FEDERAL COMMUNICATIONS COMMISSION  
Washington, D.C. 20554

In the Matter of	)	
	)	
Amendment of Part 74 of the Commissions Rules	)	MB Docket No. 18-119
Regarding FM Translator Interference	)	
	)	

To: The Commission

COMMENTS OF T Z SAWYER TECHNICAL CONSULTANTS

INTRODUCTION

T Z Sawyer Technical Consultants (TZSTC), pursuant to the FCC Rule Section 1.401, submits its comments to the above captioned Notice of Proposed Rule Making (NPRM) wherein the FCC seeks to investigate possible changes to its rules relating to interference caused by FM translators and expedite the translator complaint resolution process.

TZSTC is a broadcast engineering consulting firm formed in 1990 and which has practiced before the FCC continuously since its inception. During that time period the firm has filed hundreds of FCC applications for construction permits and licenses for both commercial and noncommercial FM full service and FM translator facilities and participated in numerous Rule Making proceedings. TZSTC is a wholly owned entity of Timothy Z. Sawyer. Mr. Sawyer has been in continuous practice before the Commission since 1985 (33 years) as a consultant on broadcast technical matters, RF spectrum allocation issues, and licensing procedures.

COMMENTS IN RESPONSE TO FCC PROPOSALS SET FORTH IN THE NPRM

Item 1: Allowing FM translators to change channels.

TZSTC supports allowing operating FM translators to file minor modification applications to change channels to any available frequency (no band hopping) to resolve interference issues

raised by either a full service or existing secondary facility. However, caution must be observed to prevent possible abuse by applicants that may select a less desirable channel during a window filing period in hopes of avoiding a spectrum auction, and then jumping to the more desirable channel at a later date to provide improved coverage while claiming interference resolution as the reason for a channel change.

Item 2: Requiring a minimum number of listener complaints.

TZSTC believes that requiring listener participation (often at the urging of the offended facility) is wrong headed and a waste of valuable time and other resources. We believe that an approach similar to that employed by the Video Division of the Mass Media Bureau to evaluate FM translator applications' interference to other facilities is appropriate at the FM translator application stage and the permissible level of interference to other facilities should be codified as a matter of law.

The FCC software program "TVStudy" used by the Video Division to evaluate full and secondary TV service and their interference levels also has the ability to evaluate FM station and FM translator service and interference levels (General-Purpose FM Study).

The only areas that need to be decided by the Commission are the baseline contours to be used for the protected service value and the allowable percentage of interference to be received.

As a further example of the use of TVStudy in evaluating FM service and interference the following Tables are provided:

Table 1A to Table 6A

Baseline calculations of area and population for FM stations residing in Zone I for three States; Indiana, Ohio, and Pennsylvania (614 facilities).

Table 7A to Table 12A

Baseline calculations of area and population for FM stations residing in Non-Zone I/IA for three States; Georgia, Alabama and Mississippi (540 facilities).

For all tables above only Full Service FM facilities on channels 221 to 300 were used. The protected contour values were adjusted by 0, 3, 6, 9, 12 and 15 dB and used to generate the tables.

The purpose of this exercise was to attempt to determine the appropriate baseline contour to be used should the Commission wish to explore the possibility of utilizing software driven baseline contour values and interference percentages to determine acceptable interference levels. Please note that as the baseline contour value is reduced the mutual interference level increases. See the summary table at the start of the Tables provided. What's an acceptable level of mutual interference? 1%, 5%, 10% . . . . We believe that the starting point is 1-2% of mx interference which equates to an offset of 3 dB from the protected contour values in Zone 1 and 6 dB in non Zone I/IA areas. Further study and discussion is certainly warranted.

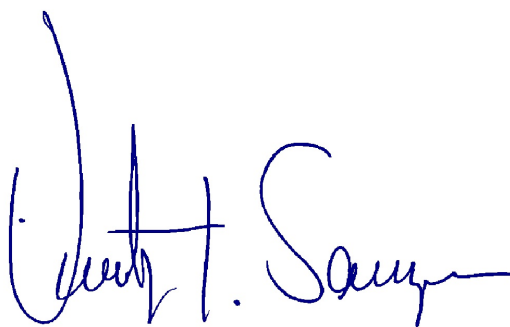

Tables 2 and 3 are the detailed station calculations, Table 2 for Zone 1 facilities, Table 3 for the non-Zone 1 facilities. Rather than provide the entire baseline offset values (several hundreds of pages) I have provided the detailed tabulations only for a contour offset value of 9 dB. The Summary table provides the individual Class contour values used for this offset.

TZSTC urges the Commission to consider adoption of FM baseline contour values and their use in determining if interference is likely to occur during the application processing stage as has been done by the Video Division.

August 6, 2018

Respectfully submitted

Timothy Z. Sawyer
