

APPENDIX 3

CO-CHANNEL INTERFERENCE PROCEDURE

1. Determine the distance from the proposed station to the existing station.
2. If not previously known, determine service area boundary of existing station. (method is detailed in Appendix 2)
3. Find distance from proposed station to closest point of service area boundary of the existing station. (subtract #2 from #1.)
4. Based on mileage from 3 (above), ERP and HAAT of the proposed station, consult look-up tables for dBu level at the service area boundary of the existing station.
5. Subtract this dBu level from 40. If the result is greater than 25, the proposed system will conform with the interference parameters. If the result is less than 25, the proposed system must be redesigned by lowering power, antenna height, or both until the 25 dB protection ratio is met.

NOTE: If terrain between the two systems would provide additional protection that would not be evident from using the normalized HAAT's, it will be permissible to calculate the HAAT of both existing and proposed system along the radial line directly connecting the two stations. The resulting service area boundary of the existing station and the dBu level of the proposed station at that point would then be used to calculate the protection ratio.

EXAMPLE

	Station A (proposed)	Station X (existing)
ERP:	100 W (-10dBk)	200 W (-7dBk)
HAAT:	500 feet, AMSL	200 feet, AMSL

Distance from A to X: 46 miles

Service Area Boundary:	13 miles	11 miles
------------------------	----------	----------

46 miles - 11 miles = 35 miles, distance from proposed to service area boundary of existing station.

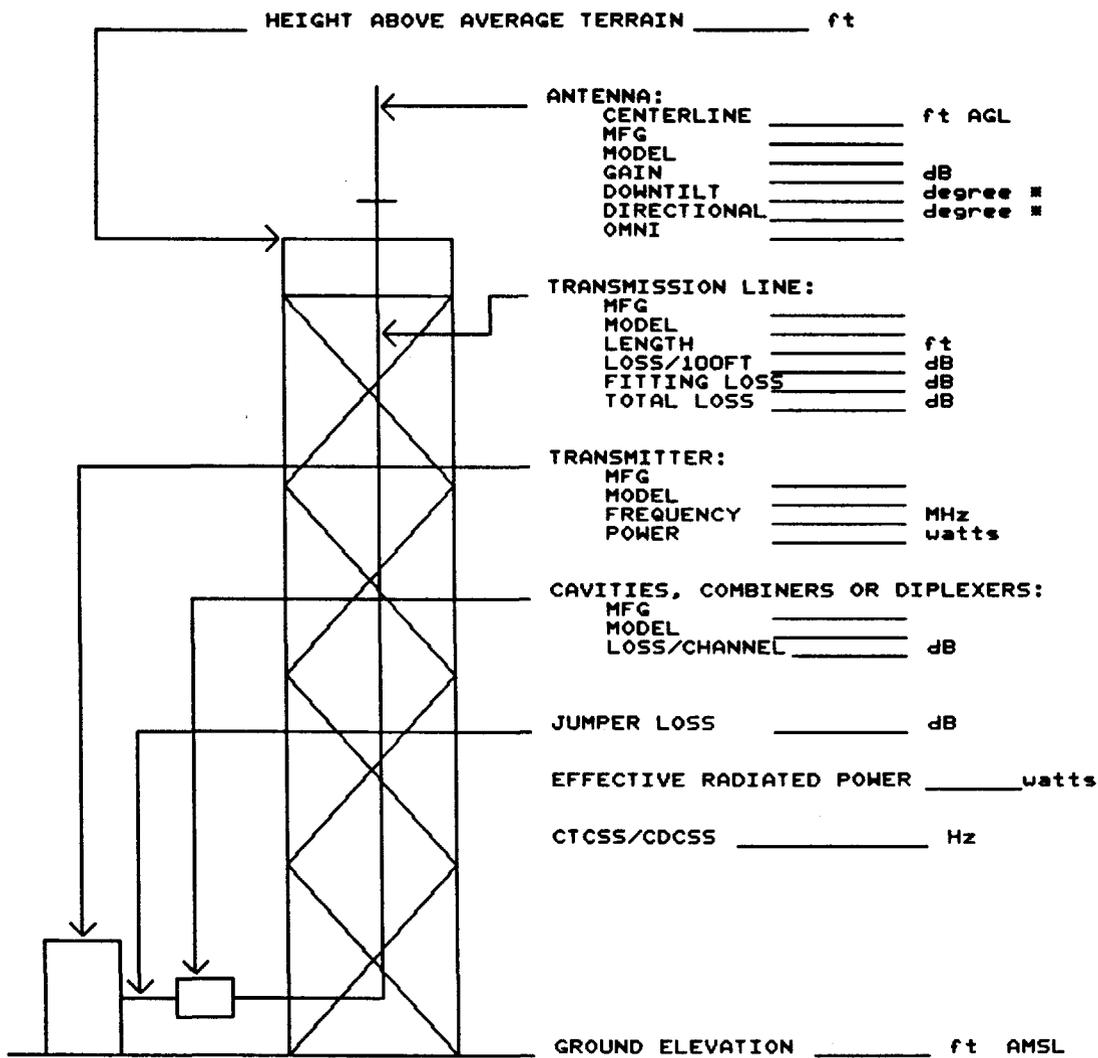

From look-up tables, dBu level at 35 miles from a station with an ERP of 100 watts and HAAT of 500 feet is:

Appendix 3 (cont)

$$25.5 - 10 = 15.5 \text{ dBu}$$

Subtracting this amount from the defined 40 dBu level at the service area boundary of the existing station gives 24.5 dB of protection, 0.5 dB less than the minimum required. Additional protection will have to be supplied to protect the existing user.

APPENDIX 4
SYSTEM ENGINEERING EXHIBIT

- * DOWNTILT will be degrees below horizontal.
- * DIRECTIONAL will be in degrees relative to true north.

Maximum field strength for co-channel operation is 5.00 Dbu

Maximum field strength for adj.-channel operation is 25.00 Dbu

Iterations required for solution = 12

Number of channels used for solution = 224

Total number of channels assigned = 218

Total number of unassigned channels = 95

Total number of reserved channels = 0

Total number of co-channels assigned = 88

Probability of interference with the nearest :

* Co-channel user is between 0 % and 1 % .

* Adj.-channel user is between 0 % and 1 % .

* Estimated assuming a 40 Dbu signal at the boundary.

PUBLIC NOTICE

Having been duly certified to the Federal Communications Commission (FCC) by the Associated Public-Safety Communications Officers, Inc., (APCO) as the Convenor of an initial meeting of representatives of parties eligible for radio licensing in the FCC's Public Safety and Special Emergency Radio Services to establish a Regional Planning Committee in the State of Oregon (in Region 35), hereby give Public Notice that such an initial meeting will be held on October 11, 1988, at Chumaree Hotel, 3658 Market Street N.E., Salem, Oregon, beginning at 9:00 a.m. This Region is one of 48 established by the FCC, throughout the United States.

The responsibility of the Regional Planning Committee will be to develop a Plan for use of frequencies in the 821 - 824 and 866 - 869 megahertz bands allocated by the FCC for use by such licensees. Parties interested in participating in the regional planning process should contact me.

This Public Notice is in accordance with the FCC's Report and Order in Gen. Docket No. 87-112, adopted by the FCC on November 24, 1987.

The Report and Order was based in large part on the Final Report of the National Public Safety Planning Advisory Committee, which was submitted to the FCC on September 9, 1987.

Copies of both the Report and Order and the Final Report are available from the FCC's duplication contractor, International Transcription Services, Inc., Suite 140, 2100 M Street, N.W., Washington, D.C. 20037. Phone (202)857-3800.

James R. DeRosier
