To whom it may concern,

I am a PhD student at Stanford University who is very concerned about the recent move by the FCC to eliminate Net Neutrality.

Please do everything in your power to protect Net Neutrality. Eliminating net neutrality will harm the people of the US by limiting their access to the unbiased, unfiltered, and unprompted content. If content is preferentially supported by companies that control the infrastructure of the internet we risk eliminating the free flow of information that is essential to an informed and educated populace and a functioning democracy. It is in the best social, political, and economic interests of the people of this country to have a free and open internet.

Sincerely yours,

Taylor Geisler
