

Dear FCC Member,

I would like to comment on the Ideas of putting a limit to the internet speed, this is something that could affect a lot of people in the long run. As someone that has taken a coding class and know the reason for net neutrality it is very important for this to stay in place. The idea to net neutrality was to give and one that needed to access the internet to option to and this is a good this as more and more people are going to online schools and this could make it hard for them and since it has not happened yet it is hard to tell what the effect could be but this could increase the cost of going to an online school and or make in only possible for people that have lots of money. Not telling you that this will happen but there are a lot of people that are will bet money that they will not be able to use the internet the same way that they did before if this passes. I think there are lots of things that you have not considered yet and that you should at least give it more time before you make the decisions to go through with this. There are many companies that are built on the freedom of the internet and the number of businesses that you would crush by going through with this would be astronomical. There are people like Bill Gates and Mark Zuckerberg that are try to be able to spread the joy of using the internet to everyone and this would make their goal unreachable in their lifetime if this happens. Have you ever gone on to a website like youtube and watch some videos on there, there are some people that make a living on youtube and other videos/streaming websites. There are 4,950,000,000 people that watch youtube a day, I am not sure about you but that is a lot of of traffic going to a single website. Then take the number of people that have access to high speed internet. Take though people and set them aside for now. Take the people that can't afford high speed internet or can't pay some special fee to watch there cat videos. Then take the people that can not even get high speed internet to there home for the sole location they live in. Take all of through people and subtract them from that number I listed above. I bet if you did the math you and add back in the people that can afford it you would only get about half that number. Do you know how that would affect people, many people including myself do not have cable tv so are only form of entertainment that is not going out and doing something is the internet. I am sure I am not the first person to send this into you, and I am sure you are busy people but at least take a look at the outcome of your actions and how it will affect others.
