**Re: In the Matter of Petition of USTelecom for Forbearance Pursuant to  
47 U.S.C. Section 160(c); WC Docket No. 18-141; Category 1**

Dear FCC,

I migrated to this country two years ago from Europe. I moved to San Francisco Bay Area thinking that this would be the most innovative place on the Earth. Two things shocked me here: bad quality of mobile network with not reasonable price and the Internet which is still provided via coaxial technology. I could not believe my eyes as this technology came from 20th century and should stay there. European countries for the last several years have fiber optics or Ethernet with a gigabit bandwidth tariffs just for \$10 or fewer dollars per month. Here I had to pay \$70 for 40Mbits to Comcast. Another thing - it's a contract price model. At the beginning of a partnership, they will tell you that you price would be just \$50 but after a year telecommunication company will raise the price on another \$20 without any reason just because they have such right. Thus when I moved to my new house which has fiber internet from Sonic, I was so happy to switch immediately to this provider. Sonic provides high-quality internet with gigabit bandwidth for the price which is less than the price for outdated technology from monstrozoid ancient companies such as Comcast or AT&T.

Please think, do you want to be the most innovative country in the world?

Sonic really makes America innovative and great again.

Sincerely,

Alexander Kozulin
