

Passage of this bill would allow regional monopolistic private entities to arbitrarily censor content, or more likely financially censor content by charging extra fees to some content providers. This would be like allowing a utility company to charge for different tiers of water at my house. The most expensive would be the cleanest, and cheaper tiers would have progressively more toxins and heavy metals, until in the bottom tier the utility company is simply pipping untreated raw sewage directly into my kitchen sink. No one should have to pay extra not to drink sewage.
