

Regarding MB 18-184

My name is Justin Wade, and I am the General Manager of WBDX 102.7 FM in Trenton, GA, USA, and WJLJ 103.1 FM in Ettowah, TN, USA.

I am in full support of the MMTC and SSR Communications FM Class C4 / 73.215 proposal to allow eligible Zone II Class A stations to upgrade in power from 6,000 Watts to 12,000 Watts.

J103 has been broadcasting on these frequencies for over 20 years. The station uses the radio frequencies to help the community with promotions like Christmas Wish, Nehemiah Project, and Iron Man. The J103 Christmas Wish gives Christmas to families in our area that struggle around Christmas time. The frequencies are used to both ask for nominations of families in need and gather together the needed supplies to bless the families. The Nehemiah project provides school supplies to inner city school kids in our area. We use our radio frequencies to gather school supplies from listeners to bless the inner city students with. J103 also partners with the local Iron Man to man an aid station during the Chattanooga Iron Man and encourage the runners over the course of their race. J103's frequencies help us to solicit volunteers for this community project. J103 has also used the frequencies to help feed kids in Africa and provide Christmas for kids over seas through Operation Christmas Child.

Please implement the MB 18-184 proposal fully without delay. Many small broadcasters need this relief.

Sincerely,

Justin Wade
WBDX/WJLJ
