

Marlene H. Dortch, Secretary  
Federal Communications Commission

RE: GN Docket no 12-354, RM 11778, RM 11789

Ms. Dortch:

Intelliwave is a fixed wireless and FTTH service provider located in Ohio. Intelliwave has been providing broadband services to 15 underserved, rural counties in Appalachian Ohio for 15 years. We currently serve 5,000 residential and business customers. We offer service plans from 2-100Mb using unlicensed or licensed light (NN) spectrum. Over the past 7 years we have invested over \$2,500,000 building out our 3650MHz network. While our existing 3650MHz network is large, we are excited by the prospect of gaining an additional 100MHz of spectrum. Additional spectrum would allow us to expand our network into additional unserved areas of Ohio. Additional spectrum would also allow us to expand channel widths in our existing network to increase bandwidth to our customers. Our area of Ohio is faced with deep poverty, high unemployment and a marked home work gap. Our citizens need every tool available to help them succeed professionally and educationally. Access to an additional 100MHz of spectrum would allow Intelliwave to expand much needed broadband service in this region. I object to the petitions filed by CTIA and T-Mobile. This spectrum should be made available to the fixed wireless carriers that are doing the most to serve rural America and not simply to the parties with the deepest pockets who have done nothing to solve the problem of fixed access in rural America.

Regards,
