**Re: In the Matter of Petition of USTelecom for Forbearance Pursuant to  
47 U.S.C. Section 160(c); WC Docket No. 18-141; Category 1**

Dear FCC,

Of course people rely on broadband competition. I currently have a service that uses the copper and fiber network opened to business by the 1996 act. To take this away would support the larger network's cohesive monopoly. There is a reason America as whole is against active collective (a small group of big business creating the market with a collective interest) monopolies that create price setting destroying competition and a free business system. Competition makes them better and more responsive to their customers without a "Where are going to get service?" attitude. Even if no one was using it and of course Sonic is using it, why take away the ability to create new businesses that will use it? Why stop Enterprise based on the idea that if no one is using it then no will ever use it? Clearly it is yet another attempt at gaining control over their market and their ability to set prices. How does this idea serve the people? That's your job at the FCC to serve the American people. Just do your job. Two companies that obviously for years, set their prices in "apparent" competition with each other was the reason why you chose to open it up to the other businesses. Again, do your job. Have the best interest of business and the future of small and medium range business which drive the American economy.
