

Dear FCC,

I highly advise against repealing Title 2 Net Neutrality and I understand that giving power back to the business is a great way to feed money back into America but it would create an never ending ripple effect in America. However I would like to offer a compromise; my compromised version of Net Neutrality states that all Internet traffic should be treated as equal and at speed as advertised however Internet Service Providers are free to slow down or speed up Internet traffic to their services or websites owned by them.

My simple compromise of Net Neutrality should satisfy American citizen and allow businesses to be in control to feed money back into America but most importantly; allow us as a nation to focus on bigger issues, more notably North Korea.

To answer your question about my ripple effect of repealing Net Neutrality; they can include from lack lustering sales of American products overseas spells leaving our money behind closed doors, damaging America's ranks against other nation will say detracting international investors, to America's bottom low morale and stifling innovations that could otherwise fix costly problems faster perhaps find new emerging markets to keep America fresh.

If you took your time to read this then I appreciate taking your time to read and reconsider your actions. If you got any question then feel free to mail or email me.

And have a happy Thanksgiving holiday!

Kind regards,
Kevin Ung
