**ITMC COMMENTS TO PETITION FCC
TO EXPAND SHARED ACCESS TO UNDERUSED SPECTRUM
TO BOOST HIGH-SPEED BROADBAND ACCESS
IN RURAL AND UNDERSERVED AREAS**

ITMC is a new company providing technology consulting and operations management to small businesses in rural northeast Mississippi. As the principal of ITMC, with deep experience managing enterprise WAN's across North America, I am often asked how to get reliable, affordable, high-speed Internet access from customers' business locations and the homes of their employees. Unfortunately, this is a region that suffers from lack of choice, and in many cases a complete lack of access to broadband Internet service.

As an associate member of the Wireless Internet Providers Association (WISPA), ITMC believes part of the solution lies in the Broadband Access Coalition's petition for shared use of the 3700-4200 MHz spectrum band.

This innovative approach will protect existing use of the spectrum with an efficient, automated process for spectrum management, while making unused portions of the spectrum available for the public good.

Respectfully,

Gregg Collins
