Re: Expanding Flexible Use of the 3.7 GHz to 4.2 GHz Band, GN Docket No.
18-122 Reply Comments

Dear Ms. Dortch:

Olympusat writes to express its agreement with comments filed by various content distributors in response to the Commission's July 19 Public Notice in the above referenced docket.¹ Olympusat relies on the highly reliable, extremely cost-effective C-band satellite service upon which video and audio content has been delivered in the United States for the past several decades. Put simply, the ACA Connects Coalition proposal is unworkable and would harm our business.

Olympusat agrees with the Content Companies that the ACA Connects Coalition proposal "speculates, wrongly, that the Commission could, via regulatory mandate, overhaul the distribution of video programming in the United States from a satellite-based system to one that relies almost exclusively on fiber—and for the most part in a mere '18 to 36 months.'"² The Content Companies are correct that the ACA Connects proposal "underestimates the complexity, timing, and cost that would be necessary to fundamentally change the video distribution infrastructure" from satellite to fiber and that "[e]ven in a best-case scenario, the shift to a primarily fiber-based video delivery system would take an unknown number of years to complete and cost far more than the estimated \$6 to \$7 billion dollars."³

Olympusat believes that the Commission should not adopt a proposal that requires us to move to a fiber-based distribution system, the details of which are entirely unknown. Olympusat agrees with NAB that "[f]orcing content providers to give up the ubiquitous, seamlessly reliable satellite distribution C-band spectrum provides in exchange for a massively complex, expensive and less reliable fiber distribution network risks devastating harm to a vibrant content ecosystem on which hundreds of millions of Americans rely for

the news, sports and entertainment programming they currently enjoy.”⁴ Specifically, with regard to reliability, the “reduction in reliability” from C-band satellite distribution to fiber “would be completely unacceptable for video content delivery services that reach millions of consumers at the same time.”⁵

Olympusat also agrees with the C-Band Alliance that AT&T’s proposal for “unrestricted” terrestrial licenses in the C-band would fail to adequately protect FSS operations.⁶ The C-Band Alliance provides evidence on the record that because of “fundamental satellite earth station antenna design,” “a 5G base station will cause blocking to the FSS earth station even at relatively large separation distances.”⁷ Therefore, “unrestricted licenses as AT&T conceives them are simply not possible if FSS earth stations will continue to operate in the upper portion of the C-Band.”⁸

From the beginning of the FCC’s C-band inquiry, programmers and broadcasters have sought certainty regarding the operating environments for our businesses. Olympusat agrees with the Content Companies that the proposal advocated by the C-Band Alliance is the only one that preserves the reliability of the existing C-band distribution system.⁹ Olympusat therefore urges the Commission to adopt the C-Band Alliance proposal.

Respectfully submitted,

/s/  _____
