

Regarding MB 18-184

Dear FCC Commissioners,

My name is Robert Fuller, and I am one of the 2 owners of Atlantic Coast Radio, LLC in Portland, Maine. I have over sixty years of radio broadcasting experience , and I'm still in it.

I fully support the FM Class C4 / 73.215 petition for rulemaking filed by MMTC and SSR Communications, MB 18-184.

However, in addition to the current proposal it is by far the most efficient use of the spectrum that ALL ZONES must have the ability for class A FM's to increase their power to 12,000 watts if the spacing mileage requirements are within the technical rules.

Therefore in the non Class C zones I would propose it be called a " B -2 " .

There are many "rural " areas in the zones that currently only allow Class B and B1 facilities.

Populations have expanded out of the principal communities of many of the rural areas and a current class A of 3KW or 6KW are not powerful enough to provide local public service to these areas

If a C-4 or B-2 (12kw @ 100 meters) technically meets the separation requirements it is my belief that it is strongly in the public interest that The Commission approve this proposal for all areas of the United States.

Respectfully,

Robert F. "Doc" Fuller
