

## APPENDIX B

### RAW DATA FROM §73.215 UPGRADE STUDY AND IMPACTS TO LPFM STATIONS

This data looks at all current Class A, B1, C3 and C2 engineering records in the United States with the exception of Puerto Rico and the Virgin Islands. The report also excludes special temporary authority (STA) applications.

#### HOW TO READ THE DATA

24 ) FacID: 71462 Call: WRTT-FM Chan: 236C2 Upgrade to: C1 COL: HUNTSVILLE AL Zone: 2  
This is the evaluated station. This line includes a count of facilities, the Facility ID, the station call sign, the station channel, the station's current class, the class it could upgrade to, the community of license and the FM zone.

- Class will be attempted to the next highest one. For existing Class C2 facilities, the upgrade will be to either C1, C0 or C depending on the HAAT.
- The Zone 1 designation in this report also includes Zone I-A.

WONA-FM 236 A SHERMAN

MS 197/199 69.1%

BPH-20170306AIW

This is a station that currently does not meet §73.207 minimum spacing but does meet §73.215 minimum spacing. It includes the call sign, channel, class, community of license, distance to this station in kilometers, minimum distance required under §73.207, the size of the service contour in respect to a full reference facility for the station class and the application reference number.

- Only facilities where the service contour is less than 92% of the full reference class is shown.

TN NEW INTERFERENCE

These are LPFM stations that would be impacted by the upgrade. This data includes the LPFM station's call letters, facility ID, channel, community and a narrative of the impact.

- LPFM records that show "possible displacement" are those that based on distance separation may have the LPFM interfering contour overlapping the 70 dBu city-grade contour of the upgraded station. Determination of §73.809 displacement needs to be verified using a contour tool such as ComStudy 2 or Vsoft.

This data is prepared to the best of our knowledge. It also assumes that FM stations will upgrade in place.
