Marlene H. Dortch  
Secretary  
Federal Communications Commission  
445 12<sup>th</sup> Street, S.W.  
Washington, D.C. 20554

Re: Notice of Ex Parte Communication, GN Docket No. 12-268, MB Docket No. 16-306.

Dear Ms. Dortch:

In an effort to help its radio members better understand and prepare for the impacts of the post-auction transition of repacked television stations, NAB commissioned a study to determine which FM stations are likely to need to coordinate with TV stations making adjustments following the Incentive Auction. This analysis identifies 678 FM stations that may need to reduce power, shut down, or operate from an auxiliary facility as work is being done on a neighboring TV station antenna to ensure tower worker safety from radio frequency exposure. A copy of this analysis is attached.

We look forward to working with the Commission to ensure the smoothest possible transition for broadcast viewers and listeners.

Respectfully Submitted,

A handwritten signature in black ink, appearing to read "Patrick McFadden", with a stylized flourish at the end.

# **FM Stations Affected by the 2017 TV Band Repacking Plan**

Report Created For the National Association of Broadcasters

## Project Summary

V-Soft Communications is pleased to provide the following report for the National Association of Broadcasters (NAB). The purpose of this project is to use information available in the FCC's station database to determine which FM radio stations in the U.S. may be affected by TV antenna modifications as a result of the spectrum auction repack. This report lists FM stations that are likely to be affected by TV antenna modifications by full-service and class A TV facilities required as a result of the spectrum auction repack as derived from FCC data.

In addition to determining affected stations, the reader will find a list of FM stations that, based on our calculations, are in a common aperture with the TV station antenna on the same tower. This report also identifies whether potentially affected FM stations could use auxiliary facilities while work is being performed on the TV facility.

## Result Summary

Affected FM stations were determined for three cases:

- For TV stations changing channels due to repacking.
- For TV stations going off the air. Tower work will be needed to remove antennas.
- A combined total considering both channel changes and stations that are going off the air was determined.

### Post-auction TV Transmitter Totals

Number of TV Transmitters Changing Channels: 997

Number of TV Transmitters Going Off-air: 153

Combined Total Number of TV Transmitter Changes: 1,150

Note: The total number of TV transmitters exceeds the total number of TV stations because DTS systems contain more than one transmitter.

**Summary of affected stations:**

	Only Considering TV Stations Going Off-air	Only Considering TV Stations Changing Channels	Combined Total
<b>Number of Affected FM Transmitters</b>	<b>115</b>	<b>629</b>	<b>678</b>
Number of TV Transmitters Affecting at Least 1 FM	74	452	526
Number of TV Transmitters NOT Affecting FM	79	545	624
Affected FM stations with an off-site auxiliary facility	62	237	254
Affected FM stations without an off-site auxiliary facility	53	392	424
FM stations in common aperture with TV antenna	41	135	154
FM stations considered that were NOT deemed to be affected	10,738	10,224	10,175

The first column indicates counts for the scenario where only TV stations that are going off-air are considered. The second indicates FM stations affected by TV stations that are changing channels. The last column shows the results when both stations going off-air and those changing channels are considered. The combined total is not a simple sum of the first two columns because some FM stations are affected by both a channel going off-air and a station that is changing channels.

## Methodology

- Facility records for FM and TV as indicated in the FCC’s CDBS database dated 4/14/2017 were considered. Licensed full service FM stations were considered. The “Post Auction Technical Parameters” data available on the FCC’s web site ( [http://data.fcc.gov/download/incentive-auctions/Transition\\_Files/](http://data.fcc.gov/download/incentive-auctions/Transition_Files/) ) was used to determine which TV stations were changing channels.
- An FM transmitter was considered likely to be affected if it was located at the exact same location as the TV site, or if the calculated FM free space, far field, power density, determined using the distance between the FM and TV station coordinates, was greater than  $100 \text{ uW/cm}^2$  which is one tenth of the standard controlled area limit.
- FM stations located at the exact same coordinates as the TV station, where the COR (Center Of Radiation) was within 20 meters of the COR for the TV station, were flagged as sharing a common aperture with the TV antenna.
- Contact information and the update date for each FM and TV station was taken from the “fac\_party” table in the FCC’s CDBS database.

- The number of auxiliary facility records for all FM stations in the database was determined. Only the records where the site coordinates differed from the licensed facility were counted so that only off-site auxiliary facilities would be considered.

## Generated Output

### **Appendix I – Summary of FM Stations Affected by TV Station Channel Changes in Repacking**

Contains a summary showing each TV station that is changing channels that was determined to affect at least one FM station, followed by a list of the affected FM station(s).

### **Appendix II – Summary of FM Stations Affected by TV Stations Going Off the Air**

Contains a summary showing each TV station going off the air that was determined to affect at least one FM station, followed by a list of the affected FM station(s).

### **Result Tables for Off-air and Channel Change Scenarios**

#### **NAB\_FM\_Impact\_Channel\_Change\_Full.csv**

#### **NAB\_FM\_Impact\_Off\_Air\_Full.csv**

These result tables, in CSV (Comma Separated Value) format, contain full results for each study including call signs, channels, file numbers, latitude (NAD27), longitude (NAD27), ERP, and contact information for each TV and FM station. For each potentially affected FM it contains the distance to the TV station, calculated received power density at the TV site, number of auxiliary facilities associated with the FM station that were located at different coordinates than the primary station, COR (Center of Radiation) difference between the TV and FM antenna, and an indication of if the FM and TV antennas are in a common aperture on the same tower.

#### **NAB\_FM\_Impact\_Channel\_Change\_Sortable.csv**

#### **NAB\_FM\_Impact\_Off\_Air\_Sortable.csv**

These CSV tables contain one row for each potentially affected FM station. It shows the call signs, channels numbers, and CDBS facility ID of both the FM and TV stations. It also indicates if the FM and TV antennas are in a common aperture on the same tower.

## Appendix I
