Amarillo Wireless

203 SW 8Th Ave. STE 601

Amarillo, Texas, 79101

FCC Comments,

Amarillo Wireless provides wireless Internet access to rural areas of the Amarillo Texas panhandle. Currently we are servicing over 4000 customers with Internet and telephone service. We offer speeds of up to 100Mbit even in extreme rural areas.

We have invested over \$100,000.00 dollar in LTE equipment that operates in the 3560-3700Mhz band. This LTE equipment services hundreds of customers that are locked behind trees or are far from any towers. We are eager to gain access to the CBRS bands so that we can continue to deploy high speed LTE in remote areas as well as small town with high tree coverage. The extra bandwidth will open many areas that today are frequency congested and prevents us from installed our LTE equipment.

We strongly oppose the CTIA and T-Mobile petitions. Their petitions will hurt our efforts to provide high speed Internet access to the rural areas of the Texas panhandle.

Sincerely yours,

Amarillo Wireless
