To whom it may concern;

I am writing you on behalf of our company Professional Value Internet Services, Inc dba ProValue.Net regarding access to the 3.7-4.2ghz spectrum.

We are a family owned and operated Internet Service Provider that has been serving the Central and North Central parts of Oklahoma since 1996. Based out of Stillwater, OK. We moved from dial-up to Wireless Internet Service in 2001 and now serve 3000+ subscribers covering 4600 square miles in very unserved and underserved rural Oklahoma. With speeds ranging up to 50mbps for businesses and 25mbps for rural residential customers. Along with no contract, unlimited data, and local support.

One of the biggest challenges for us to provide faster speeds is the lack of adequate open spectrum. We currently utilize 2.4ghz, 3.65ghz and 5.8ghz spectrum. It has allowed us to grow but is overly cumbersome with interference. The ability to open up 500mhz of spectrum between 3.7ghz – 4.2ghz would be a game changer for rural providers. We would be able to bring faster rates to our underserved areas. 25/5 – 30/10 – 50/15 for Rural Residential with the access to 20/50/80/160 MHz of light licensed spectrum.

We do not have the funding to purchase spectrum at auction. We have been fully funded by our own means without the use of federal or state money.

We ask that you accept this proposal and give the much-needed spectrum access to the WISP's that bring internet to Rural America.

Sincerely,

Drew Beverage
Vice President of Business Development
