

My name is tyler and I primarily work in businesses run by myself and are generally quite small. We require the same non paid access to internet for our products to succeed, if you want small businesses to succeed you must give them the same access to the internet as businesses that can afford to pay. My businesses will never be able to compete with facebook or massive online games like WOW if I have to pay for expedited internet connections.

Do not pass this. You are killing small businesses.

You say you're for economic freedom, give that freedom to the people / companies that need it, not to the massive corporations that do not need a break.
