ask you to consider full implementation of the MB 18-184 proceeding as soon as possible.

Sincerely,
Louis Coco, Jr
