

Regarding MB 18-184:

My name is Linda Russin and I am the owner and General Manager of WIIS Island 106.9 FM in Key West, FL.

I am in full support of the MMTC and SSR Communications FM Class C4 / 73.215 proposal to allow eligible Zone II Class A stations to upgrade in power from 6,000 Watts to 12,000 Watts.

My radio station, Island 106.9 FM, is very involved in the Key West community. We have a strong record of community service to our town, and we also help to promote local events, student success, and important news updates. As we are so separated from the mainland of Florida, upgrading in power from 6,000 Watts to 12,000 Watts would help us greatly in getting full coverage for all our listeners during their daily lives and, especially, in times of emergency.

Please implement the MB 18-184 proposal fully without delay. Many small broadcasters need this relief.

Sincerely,  
Linda Russin  
WIIS Island 106.9 FM
