**Re: WT Docket No. 17-200
Ex Parte Letter**

Dear Ms. Dortch:

J&H Radio was founded in 1967 by Joseph and Dorothy Mayerchak and Harry Schneider. What started out as a small service facility has grown to become a fully staffed, full service wireless solutions provider. J&H Radio provides its customers with expert guidance in product selection, total wireless system integration, professional installation and quality service after the sale. We combine the best products in the industry with years of experience to ensure that our customers will gain the most possible benefit from every product they purchase. In being sure that we offer the best solutions, we strongly believe that the addition of broadband services in our portfolio would provide endless benefits that are customizable to specific customers in the many industries that we serve. A realignment of the 900 MHz band will make these offerings possible.

After serving as a dedicated wireless solutions resource for more than 50 years to a vast amount of business, we know that instant communications are crucial, and reliable service is essential for the administration thereof. Our customer base spans many industries, serving Construction, Education, Fire and EMS, Healthcare, Hospitality, Law Enforcement, Manufacturing, Oil and Gas, Retail, Transportation and Utilities. In all of these verticals, seamless communications are required, with reliability being the upmost important factor. Dedicated networks are few and far between, and the commercial alternatives are already bogged down by the general consumer, therefore making it very difficult to ensure there are reliable networks available for these critical industries. Therefore, the more dedicated networks there are, the more valuable their services are, nonetheless proving how essential a realignment of the 900MHz band is.

Sincerely,

William Mayerchak
President
