facilities. This service transports one channel of video and up to four audio channels at 30Hz to 6.6MHz (See BellSouth Telecommunications Tariff, FCC No. 1, Sections 7.2.5 and 23.5.2.5.1).

The public convenience and necessity will not be impaired by the discontinuance of this service because there is no customer demand for this service. AT&T has no customers that currently subscribe to this service in the Trial Wire Centers. AT&T currently offers Serial Component Video Service (SCVS) to satisfy market demand for video transport services. Specifically, SCVS is an IP-based digital video service that provides standards-based 270 Mbps digital video transport for one-way transport of high quality digital video and audio signals. SCVS transmits digital video signals in an uncompressed format with no loss of video quality. This service is currently available throughout AT&T's service area in the Trial Wire Centers.
