Re: Radio Physics Solutions Stand Off Threat Detection
Docket Number 19-158
Ex Parte Letter

Ms. Dortch,

On behalf of my company, Muller Group International, I am taking this opportunity to write to the FCC to urge the Commission to grant the Petition for Waiver filed by Radio Physics Solutions, Docket Number 19-158.

I previously served for 21 years as a Supervisory Special Agent of the United States of America's Federal Bureau of Investigation (FBI) where I was a co-founder of the FBI's Weapons of Mass Destruction Directorate and developed and founded INTERPOL's Chemical, Biological, Radiological, Nuclear and Explosives (CBRNE) Directorate. I have been involved with CBRNE and the Critical Infrastructure Protection (CIP) arena for over 30 years as a military officer, a special agent and executive with the Federal Bureau of Investigation and as the Assistant Director of the INTERPOL CBRNE Directorate in Lyon, France.

Muller Group International is a company that specializes in multi-layered security solutions. Our customer base includes cities, counties, school systems, corporations, large event venues, and others with spaces, customers, employees, environments that they want to keep safe. Our integrated security solutions provide enhanced situational awareness for security personnel, first responders, and patrons. Muller Group sees the Radio Physics Stand Off Threat Detection System as a highly valuable technology that we want to incorporate into the integrated security solution immediately.

This threat detection system is unlike any other product on the market today. It offers the opportunity to provide faster alerts to security and a broader perimeter monitoring system. Currently, most monitoring takes place at the entrance to a venue. The Radio Physics technology can watch the entrance and also be positioned to search for threats coming from other directions, and it has the ability to alert personnel to respond quickly to those threats. The more situational awareness security personnel have, the faster and more effectively they can respond to save lives.

I was prompted to write this letter after the tragic shootings in Gilroy, El Paso and Dayton over the past weeks. Muller Group has received numerous phone calls from prospective customers looking for security solutions that will help them avoid these types of tragic events. The Radio Physics Stand Off Threat Detection System is an essential component for our future planning. Time is of the essence for our clients. This technology, as a standalone system or as a part of our security suite, will prevent future tragedies and save lives.

Thank you very much for your consideration.

Sincerely,

Jeffrey Muller
CEO

Muller Group International
