

Congress of the United States  
Washington, DC 20515

801

October 2, 2017

The Honorable Ajit Pai  
Federal Communications Commission  
445 12<sup>th</sup> Street SW  
Washington, D.C. 20554

Dear Chairman Pai:

We write to request that the Federal Communications Commission (FCC) take action to address the budget shortfall in certain parts of the High-Cost Universal Service Fund (USF). As outlined in a letter sent to you last May by 160 Members of Congress, this lack of sufficient funding puts the rural communities that we represent at a significant disadvantage.

The annual budget instructions through which the High-Cost USF is funded have not been fully utilized since their implementation in 2011. Despite the appearance of surplus funds in the overall budget in prior years, the Rate of Return (ROR) carriers that benefit from High-Cost USF programs have been subject to strict and separate budget caps under actual cost recovery mechanisms and cost model support. These caps limit broadband infrastructure investments in nearly 40 percent of rural America.

Pending comprehensive FCC review or adjustment of the High-Cost USF budget instructions, we strongly urge you to maintain level collections from telecommunications companies into the future. To the extent that the collected sum exceeds High-Cost USF spending obligations at the time, the FCC should directly apply funds to help mitigate or neutralize the budget constraints applied to these smaller, rural operators.

While it is currently unclear how funds that exceed High-Cost USF spending may be obligated under existing budget instructions, their continued collection has the potential to help provide rural communities with comparable broadband services for comparable rates relative to urban areas. In doing so, the country will move closer to the fund's stated mission to provide all Americans with "accessible, affordable, and pervasive high-speed connectivity."

Thank you for considering our request. We look forward to working with you to ensure that the "digital divide" does not exclude millions of rural Americans from the services that they, and our economy, depend on.

Sincerely,

FEDERAL COMMUNICATIONS COMMISSION  
WASHINGTON

October 24, 2017

OFFICE OF  
THE CHAIRMAN

The Honorable Mike Bost  
U.S. House of Representatives  
1440 Longworth House Office Building  
Washington, D.C. 20515

Dear Congressman Bost:

Thank you for your letter regarding the importance of delivering affordable access to high-speed Internet to all Americans—including those in high-cost rural areas. Your views are very important and will be entered into the record of the proceeding.

In my first remarks to FCC staff as Chairman earlier this year, I declared that my highest priority would be making sure every American who wants high-speed Internet access can get it. Rural Americans deserve the same digital access as those living in more urban areas.

Four years ago, I called on the Commission to tackle the issue of affordable broadband in rural America head on. The problem back then was that the Universal Service Fund predicated support on providing voice service. This meant bundled telephone/broadband offers could get support while standalone broadband could not. The perverse result was that carriers had an incentive to take universal service support and offer telephone/broadband bundles (even if consumers could not afford them) while not offering standalone broadband. The business case for stand-alone broadband didn't exist for some rural telephone companies – not because consumers didn't want it, but because our arcane rules penalized companies for offering it.

I wish I could tell you that the FCC has fixed this problem, but we have not. Despite what was framed as an order adopting “significant reforms,” the Commission's 2016 Rate-of-Return Order – which I did not support – has not had its intended effect. I repeatedly hear from small carriers that offering stand-alone broadband would put them underwater, that the rates they have to charge exceed the rates for bundled services because of the different regulatory treatment. This is unfortunate but unsurprising. As I said at the time, the Order complicated our rate-of-return system and in many ways made it harder, not easier, for small providers to serve rural, America.

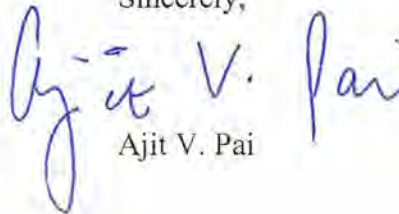

Nor, as I predicted in my dissent to that Order, have we given carriers “sufficient incentive to be prudent and efficient in their expenditures.” Due to the complexity of the budget control mechanism, carriers do not have the certainty they need to make the long-term investment decisions that will lead to greater connectivity. It has become clear, as my colleagues and I have worked our way through the so-called punch list of lingering issues from the 2016 Order, that more fundamental reforms are needed. The statute directs that universal service

support be specific, predictable, and sufficient. Yet today I worry we are not achieving that objective for many legacy rate-of-return carriers.

For those carriers that continue to receive support from the legacy rate-of-return system, I am committed to exploring how this situation can be changed and to determine the appropriate budget levels. The Commission should address the uncertainty caused by the current budget control mechanism – such as guaranteeing at least some minimum level of support to ease the unpredictability and allow reasonable capital planning – while being mindful of mitigating incentives to operate inefficiently.

I appreciate your interest in this matter. Please let me know if I can be of any further assistance.

Sincerely,

A handwritten signature in blue ink that reads "Ajit V. Pai". The signature is fluid and cursive, with the first name "Ajit" being the most prominent part, followed by "V." and "Pai".

The problem back then was that the Universal Service Fund predicated support on providing voice service. This meant bundled telephone/broadband offers could get support while standalone broadband could not. The perverse result was that carriers had an incentive to take universal service support and offer telephone/broadband bundles (even if consumers could not afford them) while not offering standalone broadband. The business case for stand-alone broadband didn't exist for some rural telephone companies – not because consumers didn't want it, but because our arcane rules penalized companies for offering it.

I wish I could tell you that the FCC has fixed this problem, but we have not. Despite what was framed as an order adopting “significant reforms,” the Commission's 2016 Rate-of-Return Order – which I did not support – has not had its intended effect. I repeatedly hear from small carriers that offering stand-alone broadband would put them underwater, that the rates they have to charge exceed the rates for bundled services because of the different regulatory treatment. This is unfortunate but unsurprising. As I said at the time, the Order complicated our rate-of-return system and in many ways made it harder, not easier, for small providers to serve rural, America.

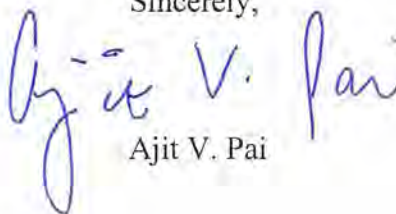

Nor, as I predicted in my dissent to that Order, have we given carriers “sufficient incentive to be prudent and efficient in their expenditures.” Due to the complexity of the budget control mechanism, carriers do not have the certainty they need to make the long-term investment decisions that will lead to greater connectivity. It has become clear, as my colleagues and I have worked our way through the so-called punch list of lingering issues from the 2016 Order, that more fundamental reforms are needed. The statute directs that universal service

support be specific, predictable, and sufficient. Yet today I worry we are not achieving that objective for many legacy rate-of-return carriers.

For those carriers that continue to receive support from the legacy rate-of-return system, I am committed to exploring how this situation can be changed and to determine the appropriate budget levels. The Commission should address the uncertainty caused by the current budget control mechanism – such as guaranteeing at least some minimum level of support to ease the unpredictability and allow reasonable capital planning – while being mindful of mitigating incentives to operate inefficiently.

I appreciate your interest in this matter. Please let me know if I can be of any further assistance.

Sincerely,

This meant bundled telephone/broadband offers could get support while standalone broadband could not. The perverse result was that carriers had an incentive to take universal service support and offer telephone/broadband bundles (even if consumers could not afford them) while not offering standalone broadband. The business case for stand-alone broadband didn't exist for some rural telephone companies – not because consumers didn't want it, but because our arcane rules penalized companies for offering it.

I wish I could tell you that the FCC has fixed this problem, but we have not. Despite what was framed as an order adopting “significant reforms,” the Commission's 2016 Rate-of-Return Order – which I did not support – has not had its intended effect. I repeatedly hear from small carriers that offering stand-alone broadband would put them underwater, that the rates they have to charge exceed the rates for bundled services because of the different regulatory treatment. This is unfortunate but unsurprising. As I said at the time, the Order complicated our rate-of-return system and in many ways made it harder, not easier, for small providers to serve rural, America.

Nor, as I predicted in my dissent to that Order, have we given carriers “sufficient incentive to be prudent and efficient in their expenditures.” Due to the complexity of the budget control mechanism, carriers do not have the certainty they need to make the long-term investment decisions that will lead to greater connectivity. It has become clear, as my colleagues and I have worked our way through the so-called punch list of lingering issues from the 2016 Order, that more fundamental reforms are needed. The statute directs that universal service

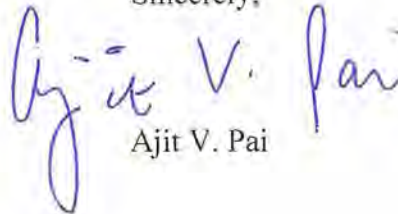

support be specific, predictable, and sufficient. Yet today I worry we are not achieving that objective for many legacy rate-of-return carriers.

For those carriers that continue to receive support from the legacy rate-of-return system, I am committed to exploring how this situation can be changed and to determine the appropriate budget levels. The Commission should address the uncertainty caused by the current budget control mechanism – such as guaranteeing at least some minimum level of support to ease the unpredictability and allow reasonable capital planning – while being mindful of mitigating incentives to operate inefficiently.

I appreciate your interest in this matter. Please let me know if I can be of any further assistance.

Sincerely,

A handwritten signature in blue ink that reads "Ajit V. Pai". The signature is fluid and cursive, with the first name "Ajit" being the most prominent part, followed by "V." and "Pai".

OFFICE OF  
THE CHAIRMAN

FEDERAL COMMUNICATIONS COMMISSION  
WASHINGTON

October 24, 2017

The Honorable Markwayne Mullin  
U.S. House of Representatives  
1113 Longworth House Office Building  
Washington, D.C. 20515

Dear Congressman Mullin:

Thank you for your letter regarding the importance of delivering affordable access to high-speed Internet to all Americans—including those in high-cost rural areas. Your views are very important and will be entered into the record of the proceeding.

In my first remarks to FCC staff as Chairman earlier this year, I declared that my highest priority would be making sure every American who wants high-speed Internet access can get it. Rural Americans deserve the same digital access as those living in more urban areas.

Four years ago, I called on the Commission to tackle the issue of affordable broadband in rural America head on. The problem back then was that the Universal Service Fund predicated support on providing voice service. This meant bundled telephone/broadband offers could get support while standalone broadband could not. The perverse result was that carriers had an incentive to take universal service support and offer telephone/broadband bundles (even if consumers could not afford them) while not offering standalone broadband. The business case for stand-alone broadband didn't exist for some rural telephone companies – not because consumers didn't want it, but because our arcane rules penalized companies for offering it.

I wish I could tell you that the FCC has fixed this problem, but we have not. Despite what was framed as an order adopting “significant reforms,” the Commission's 2016 Rate-of-Return Order – which I did not support – has not had its intended effect. I repeatedly hear from small carriers that offering stand-alone broadband would put them underwater, that the rates they have to charge exceed the rates for bundled services because of the different regulatory treatment. This is unfortunate but unsurprising. As I said at the time, the Order complicated our rate-of-return system and in many ways made it harder, not easier, for small providers to serve rural, America.

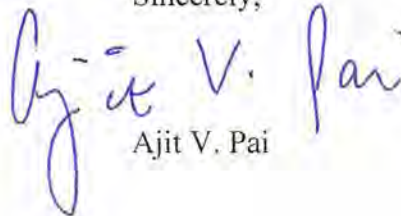

Nor, as I predicted in my dissent to that Order, have we given carriers “sufficient incentive to be prudent and efficient in their expenditures.” Due to the complexity of the budget control mechanism, carriers do not have the certainty they need to make the long-term investment decisions that will lead to greater connectivity. It has become clear, as my colleagues and I have worked our way through the so-called punch list of lingering issues from the 2016 Order, that more fundamental reforms are needed. OFFICE OF  
THE CHAIRMAN

FEDERAL COMMUNICATIONS COMMISSION  
WASHINGTON

October 24, 2017

The Honorable Steve Russell  
U.S. House of Representatives  
128 Cannon House Office Building  
Washington, D.C. 20515

Dear Congressman Russell:

Thank you for your letter regarding the importance of delivering affordable access to high-speed Internet to all Americans—including those in high-cost rural areas. Your views are very important and will be entered into the record of the proceeding.

In my first remarks to FCC staff as Chairman earlier this year, I declared that my highest priority would be making sure every American who wants high-speed Internet access can get it. Rural Americans deserve the same digital access as those living in more urban areas.

Four years ago, I called on the Commission to tackle the issue of affordable broadband in rural America head on. The problem back then was that the Universal Service Fund predicated support on providing voice service. This meant bundled telephone/broadband offers could get support while standalone broadband could not. The perverse result was that carriers had an incentive to take universal service support and offer telephone/broadband bundles (even if consumers could not afford them) while not offering standalone broadband. The business case for stand-alone broadband didn't exist for some rural telephone companies – not because consumers didn't want it, but because our arcane rules penalized companies for offering it.

I wish I could tell you that the FCC has fixed this problem, but we have not. Despite what was framed as an order adopting “significant reforms,” the Commission's 2016 Rate-of-Return Order – which I did not support – has not had its intended effect. I repeatedly hear from small carriers that offering stand-alone broadband would put them underwater, that the rates they have to charge exceed the rates for bundled services because of the different regulatory treatment. This is unfortunate but unsurprising. As I said at the time, the Order complicated our rate-of-return system and in many ways made it harder, not easier, for small providers to serve rural, America.

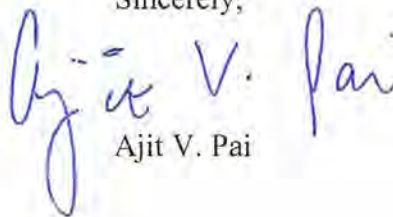

Nor, as I predicted in my dissent to that Order, have we given carriers “sufficient incentive to be prudent and efficient in their expenditures.” Due to the complexity of the budget control mechanism, carriers do not have the certainty they need to make the long-term investment decisions that will lead to greater connectivity. It has become clear, as my colleagues and I have worked our way through the so-called punch list of lingering issues from the 2016 Order, that more fundamental reforms are needed. The statute directs that universal service

support be specific, predictable, and sufficient. Yet today I worry we are not achieving that objective for many legacy rate-of-return carriers.

For those carriers that continue to receive support from the legacy rate-of-return system, I am committed to exploring how this situation can be changed and to determine the appropriate budget levels. The Commission should address the uncertainty caused by the current budget control mechanism – such as guaranteeing at least some minimum level of support to ease the unpredictability and allow reasonable capital planning – while being mindful of mitigating incentives to operate inefficiently.

I appreciate your interest in this matter. Please let me know if I can be of any further assistance.

Sincerely,

A handwritten signature in blue ink, appearing to read "Ajit V. Pai". The signature is stylized, with the first name "Ajit" written in a cursive-like script, followed by "V." and "Pai".

Ajit V. Pai

OFFICE OF  
THE CHAIRMAN
