Yes, I wrote "this bid is for a total of two circuits". Then follows with your statement all details on **specifications bandwidth requirement etc. are outlined in the bid** so I think we are good to go.

Ah yes, I think that's been an issue we've had with these in the past.

Can you edit the narrative? It might be a good idea to specify two circuits there so that vendors know how to best present their quotes.

When I click on edit service request the quantity box does not come up even though it is listed on the 470. So I guess I just have to leave that blank.

FYI – looping Al in for comments before you certify:

Bruce was able to go back in and make the updates. He's listed 2 circuits with a minimum 2 GBPS and a maximum 25 GBPS. He should be good to go now, right?

That's perfect. Is there a spot for the quantity as well?

Is it possible to send me a screenshot of what you do see? If not, I can call CSB and see what they recommend.

I haven't certified it. When I pull up the task, what do I do to assign it to you? I don't see that as an option.

On Tue, Jan 31, 2017 at 2:34 PM, Beth McConnell <bmcconnell@csmcentral.com> wrote:

Got the notification of a new task, but it only says FCC Form 470 and has no link for me to follow to edit anything. Is it still waiting for certification in your task bar, Bruce? Or what does it say on your end?

I agree. You guys have to do it, I can't. Let me know when it's updated. I'll try to stick around until you do it, otherwise I will do it when I get home.

Hi Bruce yeah I think we should account for the range on the 470

On Tuesday, January 31, 2017 at 2:04 PM, Bruce Walsh <bruce.walsh@palmbeachschools.org> wrote:

Internet bid is on Demandstar. I have one question on the 470. On the "Category One Service Requests" it has minimum and maximum capacity listed as 2 Gbps. We are requesting two circuits of 4 Gpbs with possible growth to 10 Gpbs. Is that an issue?
