Re: *Globalstar, Inc. Petition for Notice of Inquiry Regarding the Operation of Outdoor U-NII-1 Devices in the 5 GHz Band – RM-11808*

Dear Ms. Dortch:

I am Principal and Founder of MRS LLC, and the founder of The Nationwide Resilience Project™, a collaboration of multi-industry experts and corporate leaders whose core values create a passion for holistic change, a shared vision of implementing resilient solutions, and a collective focus on building renewable, self-sustaining, disaster-resistant communities.

I am writing to request your support of Globalstar's petition to protect its satellite system from any harmful interference it is experiencing. Globalstar's satellite system must be protected from any such interference given the incredible importance it plays during natural and man-made disasters.

After spending over 20 years in a first responder capacity, from the NGO world, I've seen the sheer devastation of natural and man-made disasters from the loss of property to the loss of life to the emotional strain left behind, especially when communication is in short supply. Therefore, we believe there is a stronger, smarter, more resilient future ahead, and we know Globalstar is the answer. We will only use Globalstar as our exclusive communications partner for all of our resilience projects. Our outstanding team includes Witt Global Partners, FOND LLC, ICF and More LLC (Quad-Lock), HUB International, Breton Industries, Inc., Green Coast Energy (a subsidiary of Southeastern Power), PortaFloor, EcoJohn, and more, and they agree in our assessment of Globalstar.

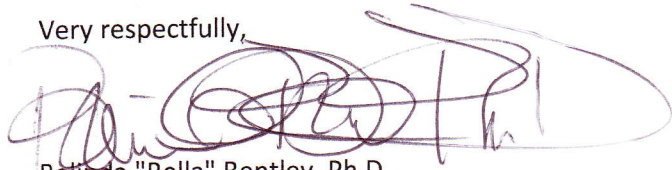

One of the many hats I wear includes Cyber Security, and with that, the knowledge that while phone service like ATT, Google, and T-Mobile are necessary, their unreliability and lack of stability during a crisis is prevalent. Regardless of a crisis, these unstable networks are hacked daily, which provides a unique opportunity for Globalstar to take the lead, because the safety and security of our nation depend on stable, resilient, secure communications.

Globalstar has the fortuity to become the leader in all forms of communication. Its' unbeatable satellite network provides a shelter in the storm as resilience is a key factor in the design parameters. In fact, those design parameters and reliability standards are the reason we chose Globalstar for The Nationwide Resilience Project.

No other communication platform can offer and deliver dependability and security at the level of Globalstar, and in times of crisis, it is crucial to maintaining connections, especially in the world of first response.

I respectfully request that the FCC investigate the interference into Globalstar's system and take any and all steps necessary to ensure that its services are not negatively impacted. Please do not hesitate to contact me if I may be of assistance to you in any way.

Very respectfully,

Belinda "Bella" Bentley, Ph.D.
