The participants discussed using open standards-based HTML5 apps for promoting increased competition in navigation devices, as proposed by representatives from MVPDs and independent, minority-owned TV networks and described in the ex parte notice of June 16, 2016. We discussed the implementation required to make such apps available; the requirements to protect privacy and copyright and to fully enforce the terms of the MVPD's underlying programming licenses and the scope of rights granted by the programmers to the MVPD; and the delivery of such apps to homes that do not subscribe to broadband Internet access service. The participants in the June 30 meeting also discussed the availability of HTML5 EME as an open, royalty-free standard; support available for implementing HTML5 EME; and support for closed captioning in HTML5 EME.
